Affairs being thus miserably situated, I left the place in disgust, and now appeal for aid to all lovers of correct time and fine kraut. Let us proceed in a body to the borough, and restore the ancient order of things in Vondervotteimittiss by ejecting that little fellow from the steeple.

Bon-Bon

(This tale was published in the *Southern Literary Messenger,* August, 1835.—Ed.)

Quand un bon vin meuble mon estomac
Je suis plus savant que Balzac—
Plus sage que Pibrac;
Mon bras seul faisant l'attaque
De la nation Cossaque,
La mettroit au sac;
De Charon je passerois le lac
En dormant dans son bac;
J'irois au fier Eac,
Sans que mon coeur fit tic ni tac,
Presenter du tabac.
—*French Vaudeville.*

THAT Pierre Bon-Bon was a *restaurateur* of uncommon qualifications, no man who during the reign of ——, frequented the little café in the cul-de-sac Le Febre at Rouen, will, I imagine, feel himself at liberty to dispute. That Pierre Bon-Bon was, in an equal degree, skilled in the philosophy of that period is, I presume still more especially undeniable. His *pates a la fois* were beyond doubt immaculate; but what pen can do justice to his essays *sur la Nature*—his thoughts *sur l'Ame*—his observations *sur l'Esprit?* If his *omelettes*—if his *fricandeaux* were inestimable, what *litterateur* of that day would not have given twice as much for an *"Idee de Bon-Bon"* as for all the trash of all the *"Idees"* of all the rest of the *savants?* Bon-Bon had ransacked libraries which no other man had ransacked—had read more than any other would have entertained a notion of reading—had understood more than any other would have conceived the possibility of understanding; and although, while he flourished, there were not wanting some authors at Rouen to assert "that his *dicta* evinced neither the purity of the Academy, nor the depth of the Lyceum"—although, mark me, his doctrines were by no means very generally comprehended, still it did not follow that they were difficult of comprehension. It was, I think, on account of their self-evidency that many persons were led to consider them abstruse. It is to Bon-Bon—but let this go no further—it is to Bon-Bon that Kant himself is mainly indebted for his metaphysics. The former was indeed not a Platonist, nor strictly speaking an Aristotelian—nor did he, like the modern Leibnitz, waste those precious hours which might be employed in the invention of a *fricasee* or, *facili gradu,* the analysis of a sensation, in frivolous attempts at reconciling the obstinate oils and waters of ethical discussion. Not at all. Bon-Bon was Ionic—Bon-Bon was equally Italic. He reasoned *a priori*—He reasoned *a posteriori.* His ideas were innate—or otherwise. He believed in George of Trebizond—He believed in Bossarion. Bon-Bon was emphatically a—Bon-Bonist.

I have spoken of the philosopher in his capacity of *restaurateur.* I would not, however, have any friend of mine imagine that, in fulfilling his hereditary duties in that line, our hero wanted a proper estimation of their dignity and importance. Far from it. It was impossible to say in which branch of his profession he took the greater pride.

In his opinion the powers of the intellect held intimate connection with the capabilities of the stomach. I am not sure, indeed, that he greatly disagreed with the Chinese, who hold that the soul lies in the abdomen. The Greeks at all events were right, he thought, who employed the same words for the mind and the diaphragm.* By this I do not mean to insinuate a charge of gluttony, or indeed any other serious charge to the prejudice of the metaphysician. If Pierre Bon-Bon had his failings—and what great man has not a thousand?—if Pierre Bon-Bon, I say, had his failings, they were failings of very little importance—faults indeed which, in other tempers, have often been looked upon rather in the light of virtues. As regards one of these foibles, I should not even have mentioned it in this history but for the remarkable prominency—the extreme *alto relievo*—in which it jutted out from the plane of his general disposition. He could never let slip an opportunity of making a bargain.

Not that he was avaricious—no. It was by no means necessary to the satisfaction of the philosopher, that the bargain should be to his own proper advantage. Provided a trade could be effected—a trade of any kind, upon any terms, or under any circumstances—a triumphant smile was seen for many days thereafter to enlighten his countenance, and a knowing wink of the eye to give evidence of his sagacity.

At any epoch it would not be very wonderful if a humor so peculiar as the one I have just mentioned, should elicit attention and remark. At the epoch of our narrative, had this peculiarity *not* attracted observation, there would have been room for wonder indeed. It was soon reported that, upon all occasions of the kind, the smile of Bon-Bon was found to differ widely from the downright grin with which he would laugh at his own jokes, or welcome an acquaintance. Hints were thrown out of an exciting nature; stories were told of perilous bargains made in a hurry and repented of at leisure; and instances were adduced of unaccountable capacities, vague longings, and unnatural inclinations implanted by the author of all evil for wise purposes of his own.

The philosopher had other weaknesses—but they are scarcely worthy our serious examination. For example, there are few men of extraordinary profundity who are found wanting in an inclination for the bottle. Whether this inclination be an exciting cause, or rather a valid proof of such profundity, it is a nice thing to say. Bon-Bon, as far as I can learn, did not think the subject adapted to minute investigation;—nor do I. Yet in the indulgence of a propensity so truly classical, it is not to be supposed that the *restaurateur* would lose sight of that intuitive discrimination which was wont to characterize, at one and the same time, his *essais* and his *omelettes*. In his seclusions the Vin de Bourgogne had its allotted hour, and there were appropriate moments for the Cotes du Rhone. With him Sauterne was to Medoc what Catulus was to Homer. He would sport with a syllogism in sipping St. Peray, but unravel an argument over Clos de Vougeot, and upset a theory in a torrent of Chambertin. Well had it been if the same quick sense of propriety had attended him in the peddling propensity

* *Phrenes.

to which I have formerly alluded—but this was by no means the case. Indeed to say the truth, *that* trait of mind in the philosophic Bon-Bon *did* begin at length to assume a character of strange intensity and mysticism, and appeared deeply tinctured with the *diablerie* of his favorite German studies.

To enter the little *cafe* in the *culde-sac* Le Febre was, at the period of our tale, to enter the *sanctum* of a man of genius. Bon-Bon was a man of genius. There was not a *sous-cuisinier* in Rouen, who could not have told you that Bon-Bon was a man of genius. His very cat knew it, and forebore to whisk her tail in the presence of the man of genius. His large water-dog was acquainted with the fact, and upon the approach of his master, betrayed his sense of inferiority by a sanctity of deportment, a debasement of the ears, and a dropping of the lower jaw not altogether unworthy of a dog. It is, however, true that much of this habitual respect might have been attributed to the personal appearance of the metaphysician. A distinguished exterior will, I am constrained to say, have its way even with a beast; and I am willing to allow much in the outward man of the *restaurateur* calculated to impress the imagination of the quadruped. There is a peculiar majesty about the atmosphere of the little great—if I may be permitted so equivocal an expression—which mere physical bulk alone will be found at all times inefficient in creating. If, however, Bon-Bon was barely three feet in height, and if his head was diminutively small, still it was impossible to behold the rotundity of his stomach without a sense of magnificence nearly bordering upon the sublime. In its size both dogs and men must have seen a type of his acquirements—in its immensity a fitting habitation for his immortal soul.

I might here—if it so pleased me—dilate upon the matter of habiliment, and other mere circumstances of the external metaphysician. I might hint that the hair of our hero was worn short, combed smoothly over his forehead, and surmounted by a conical-shaped white flannel cap and tassels—that his pea-green jerkin was not after the fashion of those worn by the common class of *restaurateurs* at that day—that the sleeves were something fuller than the reigning costume permitted—that the cuffs were turned up, not as usual in that barbarous period, with cloth of the same quality and color as the garment, but faced in a more fanciful manner with the particolored velvet of Genoa—that his slippers were of a bright purple, curiously filigreed, and might have been manufactured in Japan, but for the exquisite pointing of the toes, and the brilliant tints of the binding and embroidery—that his breeches were of the yellow satin-like material called *aimable*—that his sky-blue cloak, resembling in form a dressing-wrapper, and richly bestudded all over with crimson devices, floated cavalierly upon his shoulders like a mist of the morning—and that his *tout ensemble* gave rise to the remarkable words of Benevenuta, the Improvisatrice of Florence, "that it was difficult to say whether Pierre Bon-Bon was indeed a bird of Paradise, or the rather a very Paradise of perfection." I might, I say, expatiate upon all these points if I pleased,—but I forbear; merely personal details may be left to historical

novelists,—they are beneath the moral dignity of matter-of-fact.

I have said that "to enter the *cafe* in the *cul-de-sac* Le Febre was to enter the *sanctum* of a man of genius"—but then it was only the man of genius who could duly estimate the merits of the *sanctum*. A sign, consisting of a vast folio, swung before the entrance. On one side of the volume was painted a bottle; on the reverse a *pate*. On the back were visible in large letters *Œuvres de Bon-Bon*. Thus was d e l i c a t e l y shadowed forth the twofold occupation of the proprietor.

Upon stepping over the threshold, the whole interior of the building presented itself to view.

A long, low-pitched room, of antique construction, was indeed all the accommodation afforded by the *cafe*. In a corner of the apartment stood the bed of the metaphysician. An array of curtains, together with a canopy *a la Greque*, gave it an air at once classic and comfortable. In the corner diagonally opposite, appeared, in direct family communion, the properties of the kitchen and the *bibliotheque*. A dish of polemics stood peacefully upon the dresser. Here lay an ovenful of the latest ethics—there a kettle of duodecimo *melanges*. Volumes of German morality were hand and glove with the gridiron—a toasting-fork might be discovered by the side of Eusebius—Plato reclined at his ease in the frying-pan—and contemporary manuscripts were filed away upon the spit.

In other respects the *Cafe de Bon-Bon* might be said to differ little from the usual *restaurants* of the period. A fireplace yawned opposite the door. On the right of the fireplace an open cupboard displayed a formidable array of labelled bottles.

It was here, about twelve o'clock one night during the severe winter of ——, that Pierre Bon-Bon, after having listened for some time to the comments of his neighbors upon his singular propensity—that Pierre Bon-Bon, I say, having turned them all out of his house, locked the door upon them with an oath, and betook himself in no very pacific mood to the comforts of a leather-bottomed arm-chair, and a fire of blazing fagots.

It was one of those terrific nights which are only met with once or twice during a century. It snowed fiercely, and the house tottered to its centre with the floods of wind that, rushing through the crannies of the wall, and pouring impetuously down the chimney, shook awfully the curtains of the philosopher's bed, and disorganized the economy of his pate-pans and papers. The huge folio sign that swung without, exposed to the fury of the tempest, creaked ominously, and gave out a moaning sound from its stanchions of solid oak.

It was in no placid temper, I say, that the metaphysician drew up his chair to its customary station by the hearth. Many circumstances of a perplexing nature had occurred during the day, to disturb the serenity of his meditations. In attempting *des œufs a la Princesse*, he had unfortunately perpetrated an *omelette a la Reine;* the discovery of a principle in ethics had been frustrated by the overturning of a stew; and last, not least, he had been thwarted in one of those admirable bargains which he at all times took such especial delight in bringing to a successful termination. But in the chafing of his mind

at these unaccountable vicissitudes, there did not fail to be mingled some degree of that nervous anxiety which the fury of a boisterous night is so well calculated to produce. Whistling to his more immediate vicinity the large black waterdog we have spoken of before, and settling himself uneasily in his chair, he could not help casting a wary and unquiet eye toward those distant recesses of the apartment whose inexorable shadows not even the red firelight itself could more than partially succeed in overcoming. Having completed a scrutiny whose exact purpose was perhaps unintelligible to himself, he drew close to his seat a small table covered with books and papers, and soon became absorbed in the task of retouching a voluminous manuscript, intended for publication on the morrow.

He had been thus occupied for some minutes, "I am in no hurry, Monsieur Bon-Bon," suddenly whispered a whining voice in the apartment.

"The devil!" ejaculated our hero, starting to his feet, overturning the table at his side, and staring around him in astonishment.

"Very true," calmly replied the voice.

"Very true!—what is very true?—how came you here?" vociferated the metaphysician, as his eye fell upon something which lay stretched at full length upon the bed.

"I was saying," said the intruder, without attending to the interrogatives,—"I was saying that I am not at all pushed for time—that the business upon which I took the liberty of calling, is of no pressing importance—in short, that I can very well wait until you have finished your Exposition."

"My Exposition!—there now!—how do *you* know?—how came *you* to understand that I was writing an Exposition—good God!"

"Hush!" replied the figure, in a shrill undertone; and, arising quickly from the bed, he made a single step toward our hero, while an iron lamp that depended over-head swung convulsively back from his approach.

The philosopher's amazement did not prevent a narrow scrutiny of the stranger's dress and appearance. The outlines of his figure, exceedingly lean, but much above the common height, were rendered minutely distinct by means of a faded suit of black cloth which fitted tight to the skin, but was otherwise cut very much in the style of a century ago. These garments had evidently been intended for a much shorter person than their present owner. His ankles and wrists were left naked for several inches. In his shoes, however, a pair of very brilliant buckles gave the lie to the extreme poverty implied by the other portions of his dress. His head was bare, and entirely bald, with the exception of a hinder-part, from which depended a *queue* of considerable length. A pair of green spectacles, with side glasses, protected his eyes from the influence of the light, and at the same time prevented our hero from ascertaining either their color or their conformation. About the entire person there was no evidence of a shirt; but a white cravat, of filthy appearance, was tied with extreme precision around the throat, and the ends hanging down formally side by side gave (although I dare say unintentionally) the idea of an ecclesiastic. Indeed, many other points both in his appearance and demeanor might have very well sustained

a conception of that nature. Over his left ear, he carried, after the fashion of a modern clerk, an instrument resembling the *stylus* of the ancients. In a breast-pocket of his coat appeared conspicuously a small black volume fastened with clasps of steel. This book, whether accidentally or not, was so turned outwardly from the person as to discover the words *"Rituel Catholique"* in white letters upon the back. His entire physiognomy was interestingly saturnine—even cadaverously pale. The forehead was lofty, and deeply furrowed with the ridges of contemplation. The corners of the mouth were drawn down into an expression of the most submissive humility. There was also a clasping of the hands, as he stepped toward our hero—a deep sigh—and altogether a look of such utter sanctity as could not have failed to be unequivocally prepossessing. Every shadow of anger faded from the countenance of the metaphysician, as, having completed a satisfactory survey of his visitor's person, he shook him cordially by the hand, and conducted him to a seat.

There would however be a radical error in attributing this instantaneous transition of feeling in the philosopher, to any one of those causes which might naturally be supposed to have had an influence. Indeed, Pierre Bon-Bon, from what I have been able to understand of his disposition, was of all men the least likely to be imposed upon by any speciousness of exterior deportment. It was impossible that so accurate an observer of men and things should have failed to discover, upon the moment, the real character of the personage who had thus intruded upon his hospitality. To say no more, the conformation of his visitor's feet was sufficiently remarkable — he maintained lightly upon his head an inordinately tall hat—there was a tremulous swelling about the hinder part of his breeches—and the vibration of his coat tail was a palpable fact. Judge, then, with what feelings of satisfaction our hero found himself thrown thus at once into the society of a person for whom he had at all times entertained the most unqualified respect. He was, however, too much of the diplomatist to let escape him any intimation of his suspicions in regard to the true state of affairs. It was not his cue to appear at all conscious of the high honor he thus unexpectedly enjoyed; but, by leading his guest into conversation, to elicit some important ethical ideas, which might, in obtaining a place in his contemplated publication, enlighten the human race, and at the same time immortalize himself—ideas which, I should have added, his visitor's great age, and well-known proficiency in the science of morals, might very well have enabled him to afford.

Actuated by these enlightened views, our hero bade the gentleman sit down, while he himself took occasion to throw some fagots upon the fire, and place upon the now re-established table some bottles of *Mousseux*. Having quickly completed these operations, he drew his chair *vis-a-vis* to his companion's, and waited until the latter should open the conversation. But plans even the most skilfully matured are often thwarted in the outset of their application—and the *restaurateur* found himself *nonplussed* by the very first words of his visitor's speech.

"I see you know me, Bon-Bon," said

he; "ha! ha! ha!—he! he! he!—hi! hi! hi!—ho! ho! ho!—hu! hu! hu!"—and the Devil, dropping at once the sanctity of his demeanor, opened to its fullest extent a mouth from ear to ear, so as to display a set of jagged and fang-like teeth, and, throwing back his head, laughed long, loudly, wickedly, and uproariously, while the black dog, crouching down upon his haunches, joined lustily in the chorus, and the tabby cat, flying off at a tangent, stood up on end, and shrieked in the farthest corner of the apartment.

Not so the philosopher: he was too much a man of the world either to laugh like the dog, or by shrieks to betray the indecorous trepidation of the cat. It must be confessed, he felt a little astonishment to see the white letters which formed the words *"Rituel Catholique"* on the book in his guest's pocket, momently changing both their color and their import, and in a few seconds, in place of the original title, the words *"Regitre des Condamnes"* blazed forth in characters of red. This startling circumstance, when Bon-Bon replied to his visitor's remark, imparted to his manner an air of embarrassment which probably might not otherwise have been observed.

"Why sir," said the philosopher, "why sir, to speak sincerely—I believe you are—upon my word—the d——dest—that is to say, I think—I imagine—I *have* some faint—some *very* faint idea—of the remarkable honor——"

"Oh!—ah!—yes!—very well!" interrupted his Majesty; "say no more—I see how it is." And hereupon, taking off his green spectacles, he wiped the glasses carefully with the sleeve of his coat, and deposited them in his pocket.

If Bon-Bon had been astonished at the incident of the book, his amazement was now much increased by the spectacle which here presented itself to view. In raising his eyes, with a strong feeling of curiosity to ascertain the color of his guest's, he found them by no means black, as he had anticipated—nor gray, as might have been imagined—nor yet hazel nor blue—nor indeed yellow nor red—nor purple—nor white—nor green—nor any other color in the heavens above, or in the earth beneath, or in the waters under the earth. In short, Pierre Bon-Bon not only saw plainly that his Majesty had no eyes whatsoever, but could discover no indications of their having existed at any previous period—for the space where eyes should naturally have been was, I am constrained to say, simply a dead level of flesh.

It was not in the nature of the metaphysician to forbear making some inquiry into the sources of so strange a phenomenon, and the reply of his Majesty was at once prompt, dignified, and satisfactory.

"Eyes! my dear Bon-Bon—eyes! did you say?—oh!—ah!—I perceive! The ridiculous prints, eh, which are in circulation, have given you a false idea of my personal appearance? Eyes!—true. Eyes, Pierre Bon-Bon, are very well in their proper place—*that,* you would say, is the head?—right—the head of a worm. To *you,* likewise, these optics are indispensable—yet I will convince you that my vision is more penetrating than your own. There is a cat I see in the corner—a pretty cat—look at her—observe her well. Now, Bon-Bon, do you behold the thoughts—the thoughts, I say—the ideas—the re-

flections—which are being engendered in her pericranium? There it is, now—you do not! She is thinking we admire the length of her tail and the profundity of her mind. She has just concluded that I am the most distinguished of ecclesiastics, and that you are the most superficial of metaphysicians. Thus you see I am not altogether blind; but to one of my profession, the eyes you speak of would be merely an incumbrance, liable at any time to be put out by a toasting-iron, or a pitchfork. To you, I allow, these optical affairs are indispensable. Endeavor, Bon-Bon, to use them well;—*my* vision is the soul."

Hereupon the guest helped himself to the wine upon the table, and pouring out a bumper for Bon-Bon, requested him to drink it without scruple, and make himself perfectly at home.

"A clever book that of yours, Pierre," resumed his Majesty, tapping our friend knowingly upon the shoulder, as the latter put down his glass after a thorough compliance with his visitor's injunction. "A clever book that of yours, upon my honor. It's a work after my own heart. Your arrangement of the matter, I think, however, might be improved, and many of your notions remind me of Aristotle. That philosopher was one of my most intimate acquaintances. I liked him as much for his terrible ill temper, as for his happy knack at making a blunder. There is only one solid truth in all that he has written, and for that I gave him the hint out of pure compassion for his absurdity. I suppose, Pierre Bon-Bon, you very well know to what divine moral truth I am alluding?"

"Cannot say that I——"

"Indeed!—why it was I who told Aristotle that by sneezing, men expelled superfluous ideas through the proboscis."

"Which is — hiccup! — undoubtedly the case," said the metaphysician, while he poured out for himself another bumper of Mousseux, and offered his snuff-box to the fingers of his visitor.

"There was Plato, too," continued his Majesty, modestly declining the snuff-box and the compliment it implied—"there was Plato, too, for whom I, at one time, felt all the affection of a friend. You knew Plato, Bon-Bon?—ah, no, I beg a thousand pardons. He met me at Athens, one day, in the Parthenon, and told me he was distressed for an idea. I bade him write, down that *o nous estin aulos.* He said that he would do so, and went home, while I stepped over to the pyramids. But my conscience smote me for having uttered a truth, even to aid a friend, and hastening back to Athens, I arrived behind the philosopher's chair as he was inditing the *'aulos.'*

"Giving the lambda a fillip with my finger, I turned it upside down. So the sentence now reads *'o nous estin augos,'* and is, you perceive, the fundamental doctrines in his metaphysics."

"Were you ever at Rome?" asked the *restaurateur,* as he finished his second bottle of Mousseux, and drew from the closet a larger supply of Chambertin.

"But once, Monsieur Bon-Bon, but once. There was a time," said the Devil, as if reciting some passage from a book—"there was a time when occurred an anarchy of five years, during which the republic, bereft of all its officers, had no magistracy besides the tribunes of the people, and these were

not legally vested with any degree of executive power—at that time, Monsieur Bon-Bon—at that time *only* I was in Rome, and I have no earthly acquaintance, consequently, with any of its philosophy."*

"What do you think of—what do you think of—hiccup!—Epicurus?"

"What do I think of *whom?*" said the Devil, in astonishment, "you surely do not mean to find any fault with Epicurus! What do I think of Epicurus! Do you mean me, sir?—I am Epicurus! I am the same philosopher who wrote each of the three hundred treatises commemorated by Diogenes Laertes."

"That's a lie!" said the metaphysician, for the wine had gotten a little into his head.

"Very well!—very well, sir!—very well, indeed, sir!" said his Majesty, apparently much flattered.

"That's a lie!" repeated the *restaurateur,* dogmatically; "that's a—hiccup!—a lie!"

"Well, well, have it your own way!" said the Devil, pacifically, and Bon-Bon, having beaten his Majesty at an argument, thought it his duty to conclude a second bottle of Chambertin.

"As I was saying," resumed the visitor—"as I was observing a little while ago, there are some very *outre* notions in that book of yours Monsieur Bon-Bon. What, for instance, do you mean by all that humbug about the soul? Pray, sir, what *is* the soul?"

"The—hiccup!—soul," replied the metaphysician, referring to his MS., "is undoubtedly——"

"No, sir!"

"Indubitably——"

"No, sir!"

"Indisputably——"

"No, sir!"

"Evidently——"

"No, sir!"

"Incontrovertibly——"

"No, sir!"

"Hiccup!——"

"No, sir!"

"And beyond all question, a——"

"No, sir, the soul is no such thing!" (Here the philosopher, looking daggers, took occasion to make an end, upon the spot, of his third bottle of Chambertin.)

"Then—hiccup!—pray, sir—what—what is it?"

"That is neither here nor there, Monsieur Bon-Bon," replied his Majesty, musingly. "I have tasted—that is to say, I have known some very bad souls, and some too—pretty good ones." Here he smacked his lips, and, having unconsciously let fall his hand upon the volume in his pocket, was seized with a violent fit of sneezing.

He continued.

"There was the soul of Cratinus—passable: Aristophanes—racy: Plato—exquisite—not *your* Plato, but Plato the comic poet; your Plato would have turned the stomach of Cerberus—faugh! Then let me see! there were Naevius, and Andronicus, and Plautus, and Terentius. Then there were Lucilius, and Catullus, and Naso, and Quintus Flaccus,—dear Quinty! as I called him when he sung a *seculare* for my amusement, while I toasted him, in pure good humor, on a fork. But they want *flavor,* these Romans. One fat Greek is worth a dozen of them, and besides will *keep,* which cannot be

---

* Ils ecrivaient sur la Philosophie (*Cicero, Lucretius, Seneca*) mais c'etait la Philosophie Grecque.—*Condorcet.*

said of a Quirite. Let us taste your Sauterne."

Bon-Bon had by this time made up his mind to *nil admirari*, and endeavored to hand down the bottles in question. He was, however, conscious of a strange sound in the room like the wagging of a tail. Of this, although extremely indecent in his Majesty, the philosopher took no notice:—simply kicking the dog, and requesting him to be quiet. The visitor continued:

"I found that Horace tasted very much like Aristotle;—you know I am fond of variety. Terentius I could not have told from Menander. Naso, to my astonishment, was Nicander in disguise. Virgilius had a strong twang of Theocritus. Martial put me much in mind of Archilochus—and Titus Livius was positively Polybius and none other."

"Hiccup!" here replied Bon-Bon, and his Majesty proceeded:

"But if I *have a penchant*, Monsieur Bon-Bon—if I *have a penchant*, it is for a philosopher. Yet, let me tell you, sir, it is not every dev—I mean it is not every gentleman who knows how to *choose* a philosopher. Long ones are *not* good; and the best, if not carefully shelled, are apt to be a little rancid on account of the gall."

"Shelled!"

"I mean taken out of the carcass."

"What do you think of a—hiccup!—physician?"

"*Don't* mention them!—ugh! ugh!" (Here his Majesty retched violently.) "I never tasted but one—that rascal Hippocrates!—smelt of asafoetida—ugh! ugh! ugh!—caught a wretched cold washing him in the Styx—and after all he gave me the cholera-morbus."

"The—hiccup!—wretch!" ejaculated Bon-Bon, "the—hiccup!—absorption of a pill-box!"—and the philosopher dropped a tear.

"After all," continued the visitor, "after all, if a dev—if a gentleman wishes to *live*, he must have more talents than one or two; and with us a fat face is an evidence of diplomacy."

"How so?"

"Why, we are sometimes exceedingly pushed for provisions. You must know that, in a climate so sultry as mine, it is frequently impossible to keep a spirit alive for more than two or three hours; and after death, unless pickled immediately (and a pickled spirit is *not* good), they will—smell—you understand, eh? Putrefaction is always to be apprehended when the souls are consigned to us in the usual way."

"Hiccup!—hiccup!—good God! how *do* you manage?"

Here the iron lamp commenced swinging with redoubled violence, and the Devil half started from his seat;—however, with a slight sigh, he recovered his composure, merely saying to our hero in a low tone: "I tell you what, Pierre Bon-Bon, we *must* have no more swearing."

The host swallowed another bumper, by way of denoting thorough comprehension and acquiescence, and the visitor continued.

"Why, there are *several* ways of managing. The most of us starve: some put up with the pickle: for my part I purchase my spirits *vivente corpore*, in which case I find they keep very well."

"But the body! — hiccup! — the body!!"

"The body, the body—well, what of the body?—oh! ah! I perceive. Why, sir, the body is not *at all* affected by the

transaction. I have made innumerable purchases of the kind in my day, and the parties never experienced any inconvenience. There were Cain and Nimrod, and Nero, and Caligula, and Dionysius, and Pisistratus, and—and a thousand others, who never knew what it was to have a soul during the latter part of their lives; yet, sir, these men adorned society. Why isn't there A——, now, whom you know as well as I? Is *he* not in possession of his faculties, mental and corporeal? Who writes a keener epigram? Who reasons more wittily? Who—but stay! I have his agreement in my pocket-book."

Thus saying, he produced a red leather wallet, and took from it a number of papers. Upon some of these Bon-Bon caught a glimpse of the letters *Machi—Maza—Robesp*—with the words *Caligula, George, Elizabeth.* His Majesty selected a narrow slip of parchment, and from it read aloud the following words:

"In consideration of certain mental endowments which it is unnecessary to specify, and in further consideration of one thousand louis d'or, I being aged one year and one month, do hereby make over to the bearer of this agreement all my right, title, and appurtenance in the shadow called my soul. (Signed) A . . . ."* (Here His Majesty repeated a name which I did not feel justified in indicating more unequivocally.)

"A clever fellow that," resumed he; "but, like you, Monsieur Bon-Bon, he was mistaken about the soul. The soul a shadow, truly! The soul a shadow; Ha! ha! ha!—he! he! he!—hu! hu! hu! Only think of a fricasseed shadow!"

"*Only* think—hiccup!—of a fricasseed shadow!" exclaimed our hero, whose faculties were becoming much illuminated by the profundity of his Majesty's discourse.

"Only think of a hiccup!—fricasseed shadow!! Now, damme!—hiccup!—humph! If *I* would have been such a—hiccup!—nincompoop! *My* soul, Mr.—humph!"

"*Your* soul, Monsieur Bon-Bon?"

"Yes, sir—hiccup!—*my* soul is——"

"What, sir?"

"*No* shadow, damme!"

"Did you mean to say——"

"Yes, sir, *my* soul is—hiccup!—humph!—yes, sir."

"Did you not intend to assert——"

"*My* soul is — hiccup! — peculiarly for—hiccup!—a——"

"What, sir?"

"Stew."

"Ha!"

"Soufflee."

"Eh!"

"Fricassee."

"Indeed!"

"Ragout and fricandeau—and see here, my good fellow! I'll let you have it — hiccup! — a bargain." Here the philosopher slapped his Majesty upon the back.

"Couldn't think of such a thing," said the latter calmly, at the same time rising from his seat. The metaphysician stared.

"Am supplied at present," said his Majesty.

"Hic-cup!—e-h?" said the philosopher.

"Have no funds on hand."

"What?"

---

* Quere-Arouet?

"Besides, very unhandsome in me—"
"Sir!"
"To take advantage of——"
"Hic-cup!"
"Your present disgusting and ungentlemanly situation."

Here the visitor bowed and withdrew—in what manner could not precisely be ascertained—but in a well-concerted effort to discharge a bottle at "the villain," the slender chain was severed that depended fom the ceiling, and the metaphysician prostrated by the downfall of the lamp.

The Duc De L'Omelette

(First published in *Southern Literary Messenger*, February, 1836.—Ed.)

And stepped at once into a cooler clime.
—*Cowper.*

KEATS fell by a criticism. Who was it died of *"The Andromache?"** Ignoble souls!—De L'Omelette perished of an ortolan. *L'histoire en est breve.* Assist me, Spirit of Apicius!

A golden cage bore the little winged wanderer, enamoured, melting, indolent, to the *Chaussee D'Antin,* from its home in far Peru. From its queenly possessor La Bellissima, to the Duc De L'Omelette, six peers of the empire conveyed the happy bird.

That night the Duc was to sup alone. In the privacy of his bureau he reclined languidly on that ottoman for which he sacrificed his loyalty in outbidding his king—the notorious ottoman of Cadet.

He buries his face in the pillow. The clock strikes! Unable to restrain his feelings, his Grace swallows an olive. At this moment the door gently opens to the sound of soft music, and lo! the most delicate of birds is before the most enamoured of men! But what inexpressible dismay now overshadows the countenance of the Duc?—*"Horreur! — chien! — Baptiste! — l'oiseau! ah, bon Dieu! cet oiseau modeste que tu as deshabille de ses plumes, et que tu as servi sans papier!"* It is superfluous to say more:—the Duc expired in a paroxysm of disgust. * * *

"Ha! ha! ha!" said his Grace on the third day after his decease.

"He! he! he!" replied the Devil faintly, drawing himself up with an air of *hauteur.*

"Why, surely you are not serious," retorted De L'Omelette. "I have sinned —*c' est vrai*—but, my good sir, consider!—you have no actual intention of putting such—such barbarous threats into execution."

"No *what?"* said his majesty—"come, sir, strip!"

"Strip, indeed! very pretty i' faith! no, sir, I shall *not* strip. Who are you, pray, that I, Duc De L'Omelette, Prince de Foie-Gras, just come of age, author of the 'Mazurkiad,' and member of the Academy, should divest myself at your bidding of the sweetest pantaloons ever made by Bourdon, the daintiest *robe-de-chambre* ever put to-

* See "Marginalia."—Ed.

gether by Rombert—to say nothing of the taking my hair out of paper—not to mention the trouble I should have in drawing off my gloves?"

"Who am I?—ah, true! I am Baal-Zebub, Prince of the Fly. I took thee, just now, from a rose-wood coffin inlaid with ivory. Thou wast curiously scented, and labelled as per invoice. Belial sent thee,—my Inspector of Cemeteries. The pantaloons, which thou sayest were made by Bourdon, are an excellent pair of linen drawers, and thy *robe-de-chambre* is a shroud of no scanty dimensions."

"Sir!" replied the Duc, "I am not to be insulted with impunity!—Sir! I shall take the earliest opportunity of avenging this insult!—Sir! you shall hear from me! In the meantime *au revoir!*"—and the Duc was bowing himself out of the Satanic presence, when he was interrupted and brought back by a gentleman in waiting. Hereupon his Grace rubbed his eyes, yawned, shrugged his shoulders, reflected. Having become satisfied of his identity, he took a bird's-eye view of his whereabouts.

The apartment was superb. Even De L'Omelette pronounced it *bien comme il faut*. It was not its length nor its breadth,—but its height—ah, that was appalling!—There was no ceiling—certainly none—but a dense whirling mass of fiery-colored clouds. His Grace's brain reeled as he glanced upward. From above, hung a chain of an unknown blood-red metal—its upper end lost, like the city of Boston, *parmi les nues*. From its nether extremity swung a large cresset. The Duc knew it to be a ruby; but from it there poured a light so intense, so still, so terrible, Persia never worshipped such —Gheber never imagined such—Mussulman never dreamed of such when, drugged with opium, he has tottered to a bed of poppies, his back to the flowers, and his face to the God Apollo. The Duc muttered a slight oath, decidedly approbatory.

The corners of the room were rounded into niches. Three of these were filled with statues of gigantic proportions. Their beauty was Grecian, their deformity Egyptian, their *tout ensemble* French. In the fourth niche the statue was veiled; it was *not* colossal. But then there was a taper ankle, a sandalled foot. De L'Omelette pressed his hand upon his heart, closed his eyes, raised them, and caught his Satanic Majesty—in a blush.

But the paintings!—Kupris! Astarte! Astoreth!—a thousand and the same! And Rafaelle has beheld them! Yes, Rafaelle has been here; for did he not paint the ——? and was he not consequently damned? The paintings! —the paintings! O luxury! O love!—who, gazing on those forbidden beauties, shall have eyes for the dainty devices of the golden frames that besprinkled, like stars, the hyacinth and the porphyry walls?

But the Duc's heart is fainting within him. He is not, however, as you suppose, dizzy with magnificence, nor drunk with the ecstatic breath of those innumerable censers. *C'est vrai que de toutes ces choses il a pense beaucoup—mais!* The Duc De L'Omelette is terror-stricken; for, through the lurid vista which a single uncurtained window is affording, lo! gleams the most ghastly of all fires!

Le pauvre Duc! He could not help

imagining that the glorious, the voluptuous, the never-dying melodies which pervaded that hall, as they passed filtered and transmuted through the alchemy of the enchanted window-panes, were the wailings and the howlings of the hopeless and the damned! And there, too!—there!—upon the ottoman!—who could *he* be?—he, the *petitmaitre*—no, the Deity—who sat as if carved in marble, *et qui sourit*, with his pale countenance, *si amerement?*

Mais il faut agir—that is to say, a Frenchman never faints outright. Besides, his Grace hated a scene—De L'Omelette is himself again. There were some foils upon a table—some points also. The Duc had studied under B——; *il avait tue ses six hommes*. Now, then, *il peut s'echapper*. He measures two points, and, with a grace inimitable, offers his Majesty the choice. *Horreur!* his Majesty does not fence!

Mais il joue!—how happy a thought! —but his Grace had always an excellent memory. He had dipped in the *"Diable"* of the Abbe Gualtier. Therein it is said *"que le Diable n'ose pas refuser un jeu d'ecarte."*

But the chances—the chances! True —desperate; but scarcely more desperate than the Duc. Besides, was he not in the secret?—had he not skimmed over Pere Le Brun?—was he not a member of the Club Vingt-un? *"Si je perds,"* said he, *"je serai deux fois perdu*—I shall be doubly damned—*voila tout!* (Here his Grace shrugged his shoulders.) *Si je gagne, je reviendrai a mes ortolans—que les cartes soient preparees!"*

His Grace was all care, all attention —his Majesty all confidence. A spectator would have thought of Francis and Charles. His Grace thought of his game. His Majesty did not think; he shuffled. The Duc cut.

The cards are dealt. The trump is turned—it is—it is—the king! No—it was the queen. His Majesty cursed her masculine habiliments. De L'Omelette placed his hand upon his heart.

They play. The Duc counts. The hand is out. His Majesty counts heavily, smiles, and is taking wine. The Duc slips a card.

"C'est a vous a faire," said his Majesty, cutting. His Grace bowed, dealt, and arose from the table *en presentant le Roi.*

His Majesty looked chagrined.

Had Alexander not been Alexander, he would have been Diogenes; and the Duc assured his antagonist in taking leave, *"que s'il n'eut ete De L'Omelette il n'aurait point d'objection d'etre le Diable."*

Never Bet the Devil Your Head

A MORAL TALE

(This tale under the title, "Never Bet Your Head," was published in *Graham's Magazine*, September, 1841.—Ed.)

"Con tal que las costumbres de un autor," says Don Thomas de las Torres, in the preface to his "Amatory Poems" *"sean puras y castas, importo muy poco que no sean igualmente severas sus obras"*—meaning, in plain English, that provided the morals of an author are pure personally, it signifies nothing what are the morals of his books. We presume that Don Thomas is now in Purgatory for the assertion. It would be a clever thing, too, in the way of poetical justice, to keep him there until his "Amatory Poems" get out of print, or are laid definitely upon the shelf through lack of readers. Every fiction *should have* a moral; and, what is more to the purpose, the critics have discovered that every fiction *has*. Philip Melanchthon, some time ago, wrote a commentary upon the "Batrachomyomachia," and proved that the poet's object was to excite a distaste for sedition. Pierre la Seine, going a step farther, shows that the intention was to recommend to young men temperance in eating and drinking. Just so, too, Jacobus Hugo has satisfied himself that, by Euenis, Homer meant to insinuate John Calvin; by Antinous, Martin Luther; by the Lotophagi, Protestants in general; and, by the Harpies, the Dutch. Our more modern Scholiasts are equally acute. These fellows demonstrate a hidden meaning in "The Antediluvians," a parable in "Powhatan," new views in "Cock Robin," and transcendentalism in "Hop O' My Thumb." In short, it has been shown that no man can sit down to write without a very profound design. Thus to authors in general much trouble is spared. A novelist, for example, need have no care of his moral. It is there—that is to say, it is somewhere—and the moral and the critics can take care of themselves. When the proper time arrives, all that the gentleman intended, and all that he did not intend, will be brought to light, in the *Dial*, or the *Down-Easter*, together with all that he ought to have intended, and the rest that he clearly meant to intend:—so that it will all come very straight in the end.

There is no just ground, therefore, for the charge brought against me by certain ignoramuses—that I have never written a moral tale, or, in more precise words, a tale with a moral. They are not the critics predestined to bring me out, and *develop* my morals:—that is the secret. By and by the *North American Quarterly Humdrum* will make them ashamed of their stupidity. In the meantime, by way of staying execution—by way of mitigating the accusations against me—I offer the sad history appended,—a history about whose obvious moral there can be no question whatever, since he who runs may read it in the large capitals which form the title of the tale. I should have credit for this arrange-

ment—a far wiser one than that of La Fontaine and others, who reserve the impression to be conveyed until the last moment, and thus sneak it in at the fag end of their fables.

Defuncti injuria ne afficiantur was a law of the twelve tables, and *De mortuis nil nisi bonum* is an excellent injunction—even if the dead in question be nothing but dead small beer. It is not my design, therefore, to vituperate my deceased friend, Toby Dammit. He was a sad dog, it is true, and a dog's death it was that he died; but he himself was not to blame for his vices. They grew out of a personal defect in his mother. She did her best in the way of flogging him, while an infant—for duties to her well-regulated mind were always pleasures, and babies, like tough steaks, or the modern Greek olive trees, are invariably the better for beating—but, poor woman! she had the misfortune to be left-handed, and a child flogged left-handedly had better be left unflogged. The world revolves from right to left. It will not do to whip a baby from left to right. If each blow in the proper direction drives an evil propensity out, it follows that every thump in an opposite one knocks its quota of wickedness in. I was often present at Toby's chastisements, and, even by the way in which he kicked, I could perceive that he was getting worse and worse every day. At last I saw, through the tears in my eyes, that there was no hope of the villain at all, and one day when he had been cuffed until he grew so black in the face that one might have mistaken him for a little African, and no effect had been produced beyond that of making him wriggle himself into a fit, I could stand it no longer, but went down upon my knees forthwith, and, uplifting my voice, made prophecy of his ruin.

The fact is that his precocity in vice was awful. At five months of age he used to get into such passions that he was unable to articulate. At six months, I caught him gnawing a pack of cards. At seven months he was in the constant habit of catching and kissing the female babies. At eight months he peremptorily refused to put his signature to the Temperance pledge. Thus he went on increasing in iniquity, month after month, until, at the close of the first year, he not only insisted upon wearing *moustaches,* but had contracted a propensity for cursing and swearing, and for backing his assertions by bets.

Through this latter most ungentlemanly practice, the ruin which I had predicted to Tobby Dammit overtook him at last. The fashion had "grown with his growth and strengthened with his strength," so that, when he came to be a man, he could scarcely utter a sentence without interlarding it with a proposition to gamble. Not that he actually *laid* wagers—no. I will do my friend the justice to say that he would as soon have laid eggs. With him the thing was a mere formula—nothing more. His expressions on this head had no meaning attached to them whatever. They were simple if not altogether innocent expletives—imaginative phrases wherewith to round off a sentence. When he said "I'll bet you so and so," nobody ever thought of taking him up; but still I could not help thinking it my duty to put him down. The habit was an immoral one, and so I told him. It was a vulgar one—this

I begged him to believe. It was discountenanced by society—here I said nothing but the truth. It was forbidden by act of Congress—here I had not the slightest intention of telling a lie. I remonstrated—but to no purpose. I demonstrated—in vain. I entreated—he smiled. I implored—he laughed. I preached—he sneered. I threatened—he swore. I kicked him—he called for the police. I pulled his nose—he blew it, and offered to bet the devil his head that I would not venture to try that experiment again.

Poverty was another vice which the peculiar physical deficiency of Dammit's mother had entailed upon her son. He was detestably poor; and this was the reason, no doubt, that his expletive expressions about betting, seldom took a pecuniary turn. I will not be bound to say that I ever heard him make use of such a figure of speech as "I'll bet you a dollar." It was usually "I'll bet you what you please," or "I'll bet you what you dare," or "I'll bet you a trifle," or else, more significantly still, *"I'll bet the Devil my head."*

This latter form seemed to please him best,—perhaps because it involved the least risk; for Dammit had become excessively parsimonious. Had any one taken him up, his head was small, and thus his loss would have been small too. But these are my own reflections, and I am by no means sure that I am right in attributing them to him. At all events the phrase in question grew daily in favor, notwithstanding the gross impropriety of a man betting his brains like bank-notes,—but this was a point which my friend's perversity of disposition would not permit him to comprehend. In the end, he abandoned all other forms of wager, and gave himself up to *"I'll bet the Devil my head,"* with a pertinacity and exclusiveness of devotion that displeased not less than it surprised me. I am always displeased by circumstances for which I cannot account. Mysteries force a man to think, and so injure his health. The truth is, there was something in *the air* with which Mr. Dammit was wont to give utterance to his offensive expression—something in his *manner* of enunciation—which at first interested, and afterward made me very uneasy—something which, for want of a more definite term at present, I must be permitted to call *queer;* but which Mr. Coleridge would have called mystical, Mr. Kant pantheistical, Mr. Carlyle twistical, and Mr. Emerson hyperquizzitistical. I began not to like it at all. Mr. Dammit's soul was in a perilous state. I resolved to bring all my eloquence into play to save it. I vowed to serve him as St. Patrick, in the Irish chronicle, is said to have served the toad,—that is to say, "awaken him to a sense of his situation." I addressed myself to the task forthwith. Once more I betook myself to remonstrance. Again I collected my energies for a final attempt at expostulation.

When I had made an end of my lecture, Mr. Dammit indulged himself in some very equivocal behavior. For some moments he remained silent, merely looking me inquisitively in the face. But presently he threw his head to one side, and elevated his eyebrows to a great extent. Then he spread out the palms of his hands and shrugged up his shoulders. Then he winked with the right eye. Then he repeated the operation with the left. Then he shut

them both up very tight. Then he opened them both so very wide that I became seriously alarmed for the consequences. Then, applying his thumb to his nose, he thought proper to make an indescribable movement with the rest of his fingers. Finally, setting his arms a-kimbo, he condescended to reply.

I can call to mind only the heads of his discourse. He would be obliged to me if I would hold my tongue. He wished none of my advice. He despised all my insinuations. He was old enough to take care of himself. Did I still think him baby Dammit? Did I mean to say any thing against his character? Did I intend to insult him? Was I a fool? Was my maternal parent aware, in a word, of my absence from the domiciliary residence? He would put this latter question to me as to a man of veracity, and he would bind himself to abide by my reply. Once more he would demand explicitly if my mother knew that I was out. My confusion, he said, betrayed me, and he would be willing to bet the Devil his head that she did not.

Mr. Dammit did not pause for my rejoinder. Turning upon his heel, he left my presence with undignified precipitation. It was well for him that he did so. My feelings had been wounded. Even my anger had been aroused. For once I would have taken him up upon his insulting wager. I would have won for the Arch-Enemy Mr. Dammit's little head—for the fact is, my mamma *was* very well aware of my merely temporary absence from home.

But *Khoda shefa midehed*—Heaven gives relief—as the Mussulmans say when you tread upon their toes. It was in pursuance of my duty that I had been insulted, and I bore the insult like a man. It now seemed to me, however, that I had done all that could be required of me, in the case of this miserable individual, and I resolved to trouble him no longer with my counsel, but to leave him to his conscience and himself. But although I forebore to intrude with my advice, I could not bring myself to give up his society altogether. I even went so far as to humor some of his less reprehensible propensities; and there were times when I found myself lauding his wicked jokes, as epicures do mustard, with tears in my eyes:—so profoundly did it grieve me to hear his evil talk.

One fine day, having strolled out together, arm in arm, our route led us in the direction of a river. There was a bridge, and we resolved to cross it. It was roofed over, by way of protection from the weather, and the archway, having but few windows, was thus very uncomfortably dark. As we entered the passage, the contrast between the external glare and the interior gloom struck heavily upon my spirits. Not so upon those of the unhappy Dammit, who offered to bet the Devil his head that I was hipped. He seemed to be in an unusual good humor. He was excessively lively—so much so that I entertained I know not what of uneasy suspicion. It is not impossible that he was affected with the transcendentals. I am not well enough versed, however, in the diagnosis of this disease to speak with decision upon the point; and unhappily there were none of my friends of the *Dial* present. I suggest the idea, nevertheless, be-

cause of a certain species of austere Merry-Andrewism which seemed to beset my poor friend, and caused him to make quite a Tom-Fool of himself. Nothing would serve him but wriggling and skipping about under and over every thing that came in his way; now shouting out, and now lisping out, all manner of odd little and big words, yet preserving the gravest face in the world all the time. I really could not make up my mind whether to kick or to pity him. At length, having passed nearly across the bridge, we approached the termination of the footway, when our progress was impeded by a turnstile of some height. Through this I made my way quietly, pushing it around as usual. But this turn would not serve the turn of Mr. Dammit. He insisted upon leaping the stile, and said he could cut a pigeon-wing over it in the air. Now this, conscientiously speaking, I did not think he could do. The best pigeon-winger over all kinds of style was my friend Mr. Carlyle, and as I knew *he* could not do it, I would not believe that it could be done by Toby Dammit. I therefore told him, in so many words, that he was a braggadocio, and could not do what he said. For this I had reason to be sorry afterward;—for he straightway offered to *bet the Devil his head* that he could.

I was about to reply, notwithstanding my previous resolutions, with some remonstrance against his impiety, when I heard, close at my elbow, a slight cough, which sounded very much like the ejaculation *"ahem!"* I started, and looked about me in surprise. My glance at length fell into a nook of the framework of the bridge, and upon the figure of a little lame old gentleman of venerable aspect. Nothing could be more reverend than his whole appearance; for he not only had on a full suit of black, but his shirt was perfectly clean and the collar turned very neatly down over a white cravat, while his hair was parted in front like a girl's. His hands were clasped pensively together over the stomach, and his two eyes were carefully rolled up into the top of his head.

Upon observing him more closely, I perceived that he wore a black silk apron over his small-clothes; and this was a thing which I thought very odd. Before I had time to make any remark, however, upon so singular a circumstance, he interrupted me with a second *"ahem!"*

To this observation I was not immediately prepared to reply. The fact is, remarks of this laconic nature are nearly unanswerable. I have known a Quarterly Review *non-plussed* by the word *"Fudge!"* I am not ashamed to say, therefore, that I turned to Mr. Dammit for assistance.

"Dammit," said I, "what are you about? don't you hear—the gentleman says *'ahem!'* " I looked sternly at my friend while I thus addressed him; for, to say the truth, I felt particularly puzzled, and when a man is particularly puzzled he must knit his brows and look savage, or else he is pretty sure to look like a fool.

"Dammit," observed I—although this sounded very much like an oath, than which nothing was further from my thoughts—"Dammit," I suggested—"the gentleman says *'ahem!'* "

I do not attempt to defend my remark on the score of profundity; I did not think it profound myself; but I

have noticed that the effect of our speeches is not always proportionate with their importance in our own eyes; and if I had shot Mr. D. through and through with a Paixhan bomb, or knocked him on the head with the "Poets and Poetry of America," he could hardly have been more discomfited than when I addressed him with those simple words: "Dammit, what are you about?—don't you hear?—the gentleman says *'ahem!'*"

"You don't say so?" gasped he at length, after turning more colors than a pirate runs up, one after the other, when chased by a man-of-war. "Are you quite sure he said *that?* Well, at all events I am in for it now, and may as well put a bold face upon the matter. Here goes, then—*ahem!*"

At this the little old gentleman seemed pleased—God only knows why. He left his station at the nook of the bridge, limped forward with a gracious air, took Dammit by the hand and shook it cordially, looking all the while straight up in his face with an air of the most unadulterated benignity which it is possible for the mind of man to imagine.

"I am quite sure you will win it, Dammit," said he, with the frankest of all smiles, "but we are obliged to have a trial, you know, for the sake of mere form."

"Ahem!" replied my friend, taking off his coat, with a deep sigh, tying a pocket-handkerchief around his waist, and producing an unaccountable alteration in his countenance by twisting up his eyes and bringing down the corners of his mouth—"ahem!" And "ahem!" said he again, after a pause; and not another word more than "ahem!" did I ever know him to say after that. "Aha!" thought I, without expressing myself aloud,—"this is quite a remarkable silence on the part of Toby Dammit, and is no doubt a consequence of his verbosity upon a previous occasion. One extreme induces another. I wonder if he has forgotten the many unanswerable questions which he propounded to me so fluently on the day when I gave him my last lecture? At all events, he is cured of the transcendentals."

"Ahem!" here replied Toby, just as if he had been reading my thoughts, and looking like a very old sheep in a revery.

The old gentleman now took him by the arm, and led him more into the shade of the bridge—a few paces back from the turnstile. "My good fellow," said he, "I make it a point of conscience to allow you this much run. Wait here, till I take my place by the stile, so that I may see whether you go over it handsomely, and transcendentally, and don't omit any flourishes of the pigeon-wing. A mere form, you know. I will say 'one, two, three, and away.' Mind you, start at the word 'away.'" Here he took his position by the stile, paused a moment as if in profound reflection, then *looked up* and, I thought, smiled very slightly, then tightened the strings of his apron, then took a long look at Dammit, and finally gave the word as agreed upon—

One—two—three—and—away!

Punctually at the word "away," my poor friend set off in a strong gallop. The style was not very high, like Mr. Lord's—nor yet very low, like that of

Mr. Lord's reviewers, but upon the whole I made sure that he would clear it. And then what if he did not?—ah, that was the question—what if he did not? "What right," said I, "had the old gentleman to make any other gentleman jump? The little old dot-and-carry-one! who is *he?* If he asks *me* to jump, I won't do it, that's flat, and I don't care who *the devil he is.*" The bridge, as I say, was arched and covered in, in a very ridiculous manner, and there was a most uncomfortable echo about it at all times—an echo which I never before so particularly observed as when I uttered the four last words of my remark.

But what I said, or what I thought, or what I heard, occupied only an instant. In less than five seconds from his starting, my poor Toby had taken the leap. I saw him run nimbly, and spring grandly from the floor of the bridge, cutting the most awful flourishes with his legs as he went up. I saw him high in the air, pigeon-winging it to admiration just over the top of the stile; and of course I thought it an unusually singular thing that he did not *continue* to go over. But the whole leap was the affair of a moment, and, before I had a chance to make any profound reflections, down came Mr. Dammit on the flat of his back, on the same side of the stile from which he had started. At the same instant I saw the old gentleman limping off at the top of his speed, having caught and wrapt up in his apron something that fell heavily into it from the darkness of the arch just over the turnstile. At all this I was much astonished; but I had no leisure to think, for Dammit lay particularly still, and I concluded that his feelings had been hurt, and that he stood in need of my assistance. I hurried up to him and found that he had received what might be termed a serious injury. The truth is, he had been deprived of his head, which after a close search I could not find anywhere; so I determined to take him home and send for the homœopathists. In the meantime a thought struck me, and I threw open an adjacent window of the bridge, when the sad truth flashed upon me at once. About five feet just above the top of the turnstile, and crossing the arch of the foot-path so as to constitute a brace, there extended a flat iron bar, lying with its breadth horizontally, and forming one of a series that served to strengthen the structure throughout its extent. With the edge of this brace it appeared evident that the neck of my unfortunate friend had come precisely in contact.

He did not long survive his terrible loss. The homœopathists did not give him little enough physic, and what little they did give him he hesitated to take. So in the end he grew worse, and at length died, a lesson to all riotous livers. I bedewed his grave with my tears, worked a *bar* sinister on his family escutcheon, and, for the general expenses of his funeral, sent in my very moderate bill to the transcendentalists. The scoundrels refused to pay it, so I had Mr. Dammit dug up at once, and sold him for dog's meat.

Why the Little Frenchman Wears His Hand in a Sling

(First appeared in an edition of 1840.—Ed.)

It's on my visiting cards sure enough (and it's them that's all o' pink satin paper) that inny gintleman that plases may behould the intheristhin words, "Sir Pathrick O'Grandison, Barronitt, 39 Southampton Row, Russell Square, Parrish o' Bloomsbury." And shud ye be wantin' to diskiver who is the pink of purliteness quite, and the laider of the hot tun in the houl city o' Lonon—why it's jist mesilf. And fait that same is no wonder at all at all (so be plased to stop curlin your nose), for every inch o' the six wakes that I've been a gintleman, and left aff wid the bogthrothing to take up wid the Barronissy, it's Pathrick that's been living like a houly imperor, and gitting the iddication and the graces. Och! and wouldn't it be a blessed thing for your spirrits if ye cud lay your two peepers jist upon Sir Pathrick O'Grandison, Barronitt, when he is all riddy drissed for the hopperer, or stipping into the Brisky for the drive into the Hyde Park. But it's the illigant big figgur that I ave, for the rason o' which all the ladies fall in love wid me. Isn't it my own swate silf now that'll missure the six fut, and the three inches more nor that, in me stockings, and that am excadingly will proportioned all over to match? And is it ralelly more than three fut and a bit that there is, inny how, of the little ould furrener Frinchman that lives jist over the way, and that's a-oggling and a-goggling the houl day, (and bad luck to him,) at the purty widdy Misthress Tracle that's my own nixt-door neighbor, (God bliss her!) and a most particuler frind and acquaintance? You percave the little spalpeen is summat down in the mouth, and wears his lift hand in a sling; and it's for that same thing, by yur lave, that I'm going to give you the good rason.

The truth of the houl matter is jist simple enough; for the very first day that I com'd from Connaught, and showd my swate little silf in the strait to the widdy, who was looking through the windy, it was a gone case althegither wid the heart o' the purty Misthress Tracle. I percaved it, ye see, all at once, and no mistake, and that's God's truth. First of all it was up wid the windy in a jiffy, and thin she threw open her two peepers to the itmost, and thin it was a little gould spy-glass that she clapped tight to one o' them, and divil may burn me if it didn't spake to me as plain as a peeper cud spake, and says it, through the spy-glass: "Och! the tip o' the mornin' to ye, Sir Patrick O'Grandison, Barronitt, mavourneen; and it's a nate gintleman that ye are, sure enough, and it's mesilf and me forten jist that'll be at yur sarvice, dear, inny time o' day at all at all for the asking." And it's not mesilf ye wud have to be bate in the purliteness; so I made her a bow that wud ha' broken yur

heart altegither to behould, and thin I pulled aff me hat with a flourish, and thin I winked at her hard wid both eyes, as much as to say: "True for you, yer a swate little crature, Mrs. Tracle, me darlint, and I wish I may be drownthed dead in a bog, if it's not mesilf, Sir Pathrick O'Grandison, Barronitt, that'll make a houl bushel o' love to yur leddyship, in the twinkling o' the eye of a Londonderry purraty."

And it was the nixt mornin', sure, jist as I was making up me mind whither it wouldn't be the purlite thing to sind a bit o' writin' to the widdy by way of a love-litter, when up com'd the delivery servant wid an illegant card, and he tould me that the name on it (for I niver could rade the copperplate printin' on account of being lifthanded) was all about Mounseer, the Count, A Goose, Look-aisy, Maiter-di-dauns, and that the houl of the divilish lingo was the spalpeeny long name of the little ould furrener Frinchman as lived over the way.

And jist wid that in cum'd the little willain himself, and thin he made me a broth of a bow, and thin he said he had ounly taken the liberty of doing me the honor of the giving me a cali, a thin he went on to palaver at a great rate, and divil the bit did I comprehind what he wud be afther the tilling me at all at all, excepting and saving that he said "pully wou, woolly wou," and tould me, among a bushel o' lies, bad luck to him, that he was mad for the love o' my widdy Misthress Tracle, and that my widdy Mrs. Tracle had a puncheon for *him*.

At the hearin' of this, ye may swear, though, I was as mad as a grasshopper, but I remimbered that I was Sir Pathrick O'Grandison, Barronitt, and that it wasn't althegither gentaal to lit the anger git the upper hand o' the purliteness, so I made light o' the matter and kipt dark, and got quite sociable wid the little chap, and afther a while what did he do but ask me to go wid him to the widdy's, saying he wud give me the feshionable inthroduction to her leddyship.

"Is it there ye are?" said I thin to mesilf, "and it's thrue for you, Patrick, that ye're the fortunittest mortal in life. We'll soon see now whither it's your swate silf, or whither it's little Mounseer Maiter-di-dauns, that Misthress Tracle is head and ears in the love wid."

Wid that we wint aff to the widdy's, next door, and ye may well say it was an illegant place; so it was. There was a carpet all over the floor, and in one corner there was a forty-pinny and a jew's-harp and the divil knows what ilse, and in another corner was a sofy, the beautifullest thing in all natur, and sitting on the sofy, sure enough, there was the swate little angel, Misthress Tracle.

"The tip o' the mornin' to ye," says I, "Mrs. Tracle," and thin I made sich an illegant obaysance that it wud ha quite althegither bewildered the brain o' ye.

"Wully woo, pully woo, plump in the mud," says the little furrenner Frinchman, "and sure Mrs. Tracle," says he, that he did, "isn't this gintleman here jist his reverence Sir Pathrick O'Grandison, Barronitt, and isn't he althegither and entirely the most particular frind and acquaintance that I have in the houl world?"

And wid that the widdy, she gits up from the sofy, and makes the swatest curthchy nor iver was seen; and thin down she sits like an angel; and thin, by the powers, it was that little spalpeen Mounseer Maiter-di-dauns that plumped his silf right down by the right side of her. Och hon! I ixpicted the two eyes o' me wud ha cum'd out of my head on the spot, I was so disperate mad! Howiver, "Bait who!" says I, after awhile. "Is it there ye are, Mounseer Maiter-di-dauns?" and so down I plumped on the lift side of her leddyship, to be aven with the willain. Botheration! it wud ha done your heart good to percave the illegant double wink that I gived her jist thin right in the face with both eyes.

But the little ould Frinchman he niver beginned to suspict me at all at all, and disperate hard it was he made the love to her leddyship. "Woully wou," says he, "Pully wou," says he, "Plump in the mud," says he.

"That's all to no use, Mounseer Frog, mavourneen," thinks I; and I talked as hard and as fast as I could all the while, and throth it was mesilf jist that divarted her leddyship complately and intirely, by rason of the illegant conversation that I kipt up wid her all about the dear bogs of Connaught. And by and by she gived me such a swate smile, from one ind of her mouth to the ither, that it made me as bould as a pig, and I jist took hould of the ind of her little finger in the most dilikittest manner in natur, looking at her all the while out o' the whites of my eyes.

And then ounly percave the cuteness of the swate angel, for no sooner did she obsarve that I was afther the squazing of her flipper, than she up wid it in a jiffy, and put it away behind her back, jist as much as to say, "Now thin, Sir Pathrick O'Grandison, there's a bitther chance for ye, mavourneen, for it's not altogether the gentaal thing to be afther the squazing of my flipper right full in the sight of that little furrenner Frinchman, Mounseer Maiter-di-dauns."

Wid that I giv'd her a big wink jist to say, "lit Sir Pathrick alone for the likes o' them thricks," and thin I wint aisy to work, and you'd have died wid the divarsion to behould how cliverly I slipped my right arm betwane the back o' the sofy, and the back of her leddyship, and there, sure enough, I found a swate little flipper all a waiting to say, "the tip o' the mornin' to ye, Sir Pathrick O'Grandison, Barronitt." And wasn't it mesilf, sure, that jist giv'd it the laste little bit of a squaze in the world, all in the way of a commincement, and not to be too rough wid her leddyship? and och, botheration, wasn't it the gentaalest and dilikittest of all the little squazes that I got in return? "Blood and thunder, Sir Pathrick, mavourneen," thinks I to myself, "fait it's jist the mother's son of you, and nobody else at all at all, that's the handsomest and the fortunittest young bog-throtter that ever cum'd out of Connaught!" And wid that I giv'd the flipper a big squaze, and a big squaze it was, by the powers, that her leddyship giv'd to me back. But it would ha split the seven sides of you wid the laffin' to behould, jist then all at once, the consated behavior of Mounseer Maiter-di-dauns. The likes o' sich a jabbering, and a smirking, and

a parley-wouing as he begin'd wid her leddyship, niver was known before upon arth; and divil may burn me if it wasn't me own very two peepers that cotch'd him tipping her the wink out of one eye. Och, hon! if it wasn't mesilf thin that was mad as a Kilkenny cat I shud like to be tould who it was!

"Let me infarm you, Mounseer Maiter-di-dauns," said I, as purlite as iver ye seed, "that it's not the gintaal thing at all at all, and not for the likes o' you inny how, to be afther the oggling and a-goggling at her leddyship in that fashion," and jist wid that such another squaze as it was I giv'd her flipper, all as much as to say: "isn't it Sir Pathrick now, my jewel, that'll be able to the protectin' o' you, my darlint?" and then there cum'd another squaze back, all by way of the answer. "Thrue for you, Sir Pathrick," it said as plain as iver a squaze said in the world, "Thrue for you, Sir Pathrick, mavourneen, and it's a proper nate gintleman ye are—that's God's truth," and with that she opened her two beautiful peepers till I belaved they wud ha' com'd out of her hid althegither and intirely, and she looked first as mad as a cat at Mounseer Frog, and thin as smiling as all out o' doors at mesilf.

"Thin," says he, the willain, "Och hon! and a wolly-wou, pully-wou," and then wid that he shoved up his two shoulders till the devil the bit of his hid was to be diskivered, and then he let down the two corners of his purraty-trap, and thin not a haporth more of the satisfaction could I git out o' the spalpeen.

Belave me, my jewel, it was Sir Pathrick that was unreasonable mad thin, and the more by token that the Frinchman kipt an wid his winking at the widdy; and the widdy she kept an wid the squazing of my flipper, as much as to say: "At him again, Sir Pathrick O'Grandisen, mavourneen:" so I just ripped out wid a big oath, and says I:

"Ye little spalpeeny frog of a bog-throtting son of a bloody noun!"—and jist thin what d'ye think it was that her leddyship did? Troth she jumped up from the sofy as if she was bit, and made off through the door, while I turned my head round afther her, in a complete bewilderment and botheration, and followed her wid me two peepers. You percave I had a reason of my own for knowing that she couldn't git down the stares althegither and intirely; for I knew very well that I had hould of her hand, for divil the bit had I iver lit it go. And says I:

"Isn't it the laste little bit of a mistake in the world that ye've been afther the making, yer leddyship? Come back now, that's a darlint, and I'll give ye yur flipper." But aff she wint down the stares like a shot, and thin I turned round to the little Frinch furrenner. Och hon! if it wasn't his spalpeeny little paw that I had hould of in my own—why thin—thin it wasn't—that's all.

And maybe it wasn't mesilf that jist died then outright wid the laffin', to behold the little chap when he found out that it wasn't the widdy at all at all that he had hould of all the time, but only Sir Pathrick O'Grandison. The ould divil himself niver behild sich a long face as he pet an! As for Sir Pathrick O'Grandison, Barronitt, it wasn't for the likes of his riverence to

be afther the minding of a thrifle of a mistake. Ye may jist say, though (for it's God's thruth), that afore I left hould of the flipper of the spalpeen (which was not till afther her leddyship's futman had kicked us both down the stares), I giv'd it such a nice little broth of a squaze as made it all up into raspberry jam.

"Woully wou," says he, "pully wou," says he—"Cot tam!"

And that's jist the thruth of the rason why he wears his lift hand in a sling.

VOLUME VII

The Thousand-and-Second Tale of Scheherazade

(First published in *Godey's Lady's Book*, February, 1845.—Ed.)

Truth is stranger than fiction—*Old Saying.*

HAVING had occasion, lately, in the course of some Oriental investigations, to consult the "Tellmenow Isitsoornot," a work which (like the "Zohar" of Simeon Jochaides) is scarcely known at all, even in Europe; and which has never been quoted, to my knowledge, by any American—if we except, perhaps, the author of the "Curiosities of American Literature";—having had occasion, I say, to turn over some pages of the first-mentioned very remarkable work, I was not a little astonished to discover that the literary world has hitherto been strangely in error respecting the fate of the vizier's daughter, Scheherazade, as that fate is depicted in the "Arabian Nights"; and that the *denouement* there given, if not altogether inaccurate, as far as it goes, is at least to blame in not having gone very much farther.

For full information on this interesting topic, I must refer the inquisitive reader to the "Isitsoornot" itself; but in the meantime, I shall be pardoned for giving a summary of what I there discovered.

It will be remembered, that, in the usual version of the tales, a certain monarch having good cause to be jealous of his queen, not only puts her to death, but makes a vow, by his beard and the prophet, to espouse each night the most beautiful maiden in his dominions, and the next morning to deliver her up to the executioner.

Having fulfilled this vow for many years to the letter, and with a religious punctuality and method that conferred great credit upon him as a man of devout feeling and excellent sense, he was interrupted one afternoon (no doubt at his prayers) by a visit from his grand vizier, to whose daughter, it appears, there had occurred an idea.

Her name was Scheherazade, and her idea was, that she would either redeem the land from the depopulating tax upon its beauty, or perish, after the approved fashion of all heroines, in the attempt.

Accordingly, and although we do not find it to be leap-year (which makes the sacrifice more meritorious), she deputes her father, the grand vizier, to make an offer to the king of her hand. This hand the king eagerly accepts—(he had intended to take it at all events, and had put off the matter from day to day, only through fear of the vizier),—but, in accepting it now, he gives all parties very distinctly to understand, that, grand vizier or no grand vizier, he has not the slightest design of giving up one iota of his vow or of his privileges. When, therefore, the fair Scheherazade

insisted upon marrying the king, and did actually marry him despite her father's excellent advice not to do any thing of the kind—when she would and did marry him, I say, will I, nill I, it was with her beautiful black eyes as thoroughly open as the nature of the case would allow.

It seems, however, that this politic damsel (who had been reading Machiavelli, beyond doubt), had a very ingenious little plot in her mind. On the night of the wedding, she contrived, upon I forget what specious pretence, to have her sister occupy a couch sufficiently near that of the royal pair to admit of easy conversation from bed to bed; and, a little before cock-crowing, she took care to awaken the good monarch, her husband (who bore her none the worse will because he intended to wring her neck on the morrow),—she managed to awaken him, I say, (although on account of a capital conscience and an easy digestion, he slept well,) by the profound interest of a story (about a rat and a black cat, I think) which she was narrating (all in an undertone, of course) to her sister. When the day broke, it so happened that this history was not altogether finished, and that Scheherazade, in the nature of things could not finish it just then, since it was high time for her to get up and be bowstrung—a thing very little more pleasant than hanging, only a trifle more genteel!

The king's curiosity, however, prevailing, I am sorry to say, even over his sound religious principles, induced him for this once to postpone the fulfilment of his vow until next morning, for the purpose and with the hope of hearing that night how it fared in the end with the black cat (a black cat, I think it was) and the rat.

The night having arrived, however, the lady Scheherazade not only put the finishing stroke to the black cat and the rat (the rat was blue) but before she well knew what she was about, found herself deep in the intricacies of a narration, having reference (if I am not altogether mistaken) to a pink horse (with green wings) that went, in a violent manner, by clockwork, and was wound up with an indigo key. With this history the king was even more profoundly interested than with the other—and, as the day broke before its conclusion (notwithstanding all the queen's endeavors to get through with it in time for the bowstringing), there was again no resource but to postpone that ceremony as before, for twenty-four hours. The next night there happened a similar accident with a similar result; and then the next—and then again the next; so that, in the end, the good monarch, having been unavoidably deprived of all opportunity to keep his vow during a period of no less than one thousand and one nights, either forgets it altogether by the expiration of this time, or gets himself absolved of it in the regular way, or (what is more probable) breaks it outright, as well as the head of his father confessor. At all events, Scheherazade, who, being lineally descended from Eve, fell heir, perhaps, to the whole seven baskets of talk, which the latter lady, we all know, picked up from under the trees in the garden of Eden; Scheherazade, I say, finally triumphed, and the tariff upon beauty was repealed.

Now, this conclusion (which is that of the story as we have it upon record)

is, no doubt, excessively proper and pleasant—but alas! like a great many pleasant things, is more pleasant than true; and I am indebted altogether to the "Isitsoornot" for the means of correcting the error. *"Le mieux,"* says a French proverb, *"est l'ennemi du bien,"* and, in mentioning that Scheherazade had inherited the seven baskets of talk, I should have added that she put them out at compound interest until they amounted to seventy-seven.

"My dear sister," said she, on the thousand-and-second night, (I quote the language of the "Isitsoornot" at this point, *verbatim*) "my dear sister," said she, "now that all this little difficulty about the bowstring has blown over, and that this odious tax is so happily repealed, I feel that I have been guilty of great indiscretion in withholding from you and the king (who I am sorry to say, snores—a thing no gentleman would do) the full conclusion of Sinbad the sailor. This person went through numerous other and more interesting adventures than those which I related; but the truth is, I felt sleepy on the particular night of their narration, and so was seduced into cutting them short—a grievous piece of misconduct, for which I only trust that Allah will forgive me. But even yet it is not too late to remedy my great neglect—and as soon as I have given the king a pinch or two in order to wake him up so far that he may stop making that horrible noise, I will forthwith entertain you (and him if he pleases) with the sequel of this very remarkable story."

Hereupon the sister of Scheherazade, as I have it from the "Isitsoornot," expressed no very particular intensity of gratification; but the king, having been sufficiently pinched, at length ceased snoring, and finally said, "Hum!" and then "Hoo!" when the queen, understanding these words (which are no doubt Arabic) to signify that he was all attention, and would do his best not to snore any more—the queen, I say, having arranged these matters to her satisfaction, re-entered thus, at once, into the history of Sinbad the sailor:

" 'At length, in my old age' (these are the words of Sinbad himself, as retailed by Scheherazade)—'at length, in my old age, and after enjoying many years of tranquility at home, I became once more possessed of a desire of visiting foreign countries; and one day, without acquainting any of my family with my design, I packed up some bundles of such merchandise as was most precious and least bulky, and, engaging a porter to carry them, went with him down to the sea-shore, to await the arrival of any chance vessel that might convey me out of the kingdom into some region which I had not as yet explored.

" 'Having deposited the packages upon the sands, we sat down beneath some trees, and looked out into the ocean in the hope of perceiving a ship, but during several hours we saw none whatever. At length I fancied that I could hear a singular buzzing or humming sound—and the porter, after listening awhile, declared that he also could distinguish it. Presently it grew louder, and then still louder, so that we could have no doubt that the object which caused it was approaching us. At length, on the edge of the horizon, we discovered a black speck, which rapidly increased in size until we made it out to be a vast monster, swimming with a

great part of its body above the surface of the sea. It came toward us with inconceivable swiftness, throwing up huge waves of foam around its breast, and illuminating all that part of the sea through which it passed, with a long line of fire that extended far off into the distance.

"'As the thing drew near we saw it very distinctly. Its length was equal to that of three of the loftiest trees that grow, and it was as wide as the great hall of audience in your palace, O most sublime and munificent of the caliphs. Its body, which was unlike that of ordinary fishes, was as solid as a rock, and of a jetty blackness throughout all that portion of it which floated above the water with the exception of a narrow blood-red streak that completely begirdled it. The belly, which floated beneath the surface, and of which we could get only a glimpse now and then as the monster rose and fell with the billows, was entirely covered with metallic scales, of a color like that of the moon in misty weather. The back was flat and nearly white, and from it there extended upwards of six spines, about half the length of the whole body.

"'This horrible creature had no mouth that we could perceive; but, as if to make up for this deficiency, it was provided with at least four score of eyes, that protruded from their sockets like those of the green dragon-fly, and were arranged all around the body in two rows, one above the other, and parallel to the blood-red streak, which seemed to answer the purpose of an eyebrow. Two or three of these dreadful eyes were much larger than the others, and had the appearance of solid gold.

"'Although this beast approached us, as I have before said, with the greatest rapidity, it must have been moved altogether by necromancy—for it had neither fins like a fish nor web-feet like a duck, nor wings like the seashell which is blown along in the manner of a vessel; nor yet did it writhe itself forward as do the eels. Its head and its tail were shaped precisely alike, only, not far from the latter, were two small holes that served for nostrils, and through which the monster puffed out its thick breath with prodigious violence, and with a shrieking, disagreeable noise.

"'Our terror at beholding this hideous thing was very great, but it was even surpassed by our astonishment, when upon getting a nearer look, we perceived upon the creature's back a vast number of animals about the size and shape of men, and altogether much resembling them, except that they wore no garments (as men do), being supplied (by nature, no doubt,) with an ugly uncomfortable covering, a good deal like cloth, but fitting so tight to the skin, as to render the poor wretches laughably awkward, and put them apparently to severe pain. On the very tips of their heads were certain square-looking boxes, which, at first sight, I thought might have been intended to answer as turbans, but I soon discovered that they were excessively heavy and solid, and I therefore concluded they were contrivances designed, by their great weight, to keep the heads of the animals steady and safe upon their shoulders. Around the necks of the creatures were fastened black collars,

(badges of servitude, no doubt,) such as we keep on our dogs, only much wider and infinitely stiffer—so that it was quite impossible for these poor victims to move their heads in any direction without moving the body at the same time; and thus they were doomed to perpetual contemplation of their noses—a view puggish and snubby in a wonderful if not positively in an awful degree.

"'When the monster had nearly reached the shore where we stood, it suddenly pushed out one of its eyes to a great extent, and emitted from it a terrible flash of fire, accompanied by a dense cloud of smoke, and a noise that I can compare to nothing but thunder. As the smoke cleared away, we saw one of the odd man-animals standing near the head of the large beast with a trumpet in his hand, through which (putting it to his mouth) he presently addressed us in loud, harsh, and disagreeable accents, that, perhaps, we should have mistaken for language, had they not come altogether through the nose.

"'Being thus evidently spoken to, I was at a loss how to reply, as I could in no manner understand what was said; and in this difficulty I turned to the porter, who was near swooning through affright, and demanded of him his opinion as to what species of monster it was, what it wanted, and what kind of creatures those were that so swarmed upon its back. To this the porter replied, as well as he could for trepidation, that he had once before heard of this sea-beast; that it was a cruel demon, with bowels of sulphur and blood of fire, created by evil genii as the means of inflicting misery upon mankind; that the things upon its back were vermin, such as sometimes infest cats and dogs, only a little larger and more savage; and that these vermin had their uses, however evil—for, through the torture they caused the beast by their nibblings and stingings, it was goaded into that degree of wrath which was requisite to make it roar and commit ill, and so fulfil the vengeful and malicious designs of the wicked genii.

"'This account determined me to take to my heels, and, without once even looking behind me, I ran at full speed up into the hills, while the porter ran equally fast, although nearly in an opposite direction, so that, by these means, he finally made his escape with my bundles, of which I have no doubt he took excellent care—although this is a point I cannot determine, as I do not remember that I ever beheld him again.

"'For myself, I was so hotly pursued by a swarm of the men-vermin (who had come to the shore in boats) that I was very soon overtaken, bound hand and foot, and conveyed to the beast, which immediately swam out again into the middle of the sea.

"'I now bitterly repented my folly in quitting a comfortable home to peril my life in such adventures as this; but regret being useless, I made the best of my condition, and exerted myself to secure the good-will of the man-animal that owned the trumpet, and who appeared to exercise authority over his fellows. I succeeded so well in this endeavor that, in a few days, the creature bestowed upon me various tokens of his favor, and in the end even went to the trouble of teaching me the rudiments of what it was vain enough to denominate its language; so that, at length, I was enabled to converse with it readily,

and came to make it comprehend the ardent desire I had of seeing the world.

"'*Washish squashish squeak, Sinbad, heydiddle diddle, grunt unt grumble, hiss, fiss, whiss,*' said he to me, one day after dinner—but I beg a thousand pardons, I had forgotten that your majesty is not conversant with the dialect of the Cock-neighs (so the man-animals were called; I presume because their language formed the connecting link between that of the horse and that of the rooster). With your permission, I will translate. '*Washish squashish,*' and so forth:—that is to say, 'I am happy to find, my dear Sinbad, that you are really a very excellent fellow; we are now about doing a thing which is called circumnavigating the globe; and since you are so desirous of seeing the world, I will strain a point and give you a free passage upon the back of the beast.'"

When the Lady Scheherazade had proceeded thus far, relates the "Isitsoornot," the king turned over from his left side to his right, and said:

"It is, in fact, *very* surprising, my dear queen, that you omitted, hitherto, these latter adventures of Sinbad. Do you know I think them exceedingly entertaining and strange?"

The king having thus expressed himself, we are told, the fair Scheherazade resumed her history in the following words:

"Sinbad went on in this manner with his narrative—'I thanked the man-animal for its kindness, and soon found myself very much at home on the beast, which swam at a prodigious rate through the ocean; although the surface of the latter is, in that part of the world, by no means flat, but round like a pomegranate, so that we went—so to say—either up hill or down hill all the time.'"

"That, I think, was very singular," interrupted the king.

"Nevertheless, it is quite true," replied Scheherazade.

"I have my doubts," rejoined the king; "but, pray, be so good as to go on with the story."

"I will," said the queen. "'The beast,' continued Sinbad, 'swam, as I have related, up hill and down hill, until, at length, we arrived at an island, many hundreds of miles in circumference, but which, nevertheless, had been built in the middle of the sea by a colony of little things like caterpillars.'"*

"Hum!" said the king.

"'Leaving this island,' said Sinbad—(for Scheherazade, it must be understood, took no notice of her husband's ill-mannered ejaculation)—'leaving this island, we came to another where the forests were of solid stone, and so hard that they shivered to pieces the finest-tempered axes with which we endeavored to cut them down.'"†

"Hum!" said the king, again; but Scheherazade, paying him no attention, continued in the language of Sinbad.

"'Passing beyond this last island, we reached a country where there was a cave that ran to the distance of thirty or forty miles within the bowels of the earth, and that contained a greater number of far more spacious and more magnificent palaces than are to be found in all Damascus and Bagdad. From the

---

* The coralites.

† "One of the most remarkable natural curiosities in Texas is a petrified forest, near the head of Pasigno river.

roofs of these palaces there hung myriads of gems, like diamonds, but larger than men; and in among the streets of towers and pyramids and temples, there flowed immense rivers as black as ebony, and swarming with fish that had no eyes.' "*

"Hum!" said the king.

" 'We then swam into a region of the sea where we found a lofty mountain, down whose sides there streamed torrents of melted metal, some of which were twelve miles wide and sixty miles long;† while from an abyss on the summit, issued so vast a quantity of ashes that the sun was entirely blotted out from the heavens, and it became darker than the darkest midnight; so that when we were even at the distance of a hundred and fifty miles from the mountain, it was impossible to see the whitest object, however close we held it to our eyes.' "‡

"Hum!" said the king.

" 'After quitting this coast, the beast continued his voyage until we met with a land in which the nature of things seemed reversed—for we here saw a great lake, at the bottom of which, more than a hundred feet beneath the surface of the water, there flourished in full leaf a forest of tall and luxuriant trees.' "§

"Hoo!" said the king.

" 'Proceeding still in the same direction, we presently arrived at the most magnificent region in the whole world. Through it there meandered a glorious river for several thousands of miles. This river was of unspeakable depth, of amber. It was from three to six miles in width; and its banks which arose on either side to twelve hundred feet in perpendicular height, were crowned with ever-blossoming trees, and perpetual sweet-scented flowers, that made the whole territory one gorgeous garden; but the name of this luxuriant land was the Kingdom of Horror, and to enter it was inevitable death.' "*

"Humph!" said the king.

" 'We left this kingdom in great haste, and, after some days, came to another, where we were astonished to perceive myriads of monstrous animals with horns resembling scythes upon their heads. These hideous beasts dig for themselves vast caverns in the soil, of a funnel shape, and line the sides of them with rocks, so disposed one upon the other that they fall instantly, when trodden upon by other animals, thus precipitating them into the monster's dens, where their blood is immediately sucked, and their carcasses afterwards hurled contemptuously out to an immense distance from "the caverns of death." ' "†

"Pooh!" said the king.

" 'Continuing our progress, we perceived a district with vegetables that grew not upon any soil, but in the air.* There were others that sprang from the substance of other vegetables;† others that derived their substance from the bodies of living animals;‡ and then again, there were others that glowed all over with intense fire;§ others that moved from place to place at pleasure, and what was still more wonderful, we discovered flowers that lived and breathed and moved their limbs at will, and had, moreover, the detestable passion of mankind for enslaving other creatures, and confining them in horrid and solitary prisons until the fulfillment of appointed tasks.' "¶

"Pshaw!" said the king.

" 'Quitting this land, we soon arrived at another in which the bees and the birds are mathematicians of such genius and erudition, that they give daily instructions in the science of geometry to the wise men of the empire. The king of the place having offered a reward for the solution of two very difficult problems, they were solved upon the spot—the one by the bees, and the other by the birds; but the king keeping their solution a secret, it was only after the most profound researches and labor, and the writing of an infinity of big books, during a long series of years, that the men-mathematicians at length arrived at the identical solutions which had been given upon the spot by the bees and by the birds.' "*

"Oh my!" said the king.

" 'We had scarcely lost sight of this empire when we found ourselves close upon another, from whose shores there flew over our heads a flock of fowls a mile in breadth, and two hundred and forty miles long; so that although they flew a mile during every minute, it required no less than four hours for the whole flock to pass over us—in which there were several millions of millions of fowl.' "†

"Oh fy!" said the king.

" 'No sooner had we got rid of these birds, which occasioned us great annoyance, than we were terrified by the appearance of a fowl of another kind, and infinitely larger than even the rocs which I met in my former voyages; for it was bigger than the biggest of the domes on your seraglio, oh, most Munificent of Caliphs. This terrible fowl had no head that we could perceive, but

* The bees—ever since bees were—have been constructing their cells with just such sides, in just such number, and at just such inclinations, as it has been demonstrated (in a problem involving the profoundest mathematical principles) are the very sides, in the very number, and at the very angles, which will afford the creatures the most room that is compatible with the greatest stability of structure. The windmill and the aeroplane are constructed by observation of bird-flight.

† A flight of pigeons described in a book of travels.

was fashioned entirely of belly, which was of a prodigious fatness and roundness, of a soft-looking substance, smooth, shining and striped with various colors. In its talons, the monster was bearing away to his eyrie in the heavens, a house from which it had knocked off the roof, and in the interior of which we distinctly saw human beings, who, beyond doubt, were in a state of frightful despair at the horrible fate which awaited them. We shouted with all our might, in the hope of frightening the bird into letting go of its prey; but it merely gave a snort or puff, as if of rage and then let fall upon our heads a heavy sack which proved to be filled with sand!' "

"Stuff!" said the king.

" 'It was just after this adventure that we encountered a continent of immense extent and prodigious solidity, but which, nevertheless, was supported entirely upon the back of a sky-blue cow that had no fewer than four hundred horns.' "*

"*That,* now, I believe," said the king, "because I have read something of the kind before, in a book."

" 'We passed immediately beneath this continent, swimming in between the legs of the cow, and, after some hours, found ourselves in a wonderful country indeed, which, I was informed by the man-animal, was his own native land, inhabited by things of his own species. This elevated the man-animal very much in my esteem, and in fact, I now began to feel ashamed of the contemptuous familiarity with which I had treated him; for I found that the man-animals in general were a nation of the most powerful magicians, who lived with worms in their brain,* which, no doubt, served to stimulate them by their painful writhings and wrigglings to the most miraculous efforts of imagination.' "

"Nonsense!" said the king.

" 'Among the magicians, were domesticated several animals of very singular kinds; for example, there was a huge horse whose bones were iron and whose blood was boiling water. In place of corn, he had black stones for his usual food; and yet, in spite of so hard a diet, he was so strong and swift that he could drag a load more weighty than the grandest temple in this city, at a rate surpassing that of the flight of most birds.' "

"Twattle!" said the king.

" 'I saw, also, among those people a hen without feathers, but bigger than a camel; instead of flesh and bone she had iron and brick; her blood, like that of the horse, (to whom, in fact, she was nearly related,) was boiling water; and like him she ate nothing but wood or black stones. This hen brought forth very frequently, a hundred chickens in the day; and, after birth, they took up their residence for several weeks within the stomach of their mother.' "†

"Fal lal!" said the king.

" 'One of this nation of mighty conjurors created a man out of brass and wood, and leather, and endowed him with such ingenuity that he would have

* "The earth is upheld by a cow of a blue color, having horns four hundred in number."—*Sale's Koran.*

beaten at chess, all the race of mankind with the exception of the great Caliph, Haroun Alraschid.* Another of these magi constructed (of like material) a creature that put to shame even the genius of him who made it; for so great were its reasoning powers that, in a second, it performed calculations of so vast an extent that they would have required the united labor of fifty thousand fleshy men for a year.† But a still more wonderful conjuror fashioned for himself a mighty thing that was neither man nor beast, but which had brains of lead, intermixed with a black matter like pitch, and fingers that employed with such incredible speed and dexterity that it would have had no trouble in writing out twenty thousand copies of the Koran in an hour; and this with so exquisite a precision, that in all the copies there should not be found one to vary from another by the breadth of the finest hair. This thing was of prodigious strength, so that it erected or overthrew the mightiest empires at a breath; but its powers were exercised equally for evil and for good.'"

"Ridiculous!" said the king.

"'Among this nation of necromancers there was also one who had in his veins the blood of the salamanders; for he made no scruple of sitting down to smoke his chibouc in a red-hot oven until his dinner was thoroughly roasted upon its floor.‡ Another had the faculty of converting the common metals into gold, without even looking at them during the process.* Another had such a delicacy of touch that he made a wire so fine as to be invisible.† Another had such quickness of perception that he counted all the separate motions of an elastic body, while it was springing backward and forward at the rate of nine hundred millions of times in a second.'"‡

"Absurd!" said the king.

"'Another of these magicians by means of a fluid that nobody ever yet saw, could make the corpses of his friends brandish their arms, kick out their legs, fight, or even get up and dance at his will.§ Another had cultivated his voice to so great an extent that he could have made himself heard from one end of the world to the other.¶ Another had so long an arm that he could sit down in Damascus and indite a letter at Bagdad—or indeed at any distance whatsoever.‖ Another commanded the lightning to come down to him out of the heavens, and it came at his call; and served him for a plaything when it came. Another took two

loud sounds and out of them made a silence. Another constructed a deep darkness out of two brilliant lights.* Another made ice in a red-hot furnace. Another directed the sun to paint his portrait, and the sun did.† Another took this luminary with the moon and the planets, and having first weighed them with scrupulous accuracy, probed into their depths and found out the solidity of the substance of which they are made. But the whole nation is, indeed, of so surprising a necromantic ability, that not even their infants, nor their commonest cats and dogs have any difficulty in seeing objects that do not exist at all, or that for twenty millions of years before the birth of the nation itself had been blotted out from the face of creation.' "‡

"Preposterous!" said the king.

" 'The wives and daughters of these incomparably great and wise magi,' " continued Scheherazade, without being in any manner disturbed by these frequent and most ungentlemanly interruptions on the part of her husband— " 'the wives and daughters of these eminent conjurers are every thing that is accomplished and refined; and would be every thing that is interesting and beautiful, but for an unhappy fatality that besets them, and from which not even the miraculous powers of their husbands and fathers has, hitherto, been adequate to save. Some fatalities come in certain shapes, and some in others— but this of which I speak has come in the shape of a crotchet.' "

"A what?" said the king.

" 'A crotchet,' " said Scheherazade. " 'One of the evil genii, who are perpetually upon the watch to inflict ill, has put it into the heads of these accomplished ladies that the thing which we describe as personal beauty consists altogether in the protuberance of the region which lies not very far below the small of the back. Perfection of loveliness, they say, is in the direct ratio of the extent of this lump. Having been long possessed of this idea, and bolsters being cheap in that country, the days have long gone by since it was possible to distinguish a woman from a dromedary—' "

"Stop!" said the king—"I can't stand that, and I won't. You have already given me a dreadful headache with your lies. The day, too, I perceive, is beginning to break. How long have we been married?—my conscience is getting to be troublesome again. And then that dromedary touch—do you take me for a fool? Upon the whole, you might as well get up and be throttled."

These words, as I learn from the "Isitsoornot," both grieved and astonished Scheherazade; but, as she knew

‡ Although light travels 167,000 miles in a second, the distance of 61 Cygni (the only star whose distance is ascertained) is so inconceivably great, that its rays would require more than ten years to reach. For stars beyond this, 20—or even 1000 years—would be a moderate estimate. Thus, if they had been annihilated 20, or 1000 years ago, we might still see them to-day by the light which *started* from their surfaces 20 or 1000 years in the past time. That many which we see daily are really extinct, is not impossible—not even improbable.

the king to be a man of scrupulous integrity, and quite unlikely to forfeit his word, she submitted to her fate with a good grace. She derived, however, great consolation, (during the tightening of the bowstring,) from the reflection that much of the history remained still untold, and that the petulance of her brute of a husband had reaped for him a most righteous reward, in depriving him of many inconceivable adventures.

A Tale of Jerusalem

(First published in *Southern Literary Messenger*, April, 1836—Ed.)

Intensos rigidam in frontem ascendere canos passus erat————

—LUCAN.

————a bristly *bore*.

Translation.

"LET us hurry to the walls," said Abel-Phittim to Buzi-Ben-Levi and Simeon the Pharisee, on the tenth day of the month Thammuz, in the year of the world three thousand nine hundred and forty-one—"let us hasten to the ramparts adjoining the gate of Benjamin, which is in the city of David, and overlooking the camp of the uncircumcised; for it is the last hour of the fourth watch, being sunrise; and the idolaters, in fulfilment of the promise of Pompey, should be awaiting us with the lambs for the sacrifices."

Simeon, Abel-Phittim, and Buzi-Ben-Levi, were the Gizbarim, or sub-collectors of the offering, in the holy city of Jerusalem.

"Verily," replied the Pharisee, "let us hasten: for this generosity in the heathen is unwonted; and fickle-mindedness has ever been an attribute of the worshippers of Baal."

"That they are fickle-minded and treacherous is as true as the Pentateuch," said Buzi-Ben-Levi, "but that is only toward the people of Adonai. When was it ever known that the Ammonites proved wanting to their own interests? Methinks it is no great stretch of generosity to allow us lambs for the altar of the Lord, receiving in lieu thereof thirty silver shekels per head!"

"Thou forgettest, however, Ben-Levi," replied Abel-Phittim, "that the Roman Pompey, who is now impiously besieging the city of the Most High, has no assurity that we apply not the lambs thus purchased for the altar, to the sustenance of the body, rather than of the spirit."

"Now, by the five corners of my beard!" shouted the Pharisee, who belonged to the sect called The Dashers (that little knot of saints whose manner of *dashing* and lacerating the feet against the pavement was long a thorn and a reproach to less zealous devotees —a stumbling-block to less gifted perambulators)—"by the five corners of that beard which, as a priest, I am forbidden to shave!—have we lived to see the day when a blaspheming and idolatrous upstart of Rome shall accuse us of appropriating to the appetites of the flesh the most holy and consecrated elements? Have we lived to see the day when—"

"Let us not question the motives of

the Philistine," interrupted Abel-Phittim, "for to-day we profit for the first time by his avarice or by his generosity; but rather let us hurry to the ramparts, lest offerings should be wanting for that altar whose fire the rains of heaven cannot extinguish, and whose pillars of smoke no tempest can turn aside."

That part of the city to which our worthy Gizbarin now hastened, and which bore the name of its architect, King David, was esteemed the most strongly fortified district of Jerusalem; being situated upon the steep and lofty hill of Zion. Here, a broad, deep, circumvallatory trench, hewn from the solid rock, was defended by a wall of great strength erected upon its inner edge. This wall was adorned, at regular interspaces, by square towers of white marble; the lowest sixty, and the highest one hundred and twenty cubits in height. But, in the vicinity of the gate of Benjamin, the wall arose by no means from the margin of the fosse. On the contrary, between the level of the ditch and the basement of the rampart, sprang up a perpendicular cliff of two hundred and fifty cubits, forming part of the precipitous Mount Moriah. So that when Simeon and his associates arrived on the summit of the tower called Adoni-Bezek—the loftiest of all the turrets around about Jerusalem, and the usual place of conference with the besieging army—they looked down upon the camp of the enemy from an eminence excelling by many feet that of the Pyramid of Cheops, and, by several, that of the temple of Belus.

"Verily," sighed the Pharisee, as he peered dizzily over the precipice, "the uncircumcised are as the sands by the seashore—as the locusts in the wilderness! The valley of the King hath become the valley of Adommin."

"And yet," added Ben-Levi, "thou canst not point me out a Philistine—no, not one—from Aleph to Tau—from the wilderness to the battlements—who seemeth any bigger than the letter Jod!"

"Lower away the basket with the shekels of silver!" here shouted a Roman soldier in a hoarse, rough voice, which appeared to issue from the regions of Pluto—"lower away the basket with the accursed coin which it has broken the jaw of a noble Roman to pronounce! Is it thus you evince your gratitude to our master Pompeius, who, in his condescension, has thought fit to listen to your idolatrous importunities? The god Phœbus, who is a true god, has been charioted for an hour—and were you not to be on the ramparts by sunrise? Aedepol! do you think that we, the conquerors of the world, have nothing better to do than stand waiting by the walls of every kennel, to traffic with the dogs of the earth? Lower away! I say—and see that your trumpery be bright in color and just in weight!"

"El Elohim!" ejaculated the Pharisee, as the discordant tones of the centurion rattled up the crags of the precipice, and fainted away against the temple—"El Elohim!—*who* is the God Phœbus?—*whom* doth the blasphemer invoke? Thou, Buzi-Ben-Levi! who art read in the laws of the Gentiles, and hast sojourned among them who dabble with the Teraphim!—is it Nergal of whom the idolater speaketh?—or Ashimah?—or—Nibhaz?—or Tartak?—or Adramalech?—or Anamalech?—or Succoth-Benith?—or Dagon?—or Belial?—

or Baal-Perith? — or Baal-Peor? — or Baal-Zebub?"

"Verily it is neither—but beware how thou lettest the rope slip too rapidly through thy fingers; for should the wicker-work chance to hang on the projection of yonder crag, there will be a woful outpouring of the holy things of the sanctuary."

By the assistance of some rudely constructed machinery, the heavily laden basket was now carefully lowered down among the multitude; and, from the giddy pinnacle, the Romans were seen gathering confusedly round it; but owing to the vast height and the prevalence of a fog, no distinct view of their operations could be obtained.

Half an hour had already elapsed.

"We shall be too late!" sighed the Pharisee, as at the expiration of this period, he looked over into the abyss—"we shall be too late! we shall be turned out of office by the Katholim."

"No more," responded Abel-Phittim, —"no more shall we feast upon the fat of the land—no longer shall our beards be odorous with frank-incense—our loins girded up with fine linen from the Temple."

"Raca!" swore Ben-Levi, "Raca! do they mean to defraud us of the purchase money? or, Holy Moses! are they weighing the shekels of the tabernacle?"

"They have given the signal at last!" cried the Pharisee—"they have given the signal at last!—pull away, Abel-Phittim!—and thou, Buzi-Ben-Levi, pull away!—for verily the Philistines have either still hold upon the basket, or the Lord hath softened their hearts to place therein a beast of good weight!" And the Gizbarim pulled away, while their burthen swung heavily upward through the still increasing mist.

* * * * * *

"Booshoh he!"—as, at the conclusion of an hour, some object at the extremity of the rope became indistinctly visible—"Booshoh he!" was the exclamation which burst from the lips of Ben-Levi.

"Booshoh he!—for shame!—it is a ram from the thickets of Engedi, and as rugged as the valley of Jehosaphat!"

"It is a firstling of the flock," said Abel-Phittim, "I know him by the bleating of his lips, and the innocent folding of his limbs. His eyes are more beautiful than the jewels of the Pectoral, and his flesh is like the honey of Hebron."

"It is a fatted calf from the pastures of Bashan," said the Pharisee, "the heathen have dealt wonderfully with us!—let us raise up our voices in a psalm!—let us give thanks on the shawm and on the psaltery—on the harp and on the huggab—on the cythern and on the sack-but!"

It was not until the basket had arrived within a few feet of the Gizbarim, that a low grunt betrayed to their perception a *hog* of no common size.

"Now El Emanu!" slowly, and with upturned eyes ejaculated the trio, as, letting go their hold, the emancipated porker tumbled headlong among the Philistines, "El Emanu!—God be with us—*it is the unutterable flesh!*"

Four Beasts in One

(Four Beasts in One is also titled Epimanes and first appeared in *Southern Literary Messenger,* March, 1836.—Ed.)

Chacun a ses vertus.
—*Crebillon's Xerxes.*

ANTIOCHUS EPIPHANES is very generally looked upon as the Gog of the prophet Ezekiel. This honor is, however, more properly attributable to Cambyses, the son of Cyrus. And, indeed the character of the Syrian monarch does by no means stand in need of any adventitious embellishment. His accession to the throne, or rather his usurpation of the sovereignty, a hundred and seventy-one years before the coming of Christ; his attempt to plunder the temple of Diana at Ephesus; his implacable hostility to the Jews; his pollution of the Holy of Holies; and his miserable death at Taba, after a tumultuous reign of eleven years, are circumstances of a prominent kind, and therefore more generally noticed by the historians of his time than the impious, dastardly, cruel, silly, and whimsical achievements which make up the sum total of his private life and reputation.

* * * * * *

Let us suppose, gentle reader, that it is now the year of the world three thousand eight hundred and thirty, and let us, for a few minutes, imagine ourselves at that most grotesque habitation of man, the remarkable city of Antioch. To be sure there were, in Syria and other countries, sixteen cities of that appellation, besides the one to which I more particularly allude. But *ours* is that which went by the name of Antiochia Epidaphne, from its vicinity to the little village of Daphne, where stood a temple to that divinity. It was built (although about this matter there is some dispute) by Seleucus Nicanor, the first king of the country after Alexander the Great, in memory of his father Antiochus, and became immediately the residence of the Syrian monarchy. In the flourishing times of the Roman Empire it was the ordinary station of the prefect of the eastern provinces; and many of the emperors of the Queen city (among whom may be mentioned, especially, Verus and Valens) spent here the greater part of their time. But I perceive we have arrived at the city itself. Let us ascend this battlement, and throw our eyes upon the town and neighboring country.

"What broad and rapid river is that which forces its way, with innumerable falls, through the mountainous wilderness, and finally through the wilderness of buildings?"

That is the Orontes, and it is the only water in sight, with the exception of the Mediterranean, which stretches, like a broad mirror, about twelve miles off to the southward. Every one has seen the Mediterranean; but let me tell you, there are few who have had a peep at Antioch. By few, I mean, few who, like you and me, have had, at the same time, the advantages of a modern education. Therefore cease to regard that sea, and give your whole attention to the mass of houses that lie beneath us.

You will remember that it is now the year of the world three thousand eight hundred and thirty. Were it later—for example, were it the year of our Lord eighteen hundred and forty-five—we should be deprived of this extraordinary spectacle. In the nineteenth century Antioch is—that is to say, Antioch *will be*—in a lamentable state of decay. It will have been, by that time, totally destroyed, at three different periods, by three successive earthquakes. Indeed, to say the truth, what little of its former self may then remain, will be found in so desolate and ruinous a state that the patriarch shall have removed his residence to Damascus. This is well. I see you profit by my advice, and are making the most of your time in inspecting the premises—in

—satisfying your eyes
With the memorials and the things of fame
That most renown this city.—

I beg pardon; I had forgotten that Shakespeare will not flourish for seventeen hundred and fifty years to come. But does not the appearance of Epidaphne justify me in calling it *grotesque?*

"It is well fortified; and in this respect is as much indebted to nature as to art."

Very true.

"There are a prodigious number of stately palaces."

There are.

"And the numerous temples, sumptuous and magnificent, may bear comparison with the most lauded of antiquity."

All this I must acknowledge. Still there is an infinity of mud huts, and abominable hovels. We cannot help perceiving abundance of filth in every kennel, and, were it not for the overpowering fumes of idolatrous incense, I have no doubt we should find a most intolerable stench. Did you ever behold streets so insufferably narrow, or houses so miraculously tall? What a gloom their shadows cast upon the ground! It is well the swinging lamps in those endless colonnades are kept burning throughout the day; we should otherwise have the darkness of Egypt in the time of her desolation.

"It is certainly a strange place! What is the meaning of yonder singular building? See! it towers above all others, and lies to the eastward of what I take to be the royal palace!"

That is the new Temple of the Sun, who is adored in Syria under the title of Elah Gabalah. Hereafter a very notorious Roman emperor will institute this worship in Rome, and thence derive a cognomen, Heliogabalus. I dare say you would like to take a peep at the divinity of the temple. You need not look up at the heavens; his Sunship is not there—at least not the Sunship adored by the Syrians. *That* deity will be found in the interior of yonder building. He is worshipped under the figure of a large stone pillar terminating at the summit in a cone or *pyramid*, whereby is denoted Fire.

"Hark!—behold!—who *can* those ridiculous beings be, half naked, with their faces painted, shouting and gesticulating to the rabble?"

Some few are mountebanks. Others more particularly belong to the race of philosophers. The greatest portion, however—those especially who belabor

the populace with clubs—are the principal courtiers of the palace, executing, as in duty bound, some laudable comicality of the king's.

"But what have we here? Heavens! the town is swarming with wild beasts! How terrible a spectacle!—how dangerous a peculiarity!"

Terrible if you please; but not in the least degree dangerous. Each animal, if you will take the pains to observe, is following, very quietly, in the wake of its master. Some few, to be sure, are led with a rope about the neck, but these are chiefly the lesser or timid species. The lion, the tiger, and the leopard are entirely without restraint. They have been trained without difficulty to their present profession, and attend upon their respective owners in the capacity of *valets-de-chambre*. It is true, there are occasions when Nature asserts her violated dominions—but then the devouring of a man-at-arms, or the throttling of a consecrated bull, is a circumstance of too little moment to be more than hinted at in Epidaphne.

"But what extraordinary tumult do I hear? Surely this is a loud noise even for Antioch! It argues some commotion of unusual interest."

Yes—undoubtedly. The king has ordered some novel spectacle—some gladiatorial exhibition at the hippodrome—or perhaps the massacre of the Scythian prisoners—or the conflagration of his new palace—or the tearing down of a handsome temple—or, indeed, a bonfire of a few Jews. The uproar increases. Shouts of laughter ascend the skies. The air becomes dissonant with wind instruments, and horrible with clamor of a million throats. Let us descend, for the love of fun, and see what is going on! This way—be careful! Here we are in the principal street, which is called the street of Timarchus. The sea of people is coming this way, and we shall find a difficulty in stemming the tide. They are pouring through the alley of Heraclides, which leads directly from the palace—therefore the king is most probably among the rioters. Yes—I hear the shouts of the herald proclaiming his approach in the pompous phraseology of the East. We shall have a glimpse of his person as he passes by the temple of Ashimah. Let us ensconce ourselves in the vestibule of the sanctuary; he will be here anon. In the meantime let us survey this image. What is it? Oh! it is the god Ashimah in proper person. You perceive, however, that he is neither a lamb, nor a goat, nor a satyr; neither has he much resemblance to the Pan of the Arcadians. Yet all these appearances have been given—I beg pardon—*will* be given—by the learned of future ages, to the Ashimah of the Syrians. Put on your spectacles, and tell me what it is. What is it?

"Bless me! it is an ape!"

True—a baboon; but by no means the less a deity. His name is a derivation of the Greek *Simia*—what great fools are antiquarians! But see!—see!—yonder scampers a ragged little urchin. Where is he going? What is he bawling about? What does he say? Oh! he says the king is coming in triumph; that he is dressed in state; that he has just finished putting to death, with his own hand, a thousand chained Israelitish prisoners! For this exploit the ragamuffin is lauding him to the skies! Hark! here comes a troop of a

similar description. They have made a Latin hymn upon the valor of the king, and are singing it as they go:

Mille, mille, mille,
Mille, mille, mille,
Decollavimus, unus homo!
Mille, mille, mille, mille, decollavimus!
Mille, mille, mille,
Vivat qui mille mille occidit!
Tantum vini habet nemo
Quantum sanguinis effudit!*

Which may be thus paraphrased:

A thousand, a thousand, a thousand,
A thousand, a thousand, a thousand,
We, with one warrior, have slain!
A thousand, a thousand, a thousand, a thousand.
Sing a thousand over again!
Soho!—let us sing
Long life to our king,
Who knocked over a thousand so fine!
Soho!—let us roar,
He has given us more
Red gallons of gore
Than all Syria can furnish of wine!

"Do you hear that flourish of trumpets?"

Yes—the king is coming! See! the people are aghast with admiration, and lift up their eyes to the heavens in reverence! He comes!—he is coming!—there he is!

"Who?—where?—the king?—I do not behold him—cannot say that I perceive him."

Then you must be blind.

"Very possible. Still I see nothing but a tumultuous mob of idiots and madmen, who are busy in prostrating themselves before a gigantic cameleopard, and endeavoring to obtain a kiss of the animal's hoofs. See! the beast has very justly kicked one of the rabble over—and another—and another—and another. Indeed, I cannot help admiring the animal for the excellent use he is making of his feet."

Rabble, indeed!—why these are the noble and free citizens of Epidaphne! Beast, did you say?—take care that you are not overheard. Do you not perceive that the animal has the visage of a man? Why, my dear sir, that cameleopard is no other than Antiochus Epiphanes—Antiochus the Illustrious, King of Syria, and the most potent of all the autocrats of the East! It is true, that he is entitled, at times, Antiochus Epimanes—Antiochus the madman—but that is because all people have not the capacity to appreciate his merits. It is also certain that he is at present ensconced in the hide of a beast, and is doing his best to play the part of a cameleopard; but this is done for the better sustaining his dignity as king. Besides, the monarch is of gigantic stature, and the dress is therefore neither unbecoming nor over large. We may, however, presume he would not have adopted it but for some occasion of especial state. Such, you will allow, is the massacre of a thousand Jews. With how superior a dignity the monarch perambulates on all fours! His tail, you perceive, is held aloft by his two principal concubines, Elline and

* Flavius Vospicus says, that the hymn here introduced was sung by the rabble upon the occasion of Aurelian, in the Sarmatic war, having slain, with his own hand, nine hundred and fifty of the enemy.

Argelais; and his whole appearance would be infinitely prepossessing, were it not for the protuberance of his eyes, which will certainly start out of his head, and the queer color of his face, which has become nondescript from the quantity of wine he has swallowed. Let us follow him to the hippodrome, whither he is proceeding, and listen to the song of triumph which he is commencing:

Who is king but Epiphanes?
Say—do you know?
Who is king but Epiphanes?
Bravo!—bravo!
There is none but Epiphanes,
No—there is none:
So tear down the temples,
And put out the sun!

Well and strenuously sung! The populace are hailing him "Prince of Poets," as well as "Glory of the East," "Delight of the Universe," and "Most Remarkable of Cameleopards." They have *encored* his effusion, and—do you hear?—he is singing it over again. When he arrives at the hippodrome, he will be crowned with the poetic wreath, in anticipation of his victory at the approaching Olympics.

"But good Jupiter! what is the matter in the crowd behind us?"

Behind us, did you say?—oh! ah!—I perceive. My friend, it is well that you spoke in time. Let us get into a place of safety as soon as possible. Here!—let us conceal ourselves in the arch of this aqueduct, and I will inform you presently of the origin of the commotion. It has turned out as I have been anticipating. The singular appearance of the cameleopard with the head of a man, has, it seems, given offence to the notions of propriety entertained in general by the wild animals domesticated in the city. A mutiny has been the result; and, as is usual upon such occasions, all human efforts will be of no avail in quelling the mob. Several of the Syrians have already been devoured; but the general voice of the four-footed patriots seems to be for eating up the cameleopard. "The Prince of Poets," therefore, is upon his hinder legs running for his life. His courtiers have left him in the lurch, and his concubines have followed so excellent an example. "Delight of the Universe," thou art in a sad predicament! "Glory of the East," thou art in danger of mastication! Therefore never regard so piteously thy tail; it will undoubtedly be draggled in the mud, and for this there is no help. Look not behind thee, then, at its unavoidable degradation; but take courage, ply thy legs with vigor, and scud for the hippodrome! Remember that thou art Antiochus Epiphanes. Antiochus the Illustrious!—also "Prince of Poets," "Glory of the East," "Delight of the Universe," and "Most Remarkable of Cameleopards!" Heavens! what a power of speed thou art displaying! What a capacity for leg-bail thou are developing! Run, Prince!—Bravo, Epiphanes! —Well done, Cameleopard!—Glorious Antiochus!—He runs!—he leaps!—he flies! Like an arrow from a catapult he approaches the hippodrome! He leaps!—he shrieks!—he is there! This is well; for hadst thou, "Glory of the East," been half a second longer in reaching the gates of the amphitheatre, there is not a bear's cub in Epidaphne

that would not have had a nibble at thy carcass. Let us be off—let us take our departure!—for we shall find our delicate modern ears unable to endure the vast uproar which is about to commence in celebration of the king's escape! Listen! it has already commenced. See!—the whole town is topsy-turvy.

"Surely this is the most populous city of the East! What a wilderness of people! What a jumble of all ranks and ages! What a multiplicity of sects and nations! what a variety of costumes! what a Babel of languages! what a screaming of beasts! what a tinkling of instruments! what a parcel of philosophers!"

Come let us be off.

"Stay a moment! I see a vast hubbub in the hippodrome; what is the meaning of it, I beseech you?"

That?—oh, nothing! The noble and free citizens of Epidaphne being, as they declare, well satisfied of the faith, valor, wisdom, and divinity of their king, and having, moreover, been eye-witnesses of his late superhuman agility, do think it no more than their duty to invest his brows (in addition to the poetic crown) with the wreath of victory in the foot-race—a wreath which it is evident he *must* obtain at the celebration of the next Olympiad, and which, therefore, they now give him in advance.

Some Words with a Mummy

(First published in *American Whig Review*, April, 1845.—Ed.)

The symposium of the preceding evening had been a little too much for my nerves. I had a wretched headache, and was desperately drowsy. Instead of going out therefore to spend the evening as I had proposed, it occurred to me that I could not do a wiser thing than just eat a mouthful of supper and go immediately to bed.

A *light* supper of course. I am exceedingly fond of Welsh rabbit. More than a pound at once, however, may not at all times be advisable. Still, there can be no material objection to two. And really between two and three, there is merely a single unit of difference. I ventured, perhaps, upon four. My wife will have it five—but, clearly, she has confounded two very distinct affairs. The abstract number, five, I am willing to admit; but, concretely, it has reference to bottles of brown stout, without which, in the way of condiment, Welsh rabbit is to be eschewed.

Having thus concluded a frugal meal, and donned my night-cap, with the serene hope of enjoying it till noon the next day, I placed my head upon the pillow, and, through the aid of a capital conscience, fell into a profound slumber forthwith.

But when were the hopes of humanity fulfilled? I could not have completed my third snore when there came a furious ringing at the street-door bell, and then an impatient thumping at the knocker, which awakened me at once.

In a minute afterward, and while I was still rubbing my eyes, my wife thrust in my face a note, from my old friend, Doctor Ponnonner. It ran thus:

"Come to me, by all means, my dear good friend, as soon as you receive this. Come and help us to rejoice. At last, by long persevering diplomacy, I have gained the assent of the Directors of the City Museum, to my examination of the Mummy—you know the one I mean. I have permission to unswathe it and open it, if desirable. A few friends only will be present—you, of course. The Mummy is now at my house, and we shall begin to unroll it at eleven to-night.

"Yours, ever,

"PONNONNER."

By the time I had reached the "Ponnonner," it struck me that I was as wide awake as a man need be. I leaped out of bed in an ecstacy, overthrowing all in my way; dressed myself with a rapidity truly marvellous; and set off, at the top of my speed, for the doctor's.

There I found a very eager company assembled. They had been awaiting me with much impatience; the Mummy was extended upon the dining-table; and the moment I entered its examination was commenced.

It was one of a pair brought, several years previously, by Captain Arthur Sabretash, a cousin of Ponnonner's, from a tomb near Eleithias, in the Lybian mountains, a considerable distance above Thebes on the Nile. The grottos at this point, although less magnificent than the Theban sepulchres, are of higher interest, on account of affording more numerous illustrations of the private life of the Egyptians. The chamber from which our specimen was taken, was said to be very rich in such illustrations—the walls being completely covered with fresco paintings and basreliefs, while statues, vases, and Mosaic work of rich patterns, indicated the vast wealth of the deceased.

The treasure had been deposited in the museum precisely in the same condition in which Captain Sabretash had found it—that is to say, the coffin had not been disturbed. For eight years it had thus stood, subject only externally to public inspection. We had now, therefore, the complete Mummy at our disposal; and to those who are aware how very rarely the unransacked antique reaches our shores, it will be evident, at once that we had great reason to congratulate ourselves upon our good fortune.

Approaching the table, I saw on it a large box, or case, nearly seven feet long, and perhaps three feet wide, by two feet and a half deep. It was oblong—not coffin-shaped. The material was at first supposed to be the wood of the sycamore (*platanus*), but, upon cutting into it, we found it to be pasteboard, or, more properly, *papier mache*, composed of papyrus. It was thickly ornamented with paintings, representing funeral scenes, and other mournful subjects—interspersed among which, in every variety of position, were certain series of hieroglyphical characters, intended, no doubt, for the name of the departed. By good luck, Mr. Gliddon formed one of our party; and he had no difficulty in translating the letters, which were simply phonetic, and represented the word *Allamistakeo*.

We had some difficulty in getting

this case open without injury; but, having at length accomplished the task, we came to a second, coffin-shaped, and very considerably less in size than the exterior one, but resembling it precisely in every other respect. The interval between the two was filled with resin, which had, in some degree, defaced the colors of the interior box.

Upon opening this latter (which we did quite easily), we arrived at a third case, also coffin-shaped, and varying from the second one in no particular, except in that of its material, which was cedar, and still emitted the peculiar and highly aromatic odor of that wood. Between the second and the third case there was no interval—the one fitting accurately within the other.

Removing the third case, we discovered and took out the body itself. We had expected to find it, as usual, enveloped in frequent rolls, or bandages, of linen; but, in place of these, we found a sort of sheath, made of papyrus, and coated with a layer of plaster, thickly gilt and painted. The paintings represented subjects connected with the various supposed duties of the soul, and its presentation to different divinities, with numerous identical human figures, intended, very probably, as portraits of the persons embalmed. Extending from head to foot was a columnar, or perpendicular, inscription, in phonetic hieroglyphics, giving again his name and titles, and the names and titles of his relations.

Around the neck thus unsheathed, was a collar of cylindrical glass beads, diverse in color, and so arranged as to form images of deities, of the scarabæus, etc., with the winged globe. Around the small of the waist was a similar collar or belt.

Stripping off the papyrus, we found the flesh in excellent preservation, with no perceptible odor. The color was reddish. The skin was hard, smooth, and glossy. The teeth and hair were in good condition. The eyes (it seemed) had been removed, and glass ones substituted, which were very beautiful and wonderfully life-like, with the exception of somewhat too determined a stare. The fingers and the nails were brilliantly gilded.

Mr. Gliddon was of opinion, from the redness of the epidermis, that the embalmment had been effected altogether by asphaltum; but, on scraping the surface with a steel instrument, and throwing into the fire some of the powder thus obtained, the flavor of camphor and other sweet-scented gums became apparent.

We searched the corpse very carefully for the usual openings through which the entrails are extracted, but, to our surprise, we could discover none. No member of the party was at that period aware that entire or unopened mummies are not unfrequently met. The brain it was customary to withdraw through the nose; the intestines through an incision in the side; the body was then shaved, washed, and salted; then laid aside for several weeks, when the operation of embalming, properly so called, began.

As no trace of an opening could be found, Doctor Ponnonner was preparing his instruments for dissection, when I observed that it was then past two o'clock. Hereupon it was agreed to postpone the internal examination until the next evening; and we were about to

separate for the present, when some one suggested an experiment or two with the Voltaic pile.

The application of electricity to a Mummy three or four thousand years old at the least, was an idea, if not very sage, still sufficiently original, and we all caught it at once. About one-tenth in earnest and nine-tenths in jest, we arranged a battery in the Doctor's study, and conveyed thither the Egyptian.

It was only after much trouble that we succeeded in laying bare some portions of the temporal muscle which appeared of less stony rigidity than other parts of the frame, but which, as we had anticipated, of course, gave no indication of galvanic susceptibility when brought in contact with the wire. This, the first trial, indeed, seemed decisive, and, with a hearty laugh at our own absurdity, we were bidding each other good night, when my eyes, happening to fall upon those of the Mummy, were there immediately riveted in amazement. My brief glance, in fact, had sufficed to assure me that the orbs which we had all supposed to be glass, and which were originally noticeable for a certain wild stare, were now so far covered by the lids, that only a small portion of the *tunica albuginea* remained visible.

With a shout I called attention to the fact, and it became immediately obvious to all.

I cannot say that I was *alarmed* at the phenomenon, because "alarmed" is, in my case, not exactly the word. It is possible, however, that, but for the Brown Stout, I might have been a little nervous. As for the rest of the company, they really made no attempt at concealing the downright fright which possessed them. Doctor Ponnonner was a man to be pitied. Mr. Gliddon, by some peculiar process, rendered himself invisible. Mr. Silk Buckingham, I fancy, will scarcely be so bold as to deny that he made his way, upon all fours, under the table.

After the first shock of astonishment, however, we resolved, as a matter of course, upon further experiment forthwith. Our operations were now directed against the great toe of the right foot. We made an incision over the outside of the exterior *os sesamoideum pollicis pedis*, and thus got at the root of the *abductor* muscle. Readjusting the battery, we now applied the fluid to the bisected nerves—when, with a movement of exceeding life-likeness, the Mummy first drew up its right knee so as to bring it nearly in contact with the abdomen, and then, straightening the limb with inconceivable force, bestowed a kick upon Doctor Ponnonner, which had the effect of discharging that gentleman, like an arrow from a catapult, through a window into the street below.

We rushed out *en masse* to bring in the mangled remains of the victim, but had the happiness to meet him upon the staircase, coming up in an unaccountable hurry, brimful of the most ardent philosophy, and more than ever impressed with the necessity of prosecuting our experiment with vigor and with zeal.

It was by his advice, accordingly, that we made, upon the spot, a profound incision into the tip of the subject's nose, while the Doctor himself, laying violent hands upon it, pulled it into vehement contact with the wire.

Morally and physically—figuratively

and literally—was the effect electric. In the first place, the corpse opened its eyes and winked very rapidly for several minutes, as does Mr. Barnes in the pantomime; in the second place, it sneezed; in the third, it sat upon end; in the fourth, it shook its fist in Doctor Ponnonner's face; in the fifth, turning to Messieurs Gliddon and Buckingham, it addressed them, in very capital Egyptian, thus:

"I must say, gentlemen, that I am as much surprised as I am mortified at your behavior. Of Doctor Ponnonner nothing better was to be expected. He is a poor little fat fool who *knows* no better. I pity and forgive him. But you, Mr. Gliddon—and you, Silk—who have travelled and resided in Egypt until one might imagine you to the manner born—you, I say who have been so much among us that you speak Egyptian fully as well, I think, as you write your mother-tongue—you, whom I have always been led to regard as the firm friend of the mummies—I really did anticipate more gentlemanly conduct from *you*. What am I to think of your standing quietly by and seeing me this unhandsomely used? What am I to suppose by your permitting Tom, Dick, and Harry to strip me of my coffins, and my clothes, in this wretchedly cold climate? In what light (to come to the point) am I to regard your aiding and abetting that miserable little villain, Doctor Ponnonner, in pulling me by the nose?"

It will be taken for granted, no doubt, that upon hearing this speech under the circumstances, we all either made for the door, or fell into violent hysterics, or went off in a general swoon. One of these three things was, I say, to be expected. Indeed each and all of these lines of conduct might have been very plausibly pursued. And, upon my word, I am at a loss to know how or why it was that we pursued neither the one nor the other. But, perhaps, the true reason is to be sought in the spirit of the age, which proceeds by the rule of contraries altogether, and is now usually admitted as the solution of every thing in the way of paradox and impossibility. Or, perhaps, after all, it was only the Mummy's exceedingly natural and matter-of-course air that divested his words of the terrible. However this may be, the facts are clear, and no member of our party betrayed any very particular trepidation, or seemed to consider that any thing had gone very especially wrong.

For my part I was convinced it was all right, and merely stepped aside, out of the range of the Egyptian's fist. Doctor Ponnonner thrust his hands into his breeches' pockets, looked hard at the Mummy, and grew excessively red in the face. Mr. Gliddon stroked his whiskers and drew up the collar of his shirt. Mr. Buckingham hung down his head, and put his right thumb into the left corner of his mouth.

The Egyptian regarded him with a severe countenance for some minutes, and at length, with a sneer, said:

"Why don't you speak, Mr. Buckingham? Did you hear what I asked you, or not? *Do* take your thumb out of your mouth!"

Mr. Buckingham, hereupon, gave a slight start, took his right thumb out of the left corner of his mouth, and, by way of indemnification inserted his left thumb in the right corner of the aperture above-mentioned.

Not being able to get an answer from Mr. B., the figure turned peevishly to Mr. Gliddon, and, in a peremptory tone, demanded in general terms what we all meant.

Mr. Gliddon replied at great length, in phonetics; and but for the deficiency of American printing-offices in hieroglyphical type, it would afford me much pleasure to record here, in the original, the whole of his very excellent speech.

I may as well take this occasion to remark, that all the subsequent conversation in which the Mummy took a part, was carried on in primitive Egyptian, through the medium (so far as concerned myself and other untravelled members of the company)—through the medium, I say, of Messieurs Gliddon and Buckingham, as interpreters. These gentlemen spoke the mother tongue of the mummy with inimitable fluency and grace; but I could not help observing that (owing, no doubt, to the introduction of images entirely modern, and, of course, entirely novel to the stranger) the two travellers were reduced, occasionally, to the employment of sensible forms for the purpose of conveying a particular meaning. Mr. Gliddon, at one period, for example, could not make the Egyptian comprehend the term "politics," until he sketched upon the wall, with a bit of charcoal, a little carbuncle-nosed gentleman, out at elbows, standing upon a stump, with his left leg drawn back, right arm thrown forward, with his fist, shut, the eyes rolled up toward Heaven, and the mouth open at an angle of ninety degrees. Just in the same way Mr. Buckingham failed to convey the absolutely modern idea "whig," until (at Doctor Ponnonner's suggestion) he grew very pale in the face, and consented to take off his own.

It will be readily understood that Mr. Gliddon's discourse turned chiefly upon the vast benefits accruing to science from the unrolling and disembowelling of mummies; apologizing, upon this score, for any disturbance that might have been occasioned *him*, in particular, the individual Mummy called Allamistakeo; and concluding with a mere hint (for it could scarcely be considered more) that, as these little matters were now explained, it might be as well to proceed with the investigation intended. Here Doctor Ponnonner made ready his instruments.

In regard to the latter suggestions of the orator, it appears that Allamistakeo had certain scruples of conscience, the nature of which I did not distinctly learn; but he expressed himself satisfied with the apologies tendered, and, getting down from the table, shook hands with the company all round.

When this ceremony was at an end, we immediately busied ourselves in repairing the damages which our subject had sustained from the scalpel. We sewed up the wound in his temple, bandaged his foot, and applied a square inch of black plaster to the tip of his nose.

It was now observed that the Count (this was the title, it seems, of Allamistakeo) had a slight fit of shivering—no doubt from the cold. The Doctor immediately repaired to his wardrobe, and soon returned with a black dress coat, made in Jennings' best manner, a pair of sky-blue plaid pantaloons with straps, a pink gingham *chemise*, a flapped vest of brocade, a white sack

overcoat, a walking cane with a hook, a hat with no brim, patent-leather boots, straw-colored kid gloves, an eye-glass, a pair of whiskers, and a waterfall cravat. Owing to the disparity of size between the Count and the Doctor (the proportion being as two to one), there was some little difficulty in adjusting these habiliments upon the person of the Egyptian; but when all was arranged, he might have been said to be dressed. Mr. Gliddon, therefore, gave him his arm, and led him to a comfortable chair by the fire, while the Doctor rang the bell upon the spot and ordered a supply of cigars and wine.

The conversation soon grew animated. Much curiosity was, of course, expressed in regard to the somewhat remarkable fact of Allamistakeo's still remaining alive.

"I should have thought," observed Mr. Buckingham, "that it is high time you were dead."

"Why," replied the Count, very much astonished, "I am little more than seven hundred years old! My father lived a thousand, and was by no means in his dotage when he died."

Here ensued a brisk series of questions and computations, by means of which it became evident that the antiquity of the Mummy had been grossly misjudged. It had been five thousand and fifty years and some months since he had been consigned to the catacombs at Eleithias.

"But my remark," resumed Mr. Buckingham, "had no reference to your age at the period of interment (I am willing to grant, in fact, that you are still a young man), and my allusion was to the immensity of time during which, by your own showing, you must have been done up in asphaltum."

"In what?" said the Count.

"In asphaltum," persisted Mr. B.

"Ah, yes; I have some faint notion of what you mean; it might be made to answer, no doubt—but in my time we employed scarcely any thing else than the Bichloride of Mercury."

"But what we are especially at a loss to understand," said Doctor Ponnonner, "is how it happens that, having been dead and buried in Egypt five thousand years ago, you are here to-day all alive and looking so delightfully well."

"Had I been, as you say, *dead*," replied the Count, "it is more than probable that dead I should still be; for I perceive you are yet in the infancy of Galvanism, and cannot accomplish with it what was a common thing among us in the old days. But the fact is, I fell into catalepsy, and it was considered by my best friends that I was either dead or should be; they accordingly embalmed me at once—I presume you are aware of the chief principle of the embalming process?"

"Why, not altogether."

"Why, I perceive—a deplorable condition of ignorance! Well, I cannot enter into details just now: but it is necessary to explain that to embalm (properly speaking), in Egypt, was to arrest indefinitely *all* the animal functions subjected to the process. I use the word 'animal' in its widest sense, as including the physical not more than the moral and *vital* being. I repeat that the leading principle of embalmment consisted, with us, in the immediately arresting, and holding in perpetual *abeyance*, all the animal func-

tions subjected to the process. To be brief, in whatever condition the individual was, at the period of embalmment, in that condition he remained. Now, as it is my good fortune to be of the blood of the Scarabæus, I was embalmed *alive*, as you see me at present."

"The blood of the Scarabæus!" exclaimed Doctor Ponnonner.

"Yes. The Scarabæus was the insignium, or the 'arms,' of a very distinguished and very rare patrician family. To be 'of the blood of the Scarabæus,' is merely to be one of that family of which the Scarabæus is the *insignium*. I speak figuratively."

"But what has this to do with you being alive?"

"Why, it is the general custom in Egypt to deprive a corpse, before embalmment, of its bowels and brains; the race of the Scarabæi alone did not coincide with the custom. Had I not been a Scarabæus, therefore, I should have been without bowels and brains; and without either it is inconvenient to live."

"I perceive that," said Mr. Buckingham, "and I presume that all the *entire* mummies that come to hand are of the race of Scarabæi."

"Beyond doubt."

"I thought," said Mr. Gliddon, very meekly, "that the Scarabæus was one of the Egyptian gods."

"One of the Egyptian *what?*" exclaimed the Mummy, starting to its feet.

"Gods!" repeated the traveller.

"Mr. Gliddon, I really am astonished to hear you talk in this style," said the Count, resuming his chair. "No nation upon the face of the earth has ever acknowledged more than one *god*. The Scarabæus, the Ibis, etc., were with us (as similar creatures have been with others) the symbols, or *media*, through which we offered worship to the Creator too august to be more directly approached."

There was here a pause. At length the colloquy was renewed by Doctor Ponnonner.

"It is not improbable, then, from what you have explained," said he, "that among the catacombs near the Nile there may exist other mummies of the Scarabæus tribe, in a condition of vitality."

"There can be no question of it," replied the Count; "all the Scarabæi embalmed accidentally while alive, are alive. Even some of those *purposely* so embalmed, may have been overlooked by their executors, and still remain in the tomb."

"Will you be kind enough to explain," I said, "what you mean by 'purposely so embalmed'?"

"With great pleasure," answered the Mummy, after surveying me leisurely through his eye-glass—for it was the first time I had ventured to address him a direct question.

"With great pleasure," he said. "The usual duration of man's life, in my time, was about eight hundred years. Few men died, unless by most extraordinary accident, before the age of six hundred; few lived longer than a decade of centuries; but eight were considered the natural term. After the discovery of the embalming principle, as I have already described it to you, it occurred to our philosophers that a laudable curiosity might be gratified, and, at the same time, the interests of science much advanced, by living this

natural term in instalments. In the case of history, indeed, experience demonstrated that something of this kind was indispensable. An historian, for example, having attained the age of five hundred, would write a book with great labor and then get himself carefully embalmed; leaving instructions to his executors *pro tem.*, that they should cause him to be revivified after the lapse of a certain period—say five or six hundred years. Resuming existence at the expiration of this time, he would invariably find his great work converted into a species of hap-hazard note-book—that is to say, into a kind of literary arena for the conflicting guesses, riddles, and personal squabbles of whole herds of exasperated commentators. These guesses, etc., which passed under the name of annotations, or emendations, were found so completely to have enveloped, distorted, and overwhelmed the text, that the author had to go about with a lantern to discover his own book. When discovered, it was never worth the trouble of the search. After rewriting it throughout, it was regarded as the bounden duty of the historian to set himself to work immediately in correcting, from his own private knowledge and experience, the traditions of the day concerning the epoch at which he had originally lived. Now this process of rescription and personal rectification, pursued by various individual sages from time to time, had the effect of preventing our history from degenerating into absolute fable."

"I beg your pardon," said Doctor Ponnonner at this point, laying his hand gently upon the arm of the Egyptian—"I beg your pardon, sir, but may I presume to interrupt you for one moment?"

"By all means, *sir*," replied the Count, drawing up.

"I merely wished to ask you a question," said the Doctor. "You mentioned the historian's personal correction of *traditions* respecting his own epoch. Pray, sir, upon an average what proportion of these Kabbala were usually found to be right?"

"The Kabbala, as you properly term them, sir, were generally discovered to be precisely on a par with the facts recorded in the unre-written histories themselves—that is to say, not one individual iota of either was ever known, under any circumstances, to be not totally and radically wrong."

"But since it is quite clear," resumed the Doctor, "that at least five thousand years have elapsed since your entombment, I take it for granted that your histories at that period, if not your traditions were sufficiently explicit on that one topic of universal interest, the Creation, which took place, as I presume you are aware, only about ten centuries before."

"Sir!" said the Count Allamistakeo.

The Doctor repeated his remarks, but it was only after much additional explanation that the foreigner could be made to comprehend them. The latter at length said, hesitatingly:

"The ideas you have suggested are to me, I confess, utterly novel. During my time I never knew any one to entertain so singular a fancy as that the universe (or this world if you will have it so) ever had a beginning at all. I remember once, and once only, hearing something remotely hinted, by a man of many speculations, concerning the

origin *of the human race;* and by this individual, the very word *Adam* (or Red Earth), which you make use of, was employed. He employed it, however, in a generical sense, with reference to the spontaneous germination from rank soil (just as a thousand of the lower *genera* of creatures are germinated)—the spontaneous germination, I say, of five vast hordes of men, simultaneously upspringing in five distinct and nearly equal divisions of the globe."

Here, in general, the company shrugged their shoulders, and one or two of us touched our foreheads with a very significant air. Mr. Silk Buckingham, first glancing slightly at the occiput and then at the sinciput of Allamistakeo, spoke as follows:

"The long duration of human life in your time, together with the occasional practice of passing it, as you have explained, in instalments, must have had, indeed, a strong tendency to the general development and conglomeration of knowledge. I presume, therefore, that we are to attribute the marked inferiority of the old Egyptians in all particulars of science, when compared with the moderns, and more especially with the Yankees, altogether to the superior solidity of the Egyptian skull."

"I confess again," replied the Count, with much suavity, "that I am somewhat at a loss to comprehend you; pray, to what particulars of science do you allude?"

Here our whole party, joining voices, detailed, at great length, the assumptions of phrenology and the marvels of animal magnetism.

Having heard us to an end, the Count proceeded to relate a few anecdotes, which rendered it evident that prototypes of Gall and Spurzheim had flourished and faded in Egypt so long ago as to have been nearly forgotten, and that the manœuvres of Mesmer were really very contemptible tricks when put in collation with the positive miracles of the Teban *savans*, who created lice and a great many other similar things.

I here asked the Count if his people were able to calculate eclipses. He smiled rather contemptuously, and said they were.

This put me a little out, but I began to make other inquiries in regard to his astronomical knowledge, when a member of the company, who had never as yet opened his mouth, whispered in my ear, that for information on this head, I had better consult Ptolemy (whoever Ptolemy is), as well as one Plutarch *de facie lunæ*.

I then questioned the Mummy about burning-glasses and lenses, and, in general, about the manufacture of glass; but I had not made an end of my queries before the silent member again touched me quietly on the elbow, and begged me for God's sake to take a peep at Diodorus Siculus. As for the Count, he merely asked me, in the way of reply, if we moderns possessed any such microscopes as would enable us to cut cameos in the style of the Egyptians. While I was thinking how I should answer this question, little Doctor Ponnonner committed himself in a very extraordinary way.

"Look at our architecture!" he exclaimed, greatly to the indignation of both the travellers, who pinched him black and blue to no purpose.

"Look," he cried with enthusiasm, "at the Bowling-Green Fountain in New

York! or if this be too vast a contemplation, regard for a moment the Capitol at Washington, D. C.!"—and the good little medical man went on to detail, very minutely, the proportions of the fabric to which he referred. He explained that the portico alone was adorned with no less than four and twenty columns, five feet in diameter, and ten feet apart.

The Count said that he regretted not being able to remember, just at that moment, the precise dimensions of any one of the principal buildings of the city of Aznac, whose foundations were laid in the night of Time, but the ruins of which were still standing, at the epoch of his entombment, in a vast plain of sand to the westward of Thebes. He recollected, however, (talking of the porticoes,) that one affixed to an inferior palace in a kind of suburb called Carnac, consisted of a hundred and forty-four columns, thirty-seven feet in circumference, and twenty-five feet apart. The approach to this portico, from the Nile, was through an avenue two miles long, composed of sphynxes, statues, and obelisks, twenty, sixty, and a hundred feet in height. The palace itself (as well as he could remember) was, in one direction, two miles long, and might have been altogether about seven in circuit. Its walls were richly painted all over, within and without, with hieroglyphics. He would not pretend to *assert* that even fifty or sixty of the Doctor's Capitols might have been built within these walls, but he was by no means sure that two or three hundred of them might not have been squeezed in with some trouble. That palace at Carnac was an insignificant little building after all. He (the Count), however, could not conscientiously refuse to admit the ingenuity, magnificence, and superiority of the Fountain at the Bowling Green, as described by the Doctor. Nothing like it, he was forced to allow, had ever been seen in Egypt or elsewhere.

I here asked the Count what he had to say to our railroads.

"Nothing," he replied, "in particular." They were rather slight, rather ill-conceived, and clumsily put together. They could not be compared, of course, with the vast, level, direct, iron-grooved causeways upon which the Egyptians conveyed entire temples and solid obelisks of a hundred and fifty feet in altitude.

I spoke of our gigantic mechanical forces.

He agreed that we knew something in that way, but inquired how I should have gone to work in getting up the imposts on the lintels of even the little palace at Carnac.

This question I concluded not to hear, and demanded if he had any idea of Artesian wells; but he simply raised his eyebrows; while Mr. Gliddon winked at me very hard and said, in a low tone, that one had been recently discovered by the engineers employed to bore for water in the Great Oasis.

I then mentioned our steel; but the foreigner elevated his nose, and asked me if our steel could have executed the sharp carved work seen on the obelisks, and which was wrought altogether by edge-tools of copper.

This disconcerted us so greatly that we thought it advisable to vary the attack to Metaphysics. We sent for a copy of a book called the "Dial," and read out of it a chapter or two about

something which is not very clear, but which the Bostonians call the Great Movement of Progress.

The Count merely said that Great Movements were awfully common things in his day, and as for Progress, it was at one time quite a nuisance, but it never progressed.

We then spoke of the great beauty and importance of Democracy, and were at much trouble in impressing the Count with a due sense of the advantages we enjoyed in living where there was suffrage *ad libitum,* and no king.

He listened with marked interest, and in fact seemed not a little amused. When we had done, he said that, a great while ago, there had occurred something of a very similar sort. Thirteen Egyptian provinces determined all at once to be free, and to set a magnificent example to the rest of mankind. They assembled their wise men, and concocted the most ingenious constitution it is possible to conceive. For a while they managed remarkably well; only their habit of bragging was prodigious. The thing ended, however, in the consolidation of the thirteen states, with some fifteen or twenty others, in the most odious and insupportable despotism that was ever heard of upon the face of the Earth.

I asked what was the name of the usurping tyrant.

As well as the Count could recollect, it was *Mob.*

Not knowing what to say to this, I raised my voice, and deplored the Egyptian ignorance of steam.

The Count looked at me with much astonishment, but made no answer. The silent gentleman, however, gave me a violent nudge in the ribs with his elbows—told me I had sufficiently exposed myself for once—and demanded if I was really such a fool as not to know that the modern steam-engine is derived from the invention of Hero, through Solomon de Caus.

We were now in imminent danger of being discomfited; but, as good luck would have it, Doctor Ponnonner, having rallied, returned to our rescue, and inquired if the people of Egypt would seriously pretend to rival the moderns in the all-important particular of dress.

The Count, at this, glanced downward to the straps of his pantaloons, and then taking hold of the end of one of his coat-tails, held it up close to his eyes for some minutes. Letting it fall, at last, his mouth extended itself very gradually from ear to ear; but I do not remember that he said any thing in the way of reply.

Hereupon we recovered our spirits, and the Doctor, approaching the Mummy with great dignity, desired it to say candidly, upon its honor as a gentleman, if the Egyptians had comprehended, at *any* period, the manufacture of either Ponnonner's lozenges or Brandreth's pills.

We looked, with profound anxiety, for an answer—but in vain. It was not forthcoming. The Egyptian blushed and hung down his head. Never was triumph more consummate; never was defeat borne with so ill a grace. Indeed, I could not endure the spectacle of the poor Mummy's mortification. I reached my hat, bowed to him stiffly, and took leave.

Upon getting home I found it past four o'clock, and went immediately to bed. It is now ten a. m. I have been

up since seven, penning these memoranda for the benefit of my family and of mankind. The former I shall behold no more. My wife is a shrew. The truth is, I am heartily sick of this life and of the nineteenth century in general. I am convinced that every thing is going wrong. Besides, I am anxious to know who will be President in 2045. As soon, therefore, as I shave and swallow a cup of coffee, I shall just step over to Ponnonner's and get embalmed for a couple of hundred years.

Loss of Breath

(First published in *Southern Literary Messenger*, September, 1835.—Ed.)

O breathe not, etc.—*Moore's Melodies.*

THE most notorious ill-fortune must in the end yield to the untiring courage of philosophy—as the most stubborn city to the ceaseless vigilance of an enemy. Shalmanezer, as we have it in holy writings, lay three years before Samaria; yet it fell. Sardanapalus—see Diodorus—maintained himself seven in Nineveh; but to no purpose. Troy expired at the close of the second lustrum; and Azoth, as Aristæus declares upon his honour as a gentleman, opened at last her gates to Psammetichus, after having barred them for the fifth part of a century. . . .

"Thou wretch!—thou vixen!—thou shrew!" said I to my wife on the morning after our wedding; "thou witch!—thou hag!—thou whipper-snapper!—thou sink of iniquity!—thou fiery-faced quintessence of all that is abominable!—thou—thou"—here standing upon tiptoe, seizing her by the throat, and placing my mouth close to her ear, I was preparing to launch forth a new and more decided epithet of opprobium, which should not fail, if ejaculated, to convince her of her insignificance, when to my extreme horror and astonishment I discovered that *I had lost my breath*.

The phrases "I am out of breath," "I have lost my breath," etc., are often enough repeated in common conversation; but it had never occurred to me that the terrible accident of which I speak could *bona fide* and actually happen! Imagine—that is if you have a fanciful turn—imagine, I say, my wonder—my consternation—my despair!

There is a good genius, however, which has never entirely deserted me. In my most ungovernable moods I still retain a sense of propriety, *et le chemin des passions me conduit*—as Lord Edouard in the "Julie" says it did him—*a la philosophie veritable.*

Although I could not at first precisely ascertain to what degree the occurrence had affected me, I determined at all events to conceal the matter from my wife, until further experience should discover to me the extent of this my unheard of calamity. Altering my countenance, therefore, in a moment, from its bepuffed and distorted appearance, to an expression of arch and coquettish benignity, I gave my lady a pat on the one cheek, and a kiss on

the other, and without saying one syllable (Furies! I could not), left her astonished at my drollery, as I pirouetted out of the room in a *pas de zephyr*.

Behold me then safely ensconced in my private *boudoir*, a fearful instance of the ill consequences attending upon irascibility—alive, with the qualifications of the dead—dead, with the propensities of the living—an anomaly on the face of the earth—being very calm, yet breathless.

Yes! breathless. I am serious in asserting that my breath was entirely gone. I could not have stirred with it a feather if my life had been at issue, or sullied even the delicacy of a mirror. Hard fate!—yet there was some alleviation to the first overwhelming paroxysm of my sorrow. I found, upon trial, that the powers of utterance which, upon my inability to proceed in the conversation with my wife, I then concluded to be totally destroyed, were in fact only partially impeded, and I discovered that had I, at that interesting crisis, dropped my voice to a singularly deep guttural, I might still have continued to her the communication of my sentiments; this pitch of voice (the guttural) depending, I find, not upon the current of the breath, but upon a certain spasmodic action of the muscles of the throat.

Throwing myself upon a chair, I remained for some time absorbed in meditation. My reflections, be sure, were of no consolatory kind. A thousand vague and lachrymatory fancies took possession of my soul—and even the idea of suicide flitted across my brain; but it is a trait in the perversity of human nature to reject the obvious and the ready, for the far-distant and equivocal. Thus I shuddered at self-murder as the most decided of atrocities while the tabby-cat purred strenuously upon the rug, and the very water-dog wheezed assiduously under the table; each taking to itself much merit for the strength of its lungs, and all obviously done in derision of my own pulmonary incapacity.

Oppressed with a tumult of vague hopes and fears, I at length heard the footsteps of my wife descending the staircase. Being now assured of her absence, I returned with a palpitating heart to the scene of my disaster.

Carefully locking the door on the inside, I commenced a vigorous search. It was possible, I thought, that, concealed in some obscure corner, or lurking in some closet or drawer, might be found the lost object of my inquiry. It might have a vapory—it might even have a tangible form. Most philosophers, upon many points of philosophy, are still very unphilosophical. William Godwin, however, says in his "Mandeville," that "invisible things are the only realities," and this, all will allow, is a case in point. I would have the judicious reader pause before accusing such asseverations of an undue quantum of absurdity. Anaxagoras, it will be remembered, maintained that snow is black, and this I have since found to be the case.

Long and earnestly did I continue the investigation: but the contemptible reward of my industry and perseverance proved to be only a set of false teeth, two pair of hips, an eye, and a number of *billets-doux* from Mr. Windenough to my wife. I might as well here observe that this confirmation of

my lady's partiality for Mr. W. occasioned me little uneasiness. That Mrs. Lackobreath should admire anything so dissimilar to myself was a natural and necessary evil. I am, it is well known, of a robust and corpulent appearance, and at the same time somewhat diminutive in stature. What wonder, then, that the lath-like tenuity of my acquaintance, and his altitude, which has grown into a proverb, should have met with all due estimation in the eyes of Mrs. Lackobreath. But to return.

My exertions, as I have before said, proved fruitless. Closet after closet—drawer after drawer—corner after corner—were scrutinized to no purpose. At one time, however, I thought myself sure of my prize, having, in rummaging a dressing-case, accidentally demolished a bottle of Grandjean's Oil of Archangels—which, as an agreeable perfume, I here take the liberty of recommending.

With a heavy heart I returned to my *boudoir*—there to ponder upon some method of eluding my wife's penetration, until I could make arrangements prior to my leaving the country, for to this I had already made up my mind. In a foreign climate, being unknown, I might, with some probability of success, endeavor to conceal my unhappy calamity—a calamity calculated, even more than beggary, to estrange the affections of the multitude, and to draw down upon the wretch the well-merited indignation of the virtuous and the happy. I was not long in hesitation. Being naturally quick, I committed to memory the entire tragedy of "Metamora." I had the good fortune to recollect that in the accentuation of this drama, or at least of such portion of it as is allotted to the hero, the tones of voice in which I found myself deficient were altogether unnecessary, and that the deep guttural was expected to reign monotonously throughout.

I practised for some time by the borders of a well-frequented marsh;—herein, however, having no reference to a similar proceeding of Demosthenes, but from a design peculiarly and conscientiously my own. Thus armed at all points, I determined to make my wife believe that I was suddenly smitten with a passion for the stage. In this, I succeeded to a miracle; and to every question or suggestion found myself at liberty to reply in my most frog-like and sepulchral tones with some passage from the tragedy—any portion of which, as I soon took great pleasure in observing, would apply equally well to any particular subject. It is not to be supposed, however, that in the delivery of such passages I was found at all deficient in the looking asquint—the showing my teeth—the working my knees—the shuffling my feet—or in any of those unmentionable graces which are now justly considered the characteristics of a popular performer. To be sure they spoke of confining me in a strait-jacket—but, good God! they never suspected me of having lost my breath.

Having at length put my affairs in order, I took my seat very early one morning in the mail stage for ———, giving it to be understood, among my acquaintances, that business of the last importance required my immediate personal attendance in that city.

The coach was crammed to repletion; but in the uncertain twilight the features of my companions could not be

distinguished. Without making any effectual resistance, I suffered myself to be placed between two gentlemen of colossal dimensions; while a third, of a size larger, requesting pardon for the liberty he was about to take, threw himself upon my body at full length, and falling asleep in an instant, drowned all my guttural ejaculations for relief, in a snore which would have put to blush the roarings of the bull of Phalaris. Happily the state of my respiratory faculties rendered suffocation an accident entirely out of the question.

As, however, the day broke more distinctly in our approach to the outskirts of the city, my tormentor, arising and adjusting his shirt-collar, thanked me in a very friendly manner for my civility. Seeing that I remained motionless (all my limbs were dislocated and my head twisted on one side), his apprehensions began to be excited; and arousing the rest of the passengers, he communicated, in a very decided manner, his opinion that a dead man had been palmed upon them during the night for a living and responsible fellow-traveller; here giving me a thump on the right eye, by way of demonstrating the truth of his suggestion.

Hereupon all, one after another (there were nine in company), believed it their duty to pull me by the ear. A young practising physician, too, having applied a pocket-mirror to my mouth, and found me without breath, the assertion of my prosecutor was pronounced a true bill; and the whole party expressed a determination to endure tamely no such impositions for the future, and to proceed no farther with any such carcasses for the present.

I was here, accordingly, thrown out at the sign of the "Crow" (by which tavern the coach happened to be passing), without meeting with any further accident than the breaking of both my arms, under the left hind wheel of the vehicle. I must besides do the driver the justice to state that he did not forget to throw after me the largest of my trunks, which, unfortunately falling on my head, fractured my skull in a manner at once interesting and extraordinary.

The landlord of the "Crow," who is a hospitable man, finding that my trunk contained sufficient to indemnify him for any little trouble he might take in my behalf, sent forthwith for a surgeon of his acquaintance, and delivered me to his care with a bill and receipt for ten dollars.

The purchaser took me to his apartments and commenced operations immediately. Having cut off my ears, however, he discovered signs of animation. He now rang the bell, and sent for a neighboring apothecary with whom to consult in the emergency. In case of his suspicions with regard to my existence proving ultimately correct, he, in the meantime, made an incision in my stomach, and removed several of my viscera for private dissection.

The apothecary had an idea that I was actually dead. This idea I endeavored to confute, kicking and plunging with all my might, and making the most furious contortions—for the operations of the surgeon had, in a measure, restored me to the possession of my faculties. All, however, was attributed to the effects of a new galvanic battery, wherewith the apothecary, who is really a man of information, performed several curious experiments, in which, from

my personal share in their fulfillment, I could not help feeling deeply interested. It was a course of mortification to me, nevertheless, that although I made several attempts at conversation, my powers of speech were so entirely in abeyance, that I could not even open my mouth; much less, then, make reply to some ingenious but fanciful theories of which, under other circumstances, my minute acquaintance with the Hippocratian pathology would have afforded me a ready confutation.

Not being able to arrive at a conclusion, the practitioners remanded me for further examination. I was taken up into a garret; and the surgeon's lady having accommodated me with drawers and stockings, the surgeon himself fastened my hands, and tied up my jaws with a pocket-handkerchief—then bolted the door on the outside as he hurried to his dinner, leaving me alone to silence and to meditation.

I now discovered to my extreme delight that I could have spoken had not my mouth been tied up with the pocket-handkerchief. Consoling myself with this reflection, I was mentally repeating some passages of the "Omnipresence of the Deity," as is my custom before resigning myself to sleep, when two cats, of a greedy and vituperative turn, entering at a hole in the wall, leaped up with a flourish *a la Catalani*, and alighting opposite one another on my visage, betook themselves to indecorous contention for the paltry consideration of my nose.

But, as the loss of his ears proved the means of elevating to the throne of Cyrus, the Magian or Mige-Gush of Persia, and as the cutting off his nose gave Zopyrus possession of Babylon, so the loss of a few ounces of my countenance proved the salvation of my body. Aroused by the pain, and burning with indignation, I burst, at a single effort, the fastenings and the bandage. Stalking across the room I cast a glance of contempt at the belligerents, and throwing open the sash to their extreme horror and disappointment, precipitated myself, very dexterously, from the window.

The mail-robber W——, to whom I bore a singular resemblance, was at this moment passing from the city jail to the scaffold erected for his execution in the suburbs. His extreme infirmity and long-continued ill-health had obtained him the privilege of remaining unmanacled; and habited in his gallows costume—one very similar to my own,—he lay at full length in the bottom of the hangman's cart (which happened to be under the windows of the surgeon at the moment of my precipitation) without any other guard than the driver, who was asleep, and two recruits of the sixth infantry, who were drunk.

As ill-luck would have it, I alit upon my feet within the vehicle. W——, who was an acute fellow, perceived his opportunity. Leaping up immediately, he bolted out behind, and turning down an alley, was out of sight in the twinkling of an eye. The recruits, aroused by the bustle, could not exactly comprehend the merits of the transaction. Seeing, however, a man, the precise counterpart of the felon, standing upright in the cart before their eyes, they were of the opinion that the rascal (meaning W——) was after making his escape, (so they expressed themselves,) and, having communicated this opinion to one another, they took each a dram,

and then knocked me down with the butt-ends of their muskets.

It was not long ere we arrived at the place of destination. Of course nothing could be said in my defence. Hanging was my inevitable fate. I resigned myself thereto with a feeling half stupid, half acrimonious. Being little of a cynic, I had all the sentiments of a dog. The hangman, however, adjusted the noose about my neck. The drop fell.

I forbear to depict my sensations upon the gallows; although here, undoubtedly, I could speak to the point, and it is a topic upon which nothing has been well said. In fact, to write upon such a theme it is necessary to have been hanged. Every author should confine himself to matters of experience. Thus Mark Antony composed a treatise upon getting drunk.

I may just mention, however, that die I did not. My body *was,* but I had no breath *to be,* suspended; and but for the knot under my left ear (which had the feel of a military stock) I dare say that I should have experienced very little inconvenience. As for the jerk given to my neck upon the falling of the drop, it merely proved a corrective to the twist afforded me by the fat gentleman in the coach.

For good reasons, however, I did my best to give the crowd the worth of their trouble. My convulsions were said to be extraordinary. My spasms it would have been difficult to beat. The populace *encored.* Several gentlemen swooned; and a multitude of ladies were carried home in hysterics. Pinxit availed himself of the opportunity to retouch, from a sketch taken upon the spot, his admirable painting of the "Marsyas flayed alive."

When I had afforded sufficient amusement, it was thought proper to remove my body from the gallows—this the more especially as the real culprit had in the meantime been retaken and recognized, a fact which I was so unlucky as not to know.

Much sympathy was, of course, exercised in my behalf, and as no one made claim to my corpse, it was ordered that I should be interred in a public vault.

Here, after due interval, I was deposited. The sexton departed, and I was left alone. A line of Marston's "Malcontent"—

> Death's a good fellow and keeps open house—

struck me at that moment as a palpable lie.

I knocked off, however, the lid of my coffin, and stepped out. The place was dreadfully dreary and damp, and I became troubled with *ennui.* By way of amusement, I felt my way among the numerous coffins ranged in order around. I lifted them down, one by one, busied myself in speculations about the mortality within.

"This," I soliloquized, tumbling over a carcass, puffy, bloated, and rotund—"this has been, no doubt, in every sense of the word, an unhappy—an unfortunate man. It has been his terrible lot not to walk but to waddle—to pass through life not like a human being, but like an elephant—not like a man, but like a rhinoceros.

"His attempts at getting on have been mere abortions, and his circumgyratory proceedings a palpable failure.

Taking a step forward, it has been his misfortune to take two toward the right, and three toward the left. His studies have been confined to the poetry of Crabbe. He can have no idea of the wonder of a *pirouette*. To him a *pas de papillon* has been an abstract conception. He has never ascended the summit of a hill. He has never viewed from any steeple the glories of a metropolis. Heat has been his mortal enemy. In the dog-days his days have been the days of a dog. Therein, he has dreamed of flames and suffocation —of mountains upon mountains—of Pelion upon Ossa. He was short of breath—to say all in a word, he was short of breath. He thought it extravagant to play upon wind-instruments. He was the inventor of self-moving fans, wind-sails, and ventilators. He patronized Du Pont the bellows-maker, and he died miserably in attempting to smoke a cigar. His was a case in which I feel a deep interest—a lot in which I sincerely sympathize.

"But here,"—said I—"here"—and I dragged spitefully from its receptacle a gaunt, tall and peculiar-looking form, whose remarkable appearance struck me with a sense of unwelcome familiarity—"here is a wretch entitled to no earthly commiseration." Thus saying, in order to obtain a more distinct view of my subject, I applied my thumb and forefinger to its nose, and causing it to assume a sitting position upon the ground, held it thus, at the length of my arm, while I continued my soliloquy.

—"Entitled," I repeated, "to no earthly commiseration. Who indeed would think of compassioning a shadow? Besides, has he not had his full share of the blessings of mortality? He was the originator of tall monuments — shot-towers — lightning-rods— Lombardy poplars. His treatise upon 'Shades and Shadows' has immortalized him. He edited with distinguished ability the last edition of 'South on the Bones.' He went early to college and studied pneumatics. He then came home, talked eternally, and played upon the French-horn. He patronized the bag-pipes. Captain Barclay, who walked against Time, would not walk against *him*. Windham and Allbreath were his favorite writers; his favorite artist, Phiz. He died gloriously while inhaling gas—*levique flatu corrupitur*, like the *fama pudicitiæ* in Hieronymus. He was indubitably a———"

"How *can* you?—how—*can*—you?"—interrupted the object of my animadversions, gasping for breath, and tearing off, with a desperate exertion, the bandage around its jaws—"how *can* you, Mr. Lackobreath, be so infernally cruel as to pinch me in that manner by the nose? Did you not see how they had fastened up my mouth—and you *must* know—if you know any thing—how vast a superfluity of breath I have to dispose of! If you do *not* know, however, sit down and you shall see. In my situation it is really a great relief to be able to open one's mouth—to be able to expatiate—to be able to communicate with a person like yourself, who do not think yourself called upon at every period to interrupt the thread of a gentleman's discourse. Interruptions are annoying and should undoubtedly be abolished—don't you think so?—no reply, I beg you,—one person is enough to be speaking at a time.—I shall be done by and by, and then you

may begin.—How the devil, sir, did you get into this place?—not a word I beseech you—been here some time myself—terrible accident!—heard of it, I suppose?—awful calamity!—walking under your windows—some short while ago—about the time you were stage-struck—horrible occurrence!—heard of 'catching one's breath,' eh?—hold your tongue I tell you!—I caught somebody else's!—had always too much of my own—met Blab at the corner of the street—wouldn't give me a chance for a word—couldn't get in a syllable edgeways—attacked, consequently, with epilepsis—Blab made his escape—damn all fools!—they took me up for dead, and put me in this place—pretty doings all of them!—heard all you said about me—every word a lie—horrible!—wonderful! — outrageous! — hideous! — incomprehensible! — et cetera — et cetera—et cetera—et cetera——"

It is impossible to conceive my astonishment at so unexpected a discourse; or the joy with which I became gradually convinced that the breath so fortunately caught by the gentleman (whom I soon recognized as my neighbor Windenough) was, in fact, the identical expiration mislaid by myself in the conversation with my wife. Time, place, and circumstances rendered it a matter beyond question. I did not, however, immediately release my hold upon Mr. W.'s proboscis—not at least during the long period in which the inventor of Lombardy poplars continued to favor me with his explanations.

In this respect I was actuated by that habitual prudence which has ever been my predominating trait. I reflected that many difficulties might still lie in the path of my preservation which only extreme exertion on my part would be able to surmount. Many persons, I considered, are prone to estimate commodities in their possession—however valueless to the then proprietor—however troublesome, or distressing—in direct ratio with the advantages to be derived by others from their attainment, or by themselves from their abandonment. Might not this be the case with Mr. Windenough? In displaying anxiety for the breath of which he was at present so willing to get rid, might I not lay myself open to the exactions of his avarice? There are scoundrels in this world, I remembered with a sigh, who will not scruple to take unfair opportunities with even a next-door neighbor, and (this remark is from Epictetus) it is precisely at that time when men are most anxious to throw off the burden of their own calamities that they feel the least desirous of relieving them in others.

Upon considerations similar to these, and still retaining my grasp upon the nose of Mr. W., I accordingly thought proper to model my reply.

"Monster!" I began in a tone of the deepest indignation—"monster and double-winded idiot!—dost *thou*, whom for thine iniquities it has pleased heaven to accurse with a twofold respiration—dost *thou*, I say, presume to address me in the familiar language of an old acquaintance?—'I lie,' forsooth! and 'hold my tongue,' to be sure!—pretty conversation indeed, to a gentleman with a single breath!—all this, too, when I have it in my power to relieve the calamity under which thou dost so justly suffer—to curtail the superfluities of thine unhappy respiration."

Like Brutus, I paused for a reply—with which, like a tornado, Mr. Windenough immediately overwhelmed me. Protestation followed upon protestation, and apology upon apology. There were no terms with which he was unwilling to comply, and there were none of which I failed to take the fullest advantage.

Preliminaries being at length arranged, my acquaintance delivered me the respiration; for which (having carefully examined it) I gave him afterward a receipt.

I am aware that by many I shall be held to blame for speaking in a manner so cursory, of a transaction so impalpable. It will be thought that I should have entered more minutely, into the details of an occurrence by which—and this is very true—much new light might be thrown upon a highly interesting branch of physical philosophy.

To all this I am sorry that I cannot reply. A hint is the only answer which I am permitted to make. There were *circumstances*—but I think it much safer upon consideration to say as little as possible about an affair so delicate—*so delicate*, I repeat, and at the time involving the interests of a third party whose sulphurous resentment I have not the least desire, at this moment, of incurring.

We were not long after this necessary arrangement in effecting an escape from the dungeons of the sepulchre. The united strength of our resuscitated voices was soon sufficiently apparent. Scissors, the Whig editor, republished a treatise upon "the nature and origin of subterranean noises." A reply—rejoinder — confutation — and justification—followed in the columns of a Democratic gazette. It was not until the opening of the vault to decide the controversy, that the appearance of Mr. Windenough and myself proved both parties to have been decidedly in the wrong.

I cannot conclude these details of some very singular passages in a life at all times sufficiently eventful, without again recalling to the attention of the reader the merits of that indiscriminate philosophy which is a sure and ready shield against those shafts of calamity which can neither be seen, felt, nor fully understood. It was in the spirit of this wisdom that, among the ancient Hebrews, it was believed the gates of Heaven would be inevitably opened to that sinner, or saint, who, with good lungs and implicit confidence, should vociferate the word *"Amen!"* It was in the spirit of this wisdom that, when a great plague raged at Athens, and every means had been in vain attempted for its removal, Epimenides, as Laertius relates, in his second book, of that philosopher, advised the erection of a shrine and temple "to the proper God."

LYTTLETON BARRY.

The Man That Was Used Up

A TALE OF THE LATE BUGABOO AND KICKAPOO CAMPAIGN

(First published in *Burton's Gentleman's Magazine,* August, 1839.—Ed.)

Pleurez, pleurez, mes yeux, et fondez vous en eau!
La moitie de ma vie a mis l'autre au tombeau. —CORNEILLE.

I CANNOT just now remember when or where I first made the acquaintance of that truly fine-looking fellow, Brevet Brigadier-General John A. B. C. Smith. Some one *did* introduce me to the gentleman, I am sure—at some public meeting, I know very well—held about something of great importance, no doubt—at some place or other, I feel convinced,—whose name I have unaccountably forgotten. The truth is—that the introduction was attended, upon my part, with a degree of anxious embarrassment which operated to prevent any definite impressions of either time or place. I am constitutionally nervous—this, with me, is a family failing, and I can't help it. In especial, the slightest appearance of mystery—of any point I cannot exactly comprehend—puts me at once into a pitiable state of agitation.

There was something, as it were, remarkable—yes, *remarkable,* although this is but a feeble term to express my full meaning—about the entire individuality of the personage in question. He was, perhaps, six feet in height, and of a presence singularly commanding. There was an *air distingue* pervading the whole man, which spoke of high breeding, and hinted at high birth. Upon this topic—the topic of Smith's personal appearance—I have a kind of melancholy satisfaction in being minute. His head of hair would have done honor to a Brutus; nothing could be more richly flowing, or possess a brighter gloss. It was of a jetty black; which was also the color, or more properly the no-color of his unimaginable whiskers. You perceive I cannot speak of these latter without enthusiasm; it is not too much to say that they were the handsomest pair of whiskers under the sun. At all events, they encircled, and at times partially overshadowed, a mouth utterly unequalled. Here were the most entirely even, and the most brilliantly white of all conceivable teeth. From between them, upon every proper occasion, issued a voice of surpassing clearness, melody, and strength. In the matter of eyes, also, my acquaintance was pre-eminently endowed. Either one of such a pair was worth a couple of the ordinary ocular organs. They were of a deep hazel exceedingly large and lustrous; and there was perceptible about them, ever and anon, just that amount of interesting obliquity which gives pregnancy to expression.

The bust of the General was unquestionably the finest bust I ever saw. For your life you could not have found a fault with its wonderful proportion. This rare peculiarity set off to great advantage a pair of shoulders which would have called up a blush of con-

scious inferiority into the countenance of the marble Apollo. I have a passion for fine shoulders, and may say that I never beheld them in perfection before. The arms altogether were admirably modelled. Nor were the lower limbs less superb. These were, indeed, the *ne plus ultra* of good legs. Every connoisseur in such matters admitted the legs to be good. There was neither too much flesh nor too little,—neither rudeness nor fragility. I could not imagine a more graceful curve than that of the *os femoris*, and there was just that due gentle prominence in the rear of the *fibula* which goes to the conformation of a properly proportioned calf. I wish to God my young and talented friend Chiponchipino, the sculptor, had but seen the legs of Brevet Brigadier-General John A. B. C. Smith.

But although men so absolutely fine-looking are neither as plenty as reasons or blackberries, still I could not bring myself to believe that *the remarkable* something to which I alluded just now,—that the odd air of *je ne sais quoi* which hung about my new acquaintance,—lay altogether, or indeed at all, in the supreme excellence of his bodily endowments. Perhaps it might be traced to the *manner*;—yet here again I could not pretend to be positive. There *was* a primness, not to say stiffness, in his carriage—a degree of measured and, if I may so express it, of rectangular precision attending his every movement, which, observed in a more diminutive figure, would have had the least little savor in the world of affectation, pomposity, or constraint, but which, noticed in a gentleman of his undoubted dimensions, was readily placed to the account of reserve, *hauteur*—of a commendable sense, in short, of what is due to the dignity of colossal proportion.

The kind friend who presented me to General Smith whispered in my ear some few words of comment upon the man. He was a *remarkable* man—a *very* remarkable man—indeed one of the *most* remarkable men of the age. He was an especial favorite, too, with the ladies—chiefly on account of his high reputation for courage.

"In *that* point he is unrivalled—indeed he is a perfect desperado—a downright fire-eater, and no mistake," said my friend, here dropping his voice excessively low, and thrilling me with the mystery of his tone.

"A downright fire-eater, and *no* mistake. Showed *that*, I should say, to some purpose, in the late tremendous swamp-fight, away down South, with the Bugaboo and Kickapoo Indians." [Here my friend opened his eyes to some extent.] "Bless my soul!—blood and thunder, and all that!—*prodigies* of valor!—heard of him of course?—you know he's the man——"

"Man alive, how *do* you do? why, how *are* ye? *very* glad to see ye, indeed!" here interrupted the General himself, seizing my companion by the hand as he drew near, and bowing stiffly but profoundly, as I was presented. I then thought (and I think so still) that I never heard a clearer nor a stronger voice, nor beheld a finer set of teeth: but I *must* say that I was sorry for the interruption just at that moment, as owing to the whispers and insinuations aforesaid, my interest had been greatly excited in the hero of the Bugaboo and Kickapoo campaign.

However, the delightfully luminous

conversation of Brevet Brigadier-General John A. B. C. Smith soon completely dissipated this chagrin. My friend leaving us immediately, we had quite a *tete-a-tete,* and I was not only pleased but *really*—instructed. I never heard a more fluent talker, or a man of greater general information. With becoming modesty, he forebore, nevertheless, to touch upon the theme I had just then most at heart—I mean the mysterious circumstances attending the Bugaboo war—and, on my own part, what I conceive to be a proper sense of delicacy forbade me to broach the subject; although, in truth, I was exceedingly tempted to do so. I perceived, too, that the gallant soldier preferred topics of philosophical interest, and that he delighted, especially, in commenting upon the rapid march of mechanical invention. Indeed, lead him where I would, this was a point to which he invariably came back.

"There is nothing at all like it," he would say; "we are a wonderful people, and live in a wonderful age. Parachutes and railroads—man-traps and spring-guns! Our steam-boats are upon every sea, and the Nassau balloon packet is about to run regular trips (fare either way only twenty pounds sterling) between London and Timbuctoo. And who shall calculate the immense influence upon social life—upon arts—upon commerce—upon literature—which will be the immediate result of the great principles of electro-magnetics! Nor, is this all, let me assure you! There is really no end to the march of invention. The most wonderful—the most ingenious—and let me add, Mr.—Mr. Thompson, I believe, is your name—let me add, I say the most *useful*—the most truly *useful*—mechanical contrivances are daily springing up like mushrooms, if I may so express myself, or, more figuratively, like—ah—grasshoppers—like grasshoppers, Mr. Thompson—about us and ah—ah—ah—around us!"

Thompson, to be sure, is not my name; but it is needless to say that I left General Smith with a heightened interest in the man, with an exalted opinion of his conversational powers, and a deep sense of the valuable privileges we enjoy in living in this age of mechanical invention. My curiosity, however, had not been altogether satisfied, and I resolved to prosecute immediate inquiry among my acquaintances, touching the Brevet Brigadier-General himself, and particularly respecting the tremendous events *quorum pars magna fuit,* during the Bugaboo and Kickapoo campaign.

The first opportunity which presented itself, and which (*horresco referens*) I did not in the least scruple to seize, occurred at the Church of the Reverend Doctor Drummummupp, where I found myself established, one Sunday, just at sermon time, not only in the pew, but by the side of that worthy and communicative little friend of mine, Miss Tabitha T. Thus seated, I congratulated myself, and with much reason, upon the very flattering state of affairs. If any person knew any thing about Brevet Brigadier-General John A. B. C. Smith, that person it was clear to me, was Miss Tabitha T. We telegraphed a few signals and then commenced, *sotto voce,* a brisk *tete-a-tete.*

"Smith!" said she in reply to my very earnest inquiry: "Smith!—why, not General A. B. C.? Bless me, I thought you *knew* all about *him!* This

is a wonderfully inventive age! Horrid affair that!—a bloody set of wretches, those Kickapoos!—fought like a hero—prodigies of valor—immortal renown. Smith!—Brevet Brigadier-General John A. B. C.!—why, you know he's the man——"

"Man," here broke in Doctor Drummummupp, at the top of his voice, and with a thump that came near knocking the pulpit about our ears—"man that is born of a woman hath but a short time to live; he cometh up and is cut down like a flower!" I started to the extremity of the pew, and perceived by the animated looks of the divine, that the wrath which had nearly proved fatal to the pulpit had been excited by the whispers of the lady and myself. There was no help for it; so I submitted with a good grace, and listened, in all the martyrdom of dignified silence, to the balance of that very capital discourse.

Next evening found me a somewhat late visitor at the Rantipole Theatre, where I felt sure of satisfying my curiosity at once, by merely stepping into the box of those exquisite specimens of affability and omniscience, the Misses Arabella and Miranda Cognoscenti. That fine tragedian, Climax, was doing Iago to a very crowded house, and I experienced some little difficulty in making my wishes understood; especially as our box was next the slips, and completely overlooked the stage.

"Smith!" said Miss Arabella, as she at length comprehended the purport of my query; "Smith!—why, not General John A. B. C.?"

"Smith!" inquired Miranda, musingly. "God bless me, did you ever behold a finer figure?"

"Never, madam, but *do* tell me——"

"Or so inimitable grace?"

"Never, upon my word! But pray, inform me——"

"Or so just an appreciation of stage effect?"

"Madam!"

"Or a more delicate sense of the true beauties of Shakespeare? Be so good as to look at that leg!"

"The devil!" and I turned again to her sister.

"Smith!" said she, "why, not General John A. B. C.? Horrid affair that, wasn't it?— great wretches, those Bugaboos—savage and so on—but we live in a wonderfully inventive age!—Smith!—O yes! great man!—perfect desperado!—immortal renown!—prodigies of valor! *Never heard!*" [This was given in a scream.] "Bless my soul!—why, he's the man——"

"—mandragora
Nor all the drowsy syrups of the world
Shall ever medicine thee to that sweet sleep
Which thou ow'dst yesterday!"

here roared our Climax just in my ear, and shaking his fist in my face all the time, in a way that I *couldn't* stand, and I *wouldn't*. I left the Misses Cognoscenti immediately, went behind the scenes forthwith, and gave the beggarly scoundrel such a thrashing as I trust he will remember till the day of his death.

At the *soiree* of the lovely widow, Mrs. Kathleen O'Trump, I was confident that I should meet with no similar disappointment. Accordingly, I was no sooner seated at the card-table, with my pretty hostess for a *vis-a-vis*, than I

propounded those questions the solution of which had become a matter so essential to my peace.

"Smith!" said my partner, "why, not General John A. B. C.? Horrid affair that, wasn't it?—diamonds did you say?—terrible wretches those Kickapoos!—we are playing *whist*, if you please, Mr. Tattle—however, this is the age of invention, most certainly *the* age, one may say—*the* age *par excellence*—speak French?—oh, quite a hero—perfect desperado!—*no hearts*, Mr. Tattle? I don't believe it.—Immortal renown and all that!—prodigies of valor! *Never heard!!*—why, bless me, he's the man——"

"Mann! — *Captain* Mann!" here screamed some little feminine interloper from the farthest corner of the room. "Are you talking about Captain Mann and the duel?—oh, I *must* hear—do tell—go on, Mrs. O'Trump—do now go on!" And go on Mrs. O'Trump did—all about a certain Captain Mann, who was either shot or hung, or should have been both shot and hung. Yes! Mrs. O'Trump, she went on, and I—I went off. There was no chance of hearing any thing further that evening in regard to Brevet Brigadier-General John A. B. C. Smith.

Still I consoled myself with the reflection that the tide of ill-luck would not run against me forever, and so determined to make a bold push for information at the rout of that bewitching little angel, the graceful Mrs. Pirouette.

"Smith!" said Mrs. P., as we twirled about together in a *pas de zephyr*, "Smith!—why, not General John A. B. C.? Dreadful business that of the Bugaboos, wasn't it?—dreadful creatures, those Indians!—*do* turn out your toes! I really am ashamed of you—man of great courage, poor fellow!—but this is a wonderful age for invention—O dear me, I'm out of breath—quite a desperado—prodigies of valor — *never heard!*—can't believe it—I shall have to sit down and enlighten you—Smith! why, he's the man——"

"Man-*Fred*, I tell you!" here bawled out Miss Bas-Bleu, as I led Mrs. Pirouette to a seat. "Did ever anybody hear the like? It's Man-*Fred*, I say, and not at all by any means Man-*Friday*." Here Miss Bas-Bleu beckoned to me in a very peremptory manner; and I was obliged, will I nill I, to leave Mrs. P. for the purpose of deciding a dispute touching the title of a certain poetical drama of Lord Byron's. Although I pronounced, with great promptness, that the true title was Man-*Friday*, and not by any means Man-*Fred* yet when I returned to seek Mrs. Pirouette she was not to be discovered, and I made my retreat from the house in a very bitter spirit of animosity against the whole race of the Bas-Bleus.

Matters had now assumed a really serious aspect, and I resolved to call at once upon my particular friend, Mr. Theodore Sinivate; for I knew that here at least I should get something like definite information.

"Smith!" said he, in his well-known peculiar way of drawling out his syllables; "Smith!—why, not General John A. B. C.? Savage affair that with the Kickapo-o-o-os, wasn't it? Say, don't you think so?—perfect despera-a-ado—great pity, 'pon my honor!—wonderfully inventive age—pro-o-odigies of valor! By the by, did you ever hear about Captain Ma-a-a-a-n?"

"Captain Mann be d—d!" said I; "please to go on with your story."

"Hem!—oh well!—quite *la meme cho-o-ose*, as we say in France. Smith, eh? Brigadier-General John A—B—C.? I say"—[here Mr. S. thought proper to put his finger to the side of his nose]—"I say, you don't mean to insinuate now, really and truly, and conscientiously, that you don't know all about that affair of Smith's, as well as I do, eh? Smith? John A—B—C.? Why, bless me, he's the ma-a-an——"

"*Mr.* Sinivate," said I, imploringly, "*is* he the man in the mask?"

"No-o-o!" said he, looking wise, "nor the man in the mo-o-on."

This reply I considered a pointed and positive insult, and so left the house at once in high dudgeon, with a firm resolve to call my friend, Mr. Sinivate, to a speedy account for his ungentlemanly conduct and ill-breeding.

In the meantime, however, I had no notion of being thwarted touching the information I desired. There was one resource left me yet. I would go to the fountain-head. I would call forthwith upon the General himself, and demand, in explicit terms, a solution of this abominable piece of mystery. Here, at least, there should be no chance for equivocation. I would be plain, positive, peremptory—as short as piecrust—as concise as Tacitus or Montesquieu.

It was early when I called, and the General was dressing, but I pleaded urgent business, and was shown at once into his bedroom by an old negro valet, who remained in attendance during my visit. As I entered the chamber, I looked about, of course, for the occupant, but did not immediately perceive him. There was a large and exceedingly odd-looking bundle of something which lay close by my feet on the floor, and, as I was not in the best humor in the world, I gave it a kick out of the way.

"Hem! ahem! rather civil that, I should say!" said the bundle, in one of the smallest, and altogether the funniest little voices, between a squeak and a whistle, that I ever heard in all the days of my existence.

"Ahem! rather civil that, I should observe."

I fairly shouted with terror, and made off, at a tangent, into the farthest extremity of the room.

"God bless me, my dear fellow!" here again whistled the bundle, "what—what—what—why, what *is* the matter? I really believe you don't know me at all."

What *could* I say to all this—what *could* I? I staggered into an armchair, and, with staring eyes and open mouth, awaited the solution of the wonder.

"Strange you shouldn't know me though, isn't it?" presently re-squeaked the nondescript, which I now perceived was performing upon the floor some inexplicable evolution, very analogous to the drawing on of a stocking. There was only a single leg, however, apparent.

"Strange you shouldn't know me though, isn't it? Pompey, bring me that leg!" Here Pompey handed the bundle a very capital cork leg, already dressed, which it screwed on in a trice; and then it stood up before my eyes.

"And a bloody action it *was*," continued the thing, as if in a soliloquy; "but then one mustn't fight with the Bugaboos and Kickapoos, and think of coming off with a mere scratch. Pom-

pey, I'll thank you now for that arm. Thomas" [turning to me] "is decidedly the best hand at a cork leg; but if you should ever want an arm, my dear fellow, you must really let me recommend you to Bishop." Here Pompey screwed on an arm.

"We had rather hot work of it, that you may say. Now, you dog, slip on my shoulders and bosom. Pettit makes the best shoulders, but for a bosom you will have to go to Ducrow."

"Bosom!" said I.

"Pompey, will you *never* be ready with that wig? Scalping is a rough process, after all; but then you can procure such a capital scratch at De L'Orme's."

"Scratch!"

"Now, you nigger, my teeth! For a *good* set of these you had better go to Parmly's at once; high prices, but excellent work. I swallowed some very capital articles, though, when the big Bugaboo rammed me down with the butt end of his rifle."

"Butt end! ram down!! my eye!!"

"O yes, by the by, my eye—here, Pompey, you scamp, screw it in! Those Kickapoos are not so very slow at a gouge; but he's a belied man, that Dr. Williams, after all; you can't imagine how well I see with the eyes of his make."

I now began very clearly to perceive that the object before me was nothing more nor less than my new acquaintance, Brevet Brigadier-General John A. B. C. Smith. The manipulations of Pompey had made, I must confess, a very striking difference in the personal appearance of the man. The voice, however, still puzzled me no little; but even this apparent mystery was speedily cleared up.

"Pompey, you black rascal," squeaked the General, "I really do believe you would let me go out without my palate."

Hereupon, the negro, grumbling out an apology, went up to his master, opened his mouth with the knowing air of a horse-jockey, and adjusted therein a somewhat singular-looking machine, in a very dexterous manner, that I could not altogether comprehend. The alteration, however, in the entire expression of the General's countenance was instantaneous and surprising. When he again spoke, his voice had resumed all that rich melody and strength which I had noticed upon our original introduction.

"D—n the vagabonds!" said he, in so clear a tone that I positively started at the change, "D—n the vagabonds! they not only knocked in the roof of my mouth, but took the trouble to cut off at least seven-eighths of my tongue. There isn't Bonfanti's equal, however, in America, for really good articles of this description. I can recommend you to him with confidence," [here the General bowed,] "and assure you that I have the greatest pleasure in so doing."

I acknowledged his kindness in my best manner, and took leave of him at once, with a perfect understanding of the true state of affairs—with a full comprehension of the mystery which had troubled me so long. It was evident. It was a clear case. Brevet Brigadier-General John A. B. C. Smith was the man—was *the man that was used up*.

The Business Man

(First published in *Burton's Gentleman's Magazine,* February, 1840. The Business Man is also known as Peter Pendulum.—Ed.)

Method is the soul of business.
—Old Saying.

I am a business man. I am a methodical man. Method is *the* thing, after all. But there are no people I more heartily despise than your eccentric fools who prate about method without understanding it; attending strictly to its letter, and violating its spirit. These fellows are always doing the most out-of-the-way things in what they call an orderly manner. Now here, I conceive, is a positive paradox. True method appertains to the ordinary and the obvious alone, and cannot be applied to the *outre*. What definite idea can a body attach to such expressions as "methodical Jack o' Dandy," or "a systematical Will o' the Wisp?"

My notions upon this head might not have been so clear as they are, but for a fortunate accident which happened to me when I was a very little boy. A good-hearted old Irish nurse (whom I shall not forget in my will) took me up one day by the heels, when I was making more noise than was necessary, and swinging me round two or three times, "d——d my eyes for a skreeking little spalpeen," and then knocked my head into a cocked hat against the bedpost. This, I say, decided my fate, and made my fortune. A bump arose at once on my sinciput, and turned out to be as pretty an organ of *order* as one shall see on a summer's day. Hence that positive appetite for system and regularity which has made me the distinguished man of business that I am.

If there is any thing on earth I hate, it is a genius. Your geniuses are all arrant asses—the greater the genius the greater the ass—and to this rule there is no exception whatever. Especially, you cannot make a man of business out of a genius, any more than money out of a Jew, or the best nutmegs out of pine-knots. The creatures are always going off at a tangent into some fantastic employment, or ridiculous speculation, entirely at variance with the "fitness of things," and having no business whatever to be considered as a business at all. Thus you may tell these characters immediately by the nature of their occupations. If you ever perceive a man setting up as a merchant or a manufacturer; or going into the cotton or tobacco trade, or any of those eccentric pursuits; or getting to be a dry-goods dealer, or soap-boiler, or something of that kind; or pretending to be a lawyer, or a blacksmith, or a physician—any thing out of the usual way—you may set him down at once as a genius, and then, according to the rule-of-three, he's an ass.

Now I am not in any respect a genius, but a regular business man. My day-book and ledger will evince this in a minute. They are well kept, though I say it myself; and, in my general habits of accuracy and punctuality, I am not to be beat by a clock. More-

over, my occupations have been always made to chime in with the ordinary habitudes of my fellow-men. Not that I feel the least indebted, upon this score, to my exceedingly weak-minded parents, who, beyond doubt, would have made an arrant genius of me at last, if my guardian angel had not come, in good time, to the rescue. In biography the truth is every thing, and in autobiography it is especially so—yet I scarcely hope to be believed when I state, however solemnly, that my poor father put me, when I was about fifteen years of age, into the counting-house of what he termed "a respectable hardware and commission merchant doing a capital bit of business!" A capital bit of fiddlestick! However, the consequence of this folly was, that in two or three days, I had to be sent home to my button-headed family in a high state of fever, and with a most violent and dangerous pain in the sinciput, all round about my organ of order. It was nearly a gone case with me then—just touch-and-go, for six weeks—the physicians giving me up and all that sort of thing. But, although I suffered much, I was a thankful boy in the main. I was saved from being a "respectable hardware and commission merchant, doing a capital bit of business," and I felt grateful to the protuberance which had been the means of my salvation, as well as to the kind-hearted female who had originally put these means within my reach.

The most of boys run away from home at ten or twelve years of age, but I waited till I was sixteen. I don't know that I should have gone even then, if I had not happened to hear my old mother talk about setting me up on my own hook in the grocery way. The *grocery* way!—only think of that! I resolved to be off forthwith, and try and establish myself in some *decent* occupation, without dancing attendance any longer upon the caprices of these eccentric old people, and running the risk of being made a genius of in the end. In this project I succeeded perfectly well at the first effort, and by the time I was fairly eighteen, found myself doing an extensive and profitable business in the Tailor's Walking Advertisement line.

I was enabled to discharge the onerous duties of this profession, only by that rigid adherence to system which formed the leading feature of my mind. A scrupulous *method* characterized my actions as well as my accounts. In my case, it was method—not money—which made the man—at least all of him that was not made by the tailor whom I served. At nine, every morning, I called upon that individual for the clothes of the day. Ten o'clock found me in some fashionable promenade or other place of public amusement. The precise regularity with which I turned my handsome person about, so as to bring successively into view every portion of the suit upon my back, was the admiration of all the knowing men in the trade. Noon never passed without my bringing home a customer to the house of my employers, Messrs. Cut & Comeagain. I say this proudly, but with tears in my eyes—for the firm proved themselves the basest of ingrates. The little account, about which we quarreled and finally parted, cannot, in any item, be thought overcharged, by gentlemen really conversant with the nature of the business.

Upon this point, however, I feel a degree of proud satisfaction in permitting the reader to judge for himself. My bill ran thus:

MESSRS. CUT & COMEAGAIN,
Merchant Tailors.
To PETER PROFFIT, *Walking Advertiser,*

	Drs.
July 10.—To promenade, as usual and customer brought home..$	.25
July 11.—To do do do	.25
July 12.—To one lie, second class; damaged black cloth sold for invisible green.....	.25
July 13.—To one lie, first class, extra quality and size; recommending milled satinet as broadcloth	.75
July 20.—To purchasing brand-new paper shirt collar or dickey, to set off gray Petersham	.02
Aug. 15.—To wearing double-padded bobtail frock, (thermometer 106 in the shade,)..	.25
Aug. 16.—Standing on one leg three hours, to show off new-style strapped pants at 12½ cents per leg per hour.....	.37½
Aug. 17.—To promenade, as usual, and large customer brought (fat man).....	.50
Aug. 18.—To do do do (medium size)	.25
Aug. 19.—To do do do (small man and bad pay)...	.06
	$2.95½

The item chiefly disputed in this bill was the very moderate charge of two pennies for the dickey. Upon my word of honor, this *was not* an unreasonable price for that dickey. It was one of the cleanest and prettiest little dickeys I ever saw; and I have good reason to believe that it effected the sale of three Petershams. The elder partner of the firm, however, would allow me only one penny of the charge, and took it upon himself to show in what manner four of the same-sized conveniences could be got out of a sheet of foolscap. But it is needless to say that I stood upon the *principle* of the thing. Business is business, and should be done in a business way. There was no *system* whatever in swindling me out of a penny—a clear fraud of fifty per cent.—no *method* in any respect. I left at once the employment of Messrs. Cut & Comeagain, and set up in the Eye-Sore line by myself—one of the most lucrative, respectable, and independent of the ordinary occupations.

My strict integrity, economy, and rigorous business habits, here again came into play. I found myself driving a flourishing trade, and soon became a marked man upon "Change." The truth is, I never dabbled in flashy matters, but jogged on in the good old sober routine of the calling—a calling in which I should, no doubt, have remained to the present hour, but for a little accident which happened to me in the prosecution of one of the usual business operations of the profession. Whenever a rich old hunks or prodigal heir or bankrupt corporation gets into the notion of putting up a palace, there is no such thing in the world as stopping either of them, and this every intelligent person knows. The fact in question is indeed the basis of the Eye-

Sore trade. As soon, therefore, as a building project is fairly afoot by one of these parties, we merchants secure a nice corner of the lot in contemplation, or a prime little situation just adjoining, or right in front. This done, we wait until the palace is half-way up, and then we pay some tasty architect to run us up an ornamental mud hovel, right against it; or a Down-East or Dutch pagoda, or a pig-sty, or an ingenious little bit of fancy work, either Esquimau, Kickapoo, or Hottentot. Of course we can't afford to take these structures down under a bonus of five hundred per cent. upon the prime cost of our lot and plaster. *Can* we? I ask the question. I ask it of business men. It would be irrational to suppose that we can. And yet there was a rascally corporation which asked me to do this very thing—this *very thing!* I did not reply to their absurd proposition, of course; but I felt it a duty to go that same night, and lamp-black the whole of their palace. For this the unreasonable villains clapped me into jail; and the gentlemen of the Eye-Sore trade could not well avoid cutting my connection when I came out.

The Assault-and-Battery business, into which I was now forced to adventure for a livelihood, was somewhat ill-adapted to the delicate nature of my constitution; but I went to work in it with a good heart, and found my account here, as heretofore, in those stern habits of methodical accuracy which had been thumped into me by that delightful old nurse—I would indeed be the basest of men not to remember her well in my will. By observing, as I say, the strictest system in all my dealings, and keeping a well-regulated set of books, I was enabled to get over many serious difficulties, and, in the end, to establish myself very decently in the profession. The truth is, that few individuals, in any line, did a snugger little business than I. I will just copy a page or so out of my day-book; and this will save me the necessity of blowing my own trumpet—a contemptible practice of which no high-minded man will be guilty. Now, the day-book is a thing that don't lie.

"Jan. 1.—New Year's Day. Met Snap in the street, groggy. Mem—he'll do. Met Gruff shortly afterward, blind drunk. Mem—he'll answer, too. Entered both gentlemen in my ledger, and opened a running account with each.

"Jan. 2.—Saw Snap at the Exchange, and went up and trod on his toe. Doubled his fist and knocked me down. Good!—got up again. Some trifling difficulty with Bag, my attorney. I want the damages at a thousand, but he says that for so simple a knock-down we can't lay them at more than five hundred. Mem—must get rid of Bag—no *system* at all.

"Jan. 3.—Went to the theatre, to look for Gruff. Saw him sitting in a side box, in the second tier, between a fat lady and a lean one. Quizzed the whole party through an opera-glass, till I saw the fat lady blush and whisper to G. Went round, then, into the box, and put my nose within reach of his hand. Wouldn't pull it—no go. Blew it, and tried again—no go. Sat down then, and winked at the lean lady, when I had the high satisfaction of finding him lift me up by the nape of the neck, and fling me over into the pit. Neck dislocated, and right leg

capitally splintered. Went home in high glee, drank a bottle of champagne, and booked the young man for five thousand. Bag says it'll do.

"Feb. 15.—Compromised the case of Mr. Snap. Amount entered in journal —fifty cents—which see.

"Feb. 16.—Cast by that ruffian, Gruff, who made me a present of five dollars. Costs of suit, four dollars and twenty-five cents. Net profit,—see journal,—seventy-five cents."

Now, here is a clear gain, in a very brief period, of no less than one dollar and twenty-five cents—this is in the mere cases of Snap and Gruff; and I solemnly assure the reader that these extracts are taken at random from my day-book.

It's an old saying, and a true one, however, that money is nothing in comparison with health. I found the exactions of the profession somewhat too much for my delicate state of body; and, discovering, at last, that I was knocked all out of shape, so that I didn't know very well what to make of the matter, and so that my friends, when they met me in the street, couldn't tell that I was Peter Proffit at all, it occurred to me that the best expedient I could adopt was to alter my line of business. I turned my attention, therefore, to Mud-Dabbling, and continued it for some years.

The worst of this occupation is, that too many people take a fancy to it, and the competition is in consequence excessive. Every ignoramus of a fellow who finds that he hasn't brains in sufficient quantity to make his way as a walking advertiser, or an eye-sore prig, or a salt-and-batter man, thinks, of course, that he'll answer very well as a dabbler of mud. But there never was entertained a more erroneous idea than that it requires no brains to mud-dabble. Especially, there is nothing to be made in this way without *method*. I did only a retail business myself, but my old habits of *system* carried me swimmingly along. I selected my street-crossing, in the first place, with great deliberation, and I never put down a broom in any part of the town *but that*. I took care, too, to have a nice little puddle at hand, which I could get at in a minute. By these means I got to be well known as a man to be trusted; and this is one-half the battle, let me tell you, in trade. Nobody ever failed to pitch *me* a copper, and got over *my* crossing with a clean pair of pantaloons. And, as my business habits, in this respect, were sufficiently understood, I never met with any attempt at imposition. I wouldn't have put up with it, if I had. Never imposing upon any one myself, I suffered no one to play the possum with me. The frauds of the banks of course I couldn't help. Their suspension put me to ruinous inconvenience. These, however, are not individuals, but corporations; and corporations, it is very well known, have neither bodies to be kicked nor souls to be damned.

I was making money at this business when, in an evil moment, I was induced to merge in the Cur-Spattering—a somewhat analogous, but, by no means, so respectable a profession. My location, to be sure, was an excellent one, being central, and I had capital blacking and brushes. My little dog, too, was quite fat and up to all varieties of snuff. He had been in the trade a long time, and, I may say, understood

it. Our general routine was this:—Pompey, having rolled himself well in the mud, sat upon end at the shop door, until he observed a dandy approaching in bright boots. He then proceeded to meet him, and gave the Wellingtons a rub or two with his wool. Then the dandy swore very much, and looked about for a boot-black. There I was, full in his view, with blacking and brushes. It was only a minute's work, and then came a sixpence. This did moderately well for a time;—in fact, I was not avaricious, but my dog was. I allowed him a third of the profit, but he was advised to insist upon half. This I couldn't stand—so we quarrelled and parted.

I next tried my hand at the Organ-Grinding for a while, and may say that I made out pretty well. It is a plain, straightforward business, and requires no particular abilities. You can get a music-mill for a mere song, and to put it in order, you have but to open the works, and give them three or four smart raps with a hammer. It improves the tone of the thing, for business purposes, more than you can imagine. This done, you have only to stroll along, with the mill on your back, until you see tanbark in the street, and a knocker wrapped up in buckskin. Then you stop and grind; looking as if you meant to stop and grind till doomsday. Presently a window opens, and somebody pitches you a sixpence, with a request to "Hush up and go on," etc. I am aware that some grinders have actually afforded to "go on" for this sum; but for my part, I found the necessary outlay of capital too great to permit of my "going on" under a shilling.

At this occupation I did a good deal; but, somehow, I was not quite satisfied, and so finally abandoned it. The truth is, I labored under the disadvantage of having no monkey—and American streets are *so* muddy, and a Democratic rabble is *so* obstrusive, and so full of demnition mischievous little boys.

I was now out of employment for some months, but at length succeeded, by dint of great interest, in procuring a situation in the Sham-Post. The duties, here, are simple, and not altogether unprofitable. For example:—very early in the morning I had to make up my packet of sham letters. Upon the inside of each of these I had to scrawl a few lines—on any subject which occurred to me as sufficiently mysterious—signing all the epistles Tom Dobson, or Bobby Tompkins, or anything in that way. Having folded and sealed all, and stamped them with sham postmarks—New Orleans, Bengal, Botany Bay, or any other place a great way off—I set out, forthwith, upon my daily route, as if in a very great hurry. I always called at the big houses to deliver the letters, and receive the postage. Nobody hesitates at paying for a letter—especially for a double one—people *are* such fools—and it was no trouble to get round a corner before there was time to open the epistles. The worst of this profession was, that I had to walk so much and so fast; and so frequently to vary my route. Besides, I had serious scruples of conscience. I can't bear to hear innocent individuals abused—and the way the whole town took to cursing Tom Dobson and Bobby Tompkins was really awful to hear. I washed my hands of the matter in disgust.

My eighth and last speculation has

been in the Cat-Growing way. I have found this a most pleasant and lucrative business, and, really, no trouble at all. The country, it is well known, has become infested with cats—so much so of late, that a petition for relief, most numerously and respectably signed, was brought before the Legislature at its late memorable session. The Assembly, at this epoch, was unusually well-informed, and, having passed many other wise and wholesome enactments, it crowned all with the Cat-Act. In its original form, this law offered a premium for cat-*heads* (fourpence a-piece), but the Senate succeeded in amending the main clause, so as to substitute the word *"tails"* for "heads." This amendment was so obviously proper, that the House concurred in it *nem. con.*

As soon as the governor had signed the bill, I invested my whole estate in the purchase of Toms and Tabbies. At first I could only afford to feed them upon mice (which are cheap), but they fulfilled the scriptural injunction at so marvellous a rate, that I at length considered it my best policy to be liberal, and so indulged them in oysters and turtle. Their tails, at a legislative price, now bring me in a good income; for I have discovered a way, in which, by means of Mamassar oil, I can force three crops in a year. It delights me to find, too, that the animals soon get accustomed to the thing, and would rather have the appendages cut off than otherwise. I consider myself, therefore, a made man, and am bargaining for a country-seat on the Hudson.

Diddling

CONSIDERED AS ONE OF THE EXACT SCIENCES

(Published in *Broadway Journal,* Vol. 2:10.—Ed.)

Hey, diddle diddle,
The cat and the fiddle.

SINCE the world began there have been two Jeremys. The one wrote a Jeremiad about usury, and was called Jeremy Bentham. He has been much admired by Mr. John Neal, and was a great man in a small way. The other gave name to the most important of the Exact Sciences, and was a great man in a *great way*—I may say, indeed, in the very greatest of ways.

Diddling—or the abstract idea conveyed by the verb to diddle—is sufficiently well understood. Yet the fact, the deed, the thing *diddling,* is somewhat difficult to define. We may get, however, at a tolerably distinct conception of the matter in hand, by defining—not the thing diddling in itself—but man as an animal that diddles. Had Plato but hit upon this, he would have been spared the affront of the picked chicken.

Very pertinently it was demanded of Plato why a picked chicken, which was clearly "a biped without feathers," was

not, according to his own definition, a man? But I am not to be bothered by any similar query. Man is an animal that diddles, and there is *no* animal that diddles *but* man. It will take an entire hen-coop of picked chickens to get over that.

What constitutes the essence, the nare, the principle of diddling is, in fact, peculiar to the class of creatures that wear coats and pantaloons. A crow thieves; a fox cheats; a weasel outwits; a man diddles. To diddle is his destiny. "Man was made to mourn," says the poet. But not so:—he was made to diddle. This is his aim—his object—his *end*. And for this reason when a man's diddled we say he's *"done."*

Diddling, rightly considered, is a compound, of which the ingredients are minuteness, interest, perseverance, ingenuity, audacity, *nonchalance,* originality, impertinence, and *grin*.

Minuteness:—Your diddler is minute. His operations are upon a small scale. His business is retail, for cash, or approved paper at sight. Should he ever be tempted into magnificent speculation, he then, at once, loses his distinctive features, and becomes what we term "financier." This latter word conveys the diddling idea in every respect except that of magnitude. A diddler may thus be regarded as a banker *in petto*—a "financial operation," as a diddle at Brobdignag. The one is to the other, as Homer to "Flaccus"—as a Mastodon to a mouse—as the tail of a comet to that of a pig.

Interest:—Your diddler is guided by self-interest. He scorns to diddle for the mere *sake* of the diddle. He has an object in view—his pocket—and yours. He regards always the main chance. He looks to Number One. You are Number Two, and must look to yourself.

Perseverance:—Your diddler perseveres. He is not readily discouraged. Should even the banks break, he cares nothing about it. He steadily pursues his end, and

Ut canis a corio nunquam absterrebitur uncto.

so he never lets go of his game.

Ingenuity:—Your diddler is ingenious. He has constructiveness large. He understands plot. He invents and circumvents. Were he not Alexander he would be Diogenes. Were he not a diddler, he would be a maker of patent rat-traps or an angler for trout.

Audacity:—Your diddler is audacious.—He is a bold man. He carries the war into Africa. He conquers all by assault. He would not fear the daggers of Frey Herren. With a little more prudence Dick Turpin would have made a good diddler; with a trifle less blarney, Daniel O'Connell; with a pound or two more brains Charles the Twelfth.

Nonchalance:—Your diddler is *nonchalant*. He is not at all nervous. He never had any nerves. He is never seduced into a flurry. He is never put out—unless put out of doors. He is cool—cool as a cucumber. He is calm—"calm as a smile from Lady Bury." He is easy—easy as an old glove, or the damsels of ancient Baiæ.

Originality:—Your diddler is original—conscientiously so. His thoughts are his own. He would scorn to employ those of another. A stale trick is his aversion. He would return a purse, I

am sure, upon discovering that he had obtained it by an unoriginal diddle.

Impertinence:—Your diddler is impertinent. He swaggers. He sets his arms a-kimbo. He thrusts his hands in his trowsers' pockets. He sneers in your face. He treads on your corns. He eats your dinner, he drinks your wine, he borrows your money, he pulls your nose, he kicks your poodle, and he kisses your wife.

Grin:—Your *true* diddler winds up all with a grin. But this nobody sees but himself. He grins when his daily work is done—when his allotted labors are accomplished—at night in his own closet, and altogether for his own private entertainment. He goes home. He locks his door. He divests himself of his clothes. He puts out his candle. He gets into bed. He places his head upon the pillow. All this done, and your diddler *grins*. This is no hypothesis. It is a matter of course. I reason *a priori*, and a diddle would be *no* diddle without a grin.

The origin of the diddle is referrable to the infancy of the Human Race. Perhaps the first diddler was Adam. At all events, we can trace the science back to a very remote period of antiquity. The moderns, however, have brought it to a perfection never dreamed of by our thick-headed progenitors. Without pausing to speak of the "old saws," therefore, I shall content myself with a compendious account of some of the more "modern instances."

A very good diddle is this. A housekeeper in want of a sofa, for instance, is seen to go in and out of several cabinet warehouses. At length she arrives at one offering an excellent variety. She is accosted, and invited to enter, by a polite and voluble individual at the door. She finds a sofa well adapted to her views, and upon inquiring the price, is surprised and delighted to hear a sum named at least twenty per cent. lower than her expectations. She hastens to make the purchase, gets a bill and receipt, leaves her address, with a request that the article be sent home as speedily as possible, and retires amid a profusion of bows from the shopkeeper. The night arrives and no sofa. A servant is sent to make inquiry about the delay. The whole transaction is denied. No sofa has been sold—no money received—except by the diddler, who played shop-keeper for the nonce.

Our cabinet warehouses are left entirely unattended, and thus afford every facility for a trick of this kind. Visitors enter, look at furniture, and depart unheeded and unseen. Should any one wish to purchase, or to inquire the price of an article, a bell is at hand, and this is considered amply sufficient.

Again, quite a respectable diddle is this. A well-dressed individual enters a shop; makes a purchase to the value of a dollar; finds, much to his vexation, that he has left his pocket-book in another coat pocket; and so says to the shopkeeper—

"My dear sir, never mind! just oblige me, will you, by sending the bundle home? But stay! I really believe that I have nothing less than a five dollar bill, even *there*. However, you can send four dollars in change *with* the bundle, you know."

"Very good, sir," replies the shopkeeper, who entertains, at once, a lofty opinion of the high-mindedness of his customer. "I know fellows," he says

to himself, "who would just have put the goods under their arm, and walked off with a promise to call and pay the dollar as they came by in the afternoon."

A boy is sent with the parcel and change. On the route, quite accidentally, he is met by the purchaser, who exclaims:

"Ah! this is my bundle, I see—I thought you had been home with it, long ago. Well, go on! My wife, Mrs. Trotter, will give you the five dollars—I left instructions with her to that effect. The change you might as well give to *me*—I shall want some silver for the Post Office. Very good! One, two, is this a good quarter?—three, four—quite right! Say to Mrs. Trotter that you met me, and be sure now and *do* not loiter on the way."

The boy doesn't loiter at all—but he is a very long time in getting back from his errand—for no lady of the precise name of Mrs. Trotter is to be discovered. He consoles himself, however, that he has not been such a fool as to leave the goods without the money, and re-entering his shop with a self-satisfied air, feels sensibly hurt and indignant when his master asks him what has become of the change.

A very simple diddle, indeed, is this. The captain of a ship, which is about to sail, is presented by an official looking person with an unusually moderate bill of city charges. Glad to get off so easily, and confused by a hundred duties pressing upon him all at once, he discharges the claim forthwith. In about fifteen minutes, another and less reasonable bill is handed him by one who soon makes it evident that the first collector was a diddler, and the original collection a diddle.

And here, too, is a somewhat similar thing. A steamboat is casting loose from the wharf. A traveller, portmanteau in hand, is discovered running toward the wharf, at full speed. Suddenly, he makes a dead halt, stoops, and picks up something from the ground in a very agitated manner. It is a pocket-book, and—"Has any gentleman lost a pocket-book?" he cries. No one can say that he has exactly lost a pocketbook; but a great excitement ensues, when the treasure trove is found to be of value. The boat, however, must not be detained.

"Time and tide wait for no man," says the captain.

"For God's sake, stay only a few minutes," says the finder of the book—"the true claimant will presently appear."

"Can't wait!" replies the man in authority; "cast off there, d'ye hear?"

"What *am* I to do?" asks the finder, in great tribulation. "I am about to leave the country for some years, and I cannot conscientiously retain this large amount in my possession. I beg your pardon, sir," [here he addresses a gentleman on shore,] "but you have the air of an honest man. *Will* you confer upon me the favor of taking charge of this pocket-book—I *know* I can trust you—and of advertising it? The notes, you see, amount to a very considerable sum. The owner will, no doubt, insist upon rewarding you for your trouble—"

"*Me!*—no, *you!*—it was *you* who found the book."

"Well, if you *must* have it so—*I* will take a small reward—just to satisfy

your scruples. Let me see—why these notes are all hundreds—bless my soul! a hundred is too much to take—fifty would be quite enough, I am sure—"

"Cast off there!" says the captain.

"But then I have no change for a hundred, and upon the whole, *you* had better—"

"Cast off there!" says the captain.

"Never mind!" cries the gentleman on shore, who has been examining his own pocket-book for the last minute or so—"never mind! *I* can fix it—here is a fifty on the Bank of North America—throw me the book."

And the over-conscientious finder takes the fifty with marked reluctance, and throws the gentleman the book, as desired, while the steamboat fumes and fizzes on her way. In about half an hour after her departure, the "large amount" is seen to be a "counterfeit presentment," and the whole thing a capital diddle.

A bold diddle is this. A camp-meeting, or something similar, is to be held at a certain spot which is accessible only by means of a free bridge. A diddler stations himself upon this bridge, respectfully informs all passers by of the new county law, which establishes a toll of one cent for foot passengers, two for horses and donkeys, and so forth, and so forth. Some grumble but all submit, and the diddler goes home a wealthier man by some fifty or sixty dollars well earned. This taking a toll from a great crowd of people is an excessively troublesome thing.

A neat diddle is this. A friend holds one of the diddler's promises to pay, filled up and signed in due form, upon the ordinary blanks printed in red ink. The diddler purchases one or two dozen of these blanks, and every day dips one of them in his soup, makes his dog jump for it, and finally gives it to him as a *bonne bouche*. The note arriving at maturity, the diddler, with the diddler's dog, calls upon the friend, and the promise to pay is made the topic of discussion. The friend produces it from his *escritoire*, and is in the act of reaching it to the diddler, when up jumps the diddler's dog and devours it forthwith. The diddler is not only surprised but vexed and incensed at the absurd behavior of his dog, and expresses his entire readiness to cancel the obligation at any moment when the evidence of the obligation shall be forthcoming.

A very mean diddle is this. A lady is insulted in the street by a diddler's accomplice. The diddler himself flies to her assistance, and, giving his friend a comfortable thrashing, insists upon attending the lady to her own door. He bows, with his hand upon his heart, and most respectfully bids her adieu. She entreats him, as her deliverer, to walk in and be introduced to her big brother and her papa. With a sigh, he declines to do so. "Is there no way, then, sir," she murmurs, "in which I may be permitted to testify my gratitude?"

"Why, yes, madam, there is. Will you be kind enough to lend me a couple of shillings?"

In the first excitement of the moment the lady decides upon fainting outright. Upon second thought, however, she opens her purse-strings and delivers the specie. Now this, I say, is a diddle minute—for one entire moiety of the sum borrowed has to be paid to the gentleman who had the trouble of performing the insult, and who had

then to stand still and be thrashed for performing it.

Rather a small, but still a scientific diddle is this. The diddler approaches the bar of a tavern, and demands a couple of twists of tobacco. These are handed to him, when, having slightly examined them, he says:

"I don't much like this tobacco. Here, take it back, and give me a glass of brandy and water in its place."

The brandy and water is furnished and imbibed, and the diddler makes his way to the door. But the voice of the tavern-keeper arrests him.

"I believe, sir, you have forgotten to pay for your brandy and water."

"Pay for my brandy and water!—didn't I give you the tobacco for the brandy and water? What more would you have?"

"But, sir, if you please, I don't remember that you paid me for the tobacco."

"What do you mean by that, you scoundrel?—Didn't I give you back your tobacco? Isn't *that* your tobacco lying *there?* Do you expect me to pay for what I did not take?"

"But, sir," says the publican, now rather at a loss what to say, "but sir—"

"But me no buts, sir," interrupts the diddler, apparently in very high dudgeon, and slamming the door after him, as he makes his escape.—"But me no buts, sir, and none of your tricks upon travellers."

Here again is a very clever diddle, of which the simplicity is not its least recommendation. A purse, or pocket-book, being really lost, the loser inserts in *one* of the daily papers of a large city a fully descriptive advertisement. Whereupon our diddler copies the *facts* of this advertisement, with a change of heading, of general phraseology and *address*. The original, for instance, is long, and verbose, is headed "A Pocket-Book Lost!" and requires the treasure, when found, to be left at No. 1 Tom Street. The copy is brief, and being headed with "Lost" only, indicates No. 2 Dick, or No. 3 Harry Street, as the locality in which the owner may be seen. Moreover, it is inserted in at least five or six of the daily papers of the day, while in point of time, it makes its appearance only a few hours after the original. Should it be read by the loser of the purse, he would hardly suspect it to have any reference to his own misfortune. But, of course, the chances are five or six to one, that the finder will repair to the address given by the diddler, rather than to that pointed out by the rightful proprietor. The former pays the reward, pockets the treasure and decamps.

Quite an analogous diddle is this. A lady of *ton* has dropped, some where in the street, a diamond ring of very unusual value. For its recovery, she offers some forty or fifty dollars reward—giving, in her advertisement, a very minute description of the gem, and of its settings, and declaring that, on its restoration at No. so and so, in such and such Avenue, the reward would be paid *instanter,* without a single question being asked. During the lady's absence from home, a day or two afterwards, a ring is heard at the door of No. so and so, in such and such Avenue; a servant appears; the lady of the house is asked for and is declared to be out, at which astounding information, the

visitor expresses the most poignant regret. His business is of importance and concerns the lady herself. In fact, he had the good fortune to find her diamond ring. But perhaps it would be as well that he should call again. "By no means!" says the servant; and "By no means!" says the lady's sister and the lady's sister-in-law, who are summoned forthwith. The ring is clamourously identified, the reward is paid, and the finder nearly thrust out of doors. The lady returns and expresses some little dissatisfaction with her sister and sister-in-law, because they happen to have paid forty or fifty dollars for a *fac-simile* of her diamond ring—a *fac-simile* made out of real pinch-beck and unquestionable paste.

But as there is really no end to diddling, so there would be none to this essay, were I even to hint at half the variations, inflections, of which this science is susceptible. I must bring this paper, perforce, to a conclusion, and this I cannot do better than by a summary notice of a very decent, but rather elaborate diddle, of which our own city was made the theatre, not very long ago, and which was subsequently repeated with success, in other still more verdant localities of the Union. A middle-aged gentleman arrives in town from parts unknown. He is remarkably precise, cautious, staid, and deliberate in his demeanor. His dress is scrupulously neat, but plain, unostentatious. He wears a white cravat, an ample waist-coat, made with an eye to comfort alone; thick-soled cosy-looking shoes, and pantaloons without straps. He has the whole air, in fact, of your well-to-do, sober-sided, exact, and respectable "man of business," *par excellence*—one of the stern and outwardly hard, internally soft, sort of people that we see in the crack high comedies—fellows whose words are so many bonds, and who are noted for giving away guineas, in charity, with the one hand, while, in the way of mere bargain, they exact the uttermost fraction of a farthing with the other.

He makes much ado before he can get suited with a boarding-house. He dislikes children. He has been accustomed to quiet. His habits are methodical—and then he would prefer getting into a private and respectable small family, piously inclined. Terms, however, are no object—only he must insist upon settling his bill on the first of every month, (it is now the second) and begs his landlady, when he finally obtains one to his mind, *not* on any account to forget his instructions upon this point—but to send in a bill, *and* receipt, precisely at ten o'clock on the *first* day of every month, and under no circumstances to put it off to the second.

These arrangements made, our man of business rents an office in a reputable rather than a fashionable quarter of the town. There is nothing he more despises than pretense. "Where there is much show," he says, "there is seldom any thing very solid behind"—an observation which so profoundly impresses his landlady's fancy, that she makes a pencil memorandum of it forthwith, in her great family Bible, on the broad margin of the Proverbs of Solomon.

The next step is to advertise, after some such fashion as this, in the principal business six-pennies of the city—

the pennies are eschewed as not "respectable"—and as demanding payment for all advertisements in advance. Our man of business holds it as a point of his faith that work should never be paid for until done.

"WANTED.—The advertisers, being about to commence extensive business operations in this city, will require the services of three or four intelligent and competent clerks, to whom a liberal salary will be paid. The very best recommendations, not so much for capacity, as for integrity, will be expected. Indeed, as the duties to be performed, involve high responsibilities, and large amounts of money must necessarily pass through the hands of those engaged, it is deemed advisable to demand a deposit of fifty dollars from each clerk employed. No person need apply, therefore, who is not prepared to leave this sum in the possession of the advertisers, and who cannot furnish the most satisfactory testimonials of morality. Young gentlemen piously inclined will be preferred. Application should be made between the hours of ten and eleven a. m., and four and five p. m., of Messrs.

"BOGS, HOGS, LOGS, FROGS & Co.,
"No. 110 Dog Street."

By the thirty-first day of the month, this advertisement has brought to the office of Messrs. Bogs, Hogs, Logs, Frogs, and Company, some fifteen or twenty young gentlemen piously inclined. But our man of business is in no hurry to conclude a contract with any—no man of business is *ever* precipitate—and it is not until the most rigid catechism in respect to the piety of each young gentleman's inclination, that his services are engaged and his fifty dollars receipted for, *just* by way of proper precaution, on the part of the respectable firm of Bogs, Hogs, Logs, Frogs, and Company. On the morning of the first day of the next month, the landlady does *not* present her bill, according to promise—a piece of neglect for which the comfortable head of the house ending in *ogs* would no doubt have chided her severely, could he have been prevailed upon to remain in town a day or two for that purpose.

As it is, the constables have had a sad time of it, running hither and thither, and all they can do is to declare the man of business most emphatically, a "hen knee high"—by which some persons imagine them to imply that, in fact, he is n. e. i.—by which again the very classical phrase *non est inventus*, is supposed to be understood. In the meantime the young gentlemen, one and all, are somewhat less piously inclined than before, while the landlady purchases a shilling's worth of the Indian rubber, and very carefully obliterates the pencil memorandum that some fool has made in her great family Bible, on the broad margin of the Proverbs of Solomon.

Lionizing

(This tale was published in the *Southern Literary Messenger*, May, 1835. It is also called Some Passages in the Life of a Lion.—Ed.)

. all people went
Upon their ten toes in wild wonderment.
Bishop Hall's Satires.

I AM, that is to say I *was*, a great man, but I am neither the author of Junius nor the Man in the Iron Mask, for my name, I believe, is Robert Jones, and I was born somewhere in the city of Fum-Fudge.

The first action of my life was the taking hold of my nose with both hands. My mother saw this and called me a genius, my father wept for joy and presented me with a treatise on Nosology. This I mastered before I was breeched.

I now began to feel my way in the science, and soon came to understand that, provided a man had a nose sufficiently conspicuous he might, by merely following it, arrive at a Lionship. But my attention was not confined to theories alone. Every morning I gave my proboscis a couple of pulls and swallowed a half-dozen of drams.

When I came of age my father asked me one day if I would step with him into his study.

"My son," said he, when we were seated, "what is the chief end of your existence?"

"My father," I answered, "it is the study of Nosology."

"And what, Robert," he inquired, "is Nosology?"

"Sir," I said, "it is the science of Noses."

"And can you tell me," he demanded, "what is the meaning of a nose?"

"A nose, my father," I replied, greatly softened, "has been variously defined by about a thousand different authors." [Here I pulled out my watch.] "It is now noon, or thereabouts—we shall have time enough to get through with them all before midnight. To commence then:—The nose, according to Bartholinus, is that protuberance—that bump—that excresence—that——"

"Will do, Robert," interrupted the good old gentleman. "I am thunderstruck at the extent of your information—I am positively—upon my soul." [Here he closed his eyes and placed his hand upon his heart.] "Come here!" [Here he took me by the arm.] "Your education may now be considered as finished—it is high time you should scuffle for yourself—and you cannot do a better thing than merely follow your nose—so—so—so—" [Here he kicked me down stairs and out of the door.]—"So get out of my house, and God bless you!"

As I felt within me the divine *afflatus*, I considered this accident rather fortunate than otherwise. I resolved to be guided by the paternal advice. I determined to follow my nose. I gave it a pull or two upon the spot, and wrote a pamphlet on Nosology forthwith.

All Fum-Fudge was in an uproar.

"Wonderful genius!" said the *Quarterly*.

"Superb physiologist!" said the *Westminster*.

"Clever fellow!" said the *Foreign*.

"Fine writer!" said the *Edinburgh*.

"Profound thinker!" said the *Dublin*.

"Great man!" said *Bentley*.

"Divine soul!" said *Fraser*.

"One of us!" said *Blackwood*.

"Who can he be?" said Mrs. Bas-Bleu.

"What can he be?" said big Miss Bas-Bleu.

"Where can he be?" said little Miss Bas-Bleu.—But I paid these people no attention what ever—I just stepped into the shop of an artist.

The Duchess of Bless-my-Soul was sitting for her portrait; the Marquis of So-and-So was holding the Duchess' poodle; the Earl of This-and-That was flirting with her salts; and his Royal Highness of Touch-me-Not was leaning upon the back of her chair.

I approached the artist and turned up my nose.

"Oh, beautiful!" sighed her Grace.

"Oh, my!" lisped the Marquis.

"Oh, shocking!" groaned the Earl.

"Oh, abominable!" growled his Royal Highness.

"What will you take for it?" asked the artist.

"For his *nose!*" shouted her Grace.

"A thousand pounds," said I, sitting down.

"A thousand pounds?" inquired the artist, musingly.

"A thousand pounds," said I.

"Beautiful!" said he, entranced.

"A thousand pounds," said I.

"Do you warrant it?" he asked, turning the nose to the light.

"I do," said I, blowing it well.

"Is it *quite* original?" he inquired, touching it with reverence.

"Humph!" said I, twisting it to one side.

"Has *no* copy been taken?" he demanded, surveying it through a microscope.

"None," said I, turning it up.

"Admirable!" he ejaculated, thrown quite off his guard by the beauty of the manœuvre.

"A thousand pounds," said I.

"A thousand *pounds?"* said he.

"Precisely," said I.

"A thousand *pounds?"* said he.

"Just so," said I.

"You shall have them," said he. "What a piece of *virtu!"* So he drew me a check upon the spot, and took a sketch of my nose. I engaged rooms in Jermyn street, and sent her Majesty the ninety-ninth edition of the "Nosology," with a portrait of the proboscis. —That sad little rake, the Prince of Wales, invited me to dinner.

We are all lions and *recherches*.

There was a modern Platonist. He quoted Porphyry, Iamblicus, Plotinus, Proclus, Hierocles, Maximus Tyrius, and Syrianus.

There was a human-perfectibility man. He quoted Turgot, Price, Priestley, Condorcet, De Stael, and the "Ambitious Student in Ill-Health."

There was Sir Positive Paradox. He observed that all fools were philosophers, and that all philosophers were fools.

There was Æstheticus Ethix. He spoke of fire, unity, and atoms; bi-part and pre-existent soul; affinity and discord; primitive intelligence and homoomeria.

There was Theologos Theology. He talked of Eusebius and Arianus; heresy and the Council of Nice; Puseyism and con-substantialism; Homousios and Homouioisios.

There was Fricassee from the Rocher de Cancale. He mentioned Muriton of red tongue; cauliflowers with *veloute* sauce; veal *a la* St. Menehoult; marinade *a la* St. Florentin; and orange jellies *en mosaiques*.

There was Bibulus O'Bumper. He touched upon Latour and Markbrunnen; upon Mosseux and Chambertin; upon Richbourg and St. George; upon Haubrion, Leonville, and Medoc; upon Barac and Preignac; upon Grave, upon Sauterne, upon Lafitte, and upon St. Peray. He shook his head at Clos de Vougeot, and told with his eyes shut, the difference between Sherry and Amontillado.

There was Signor Tintontintino from Florence. He discoursed of Cimabue, Arpino, Carpaccio, and Argostino—of the gloom of Caravaggio, of the amenity of Albano, of the colors of Titian, of the frows of Rubens, and of the waggeries of Jan Steen.

There was the President of the Fum-Fudge University. He was of the opinion that the moon was called Bendis in Thrace, Bubastis in Egypt, Dian in Rome, and Artemis in Greece.

There was a Grand Turk from Stamboul. He could not help thinking that the angels were horses, cocks, and bulls; that somebody in the sixth heaven had seventy thousand heads; and that the earth was supported by a sky-blue cow with an incalculable number of green horns.

There was Delphinus Polyglott. He told us what had become of the eighty-three lost tragedies of Æschylus; of the fifty-four orations of Isæus; of the three hundred and ninety-one speeches of Lysias; of the hundred and eighty treatises of Theophrastus; of the eighth book of the conic sections of Apollonius; of Pindar's hymns and dithyrambics; and of the five and forty tragedies of Homer Junior.

There was Ferdinand Fitz Fossillus Feltspar. He informed us all about internal fires and tertiary formations; about aeriforms, fluidiforms, and solidforms; about quartz and marl; about schist and schorl; about gypsum and trap; about talc and calc; about blende and horn-blende; about mica-slate and pudding-stone; about cyanite and lepidolite; about hæmatite and tremolite; about antimony and calcedony; about manganese and whatever you please.

There was myself. I spoke of myself;—of myself, of myself, of myself;—of Nosology, of my pamphlet, and of myself. I turned up my nose, and I spoke of myself.

"Marvellous clever man!" said the Prince.

"Superb!" said his guests;—and next morning her Grace of Bless-my-Soul paid me a visit.

"Will you go to Almack's, pretty creature?" she said, tapping me under the chin.

"Upon honor," said I.

"Nose and all?" she asked.

"As I live," I replied.

"Here then is a card, my life. Shall I say you *will* be there?"

"Dear Duchess, with all my heart."

"Pshaw, no!—but with all your nose?"

"Every bit of it, my love," said I.

—so I gave it a twist or two, and found myself at Almack's.

The rooms were crowded to suffocation.

"He is coming!" said somebody on the staircase.

"He is coming!" said somebody farther up.

"He is coming!" said somebody farther still.

"He is come!" exclaimed the Duchess, "He is come, the little love!"—and, seizing me firmly by both hands, she kissed me thrice upon the nose.

A marked sensation immediately ensued.

"Diavolo!" cried Count Capricornutti,

"Dios guarda!" muttered Don Stiletto.

"Mille tonnerres!" ejaculated the Prince de Grenouille.

"Tousand teufel!" growled the Elector of Bluddennuff.

It was not to be borne. I grew angry. I turned short upon Bluddennuff.

"Sir!" said I to him, "you are a baboon."

"Sir," he replied, after a pause, *"Donner und Blitzen!"*

This was all that could be desired. We exchanged cards. At Chalk-Farm, the next morning, I shot off his nose—and then called upon my friends.

"Bete!" said the first.

"Fool!" said the second.

"Dolt!" said the third.

"Ass!" said the fourth.

"Ninny!" said the fifth.

"Noodle!" said the sixth.

"Be off!" said the seventh.

At all this I felt mortified, and so called upon my father.

"Father," I asked, "what is the chief end of my existence?"

"My son," he replied, "it is still the study of Nosology; but in hitting the Elector upon the nose you have overshot your mark. You have a fine nose, it is true; but then Bluddennuff has none. You are damned, and he has become the hero of the day. I grant you that in Fum-Fudge the greatness of a lion is in proportion to the size of his proboscis—but, good heavens! there is no competing with a lion who has no proboscis at all."

Literary Life of Thingum Bob, Esq.

(Late Editor of the *Goosetherumfoodle.*)

BY HIMSELF

I AM now growing in years, and—since I understand that Shakespeare and Mr. Emmons are deceased—it is not impossible that I may even die. It has occurred to me, therefore, that I may as well retire from the field of Letters and repose upon my laurels. But I am ambitious of signalizing my abdication of the literary sceptre by some important bequest to posterity; and,

perhaps, I cannot do a better thing than just pen for it an account of my earlier career. My name, indeed, has been so long and so constantly before the public eye, that I am not only willing to admit the naturalness of the interest which it has everywhere excited, but ready to satisfy the extreme curiosity which it has inspired. In fact, it is no more than the duty of him who achieves greatness to leave behind him, in his ascent, such landmarks as may guide others to be great. I propose, therefore, in the present paper (which I had some idea of calling "Memoranda to Serve for the Literary History of America") to give a detail of those important, yet feeble and tottering, first steps, by which, at length, I attained the high road to the pinnacle of human renown.

Of one's *very* remote ancestors it is superfluous to say much. My father, Thomas Bob, Esq., stood for many years at the summit of his profession, which was that of a merchant-barber, in the city of Smug. His warehouse was the resort of all the principal people of the place, and especially of the editorial corps—a body which inspires all about it with profound veneration and awe. For my own part, I regarded them as gods, and drank in with avidity the rich wit and wisdom which continuously flowed from their august mouths during the process of what is styled "lather." My first moment of positive inspiration must be dated from that ever-memorable epoch, when the brilliant conductor of the *Gad-Fly*, in the intervals of the important process just mentioned, recited aloud, before a conclave of our apprentices, an inimitable poem in honor of the "Only Genuine Oil-of-Bob" (so called from its talented inventor, my father), and for which effusion the editor of the *Fly* was remunerated with a regal liberality by the firm of Thomas Bob & Company, merchant-barbers.

The genius of the stanzas to the "Oil-of-Bob" first breathed into me, I say, the divine *afflatus*. I resolved at once to become a great man, and to commence by becoming a great poet. That very evening I fell upon my knees at the feet of my father.

"Father," I said, "pardon me!—but I have a soul above lather. It is my firm intention to cut the shop. I would be an editor—I would be a poet—I would pen stanzas to the 'Oil-of-Bob.' Pardon me and aid me to be great!"

"My dear Thingum," replied father, (I had been christened Thingum after a wealthy relative so surnamed,) "My dear Thingum," he said, raising me from my knees by the ears—"Thingum, my boy, you're a trump, and take after your father in having a soul. You have an immense head, too, and it must hold a great many brains. This I have long seen, and therefore had thoughts of making you a lawyer. The business, however, has grown ungenteel, and that of politician don't pay. Upon the whole you judge wisely;—the trade of editor is best:—and if you can be a poet at the same time,—as most of the editors are, by the by,—why, you will kill two birds with the one stone. To encourage you in the beginning of things, I will allow you a garret; pen, ink, and paper; a rhyming dictionary; and a copy of the *Gad-Fly*. I suppose you would scarcely demand any more."

"I would be an ungrateful villain if I did," I replied with enthusiasm. "Your generosity is boundless. I will repay it

by making you the father of a genius."

Thus ended my conference with the best of men, and immediately upon its termination I betook myself with zeal to my poetical labors; as upon these, chiefly, I founded my hopes of ultimate elevation to the editorial chair.

In my first attempts at composition I found the stanzas to "The Oil-of-Bob" rather a drawback than otherwise. Their splendor more dazzled than enlightened me. The contemplation of their excellence tended, naturally, to discourage me by comparison with my own abortions; so that for a long time I labored in vain. At length there came into my head one of those exquisitely original ideas which now and then *will* permeate the brain of a man of genius. It was this:—or, rather, thus was it carried into execution. From the rubbish of an old book-stall, in a very remote corner of the town, I got together several antique and altogether unknown or forgotten volumes. The bookseller sold them to me for a song. From one of these, which purported to be a translation of one Dante's "Inferno," I copied with remarkable neatness a long passage about a man named Ugolino, who had a parcel of brats. From another, which contained a good many old plays by some person whose name I forget, I extracted in the same manner, and with the same care, a great number of lines about "angels" and "ministers saying grace," and "goblins damned," and more besides of that sort. From a third, which was the composition of some blind man or other, either a Greek or a Choctaw—I cannot be at the pains of remembering every trifle exactly,—I took about fifty verses beginning with "Achilles' wrath," and "grease," and something else. From a fourth, which I recollect was also the work of a blind man, I selected a page or two all about "hail" and "holy light"; and, although a blind man has no business to write about light, still the verses were sufficiently good in their way.

Having made fair copies of these poems, I signed every one of them "Oppodeldoc" (a fine sonorous name), and, doing each up nicely in a separate envelope, I dispatched one to each of the four principal magazines, with a request for speedy insertion and prompt pay. The result of this well-conceived plan, however, (the success of which would have saved me much trouble in after-life,) served to convince me that some editors are not to be bamboozled, and gave the *coup-de-grace* (as they say in France) to my nascent hopes (as they say in the city of the transcendentals).

The fact is, that each and every one of the magazines in question gave Mr. "Oppodeldoc" a complete using-up, in the "Monthly Notices to Correspondents." The *Hum-Drum* gave him a dressing after this fashion:

"'Oppodeldoc' (whoever he is) has sent us a long *tirade* concerning a bedlamite whom he styles 'Ugolino,' who had a great many children that should have been all whipped and sent to bed without their suppers. The whole affair is exceedingly tame—not to say *flat*. 'Oppodeldoc' (whoever he is) is entirely devoid of imagination—and imagination, in our humble opinion, is not only the soul of POESY, but also its very heart. 'Oppodeldoc' (whoever he is) has the audacity to demand of us, for his twattle, a 'speedy insertion and prompt pay.' We neither insert nor purchase any stuff of the sort. There

can be no doubt, however, that he would meet with a ready sale for all the balderdash he can scribble, at the office of either the *Rowdy-Dow*, the *Lollipop*, or the *Goosetherumfoodle*."

All this, it must be acknowledged, was very severe upon "Oppodeldoc,"—but the unkindest cut was putting the word POESY in small caps. In those five pre-eminent letters what a world of bitterness is there not involved!

But "Oppodeldoc" was punished with equal severity in the *Rowdy-Dow*, which spoke thus:

"We have received a most singular and insolent communication from a person (whoever he is) signing himself 'Oppodeldoc,'—thus desecrating the greatness of the illustrious Roman emperor so named. Accompanying the letter of 'Oppodeldoc' (whoever he is) we find sundry lines of most disgusting and unmeaning rant about 'angels and ministers of grace,'—rant such as no madman short of a Nat Lee, or an 'Oppodeldoc,' could possibly perpetrate. And for this trash of trash, we are modestly requested to 'pay promptly.' No, sir—no! We pay for nothing of *that* sort. Apply to the *Hum-Drum*, the *Lollipop*, or the *Goosetherumfoodle*. These *periodicals* will undoubtedly accept any literary offal you may send them—and as undoubtedly *promise* to pay for it."

This was bitter indeed upon poor "Oppodeldoc"; but, in this instance, the weight of the satire falls upon the *Hum-Drum*, the *Lollipop*, and the *Goosetherumfoodle*, who are pungently styled *"periodicals"*—in Italics, too—a thing that must have cut them to the heart.

Scarcely less savage was the *Lollipop*, which thus discoursed:

"Some *individual*, who rejoices in the appellation 'Oppodeldoc,' (to what low uses are the names of the illustrious dead too often applied!) has enclosed us some fifty or sixty *verses* commencing after this fashion:

'Achilles' wrath, to Greece the direful spring
Of woes unnumbered, &c., &c., &c., &c.'

"'Oppodeldoc' (whoever he is) is respectfully informed that there is not a printer's devil in our office who is not in the daily habit of composing better *lines*. Those of 'Oppodeldoc' will not *scan*. 'Oppodeldoc' should learn to *count*. But why he should have conceived the idea that *we* (of all others, *we!*) would disgrace our pages with his ineffable nonsense is utterly beyond comprehension. Why, the absurd twattle is scarcely good enough for the *Hum-Drum*, the *Rowdy-Dow*, the *Goosetherumfoodle*,—things that are in the practice of publishing 'Mother Goose's Melodies' as original lyrics. And 'Oppodeldoc' (whoever he is) has even the assurance to demand *pay* for this drivel. Does 'Oppodeldoc' (whoever he is) know—is he aware that we could not be paid to insert it?"

As I perused this I felt myself growing gradually smaller and smaller, and when I came to the point at which the editor sneered at the poem as *"verses,"* there was little more than an ounce of me left. As for "Oppodeldoc," I be-

gan to experience *compassion* for the poor fellow. But the *Goosetherumfoodle* showed, if possible, less mercy than the *Lollipop*. It was the *Goosetherumfoodle* that said—

"A wretched poetaster, who signs himself 'Oppodeldoc,' is silly enough to fancy that *we* will print and *pay* for a medley of incoherent and ungrammatical bombast which he has transmitted to us, and which commences with the following most *intelligible* line:

'Hail, Holy Light! Offspring of
Heaven, first born.'

"We say, 'most *intelligible*.' 'Oppodeldoc' (whoever he is) will be kind enough to tell us, perhaps, how *'hail'* can be *'holy light.'* We always regarded it as *frozen rain*. Will he inform us, also, how frozen rain can be, at one and the same time, both 'holy light' (whatever that is) and an 'offspring'?—which latter term (if we understand anything about English) is only employed, with propriety, in reference to small babies of about six weeks old. But it is preposterous to descant upon such absurdity—although 'Oppodeldoc' (whoever he is) has the unparalleled effrontery to suppose that we will not only 'insert' his ignorant ravings, but (absolutely) *pay for them!*

"Now this is fine—it is rich!—and we have half a mind to punish this young scribbler for his egotism by really publishing his effusion *verbatim et literatim*, as he has written it. We could inflict no punishment so severe, and we *would* inflict it, but for the boredom which we should cause our readers in so doing.

"Let 'Oppodeldoc' (whoever he is) send any future *composition* of like character to the *Hum-Drum*, the *Lollipop*, or the *Rowdy-Dow*. *They* will 'insert' it. *They* 'insert' every month just such stuff. Send it to them. WE are not to be insulted with impunity."

This made an end of me; and as for the *Hum-Drum*, the *Rowdy-Dow*, and the *Lollipop*, I never could comprehend how they survived it. The putting *them* in the smallest possible *minion*, (that was the rub—thereby insinuating their lowness—their baseness,) while WE stood looking down upon them in gigantic capitals!—oh it was *too* bitter!—it was wormwood—it was gall. Had I been either of these periodicals I would have spared no pains to have the *Goosetherumfoodle* prosecuted. It might have been done under the Act for the "Prevention of Cruelty to Animals." As for Oppodeldoc (whoever he was) I had by this time lost all patience with the fellow, and sympathized with him no longer. He was a fool, beyond doubt, (whoever he was,) and got not a kick more than he deserved.

The result of my experiment with the old books convinced me, in the first place, that "honesty is the best policy," and, in the second, that if I could not write better than Mr. Dante, and the two blind men, and the rest of the old set, it would, at least, be a difficult matter to write worse. I took heart, therefore, and determined to prosecute the "entirely original" (as they say on the covers of the magazines), at whatever cost of study and pains. I again placed before my eyes, as a model, the brilliant stanzas on "The Oil-of-Bob" by the editor of the

Gad-Fly and resolved to construct an ode on the same sublime theme, in rivalry of what had already been done.

With my first line I had no material difficulty. It ran thus:

"To pen an Ode upon the 'Oil-of-Bob.'"

Having carefully looked out, however, all the legitimate rhymes to "Bob," I found it impossible to proceed. In this dilemma I had recourse to paternal aid; and, after some hours of mature thought, my father and myself thus constructed the poem:

"To pen an Ode upon the 'Oil-of-Bob'
Is all sorts of a job.
(Signed) SNOB."

To be sure, this composition was of no very great length,—but I "have yet to learn," as they say in the *Edinburgh Review*, that the mere extent of a literary work has anything to do with its merit. As for the Quarterly cant about "sustained effort," it is impossible to see the sense of it. Upon the whole, therefore, I was satisfied with the success of my maiden attempt, and now the only question regarded the disposal I should make of it. My father suggested that I should send it to the *Gad-Fly*,—but there were two reasons which operated to prevent me from so doing. I dreaded the jealousy of the editor—and I had ascertained that he did not pay for original contributions. I therefore, after due deliberation, consigned the article to the more dignified pages of the *Lollipop* and awaited the event in anxiety, but with resignation.

In the very next published number I had the proud satisfaction of seeing my poem printed at length, as the leading article, with the following significant words, prefixed in italics and between brackets:

[*We call the attention of our readers to the subjoined admirable stanzas on "The Oil-of-Bob." We need say nothing of their sublimity, or of their pathos:—it is impossible to peruse them without tears. Those who have been nauseated with a sad dose on the same august topic from the goose-quill of the editor of the "Gad-Fly," will do well to compare the two compositions.*

P. S.—We are consumed with anxiety to probe the mystery which envelops the evident pseudonym "Snob." May we hope for a personal interview?]

All this was scarcely more than justice, but it was, I confess, rather more than I had expected:—I acknowledged this, be it observed, to the everlasting disgrace of my country and of mankind. I lost no time, however, in calling upon the editor of the *Lollipop* and had the good fortune to find this gentleman at home. He saluted me with an air of profound respect, slightly blended with a fatherly and patronizing admiration, wrought in him, no doubt, by my appearance of extreme youth and inexperience. Begging me to be seated, he entered at once upon the subject of my poem;—but modesty will ever forbid me to repeat the thousand compliments which he lavished upon me. The eulogies of Mr. Crab (such was the editor's name) were, however, by no means fulsomely indiscriminate. He analyzed my composition with much freedom and great

ability—not hesitating to point out a few trivial defects—a circumstance which elevated him highly in my esteem. The *Gad-Fly* was, of course, brought upon the *tapis*, and I hope never to be subjected to a criticism so searching, or to rebukes so withering, as were bestowed by Mr. Crab upon that unhappy effusion. I had been accustomed to regard the editor of the *Gad-Fly* as something superhuman; but Mr. Crab soon disabused me of that idea. He set the literary as well as the personal character of the Fly (so Mr. C. satirically designated the rival editor), in its true light. He, the Fly, was very little better than he should be. He had written infamous things. He was a penny-a-liner, and a buffoon. He was a villain. He had composed a tragedy which set the whole country in a guffaw, and a farce which deluged the universe in tears. Besides all this, he had the impudence to pen what he meant for a lampoon upon himself (Mr. Crab), and the temerity to style him "an ass." Should I at any time wish to express my opinion of Mr. Fly, the pages of the *Lollipop*, Mr. Crab assured me, were at my unlimited disposal. In the meantime, as it was very certain that I would be attacked in the *Fly* for my attempt at composing a rival poem on the "Oil-of-Bob," he (Mr. Crab) would take it upon himself to attend, pointedly, to my private and personal interests. If I were not made a man of at once, it should not be the fault of himself (Mr. Crab).

Mr. Crab having now paused in his discourse (the latter portion of which I found it impossible to comprehend), I ventured to suggest something about the remuneration which I had been taught to expect for my poem, by an announcement on the cover of the *Lollipop*, declaring that it (the *Lollipop*) "insisted upon being permitted to pay exorbitant prices for all accepted contributions,—frequently expending more money for a single brief poem than the whole annual cost of the *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle* combined."

As I mentioned the word "remuneration," Mr. Crab first opened his eyes, and then his mouth, to quite a remarkable extent, causing his personal appearance to resemble that of a highly agitated elderly duck in the act of quacking; and in this condition he remained (ever and anon pressing his hands tightly to his forehead, as if in a state of desperate bewilderment) until I had nearly made an end of what I had to say.

Upon my conclusion, he sank back into his seat, as if much overcome, letting his arms fall lifelessly by his side, but keeping his mouth still rigorously open, after the fashion of the duck. While I remained in speechless astonishment at behavior so alarming, he suddenly leaped to his feet and made a rush at the bell-rope; but just as he reached this, he appeared to have altered his intention, whatever it was, for he dived under a table and immediately re-appeared with a cudgel. This he was in the act of uplifting (for what purpose I am at a loss to imagine), when all at once, there came a benign smile over his features, and he sank placidly back in his chair.

"Mr. Bob," he said, (for I had sent up my card before ascending myself,) "Mr. Bob, you are a young man, I presume—*very?*"

I assented; adding that I had not yet concluded my third lustrum.

"Ah!" he replied, "very good! I see how it is—say no more! Touching this matter of compensation, what you observe is very just,—in fact it is excessively so. But ah—ah—the *first* contribution—the *first*, I say—it is never the magazine custom to pay for;—you comprehend, eh? The truth is, we are usually the *recipients* in such case." [Mr. Crab smiled blandly as he emphasized the word "recipients."] "For the most part, we are *paid* for the insertion of a maiden attempt—especially in verse. In the second place, Mr. Bob, the magazine rule is never to disburse what we term in France the *argent comptant*:—I have no doubt you understand. In a quarter or two after publication of the article—or in a year or two—we make no objection to giving our note at nine months; provided, always, that we can so arrange our affairs as to be quite certain of a 'burst up' in six. I really *do* hope, Mr. Bob, that you will look upon this explanation as satisfactory." Here Mr. Crab concluded, and the tears stood in his eyes.

Grieved to the soul at having been, however innocently, the cause of pain to so eminent and so sensitive a man, I hastened to apologize, and to reassure him, by expressing my perfect coincidence with his views, as well as my entire appreciation of the delicacy of his position. Having done all this in a neat speech, I took leave.

One fine morning, very shortly afterward, "I awoke and found myself famous." The extent of my renown will be best estimated by reference to the editorial opinions of the day. These opinions, it will be seen, were embodied in critical notices of the number of the *Lollipop* containing my poem, and are perfectly satisfactory, conclusive, and clear with the exception, perhaps, of the hieroglyphical marks, "*Sep.* 15—1 *t*," appended to each of the critiques.

The *Owl*, a journal of profound sagacity, and well known for the deliberate gravity of its literary decisions—the *Owl*, I say, spoke as follows:

"The *Lollipop!* The October number of this delicious magazine surpasses its predecessors, and sets competition at defiance. In the beauty of its typography and paper—in the number and excellence of its steel plates—as well as in the literary merit of its contributions—the *Lollipop* compares with its slow-paced rivals as Hyperion with Satyr. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle*, excel, it is true, in braggadocio, but in all other points, give us the *Lollipop!* How this celebrated journal can sustain its evidently tremendous expenses, is more than we can understand. To be sure, it has a circulation of 100,000, and its subscription list has increased one fourth during the last month; but, on the other hand, the sums it disburses constantly for contributions are inconceivable. It is reported that Mr. Slyass received no less than thirty-seven and a half cents for his inimitable paper on 'Pigs.' With Mr. Crab, as editor, and with such names upon the list of contributors as Snob and Slyass, there can be no such word as 'fail' for the *Lollipop*. Go and subscribe. *Sep.* 15—1 *t*."

I must say that I was gratified with this high-toned notice from a paper so respectable as the *Owl*. The placing my name—that is to say, my *nom de*

guerre—in priority of station to that of the great Slyass, was a compliment as happy as I felt it to be deserved.

My attention was next arrested by these paragraphs in the *Toad*—a print highly distinguished for its uprightness and independence—from its entire freedom from sycophancy and subservience to the givers of dinners:

"The *Lollipop* for October is out in advance of all its contemporaries, and infinitely surpasses them, of course, in the splendor of its embellishments, as well as in the richness of its contents. The *Hum-Drum,* the *Rowdy-Dow,* and the *Goosetherumfoodle* excel, we admit, in braggadocio, but, in all other points, give us the *Lollipop.* How this celebrated magazine can sustain its evidently tremendous expenses is more than we can understand. To be sure, it has a circulation of 200,000, and its subscription list has increased one third during the last fortnight, but, on the other hand, the sums it disburses, monthly, for contributions, are fearfully great. We learn that Mr. Mumblethumb received no less than fifty cents for his late 'Monody in a Mud-Puddle.'

"Among the original contributors to the present number we notice (besides the eminent editor, Mr. CRAB), such men as SNOB, Slyass, and Mumblethumb. Apart from the editorial matter, the most valuable paper, nevertheless, is, we think, a poetical gem by Snob, on the 'Oil-of-Bob,'—but our readers must not suppose from the title of this incomparable *bijou,* that it bears any similitude to some balderdash on the same subject by a certain contemptible individual whose name is unmentionable to ears polite. The *present* poem 'On the Oil-of-Bob,' has excited universal anxiety and curiosity in respect to the owner of the evident pseudonym, 'Snob,'—a curiosity which, happily, we have it in our power to satisfy. 'Snob' is the *nom de plume* of Mr. Thingum Bob, of this city,—a relative of the great Mr. Thingum (after whom he is named), and otherwise connected with the most illustrious families of the State. His father, Thomas Bob, Esq., is an opulent merchant in Smug. *Sep.* 15—1 *t.*"

This generous approbation touched me to the heart—the more especially as it emanated from a source so avowedly—so proverbially pure as the *Toad.* The word "balderdash," as applied to the "Oil-of-Bob" of the Fly, I considered singularly pungent and appropriate. The words "gem" and "*bijou,*" however, used in reference to my composition, struck me as being, in some degree, feeble. They seemed to me to be deficient in force. They were not sufficiently *prononces* (as we have it in France).

I had hardly finished reading the *Toad,* when a friend placed in my hands a copy of the *Mole,* a daily, enjoying high reputation for the keenness of its perception about matters in general, and for the open, honest, above-ground style of its editorials. The *Mole* spoke of the *Lollipop* as follows:

"We have just received the *Lollipop* for October, and *must* say that never before have we perused any single number of any periodical which afforded us a felicity so supreme. We speak advisedly. The *Hum-Drum,* the

Rowdy-Dow, and the *Goosetherumfoodle* must look well to their laurels. These prints, no doubt, surpass everything in loudness of pretension, but, in all other points, give us the *Lollipop!* How this celebrated magazine can sustain its evidently tremendous expenses, is more than we can comprehend. To be sure, it has a circulation of 300,000; and its subscription list has increased one half within the last week, but then the sum it disburses, monthly, for contributions, is astonishingly enormous. We have it upon good authority that Mr. Fatquack received no less than sixty-two cents and a half for his late domestic nouvellette, the 'Dish-Clout.'

"The contributors to the number before us are Mr. CRAB (the eminent editor), SNOB, Mumblethumb, Fatquack, and others; but, after the inimitable compositions of the editor himself, we prefer a diamond-like effusion from the pen of a rising poet who writes over the signature 'Snob'—a *nom de guerre* which we predict will one day extinguish the radiance of 'Boz.' 'SNOB,' we learn, is a Mr. THINGUM BOB, Esq., sole heir of a wealthy merchant of this city, Thomas Bob, Esq., and a near relative of the distinguished Mr. Thingum. The title of Mr. B.'s admirable poem is the 'Oil-of-Bob'—a somewhat unfortunate name, by-the-by, as some contemptible vagabond connected with the penny press has already disgusted the town with a great deal of drivel upon the same topic. There will be no danger, however, of confounding the compositions. *Sep.* 15—1 *t.*"

The generous approbation of so clear-sighted a journal as the *Mole* penetrated my soul with delight. The only objection which occurred to me was, that the terms "contemptible vagabond" might have been better written "*odious and* contemptible *wretch, villain, and* vagabond." This would have sounded more gracefully, I think. "Diamond-like," also, was scarcely, it will be admitted, of sufficient intensity to express what the *Mole* evidently *thought* of the brilliancy of the "Oil-of-Bob."

On the same afternoon in which I saw these notices in the *Owl,* the *Toad,* and the *Mole,* I happened to meet with a copy of the *Daddy-Long-Legs,* a periodical proverbial for the extreme extent of its understanding. And it was the *Daddy-Long-Legs* which spoke thus:

"The *Lollipop!!* This gorgeous magazine is already before the public for October. The question of pre-eminence is forever put to rest, and hereafter it will be excessively preposterous in the *Hum-Drum,* the *Rowdy-Dow,* or the *Goosetherumfoodle* to make any further spasmodic attempts at competition. These journals may excel the *Lollipop* in outcry, but, in all other points, give us the *Lollipop!* How this celebrated magazine can sustain its evidently tremendous expenses, is past comprehension. To be sure it has a circulation of precisely half a million, and its subscription list has increased seventy-five per cent. within the last couple of days, but then the sums it disburses, monthly, for contributions, are scarcely credible; we are cognizant of the fact, that Mademoiselle Cribalittle received no less than eighty-seven cents and a half for her late valuable Revolutionary tale, entitled 'The York-

Town Katy-Did, and the Bunker-Hill Katy-Didn't.'

"The most able papers in the present number are, of course, those furnished by the editor (the eminent Mr. CRAB), but there are numerous magnificent contributions from such names as SNOB, Mademoiselle Cribalittle, Slyass, Mrs. Fibalittle, Mumblethumb, Mrs. Squibalittle, and last, though not least, Fatquack. The world may well be challenged to produce so rich a galaxy of genius.

"The poem over the signature 'SNOB' is, we find, attracting universal commendation, and, we are constrained to say, deserves, if possible, even more applause than it has received. The 'Oil-of-Bob' is the title of this masterpiece of eloquence and art. One or two of our readers *may* have a *very* faint, although sufficiently disgusting recollection of a poem (?) similarly entitled, the perpetration of a miserable penny-a-liner, mendicant, and cut-throat, connected in the capacity of scullion, we believe, with one of the indecent prints about the purlieus of the city; we beg them, for God's sake, not to confound the compositions. The author of *the* 'Oil-of-Bob' is, we hear, THINGUM BOB, Esq., a gentleman of high genius, and a scholar. 'Snob' is merely a *nom de guerre. Sep.* 15.—1 *t.*"

I could scarcely restrain my indignation while I perused the concluding portions of this diatribe. It was clear to me that the yea-nay manner—not to say the gentleness,—the positive forbearance—with which the *Daddy-Long-Legs* spoke of that pig, the editor of the *Gad-Fly*,—it was evident to me, I say, that this gentleness of speech could proceed from nothing else than a partiality for the *Fly*—whom it was clearly the intention of the *Daddy-Long-Legs* to elevate into reputation at my expense. Any one, indeed, might perceive, with half an eye, that, had the real design of the *Daddy* been what it wished to appear, it (the *Daddy*) might have expressed itself in terms more direct, more pungent, and altogether more to the purpose. The words "penny-a-liner," "mendicant," "scullion," and "cut-throat," were epithets so intentionally inexpressive and equivocal, as to be worse than nothing when applied to the author of the very worst stanzas ever penned by one of the human race. We all know what is meant by "damning with faint praise," and, on the other hand, who could fail seeing through the covert purpose of the *Daddy*,—that of glorifying with feeble abuse?

What the *Daddy* chose to say to the *Fly*, however, was no business of mine. What it said of myself *was*. After the noble manner in which the *Owl*, the *Toad*, the *Mole*, had expressed themselves in respect to my ability, it was rather too much to be coolly spoken of by a thing like the *Daddy-Long-Legs*, as merely "a gentleman of high genius and a scholar." Gentleman indeed! I made up my mind at once either to get a written apology from the *Daddy-Long-Legs*, or to call it out.

Full of this purpose, I looked about me to find a friend whom I could entrust with a message to his *Daddy*ship, and as the editor of the *Lollipop* had given me marked tokens of regard, I at length concluded to seek assistance upon the present occasion.

I have never yet been able to account, in a manner satisfactory to my own understanding, for the *very* peculiar countenance and demeanor with which Mr. Crab listened to me, as I unfolded to him my design. He again went through the scene of the bell-rope and cudgel, and did not omit the duck. At one period I thought he really intended to quack. His fit, nevertheless, finally subsided as before, and he began to act and speak in a rational way. He declined bearing the cartel, however, and in fact, dissuaded me from sending it at all; but was candid enough to admit that the *Daddy-Long-Legs* had been disgracefully in the wrong—more especially in what related to the epithets "gentleman and scholar."

Toward the end of this interview with Mr. Crab, who really appeared to take a paternal interest in my welfare, he suggested to me that I might turn an honest penny, and at the same time, advance my reputation, by occasionally playing Thomas Hawk for the *Lollipop*.

I begged Mr. Crab to inform me who was Mr. Thomas Hawk, and how it was expected that I should play him.

Here Mr. Crab again "made great eyes" (as we say in Germany), but at length, recovering himself from a profound attack of astonishment, he assured me that he employed the words "Thomas Hawk" to avoid the colloquialism, Tommy, which was low—but that the true idea was Tommy Hawk—or tomahawk—and that by "playing tomahawk" he referred to scalping, brow-beating, and otherwise using up the herd of poor-devil authors.

I assured my patron that, if this was all, I was perfectly resigned to the task of playing Thomas Hawk. Hereupon Mr. Crab desired me to use up the editor of the *Gad-Fly* forthwith, in the fiercest style within the scope of my ability, and as a specimen of my powers. This I did, upon the spot, in a review of the original "Oil-of-Bob," occupying thirty-six pages of the *Lollipop*. I found playing Thomas Hawk, indeed, a far less onerous occupation than poetizing; for I went upon *system* altogether, and thus it was easy to do the thing thoroughly well. My practice was this. I bought auction copies (cheap) of "Lord Brougham's Speeches," "Cobbett's Complete Works," the "New Slang-Syllabus," the "Whole Art of Snubbing," "Prentice's Billingsgate" (folio edition), and "Lewis G. Clarke on Tongue." These works I cut up thoroughly with a curry-comb, and then, throwing the shreds into a sieve, sifted out carefully all that might be thought decent (a mere trifle); reserving the hard phrases, which I threw into a large tin pepper-castor with longitudinal holes, so that an entire sentence could get through without material injury. The mixture was then ready for use. When called upon to play Thomas Hawk, I anointed a sheet of foolscap with the white of a gander's egg; then, shredding the thing to be reviewed as I had previously shredded the books—only with more care, so as to get every word separate—I threw the latter shreds in with the former, screwed on the lid of the castor, gave it a shake, and so dusted out the mixture upon the egged foolscap; where it stuck. The effect was beautiful to behold. It was captivating. Indeed, the reviews I brought to pass by this simple expedient have never been approached, and were the wonder of the

world. At first, through bashfulness—the result of inexperience—I was a little put out by a certain inconsistency —a certain air of the *bizarre* (as we say in France), worn by the composition as a whole. All the phrases did not *fit* (as we say in the Anglo-Saxon). Many were quite awry. Some, even, were upside-down; and there were none of them which were not in some measure, injured in regard to effect, by this latter species of accident, when it occurred—with the exception of Mr. Lewis Clarke's paragraphs, which were so vigorous and altogether stout, that they seemed not particularly disconcerted by any extreme of position, but looked equally happy and satisfactory, whether on their heads, or on their heels.

What became of the editor of the *Gad-Fly* after the publication of my criticism on his "Oil-of-Bob," it is somewhat difficult to determine. The most reasonable conclusion is, that he wept himself to death. At all events he disappeared instantaneously from the face of the earth, and no man has seen even the ghost of him since.

This matter having been properly accomplished, and the Furies appeased, I grew at once into high favor with Mr. Crab. He took me into his confidence, gave me a permanent situation as Thomas Hawk of the *Lollipop*, and, as for the present, he could afford me no salary, allowed me to profit, at discretion, by his advice.

"My dear Thingum," said he to me one day after dinner, "I respect your abilities and love you as a son. You shall be my heir. When I die I will bequeath you the *Lollipop*. In the meantime I will make a man of you—I *will*—provided always that you follow my counsel. The first thing to do is to get rid of the old bore."

"Boar?" said I inquiringly—"pig, eh? —*aper?* (as we say in Latin)—who?—where?"

"Your father," said he.

"Precisely," I replied—"pig."

"You have your fortune to make, Thingum," resumed Mr. Crab, "and that governor of yours is a millstone about your neck. We must cut him at once." [Here I took out my knife.] "We must cut him," continued Mr. Crab, "decidedly and forever. He won't do—he *won't*. Upon second thoughts, you had better kick him, or cane him, or something of that kind."

"What do you say," I suggested modestly, " to my kicking him in the first instance, caning him afterward, and winding up by tweaking his nose?"

Mr. Crab looked at me musingly for some moments, and then answered:

"I think, Mr. Bob, that what you propose would answer sufficiently well —indeed remarkably well—that is to say, as far as it went—but barbers are exceedingly hard to cut, and I think, upon the whole, that, having performed upon Thomas Bob the operations you suggest, it would be advisable to blacken, with your fists, both his eyes, very carefully and thoroughly, to prevent his ever seeing you again in fashionable promenades. After doing this, I really do not perceive that you can do any more. However—it might be just as well to roll him once or twice in the gutter, and then put him in charge of the police. Any time the next morning you can call at the watch-house and swear an assault."

I was much affected by the kindness

of feeling toward me personally, which was evinced in this excellent advice of Mr. Crab, and I did not fail to profit by it forthwith. The result was, that I got rid of the old bore, and began to feel a little independent and gentleman-like. The want of money, however, was, for a few weeks, a source of some discomfort; but at length, by carefully putting to use my two eyes, and observing how matters went just in front of my nose, I perceived how the thing was to be brought about. I say "thing"—be it observed—for they tell me the Latin for it is *rem*. By the way, talking of Latin, can any one tell me the meaning of *quocunque*—or what is the meaning of *modo?*

My plan was exceedingly simple. I bought, for a song, a sixteenth of the *Snapping-Turtle:*—that was all. The thing was *done,* and I put money in my purse. There were some trivial arrangements afterward, to be sure; but these formed no portion of the plan. They were a consequence—a result. For example, I bought pen, ink, and paper, and put them into furious activity. Having thus completed a Magazine article, I gave it, for appellation, "Fol Lol, *by the Author of* 'The Oil-of-Bob,'" and enveloped it to the *Goosetherumfoodle*. That journal, however, having pronounced it "twattle" in the "Monthly Notices to correspondents," I reheaded the paper "'Hey-Diddle-Diddle,' by Thingum Bob, Esq., Author of the Ode on 'The Oil-of-Bob,' *and* Editor of the *Snapping-Turtle.*" With this amendment, I re-enclosed it to the *Goosetherumfoodle,* and, while I awaited a reply, published daily, in the *Turtle,* six columns of what may be termed philosophical and analytical investigation of the literary merits of the *Goosetherumfoodle,* as well as of the personal character of the editor of the *Goosetherumfoodle*. At the end of a week the *Goosetherumfoodle* discovered that it had, by some odd mistake, "confounded a stupid article, headed 'Hey-Diddle-Diddle,' and composed by some unknown ignoramus, with a gem of resplendent lustre similarly entitled, the work of Thingum Bob, Esq., the celebrated author of 'The Oil-of-Bob.'" The *Goosetherumfoodle* deeply "regretted this very natural accident," and promised, moreover, an insertion of the *genuine* "Hey-Diddle-Diddle" in the very next number of the Magazine.

The fact is, I *thought*—I *really* thought—I thought at the time—I thought *then*—and have no reason for thinking otherwise *now*—that the *Goosetherumfoodle did* make a mistake. With the best intentions in the world, I never knew any thing that made as many singular mistakes as the *Goosetherumfoodle*. From that day I took a liking to the *Goosetherumfoodle,* and the result was I soon saw into the very depths of its literary merits, and did not fail to expatiate upon them, in the *Turtle,* whenever a fitting opportunity occurred. And it is to be regarded as a very peculiar coincidence—as one of those positively *remarkable* coincidences which set a man to serious thinking—that just such a total revolution of opinion—just such entire *bouleversement* (as we say in French)—just such thorough *topsiturviness* (if I may be permitted to employ a rather forcible term of the Choctaws), as happened, *pro* and *con,* between myself on the one part, and the *Goosetherumfoodle* on the other, did actually again happen,

in a brief period afterwards, and with precisely similar circumstances, in the case of myself and the *Rowdy-Dow*, and in the case of myself and the *Hum-Drum*.

Thus it was that, by a master-stroke of genius, I at length consummated my triumphs by "putting money in my purse," and thus may be said really and fairly to have commenced that brilliant and eventful career which rendered me illustrious, and which now enables me to say with Chateaubriand: "I have made history"—*"J'ai fait l' histoire."*

I have indeed "made history." From the bright epoch which I now record, my actions—my works—are the property of mankind. They are familiar to the world. It is, then, needless for me to detail how, soaring rapidly, I fell heir to the *Lollipop*—how I merged this journal in the *Hum-Dum*—how again I made purchase of the *Rowdy-Dow, thus combining the three periodicals*—how lastly, I effected a bargain for the sole remaining rival, and united all the literature of the country in one magnificent Magazine known everywhere as the

Rowdy-Dow, Lollipop, Hum-Drum, and Goosetherumfoodle.

Yes; I have made history. My fame is universal. It extends to the uttermost ends of the earth. You cannot take up a common newspaper in which you shall not see some allusion to the immortal THINGUM BOB. It is Mr. Thingum Bob said so, and Mr. Thingum Bob wrote this, and Mr. Thingum Bob did that. But I am meek and expire with an humble heart. After all, what is it?—this indescribable something which men will persist in terming "genius"? I agree with Buffon—with Hogarth—it is but *diligence* after all.

Look at *me!*—how I labored—how I toiled—how I wrote! Ye Gods, did I *not* write? I knew not the word "ease." By day I adhered to my desk, and at night, a pale student, I consumed the midnight oil. You should have seen me—you *should*. I leaned to the right. I leaned to the left. I sat forward. I sat backward. I sat *tete baissee* (as they have it in the Kickapoo), bowing my head close to the alabaster page. And, through all, I—*wrote*. Through joy and through sorrow, I—*wrote*. Through hunger and through thirst, I—*wrote*. Through good report and through ill report—I *wrote*. Through sunshine and through moonshine, I—*wrote*. *What* I wrote it is unnecessary to say. The *style!*—that was the thing. I caught it from Fatquack—whizz!—fizz!—and I am giving you a specimen of it now.

How to Write a Blackwood Article

(This tale has another name, Signora Zenobia. Published in *Broadway Journal*, vol. 2:1.—Ed.)

"In the name of the prophet—figs!!"
—*Cry of Turkish fig-peddler.*

I PRESUME everybody has heard of me. My name is the Signora Psyche Zenobia. This I know to be a fact. Nobody but my enemies ever calls me Suky Snobbs. I have been assured that Suky is but a vulgar corruption of Psyche, which is good Greek, and means "the soul" (that's me, I'm *all* soul) and sometimes "a butterfly," which latter meaning undoubtedly alludes to my appearance in my new crimson satin dress, with the sky-blue Arabian *mantelet*, and the trimmings of green *agraffas*, and the seven flounces of orange-colored *auriculas*. As for Snobbs—any person who should look at me would be instantly aware that my name wasn't Snobbs. Miss Tabitha Turnip propagated that report through sheer envy. Tabitha Turnip indeed! Oh the little wretch! But what can we expect from a turnip? Wonder if she remembers the old adage about "blood out of a turnip," etc.? [Mem.: put her in mind of it the first opportunity.] [Mem. again—pull her nose.] Where was I? Ah! I have been assured that Snobbs is a mere corruption of Zenobia, and that Zenobia was a queen—(So am I. Dr. Moneypenny always calls me the Queen of Hearts)—and that Zenobia, as well as Psyche, is good Greek, and that my father was "a Greek," and that consequently I have a right to our patronymic, which is Zenobia and not by any means Snobbs. Nobody but Tabitha Turnip calls me Suky Snobbs. I am the Signora Psyche Zenobia.

As I said before, everybody has heard of me. I am that very Signora Psyche Zenobia, so justly celebrated as corresponding secretary to the *"Philadelphia, Regular, Exchange, Tea, Total, Young, Belles, Letters, Universal, Experimental, Bibliographical, Association, To, Civilize, Humanity."* Dr. Moneypenny made the title for us, and says he chose it because it sounded big like an empty rum-puncheon. (A vulgar man that sometimes—but he's deep.) We all sign the initials of the society after our names, in the fashion of the R. S. A., Royal Society of Arts—the S. D. U. K., Society for the Diffusion of Useful Knowledge, etc., etc. Dr. Moneypenny says that S. stands for *stale*, and that D. U. K. spells duck, (but it don't,) that that S. D. U. K. stands for Stale Duck, and not for Lord Brougham's society—but then Dr. Moneypenny is such a queer man that I am never sure when he is telling me the truth. At any rate we always add to our names the initials P. R. E. T. T. Y. B. L. U. E. B. A. T. C. H.—that is to say, Philadelphia, Regular, Exchange, Tea, Total, Young, Belles, Lettres, Universal, Experimental, Bibliographical, Association, To, Civilize, Humanity—one letter for each word, which is a decided improvement upon Lord Brougham. Dr. Moneypenny will have it that our ini-

tials give our true character—but for my life I can't see what he means.

Notwithstanding the good offices of the Doctor, and the strenuous exertions of the association to get itself into notice, it met with no very great success until I joined it. The truth is, the members indulged in too flippant a tone of discussion. The papers read every Saturday evening were characterized less by depth than buffoonery. They were all whipped syllabub. There was no investigation of first cause, first principles. There was no investigation of any thing at all. There was no attention paid to that great point, the "fitness of things." In short there was no fine writing like this. It was all low—very! No profundity, no reading, no metaphysics—nothing which the learned call spirituality, and which the unlearned choose to stigmatize as cant. [Dr. M. says I ought to spell "cant" with a capital K—but I know better.]

When I joined the society it was my endeavor to introduce a better style of thinking and writing, and all the world knows how well I have succeeded. We get up as good papers now in the P. R. E. T. T. Y. B. L. U. E. B. A. T. C. H. as any to be found even in Blackwood. I say, Blackwood, because I have been assured that the finest writing, upon every subject, is to be discovered in the pages of that justly celebrated Magazine. We now take it for our model upon all themes, and are getting into rapid notice accordingly. And, after all, it's not so very difficult a matter to compose an article of the genuine Blackwood stamp, if one only goes properly about it. Of course I don't speak of the political articles. Everybody knows how *they* are managed, since Dr. Moneypenny explained it. Mr. Blackwood has a pair of tailor's-shears, and three apprentices who stand by him for orders. One hands him the *Times*, another the *Examiner* and a third a "Gulley's New Compendium of Slang-Whang." Mr. B. merely cuts out and intersperses. It is soon done — nothing but *Examiner*, "Slang-Whang," and *Times*—then *Times*, "Slang-Whang," and *Examiner*—and then *Times*, *Examiner*, and "Slang-Whang."

But the chief merit of the Magazine lies in its miscellaneous articles; and the best of these come under the head of what Dr. Moneypenny calls the *bizarreries* (whatever that may mean) and what everybody else calls the *intensities*. This is a species of writing which I have long known how to appreciate, although it is only since my late visit to Mr. Blackwood (deputed by the society) that I have been made aware of the exact method of composition. This method is very simple, but not so much so as the politics. Upon my calling at Mr. B.'s, and making known to him the wishes of the society, he received me with great civility, took me into his study, and gave me a clear explanation of the whole process.

"My dear madman," said he, evidently struck with my majestic appearance, for I had on the crimson satin, with the green *agraffas*, and orange-colored *auriculas*. "My *dear* madam," said he, "sit down. The matter stands thus: In the first place your writer of intensities must have very black ink, and a very big pen, with a very blunt nib. And, mark me, Miss Psyche Zenobia!" he continued, after a pause,

with the most expressive energy and solemnity of manner, "mark me!—*that pen—must—never be mended!* Herein, madam, lies the secret, the soul, of intensity. I assume upon myself to say, that no individual, of however great genius ever wrote with a good pen—understand me—a good article. You may take it for granted, that when manuscript can be read it is never worth reading. This is a leading principle in our faith, to which if you cannot readily assent, our conference is at an end."

He paused. But, of course, as I had no wish to put an end to the conference, I assented to a proposition so very obvious, and one, too, of whose truth I had all along been sufficiently aware. He seemed pleased, and went on with his instructions.

"It may appear invidious in me, Miss Psyche Zenobia, to refer you to an article, or set of articles, in the way of model or study; yet perhaps I may as well call your attention to a few cases. Let me see. There was 'The Dead Alive,' a capital thing!—the record of a gentleman's sensations when entombed before the breath was out of his body—full of tastes, terror, sentiment, metaphysics, and erudition. You would have sworn that the writer had been born and brought up in a coffin. Then we had the 'Confessions of an Opium-eater'—fine, very fine!—glorious imagination — deep philosophy — acute speculation—plenty of fire and fury, and a good spicing of the decidedly unintelligible. That was a nice bit of flummery, and went down the throats of the people delightfully. They would have it that Coleridge wrote the paper —but not so. It was composed by my pet baboon, Juniper, over a rummer of Hollands and water, hot, without sugar.'" [This I could scarcely have believed had it been anybody but Mr. Blackwood, who assured me of it.] "Then there was 'The Involuntary Experimentalist,' all about a gentleman who got baked in an oven, and came out alive and well, although certainly done to a turn. And then there was 'The Diary of a Late Physician,' where the merit lay in good rant, and indifferent Greek—both of them taking things with the public. And then there was 'The Man in the Bell,' a paper by-the-by, Miss Zenobia, which I cannot sufficiently recommend to your attention. It is the history of a young person who goes to sleep under the clapper of a church bell, and is awakened by its tolling for a funeral. The sound drives him mad, and, accordingly, pulling out his tablets, he gives a record of his sensations. Sensations are the great things after all. Should you ever be drowned or hung, be sure and make a note of your sensations—they will be worth to you ten guineas a sheet. If you wish to write forcibly, Miss Zenobia, pay minute attention to the sensations."

"That I certainly will, Mr. Blackwood," said I.

"Good!" he replied. "I see you are a pupil after my own heart. But I must put you *au fait* to the details necessary in composing what may be denominated a genuine Blackwood article of the sensation stamp—the kind which you will understand me to say I consider the best for all purposes.

"The first thing requisite is to get yourself into such a scrape as no one ever got into before. The oven, for

instance—that was a good hit. But if you have no oven or big bell, at hand, and if you cannot conveniently tumble out of a balloon, or be swallowed up in an earthquake, or get stuck fast in a chimney, you will have to be contented with simply imagining some similar misadventure. I should prefer, however, that you have the actual fact to bear you out. Nothing so well assists the fancy, as an experimental knowledge of the matter in hand. 'Truth is strange,' you know, 'stranger than fiction'—besides being more to the purpose."

Here I assured him I had an excellent pair of garters, and would go and hang myself forthwith.

"Good!" he replied, "do so—although hanging is somewhat hackneyed. Perhaps you might do better. Take a dose of Brandreth's pills, and then give us your sensations. However, my instructions will apply equally well to any variety of misadventure, and in your way home you may easily get knocked in the head, or run over by an omnibus, or bitten by a mad dog, or drowned in a gutter. But to proceed.

"Having determined upon your subject, you must next consider the tone, or manner, of your narration. There is the tone didactic, the tone enthusiastic, the tone natural—all common-place enough. But then there is the tone laconic, or curt, which has lately come much into use. It consists in short sentences. Somehow thus: Can't be too brief. Can't be too snappish. Always a full stop. And never a paragraph.

"Then there is the tone elevated, diffusive, and interjectional. Some of our best novelists patronize this tone. The words must be all in a whirl, like a humming-top, and make a noise very similar, which answers remarkably well instead of meaning. This is the best of all possible styles where the writer is in too great a hurry to think.

"The tone metaphysical is also a good one. If you know any big words this is your chance for them. Talk of the Ionic and Eleatic schools—of Archytas, Gorgias, and Alcmæon. Say something about objectivity and subjectivity. Be sure and abuse a man named Locke. Turn up your nose at things in general, and when you let slip any thing a little *too* absurd, you need not be at the trouble of scratching it out, but just add a foot-note and say that you are indebted for the above profound observation to the *'Kritik der reinem Vernunft,'* or to the *'Metaphysithe Anfongsgrunde der Noturwissenchaft.'* This would look erudite and —and—and frank.

"There are various other tones of equal celebrity, but I shall mention only two more—the tone transcendental and the tone heterogeneous. In the former the merit consists in seeing into the nature of affairs a very great deal farther than anybody else. This second sight is very efficient when properly managed. A little reading of the *Dial* will carry you a great way. Eschew, in this case, big words; get them as small as possible, and write them upside down. Look over Channing's poems and quote what he says about a 'fat little man with a delusive show of Can.' Put in something about the Supernal Oneness. Don't say a syllable about the Infernal Twoness. Above all, study innuendo. Hint everything—assert nothing, If you feel inclined to say 'bread and butter,' do not by any

means say it outright. You may say any thing and every thing *approaching* to 'bread and butter.' You may hint at buck-wheat cake, or you may even go so far as to insinuate oatmeal porridge, but if bread and butter be your real meaning, be cautious, my *dear* Miss Psyche, not on any account to say 'bread and butter!'"

I assured him that I should never say it again as long as I lived. He kissed me and continued:

"As for the tone heterogeneous, it is merely a judicious mixture, in equal proportions, of all the other tones in the world, and is consequently made up of every thing deep, great, odd, piquant, pertinent, and pretty.

"Let us suppose now you have determined upon your incidents and tone. The most important portion—in fact, the soul of the whole business, is yet to be attended to—I allude to *the filling up*. It is not to be supposed that a lady, or gentleman either, has been leading the life of a book-worm. And yet above all things it is necessary that your article have an air of erudition, or at least afford evidence of extensive general reading. Now I'll put you in the way of accomplishing this point. See here!" (pulling down some three or four ordinary-looking volumes, and opening them at random). "By casting your eye down almost any page of any book in the world, you will be able to perceive at once a host of little scraps of either learning or *bel-esprit-ism*, which are the very thing for the spicing of a Blackwood article. You might as well note down a few while I read them to you. I shall make two divisions: first, *Piquant Facts for the Manufacture of Similes;* and, second, *Piquant Expressions to be introduced as occasion may require.* Write now!" —and I wrote as he dictated.

"PIQUANT FACTS FOR SIMILES. 'There were originally but three Muses—Melete, Mneme, Acœde—meditation, memory, and singing.' You may make a good deal of that little fact if properly worked. You see it is not generally known, and looks *recherche*. You must be careful and give the thing with a downright improviso air.

"Again. 'The river Alpheus passed beneath the sea, and emerged without injury to the purity of its waters.' Rather stale that, to be sure, but, if properly dressed and dished up, will look quite as fresh as ever.

"Here is something better. 'The Persian Iris appears to some persons to possess a sweet and very powerful perfume, while to others it is perfectly scentless.' Fine that, and very delicate! Turn it about a little, and it will do wonders. We'll have some thing else in the botanical line. There's nothing goes down so well, especially with the help of a little Latin. Write!

"'*The Epidendrum Flos Aeris*, of Java, bears a very beautiful flower, and will live when pulled up by the roots. The natives suspend it by a cord from the ceiling, and enjoy its fragrance for years.' That's capital! That will do for the similes. Now for the Piquant Expressions.

"PIQUANT EXPRESSIONS. '*The Venerable Chinese novel Ju-Kiao-Li.*' Good! By introducing these few words with dexterity you will evince your intimate acquaintance with the language and literature of the Chinese. With the aid of this you may possibly get along without either Arabic, or Sanscrit, or

Chickasaw. There is no passing muster, however, without Spanish, Italian, German, Latin, and Greek. I must look you out a little specimen of each. Any scrap will answer, because you must depend upon your own ingenuity to make it fit into your article. Now write!

"'*Aussi tendre que Zaire*'—as tender as Zaire—French. Alludes to the frequent repetition of the phrase, *la tendre Zaire*, in the French tragedy of that name. Properly introduced, will show not only your knowledge of the language, but your general reading and wit. You can say, for instance, that the chicken you were eating (write an article about being choked to death by a chicken-bone) was not altogether *aussi tendre que Zaire*. Write!

'Van muerte tan escondida,
Que no te sienta venir,
Porque el plazer del morir,
No mestorne a dar la vida.'

"That's Spanish—from Miguel de Cervantes. 'Come quickly, O death! but be sure and don't let me see you coming, lest the pleasure I shall feel at your appearance should unfortunately bring me back again to life.' This you may slip in quite *a propos* when you are struggling in the last agonies with the chicken-bone. Write!

'Il pover 'huomo che non se'n era accorto,
Andava combattendo, e era morto.'

That's Italian, you perceive—from Ariosto. It means that a great hero, in the heat of combat, not perceiving that he had been fairly killed, continued to fight valiantly, dead as he was. The application of this to your own case is obvious—for I trust, Miss Psyche, that you will not neglect to kick for at least an hour and a half after you have been choked to death by that chicken-bone. Please to write!

'Und sterb'ich doch, no sterb'ich denn Durch sie—durch sie!'

That's German—from Schiller. 'And if I die, at least I die—for thee—for thee!' Here it is clear that you are apostrophizing the *cause* of your disaster, the chicken. Indeed what gentleman (or lady either) of sense, *wouldn't* die, I should like to know, for a well fattened capon of the right Molucca breed, stuffed with capers and mushrooms, and served up in a salad-bowl, with orange-jellies *en mosaiques*. Write! (You can get them that way at Tortoni's)—Write, if you please!

"Here is a nice little Latin phrase, and rare too, (one can't be too *recherche* or brief in one's Latin, it's getting so common—*ignoratio elenchi*. He has committed an *ignoratio elenchi*—that is to say, he has understood the words of your proposition, but not the idea. The man was *a fool*, you see. Some poor fellow whom you address while choking with that chicken-bone, and who therefore didn't precisely understand what you were talking about. Throw the *ignoratio elenchi* in his teeth, and, at once, you have him annihilated. If he dares to reply, you can tell him from Lucan (here it is) that speeches are mere *anemonae verborum*, anemone words. The anemone, with great brilliancy, has no smell. Or, if he begins to bluster, you may be down upon

him with *insomnia Jovis*, reveries of Jupiter—a phrase which Silius Italicus (see here!) applies to thoughts pompous and inflated. This will be sure and cut him to the heart. He can do nothing but roll over and die. Will you be kind enough to write?

"In Greek we must have some thing pretty—from Demosthenes, for example.

'Aner o pheugoen kai palin makesetai.'

There is a tolerably good translation of it in Hudibras—

'For he that flies may fight again,
Which he can never do that's slain.'

In a Blackwood article nothing makes so fine a show as your Greek. The very letters have an air of profundity about them. Only observe, madam, the astute look of that Epsilon! That Phi ought certainly to be a bishop! Was ever there a smarter fellow than that Omicron? Just twig that Tau! In short, there is nothing like Greek for a genuine sensation-paper. In the present case your application is the most obvious thing in the world. Rap out the sentence, with a huge oath, and by way of *ultimatum* at the good-for-nothing dunder-headed villain who couldn't understand your plain English in relation to the chicken-bone. He'll take the hint and be off, you may depend upon it."

These were all the instructions Mr. B. could afford me upon the topic in question, but I felt they would be entirely sufficient. I was, at length, able to write a genuine Blackwood article, and determined to do it forthwith. In taking leave of me, Mr. B. made a proposition for the purchase of the paper when written; but as he could offer me only fifty guineas a sheet, I thought it better to let our society have it, than sacrifice it for so paltry a sum. Notwithstanding this niggardly spirit, however, the gentleman showed his consideration for me in all other respects, and indeed treated me with the greatest civility. His parting words made a deep impression upon my heart, and I hope I shall always remember them with gratitude.

"My dear Miss Zenobia," he said, while the tears stood in his eyes, "is there *any* thing else I can do to promote the success of your laudable undertaking? Let me reflect! It is just possible that you may not be able, so soon as convenient, to—to—get yourself drowned, or—choked with a chicken-bone, or—or hung,—or—bitten by a—but stay! Now I think me of it, there are a couple of very excellent bull-dogs in the yard—fine fellows, I assure you—savage, and all that—indeed just the thing for your money—they'll have you eaten up, *auriculas* and all, in less than five minutes (here's my watch!)—and then only think of the sensations! Here! I say—Tom!—Peter!—Dick, you villain!—let out those"—but as I was really in a great hurry, and had not another moment to spare, I was reluctantly forced to expedite my departure, and accordingly took leave *at once*—somewhat more abruptly, I admit, than strict courtesy would have otherwise allowed.

It was my primary object upon quitting Mr. Blackwood, to get into some immediate difficulty, pursuant to his advice, and with this view I spent the

greater part of the day in wandering about Edinburgh, seeking for desperate adventures—adventures adequate to the intensity of my feelings, and adapted to the vast character of the article I intended to write. In this excursion I was attended by one negro-servant, Pompey, and my little lap-dog Diana, whom I had brought with me from Philadelphia. It was not, however, until late in the afternoon that I fully succeeded in my arduous undertaking. An important event then happened of which the following Blackwood article, in the tone heterogeneous, is the substance and result.

A Predicament

(The tale, The Scythe of Time is the same as A Predicament.—Ed.)

(A Sequel)

What chance, good lady, hath bereft you thus?—COMUS.

IT was a quiet and still afternoon when I strolled forth in the goodly city of Edina. The confusion and bustle in the streets were terrible. Men were talking. Women were screaming. Children were choking. Pigs were whistling. Carts they rattled. Bulls they bellowed. Cows they lowed. Horses they neighed. Cats they caterwauled. Dogs they danced. *Danced!* Could it then be possible? *Danced!* Alas, thought I, *my* dancing days are over! Thus it is ever. What a host of gloomy recollections will ever and anon be awakened in the mind of genius and imaginative contemplation, especially of a genius doomed to the everlasting, and eternal, and continual, and, as one might say, the—*continued*—yes, the *continued and continuous,* bitter, harassing, disturbing, and, if I may be allowed the expression, the *very* disturbing influence of the serene, and god-like, and heavenly, and exalting, and elevated, and purifying effect of what may be rightly termed the most enviable, the most *truly* enviable—nay! the most benignly beautiful, the most deliciously ethereal, and, as it were, the most *pretty* (if I may use so bold an expression) *thing* (pardon me, gentle reader!) in the world—but I am always led away by my feelings. In *such* a mind, I repeat, what a host of recollections are stirred up by a trifle! The dogs danced! *I*—I *could* not! They frisked—I wept. They capered—I sobbed aloud. Touching circumstances! which cannot fail to bring to the recollection of the classical reader that exquisite passage in relation to the fitness of things, which is to be found in the commencement of the third volume of that admirable and venerable Chinese novel the *Jo-Go-Slow.*

In my solitary walk through the city I had two humble but faithful companions. Diana, my poodle! sweetest of creatures! She had a quantity of hair over her one eye, and a blue riband tied fashionably around her neck. Diana was not more than five inches in height,

but her head was somewhat bigger than her body, and her tail being cut off exceedingly close, gave an air of injured innocence to the interesting animal which rendered her a favorite with all.

And Pompey, my negro!—sweet Pompey! how shall I ever forget thee? I had taken Pompey's arm. He was three feet in height (I like to be particular) and about seventy, or perhaps eighty, years of age. He had bow-legs and was corpulent. His mouth should not be called small, nor his ears short. His teeth, however, were like pearl, and his large full eyes were deliciously white. Nature had endowed him with no neck, and had placed his ankles (as usual with that race) in the middle of the upper portion of the feet. He was clad with a striking simplicity. His sole garments were a stock of nine inches in height, and a nearly-new drab overcoat which had formerly been in the service of the tall, stately, and illustrious Dr. Moneypenny. It was a good overcoat. It was well cut. It was well made. The coat was nearly new. Pompey held it up out of the dirt with both hands.

There were three persons in our party, and two of them have already been the subject of remark. There was a third—that person was myself. I am the Signora Psyche Zenobia. I am *not* Suky Snobbs. My appearance is commanding. On the memorable occasion of which I speak I was habited in a crimson satin dress, with a sky-blue Arabian mantelet. And the dress had trimmings of green agraffas, and seven graceful flounces of the orange-colored auricula. I thus formed the third of the party. There was the poodle. There was Pompey. There was myself. We were *three*. Thus it is said there were originally but three Furies—Melty, Nimmy, and Hetty—Meditation, Memory, and Fiddling.

Leaning upon the arm of the gallant Pompey, and attended at a respectable distance by Diana, I proceeded down one of the populous and very pleasant streets of the now deserted Edina. On a sudden, there presented itself to view a church—a Gothic cathedral—vast, venerable, and with a tall steeple, which towered into the sky. What madness now possessed me? Why did I rush upon my fate? I was seized with an uncontrollable desire to ascend the giddy pinnacle, and then survey the immense extent of the city. The door of the cathedral stood invitingly open. My destiny prevailed. I entered the ominous archway. Where then was my guardian angel?—if indeed such angels there be. *If!* Distressing monosyllable! what a world of mystery, and meaning, and doubt, and uncertainty is there involved in thy two letters! I entered the ominous archway! I entered; and, without injury to my orange-colored auriculas, I passed beneath the portal, and emerged within the vestibule. Thus it is said the immense river Alfred passed, unscathed, and unwetted, beneath the sea.

I thought the staircase would never have an end. *Round!* Yes, they went round and up, and round and up and round and up, until I could not help surmising, with the sagacious Pompey, upon whose supporting arm I leaned in all the confidence of early affection—I *could* not help surmising that the upper end of the continuous spiral ladder had been accidentally, or perhaps designedly, removed. I paused for breath;

and, in the meantime, an accident occurred of too momentous a nature in a moral, and also in a metaphysical point of view, to be passed over without notice. It appeared to me—indeed I was quite confident of the fact—I could not be mistaken—no! I had, for some moments, carefully and anxiously observed the motions of my Diana—I say that *I could not be* mistaken—Diana *smelt a rat!* At once I called Pompey's attention to the subject, and he—he agreed with me. There was then no longer any reasonable room for doubt. The rat had been smelled—and by Diana. Heavens! shall I ever forget the intense excitement of the moment? The rat!—it was there—that is to say, it was somewhere. Diana smelled the rat. I—*I could* not! Thus it is said the Prussian Isis has, for some persons, a sweet and very powerful perfume, while to others it is perfectly scentless.

The staircase had been surmounted, and there were now only three or four more upward steps intervening between us and the summit. We still ascended, and now only one step remained. One step! One little, little step! Upon one such little step in the great staircase of human life how vast a sum of human happiness or misery depends! I thought of myself, then of Pompey, and then of the mysterious and inexplicable destiny which surrounded us. I thought of Pompey!—alas, I thought of love! I thought of my many false *steps* which have been taken, and may be taken again. I resolved to be more cautious, more reserved. I abandoned the arm of Pompey, and, without his assistance, surmounted the one remaining step, and gained the chamber of the belfry. I was followed immediately afterward by my poodle. Pompey alone remained behind. I stood at the head of the staircase, and encouraged him to ascend. He stretched forth to me his hand, and unfortunately in so doing was forced to abandon his firm hold upon the overcoat. Will the gods never cease their persecution? The overcoat is dropped, and, with one of his feet, Pompey stepped upon the long and trailing skirt of the overcoat. He stumbled and fell—this consequence was inevitable. He fell forward, and, with his accursed head, striking me full in the—in the breast, precipitated me headlong, together with himself, upon the hard, filthy, and detestable floor of the belfry. But my revenge was sure, sudden, and complete. Seizing him furiously by the wool with both hands, I tore out a vast quantity of black, and crisp, and curling material, and tossed it from me with every manifestation of disdain. It fell among the ropes of the belfry and remained. Pompey arose, and said no word. But he regarded me piteously with his large eyes and—sighed. Ye Gods—that sigh! It sunk into my heart. And the hair—the wool! Could I have reached that wool I would have bathed it with my tears, in testimony of regret. But alas! it was now far beyond my grasp. As it dangled among the cordage of the bell, I fancied it alive. I fancied that it stood on end with indignation. Thus the *happy-dandy Flos Aeris* of Java bears, it is said, a beautiful flower, which will live when pulled up by the roots. The natives suspend it by a cord from the ceiling and enjoy its fragrance for years.

Our quarrel was now made up, and

we looked about the room for an aperture through which to survey the city of Edina. Windows there were none. The sole light admitted into the gloomy chamber proceeded from a square opening, about a foot in diameter, at a height of about seven feet from the floor. Yet what will the energy of true genius not effect? I resolved to clamber up to this hole. A vast quantity of wheels, pinions, and other cabalistic-looking machinery stood opposite the hole, close to it; and through the hole there passed an iron rod from the machinery. Between the wheels and the wall where the hole lay there was barely room for my body—yet I was desperate, and determined to persevere. I called Pompey to my side.

"You perceive that aperture, Pompey. I wish to look through it. You will stand here just beneath the hole—so. Now, hold out one of your hands, Pompey, and let me step upon it—thus. Now, the other hand, Pompey, and with its aid I will get upon your shoulders."

He did every thing I wished, and I found, upon getting up, that I could easily pass my head and neck through the aperture. The prospect was sublime. Nothing could be more magnificent. I merely paused a moment to bid Diana behave herself, and assure Pompey that I would be considerate and bear as lightly as possible upon his shoulders. I told him I would be tender of his feelings—*ossi tender que beef-steak.* Having done this justice to my faithful friend, I gave myself up with great zest and enthusiasm to the enjoyment of the scene which so obligingly spread itself out before my eyes.

Upon this subject, however, I shall forbear to dilate. I will not describe the city of Edinburgh. Every one has been to the city of Edinburgh. Every one has been to Edinburgh—the classic Edina. I will confine myself to the momentous details of my own lamentable adventure. Having, in some measure, satisfied my curiosity in regard to the extent, situation, and general appearance of the city, I had leisure to survey the church in which I was, and the delicate architecture of the steeple. I observed that the aperture through which I had thrust my head was an opening in the dial-plate of a gigantic clock, and must have appeared, from the street, as a large key-hole, such as we see in the face of the French watches. No doubt the true object was to admit the arm of an attendant, to adjust, when necessary, the hands of the clock from within. I observed also, with surprise, the immense size of these hands, the longest of which could not have been less than ten feet in length, and, where broadest, eight or nine inches in breadth. They were of solid steel apparently, and their edges appeared to be sharp. Having noticed these particulars, and some others, I again turned my eyes upon the glorious prospect below, and soon became absorbed in contemplation.

From this, after some minutes, I was aroused by the voice of Pompey, who declared that he could stand it no longer, and requested that I would be so kind as to come down. This was unreasonable, and I told him so in a speech of some length. He replied, but with an evident misunderstanding of my ideas upon the subject. I accordingly grew angry, and told him in plain words. that he was a fool, that he had

committed an *ignoramus e-clench-eye*, that his notions were mere *insommary Bovis*, and his words little better than *in ennemywerrybor'em*. With this he appeared satisfied, and I resumed my contemplations.

It might have been half an hour after this altercation when, as I was deeply absorbed in the heavenly scenery beneath me, I was startled by something very cold which pressed with a gentle pressure on the back of my neck. It is needless to say that I felt inexpressibly alarmed. I knew that Pompey was beneath my feet, and that Diana was sitting, according to my explicit directions, upon her hind legs, in the farthest corner of the room. What could it be? Alas! I but too soon discovered. Turning my head gently to one side, I perceived, to my extreme horror, that the huge, glittering, scimetar-like minute hand of the clock had, in the course of its hourly revolution, *descended upon my neck*. There was, I knew, not a second to be lost. I pulled back at once—but it was too late. There was no chance of forcing my head through the mouth of that terrible trap in which it was so fairly caught, and which grew narrower and narrower with a rapidity too horrible to be conceived. The agony of that moment is not to be imagined. I threw up my hands and endeavored, with all my strength, to force upward the ponderous iron bar. I might as well have tried to lift the cathedral itself. Down, down, down it came, closer and yet closer. I screamed to Pompey for aid; but he said that I had hurt his feelings by calling him "an ignorant old squint-eye." I yelled to Diana; but she only said "bow-wow-wow," and that I had told her "on no account to stir from the corner." Thus I had no relief to expect from my associates.

Meantime the ponderous and terrific *Scythe of Time* (for I now discovered the literal import of that classical phrase) had not stopped, nor was it likely to stop, in its career. Down and still down, it came. It had already buried its sharp edge a full inch in my flesh, and my sensations grew indistinct and confused. At one time I fancied myself in Philadelphia with the stately Dr. Moneypenny, at another in the back parlor of Mr. Blackwood receiving his invaluable instructions. And then again the sweet recollection of better and earlier times came over me, and I thought of that happy period when the world was not all a desert, and Pompey not altogether cruel.

The ticking of the machinery amused me. *Amused me*, I say, for my sensations now bordered upon perfect happiness, and the most trifling circumstances afforded me pleasure. The eternal *click-clak, click-clak, click-clak* of the clock was the most melodious of music in my ears, and occasionally even put me in mind of the graceful sermonic harangues of Dr. Ollapod. Then there were the great figures upon the dial-plate—how intelligent, how intellectual, they all looked! And presently they took to dancing the Mazurka, and I think it was the figure V. who performed the most to my satisfaction. She was evidently a lady of breeding. None of your swaggerers, and nothing at all indelicate in her motions. She did the pirouette to admiration—whirling round upon her apex. I made an endeavor to hand her a chair, for I saw that she appeared

fatigued with her exertions—and it was not until then that I fully perceived my lamentable situation. Lamentable indeed! The bar had buried itself two inches in my neck. I was aroused to a sense of exquisite pain. I prayed for death, and, in the agony of the moment, could not help repeating those exquisite verses of the poet Miguel De Cervantes:

Vanny Buren, tan escondida
Query no te senty venny
Pork and pleasure, delly morry
Nommy, torny, darry, widdy!

But now a new horror presented itself, and one indeed sufficient to startle the strongest nerves. My eyes, from the cruel pressure of the machine, were absolutely starting from their sockets. While I was thinking how I should possibly manage without them, one actually tumbled out of my head, and, rolling down the steep side of the steeple, lodged in the rain gutter which ran along the eaves of the main building. The loss of the eye was not so much as the insolent air of independence and contempt with which it regarded me after it was out. There it lay in the gutter just under my nose, and the airs it gave itself would have been ridiculous had they not been disgusting. Such a winking and blinking were never before seen. This behavior on the part of my eye in the gutter was not only irritating on account of its manifest insolence and shameful ingratitude, but was also exceedingly inconvenient on account of the sympathy which always exists between two eyes of the same head, however far apart. I was forced, in a manner, to wink and to blink, whether I would or not, in exact concert with the scoundrelly thing that lay just under my nose. I was presently relieved, however, by the dropping out of the other eye. In falling it took the same direction (possibly a concerted plot) as its fellow. Both rolled out of the gutter together, and in truth I was very glad to get rid of them.

The bar was now four inches and a half deep in my neck, and there was only a litle bit of skin to cut through. My sensations were those of entire happiness, for I felt that in a few minutes, at farthest, I should be relieved from my disagreeable situation. And in this expectation I was not at all deceived. At twenty-five minutes past five in the afternoon, precisely, the huge minute-hand had proceeded sufficiently far on its terrible revolution to sever the small remainder of my neck. I was not sorry to see the head which had occasioned me so much embarrassment at length make a final separation from my body. It first rolled down the side of the steeple, then lodged, for a few seconds, in the gutter, and then made its way, with a plunge, into the middle of the street.

I will candidly confess that my feelings were now of the most singular—nay, of the most mysterious, the most perplexing and incomprehensible character. My senses were here and there at one and the same moment. With my head I imagined, at one time, that I, the head, was the real Signora Psyche Zenobia—at another I felt convinced that myself, the body, was the proper identity. To clear my ideas on this topic I felt in my pocket for my snuff box, but, upon getting it, and endeavor

ing to apply a pinch of its grateful contents in the ordinary manner, I became immediately aware of my peculiar deficiency, and threw the box at once down to my head. It took a pinch with great satisfaction, and smiled me an acknowledgement in return. Shortly afterward it made me a speech, which I could hear but indistinctly without ears. I gathered enough, however, to know that it was astonished at my wishing to remain alive under such circumstances. In the concluding sentences it quoted the noble words of Ariosto—

Il pover hommy che non sera corty
And have a combat tenty erry morty;

thus comparing me to the hero who, in the heat of the combat, not perceiving that he was dead, continued to contest the battle with inextinguishable valor. There was nothing now to prevent my getting down from my elevation, and I did so. What it was that Pompey saw so *very* peculiar in my appearance I have never yet been able to find out. The fellow opened his mouth from ear to ear, and shut his two eyes as if he were endeavoring to crack nuts between the lids. Finally, throwing off his overcoat, he made one spring for the staircase and disappeared. I hurled after the scoundrel these vehement words of Demosthenes—

Andrew O'Phlegethon, you really make haste to fly,

and then turned to the darling of my heart, to the one-eyed! the shaggy-haired Diana. Alas! what a horrible vision affronted my eyes? *Was* that a rat I saw skulking into his hole? *Are* these the picked bones of the little angel who has been cruelly devoured by the monster? Ye gods! and what *do* I behold—*is* that the departed spirit, the shade, the ghost, of my beloved puppy, which I perceive sitting with a grace so melancholy, in the corner? Hearken! for she speaks, and, heavens! it is in the German of Schiller—

"Unt stubby duk, so stubby dun
Duk she! duk she!"

Alas! and are not her words too true?

"And if I died, at least I died
For thee—for thee."

Sweet creature! she *too* has sacrificed herself in my behalf. Dogless, niggerless, headless, what *now* remains for the unhappy Signora Psyche Zenobia? Alas—*nothing!* I have done.

X-ing a Paragrab

As it is well known that the "wise men" came "from the East," and as Mr. Touch-and-go Bullet-head came from the East, it follows that Mr. Bullet-head was a wise man; and if collateral proof of the matter be needed, here we have it—Mr. B. was an editor. Irascibility was his sole foible; for in fact the obstinacy of which men accused him was anything but his *foible,* since he justly considered it his forte. It was his strong point—his virtue; and it would have required all the logic of a Brownson to convince him that it was "anything else."

I have shown that Touch-and-go Bullet-head was a wise man; and the only occasion on which he did not prove infallible, was when, abandoning that legitimate home for all wise men, the East, he migrated to the city of Alexander-the-Great-o-nopolis, or some place of a similar title, out West.

I must do him the justice to say, however, that when he made up his mind finally to settle in that town, it was under the impression that no newspaper, and consequently no editor, existed in that particular section of the country. In establishing *The Tea-Pot* he expected to have the field all to himself. I feel confident he never would have dreamed of taking up his residence in Alexander-the-Great-o-nopolis had he been aware that, in Alexander-the-Great-o-nopolis, there lived a gentleman named John Smith (if I rightly remember), who for many years had there quietly grown fat in editing and publishing the *Alexander-the-Great-o-nopolis Gazette.* It was solely, therefore, on account of having been misinformed, that Mr. Bullet-head found himself in Alex—— suppose we call it Nopolis, "for short"—but, as he *did* find himself there, he determined to keep up his character for obst—for firmness, and remain. So remain he did; and he did more; he unpacked his press, type, etc., etc.: rented an office exactly opposite to that of the *Gazette,* and, on the third morning after his arrival, issued the first number of *The Alexan*—that is to say of *The Nopolis Tea-Pot*—as nearly as I can recollect, this was the name of the new paper.

The leading article, I must admit, was brilliant—not to say severe. It was especially bitter about things in general—and as for the editor of *The Gazette,* he was torn all to pieces in particular. Some of Bullet-head's remarks were really so fiery that I have always, since that time, been forced to look upon John Smith, who is still alive, in the light of a salamander. I cannot pretend to give *all* the *Tea-Pot's* paragraphs *verbatim,* but one of them runs thus:

"Oh, yes!—Oh, we perceive! Oh, no doubt! The editor over the way is a genius—O, my! Oh, goodness, gracious!—what *is* this world coming to! *Oh, tempora! Oh, Moses!*"

A philippic at once so caustic and so classical, alighted like a bombshell among the hitherto peaceful citizens of Nopolis. Groups of excited individuals gathered at the corners of the streets. Every one awaited, with heartfelt anx-

iety, the reply of the dignified Smith. Next morning it appeared as follows: "We quote from *The Tea-Pot* of yesterday the subjoined paragraph: '*Oh,* yes! *Oh,* we perceive! *Oh,* no doubt! *Oh,* my! *Oh,* goodness! *Oh,* tempora! *Oh,* Moses!' Why, the fellow is all O! That accounts for his reasoning in a circle, and explains why there is neither beginning nor end to him, nor to anything he says. We really do not believe the vagabond can write a word that hasn't an O in it. Wonder if this O-ing is a habit of his? By-the-by, he came away from Down-East in a great hurry. Wonder if he *O's* as much there as he does here? *'O!* it is pitiful.'"

The indignation of Mr. Bullet-head at these scandalous insinuations, I shall not attempt to describe. On the eel-skinning principle, however, he did not seem to be so much incensed at the attack upon his integrity as one might have imagined. It was the sneer at his *style* that drove him to desperation. What!—*he* Touch-and-go Bullet-head! —not able to write a word without an O in it! He would soon let the jack-anapes see that he was mistaken. Yes! he would let him see how *much* he was mistaken, the puppy! He, Touch-and-go Bullet-head, of Frogpondium, would let Mr. John Smith perceive that he, Bullet-head, could indite, if it so pleased him, a whole paragraph—ay! a whole article—in which that contemptible vowel should not *once*—not even *once*—make its appearance. But no;—that would be yielding a point to the said John Smith. *He,* Bullet-head, would make *no* alteration in his style, to suit the caprices of any Mr. Smith in Christendom. Perish so vile a thought! The O forever! He would persist in the O. He would be as O-wy as O-wy could be.

Burning with the chivalry of this determination, the great Touch-and-go, in the next *Tea-Pot,* came out merely with this simple but resolute paragraph, in reference to this unhappy affair:

"The editor of the *Tea-Pot* has the *honor* of advising the editor of the *Gazette* that he (the *Tea-Pot*) will take an opportunity in to-morrow morning's paper, of convincing him (the *Gazette*) that he (the *Tea-Pot*) both can and will be *his own master,* as regards style;—he (the *Tea-Pot*) intending to show him (the *Gazette*) the supreme, and indeed the withering contempt with which the criticism of him (the *Gazette*) inspires the independent bosom of him (the *Tea-Pot*) by composing for the especial gratification (?) of him (the *Gazette*) a leading article, of some extent, in which the beautiful vowel—the emblem of Eternity—yet so offensive to the hyper-exquisite delicacy of him (the *Gazette*) shall most certainly *not be avoided* by his (the *Gazette's*) most obedient, humble servant, the *Tea-Pot.* 'So much for Buckingham!'"

In fulfilment of the awful threat thus darkly intimated rather than decidedly enunciated, the great Bullet-head, turning a deaf ear to all entreaties for "copy," and simply requesting his foreman to "go to the d——l," when he (the foreman) assured him (the *Tea-Pot!*) that it was high time to "go to press": turning a deaf ear to everything, I say, the great Bullet-head sat up until daybreak, consuming the midnight oil, and absorbed in the compo-

sition of the really unparalleled paragraph, which follows:—

"So ho, John! how now? Told you so, you know. Don't crow, another time, before you're out of the woods! Does your mother *know* you're out? Oh, no, no!—so go home at once, now, John, to your odious old woods of Concord! Go home to your woods, old owl,—go! You won't! Oh, poh, poh, John, don't do so! You've *got* to go, you know! So go at once, and don't go slow; for nobody owns you here, you know! Oh! John, John, if you *don't* go you're no *homo*—no! You're only a fowl, an owl; a cow, a sow; a doll, a poll; a poor, old, good-for-nothing-to-nobody, log, dog, hog, or frog. come out of a Concord bog. Cool, now—cool! *Do* be cool, you fool! None of your crowing, old cock! Don't frown so—don't! Don't hollo, nor howl, nor growl, nor bow-wow-wow! Good Lord, John, how you *do* look! Told you so, you know—but stop rolling your goose of an old poll about so, and go and drown your sorrows in a bowl!"

Exhausted, very naturally, by so stupendous an effort, the great Touch-and-go could attend to nothing farther that night. Firmly, composedly, yet with an air of conscious power, he handed his MS. to the devil in waiting, and then, walking leisurely home, retired, with ineffable dignity to bed.

Meantime the devil, to whom the copy was entrusted, ran up stairs to his "case," in an unutterable hurry, and forthwith made a commencement at "setting" the MS. "up."

In the first place, of course,—as the opening word was "So,"—he made a plunge into the capital S hole and came out in triumph with a capital S. Elated by this success, he immediately threw himself upon the little-*o* box with a blindfold impetuosity—but who shall describe his horror when his fingers came up without the anticipated letter in their clutch? who shall paint his astonishment and rage at perceiving, as he rubbed his knuckles, that he had been only thumping them to no purpose, against the bottom of an *empty* box. Not a single little-*o* was in the little-*o* hole; and, glancing fearfully at the capital-O partition, he found *that*, to his extreme terror, in a precisely similar predicament. Awe-stricken, his first impulse was to rush to the foreman.

"Sir!" said he, gasping for breath, "I can't never set up nothing without no o's."

"*What* do you mean by that?" growled the foreman, who was in a very ill humor at being kept so late.

"Why, sir, there beant an *o* in the office, neither a big un nor a little un!"

"What—what the d—l has become of all that were in the case?"

"*I* don't know, sir," said the boy, "but one of them ere *G'zette* devils is bin prowling 'bout here all night, and I spect *he's* gone and cabbaged 'em every one."

"Dod rot him! I haven't a doubt of it," replied the foreman, getting purple with rage—"but I tell you what you do, Bob, that's a good boy—you go over the first chance you get and hook every one of their i's and (d—n them!) their izzards."

"Jist so," replied Bob, with a wink and a frown—"*I'll* be into 'em, *I'll* let 'em know a thing or two; but in de meantime, that ere paragrab? *Mus* go

in to-night, you know—else there'll be the d—l to pay, and—"

"And not a *bit* of pitch hot," interrupted the foreman, with a deep sigh, and an emphasis on the "bit." "Is it a long paragraph, Bob?"

"Shouldn't call it a *wery* long paragrab," said Bob.

"Ah, well, then! do the best you can with it! We *must* get to press," said the foreman, who was over head and ears in work; "just stick in some other letter for *o*; nobody's going to read the fellow's trash anyhow."

"*Wery* well," replied Bob, "here goes it!" and off he hurried to his case; muttering as he went: "Considdeble vell, them ere expressions, perticcler for a man as doesn't swar. So I's to gouge out all their eyes, eh? and d—n all their gizzards! Vell! this here's the chap as is just able *for* to do it." The fact is that although Bob was but twelve years old and four feet high, he was equal to any amount of fight, in a small way.

The exigency here described is by no means of rare occurrence in printing-offices; and I cannot tell how to account for it, but the fact is indisputable, that when the exigency *does* occur, it almost always happens that *x* is adopted as a substitute for the letter deficient. The true reason, perhaps, is that *x* is rather the most superabundant letter in the cases, or at least *was* so in the old times long enough to render the substitution in question an habitual thing with printers. As for Bob, he would have considered it heretical to employ any other character, in a case of this kind, than the *x* to which he had been accustomed.

"I *shell* have to *x* this ere paragrab," said he to himself, as he read it over in astonishment, "but it's jest about the awfulest *o*-wy paragrab I ever *did* see": so *x* it he did, unflinchingly, and to press it went *x-ed*.

Next morning the population of Nopolis were taken all aback by reading in *The Tea-Pot*, the following extraordinary leader:

"Sx hx, Jxhn! hxw nxw? Txld yxu sx, yxu knxw. Dxn't crxw, anxther time, befxre yxu're xut xf the wxxds! Dxes yxur mxther *knxw* yxu're xut? Xh, nx, nx!—sx gx hxme at xnce, nxw, Jxhn, tx yxur xdixus xld wxxds xf Cxncxrd! Gx hxme tx yxur wxxds, xld xwl,—gx! Yxu wxn't? Xh, pxh, pxh, Jxhn, dxn't dx sx! Yxu've *gxt* tx gx, yxu knxw; sx gx at xnce, and dxn't gx slxw; fxr nxbxdy xwns yxu here, yxu knxw. Xh, Jxhn, Jxhn, if yxu *dxn't* gx yxu're nx *hxmx*—nx! Yxu're xnly a fxwl, an xwl; a cxw, a sxw; a dxll, a pxll; a pxxr xld gxxd-fxr-nxthing-tx-nxbxdy, lxg, dxg, hxg, xr frxg, cxme xut xf a Cxncxrd bxg. Cxxl, nxw—cxxl! Dx be cxxl, yxu fxxl! Nxne xf yxur crxwing, xld cxck! Dxn't frxwn sx—dxn't! Dxn't hxllx, nxr hxwl, nxr grxwl, nxr bxw-wxw-wxw! Gxxd Lxrd, Jxhn, hxw yxu *dx* lxxk! Txld yxu sx, yxu knxw,—but stxp rxlling yxur gxxse xf an xld pxll abxut sx, and gx and drxwn yxur sxrrxws in a bxwl!"

The uproar occasioned by this mystical and cabalistical article, is not to be conceived. The first definite idea entertained by the populace was, that some diabolical treason lay concealed in the hieroglyphics; and there was a general rush to Bullet-head's residence, for the purpose of riding him on a rail; but that gentleman was nowhere to be

found. He had vanished, no one could tell how; and not even the ghost of him has ever been seen since.

Unable to discover its legitimate object, the popular fury at length subsided; leaving behind it, by way of sediment, quite a medley of opinion about this unhappy affair.

One gentleman thought the whole an X-ellent joke.

Another said that, indeed, Bullet-head had shown much X-uberance of fancy.

A third admitted him X-entric, but no more.

A fourth could only suppose it the Yankee's design to X-press, in a general way, his X-asperation.

"Say, rather, to set an X-ample to posterity," suggested a fifth.

That Bullet-head had been driven to an extremity, was clear to all; and in fact, since *that* editor could not be found, there was some talk about lynching the other one.

The more common conclusion, however, was that the affair was, simply, X-traordinary and in-X-plicable. Even the town mathematician confessed that he could make nothing of so dark a problem. X, everybody knew, was an unknown quantity; but in this case (as he properly observed), there was an unknown quantity of X.

The opinion of Bob, the devil (who kept dark about his having "X-ed the paragrab"), did not meet with so much attention as I think it deserved, although it was very openly and very fearlessly expressed. He said that, for his part, he had no doubt about the matter at all, that it was a clear case that Mr. Bullet-head "never *could* be persvaded fur to drink like other folks; but vas *con*tinually a-svigging o' that ere blessed XXX ale, and, as a naiteral consekvence, it just puffed him up say-age, and made him X (cross) in the X-treme."

Morning on the Wissahiccon

(This tale is also called The Elk and was published in *The Opal*, a literary annual, 1844.—Ed.)

THE natural scenery of America has often been contrasted, in its general features as well as in detail, with the landscape of the Old World—more especially of Europe—and not deeper has been the enthusiasm, than wide the dissension, of the supporters of each region. The discussion is one not likely to be soon closed, for, although much has been said on both sides, a word more yet remains to be said.

The most conspicuous of the British tourists who have attempted a comparison, seem to regard our northern and eastern seaboard, comparatively speaking, as all of America, at least, as all of the United States, worthy consideration. They say little, because they have seen less, of the gorgeous interior scenery of some of our western and southern districts—of the vast valley of Louisiana, for example,—a realiza-

tion of the wildest dreams of paradise. For the most part, these travellers content themselves with a hasty inspection of the natural *lions* of the land—the Hudson, Niagara, the Catskills, Harper's Ferry, the lakes of New York, the Ohio, the prairies, and the Mississippi. These, indeed, are objects well worthy the contemplation even of him who has just clambered by the castellated Rhine, or roamed

> By the blue rushing of the arrowy Rhone;

but these are not *all* of which we can boast; and, indeed, I will be so hardy as to assert that there are innumerable quiet, obscure, and scarcely explored nooks, within the limits of the United States, that, by the true artist, or cultivated lover of the grand and beautiful amid the works of God, will be preferred to each *and to all* of the chronicled and better accredited scenes to which I have referred.

In fact, the real Edens of the land lie far away from the track of our own most deliberate tourists—how very far, then, beyond the reach of the foreigner, who, having made with his publisher at home arrangements for a certain amount of comment upon America, to be furnished in a stipulated period, can hope to fulfil his agreement in no other manner than by steaming it, memorandum-book in hand, through only the most beaten thoroughfares of the country!

I mentioned, just above, the valley of Louisiana. Of all extensive areas of natural loveliness, this is perhaps the most lovely. No fiction has approached it. The most gorgeous imagination might derive suggestions from its exuberant beauty. And *beauty* is, indeed, its sole character. It has little, or rather nothing, of the sublime. Gentle undulations of soil, interwreathed with fantastic crystallic streams, banked by flowery slopes, and backed by a forest vegetation, gigantic, glossy, multicoloured, sparkling with gay birds and burthened with perfume—these features make up, in the vale of Louisiana, the most voluptuous natural scenery upon earth.

But, even of this delicious region, the sweeter portions are reached only by the bypaths. Indeed, in America generally, the traveller who would behold the finest landscapes, must seek them not by the railroad, nor by the steamboat, not by the stage-coach, nor in his private carriage, not yet even on horseback—but on foot. He must *walk*, he must leap ravines, he must risk his neck among precipices, or he must leave unseen the truest, the richest, and most unspeakable glories of the land.

Now in the greater portion of Europe no such necessity exists. In England it exists not at all. The merest dandy of a tourist may there visit every nook worth visiting without detriment to his silk stockings; so thoroughly known are all points of interest, and so well-arranged are the means of attaining them. This consideration has never been allowed its due weight, in comparisons of the natural scenery of the Old and New Worlds. The entire loveliness of the former is collated with only the most noted, and with by no means the most eminent items in the general loveliness of the latter.

River scenery has, unquestionably, within itself, all the main elements of beauty, and, time out of mind, has been

the favourite theme of the poet. But much of this fame is attributable to the predominance of travel in fluvial over that in mountainous districts. In the same way, large rivers, because usually highways, have, in all countries, absorbed an undue share of admiration. They are more observed, and, consequently, made more the subject of discourse, than less important, but often more interesting streams.

A singular exemplification of my remarks upon this head may be found in the Wissahiccon, a brook, (for more it can scarcely be called,) which empties itself into the Schuylkill, about six miles westward of Philadelphia. Now the Wissahiccon is of so remarkable a loveliness that, were it flowing in England, it would be the theme of every bard, and the common topic of every tongue, if, indeed, its banks were not parcelled off in lots, at an exorbitant price, as building-sites for the villas of the opulent. Yet it is only within a very few years that any one has more than heard of the Wissahiccon, while the broader and more navigable water into which it flows, has been long celebrated as one of the finest specimens of American river scenery. The Schuylkill, whose beauties have been much exaggerated, and whose banks, at least in the neighborhood of Philadelphia, are marshy like those of the Delaware, is not at all comparable, as an object of picturesque interest, with the more humble and less notorious rivulet of which we speak.

It was not until Fanny Kemble, in her droll book about the United States, pointed out to the Philadelphians the rare loveliness of a stream which lay at their own doors, that this loveliness was more than suspected by a few adventurous pedestrians of the vicinity. But, the "Journal" having opened all eyes, the Wissahiccon, to a certain extent, rolled at once into notoriety. I say "to a certain extent," for, in fact, the true beauty of the stream lies far above the *route* of the Philadelphian picturesque-hunters, who rarely proceed farther than a mile or two above the mouth of the rivulet—for the very excellent reason that here the carriage-road stops. I would advise the adventurer who would behold its finest points to take the Ridge Road, running westwardly from the city, and, having reached the second lane beyond the sixth mile-stone, to follow this lane to its termination. He will thus strike the Wissahiccon, at one of its best reaches, and, in a skiff, or by clambering along its banks, he can go up or down the stream, as best suits his fancy, and in either direction will meet his reward.

I have already said, or should have said, that the brook is narrow. Its banks are generally, indeed almost universally, precipitous, and consist of high hills, clothed with noble shrubbery near the water, and crowned at a greater elevation, with some of the most magnificent forest trees of America, among which stands conspicuous the *liriodendron tulipiferum*. The immediate shores, however, are of granite, sharply-defined or moss-covered, against which the pellucid water lolls in its gentle flow, as the blue waves of the Mediterranean upon the steps of her palaces of marble. Occasionally in front of the cliffs, extends a small definite *plateau* of richly herbaged land, affording the most picturesque position for a cottage and garden which the richest imagina-

tion could conceive. The windings of the stream are many and abrupt, as is usually the case where banks are precipitous, and thus the impression conveyed to the voyager's eye, as he proceeds, is that of an endless succession of infinitely varied small lakes; or, more properly speaking, tarns. The Wissahiccon, however, should be visited, not like "fair Melrose," by moonlight, or even in cloudy weather, but amid the brightest glare of a noonday sun; for the narrowness of the gorge through which it flows, the height of the hills on either hand, and the density of the foliage, conspire to produce a gloominess, if not an absolute dreariness of effect, which, unless relieved by a bright general light, detracts from the mere beauty of the scene.

Not long ago I visited the stream by the route described, and spent the better part of a sultry day in floating in a skiff upon its bosom. The heat gradually overcame me, and, resigning myself to the influence of the scenes and of the weather, and of the gentle moving current, I sank into a half slumber, during which my imagination revelled in visions of the Wissahiccon of ancient days—of the "good old days" when the Demon of the Engine was not, when pic-nics were undreamed of, when "water privileges" were neither bought nor sold, and when the red man trod alone, with the elk, upon the ridges that now towered above. And, while gradually these conceits took possession of my mind, the lazy brook had borne me, inch by inch, around one promontory and within full view of another that bounded the prospect at the distance of forty or fifty yards. It was a steep rocky cliff, abutting far into the stream, and presenting much more of the Salvator character than any portion of the shore hitherto passed. What I saw upon this cliff, although surely an object of very extraordinary nature, the place and season considered, at first neither startled nor amazed me—so thoroughly and appropriately did it chime in with the half-slumberous fancies that enwrapped me. I saw, or dreamed that I saw, standing upon the extreme verge of the precipice, with neck outstretched, with ears erect, and the whole attitude indicative of profound and melancholy inquisitiveness, one of the oldest and boldest of those identical elks which had been coupled with the red men of my vision.

I say that, for a few moments, this apparition neither startled nor amazed me. During this interval my whole soul was bound up in intense sympathy alone. I fancied the elk repining, not less than wondering, at the manifest alterations for the worse, wrought upon the brook and its vicinage, even within the last few years, by the stern hand of the utilitarian. But a slight movement of the animal's head at once dispelled the dreaminess which invested me, and aroused me to a full sense of novelty of the adventure. I arose upon one knee within the skiff, and, while I hesitated whether to stop my career, or let myself float nearer to the object of my wonder, I heard the words "hist!" "hist!" ejaculated quickly but cautiously, from the shrubbery overhead. In an instant afterwards, a negro emerged from the thicket, putting aside the bushes with care, and treading stealthily. He bore in one hand a quantity of salt, and, holding it towards the

elk, gently yet steadily approached. The noble animal, although a little fluttered, made no attempt at escape. The negro advanced; offered the salt; and spoke a few words of encouragement or conciliation. Presently, the elk bowed and stamped, and then lay quietly down and was secured with a halter.

Thus ended my romance of the elk. It was a *pet* of great age and very domestic habits, and belonged to an English family occupying a villa in the vicinity.

VOLUME VIII

Letter to Mr. B——

West Point, 1831.

Dear B—— . . . . . .

Believing only a portion of my former volume to be worthy a second edition—that small portion I thought it as well to include in the present book as to republish by itself. I have therefore herein combined "Al Aaraaf" and "Tamerlane" with other poems hitherto unprinted. Nor have I hesitated to insert from the "Minor Poems," now omitted, whole lines, and even passages, to the end that being placed in a fairer light, and the trash shaken from them in which they were imbedded, they may have some chance of being seen by posterity.

It has been said that a good critique on a poem may be written by one who is no poet himself. This, according to *your* idea and *mine* of poetry, I feel to be false—the less poetical the critic, the less just the critique, and the converse. On this account, and because there are but few B——s in the world, I would be as much ashamed of the world's good opinion as proud of your own. Another than yourself might here observe, "Shakespeare is in possession of the world's good opinion, and yet Shakespeare is the greatest of poets. It appears then that as the world judges correctly, why should you be ashamed of their favourable judgment?" The difficulty lies in the interpretation of the word "judgment" or "opinion." The opinion is the world's, truly, but it may be called theirs as a man would call a book his, having bought it; he did not write the book, but it is his; they did not originate the opinion, but it is theirs. A fool, for example, thinks Shakespeare a great poet—yet the fool has never read Shakespeare. But the fool's neighbour, who is a step higher on the Andes of the mind, whose head (that is to say, his more exalted thought) is too far above the fool to be seen or understood, but whose feet (by which I mean his every-day actions) are sufficiently near to be discerned, and by means of which that superiority is ascertained, which *but* for them would never have been discovered—this neighbour asserts that Shakespeare is a great poet—the fool believes him, and it is henceforward his *opinion*. This neighbour's own opinion has, in like manner, been adopted from one above *him*, and so, ascendingly, to a few gifted individuals who kneel around the summit, beholding, face to face, the master spirit who stands upon the pinnacle.

You are aware of the great barrier in the path of an American writer. He is read, if at all, in preference to the combined and established wit of the world. I say established; for it is with literature as with law or empire—an established name is an estate in tenure, or a throne in possession. Besides, one might suppose that books, like their authors, improve by travel—their having crossed the sea is, with us, so great a distinction. Our antiquaries abandon time for distance; our very fops glance from the binding to the

bottom of the title-page, where the mystic characters which spell London, Paris, or Genoa, are precisely so many letters of recommendation.

I mentioned just now a vulgar error as regards criticism. I think the notion that no poet can form a correct estimate of his own writings is another. I remarked before that in proportion to the poetical talent would be the justice of a critique upon poetry. Therefore a bad poet would, I grant, make a false critique, and his self-love would infallibly bias his little judgment in his favour; but a poet, who is indeed a poet, could not, I think, fail of making a just critique; whatever should be deducted on the score of self-love might be replaced on account of his intimate acquaintance with the subject; in short, we have more instances of false criticism than of just where one's own writings are the test, simply because we have more bad poets than good. There are, of course, many objections to what I say: Milton is a great example of the contrary; but his opinion with respect to the "Paradise Regained" is by no means fairly ascertained. By what trivial circumstances men are often led to assert what they do not really believe! Perhaps an inadvertent world has descended to posterity. But, in fact, the "Paradise Regained" is little, if at all, inferior to the "Paradise Lost," and is only supposed so to be because men do not like epics, whatever they may say to the contrary, and reading those of Milton in their natural order, are too much wearied with the first to derive any pleasure from the second.

I dare say Milton preferred "Comus" to either—if so—justly.

As I am speaking of poetry, it will not be amiss to touch slightly upon the most singular heresy in its modern history—the heresy of what is called, very foolishly, the Lake School. Some years ago I might have been induced, by an occasion like the present, to attempt a formal refutation of their doctrine; at present it would be a work of supererogation. The wise must bow to the wisdom of such men as Coleridge and Southey, but being wise, have laughed at poetical theories so prosaically exemplified.

Aristotle, with singular assurance, has declared poetry the most philosophical of all writings—but it required a Wordsworth to pronounce it the most metaphysical. He seems to think that the end of poetry is, or should be, instruction; yet it is a truism that the end of our existence is happiness; if so, the end of every separate part of our existence, everything connected with our existence, should be still happiness. Therefore the end of instruction should be happiness; and happiness is another name for pleasure;—therefore the end of instruction should be pleasure; yet we see the above-mentioned opinion implies precisely the reverse.

To proceed: *ceteris paribus*, he who pleases is of more importance to his fellow-men than he who instructs, since utility is happiness, and pleasure is the end already obtained while instruction is merely the means of obtaining.

I see no reason, then, why our metaphysical poets should plume themselves so much on the utility of their works, unless indeed they refer to instruction with eternity in view; in which case, sincere respect for their piety would not allow me to express my contempt

for their judgment; contempt which it would be difficult to conceal, since their writings are professedly to be understood by the few, and it is the many who stand in need of salvation. In such case I should no doubt be tempted to think of the devil in "Melmoth," who labours indefatigably, through three octavo volumes, to accomplish the destruction of one or two souls, while any common devil would have demolished one or two thousand.

Against the subtleties which would make poetry a study—not a passion—it becomes the metaphysician to reason—but the poet to protest. Yet Wordsworth and Coleridge are men in years; the one imbued in contemplation from his childhood; the other a giant in intellect and learning. The diffidence, then, with which I venture to dispute their authority would be overwhelming did I not feel, from the bottom of my heart, that learning has little to do with the imagination—intellect with the passions—or age with poetry.

Trifles, like straws, upon the surface flow;
He who would search for pearls must dive below,

are lines which have done much mischief. As regards the greater truths, men oftener err by seeking them at the bottom than at the top; Truth lies in the huge abysses where wisdom is sought—not in the palpable palaces where she is found. The ancients were not always right in hiding the goddess in a well; witness the light which Bacon has thrown upon philosophy; witness the principles of our divine faith—that moral mechanism by which the simplicity of a child may overbalance the wisdom of a man.

We see an instance of Coleridge's liability to err, in his *Biographia Literaria*—professedly his literary life and opinions, but, in fact, a treatise *de omni scibili et quibusdam aliis*.* He goes wrong by reason of his very profundity, and of his error we have a natural type in the contemplation of a star. He who regards it directly and intensely sees, it is true, the star, but it is the star without a ray—while he who surveys it less inquisitively is conscious of all for which the star is useful to us below—its brilliancy and its beauty.

As to Wordsworth, I have no faith in him. That he had in youth the feelings of a poet I believe—for there are glimpses of extreme delicacy in his writings—(and delicacy is the poet's own kingdom—his *El Dorado*)—but they have the appearance of a better day recollected; and glimpses, at best, are little evidence of present poetic fire; we know that a few straggling flowers spring up daily in the crevices of the glacier.

He was to blame in wearing away his youth in contemplation with the end of poetizing in his manhood. With the increase of his judgment the light which should make it apparent has faded away. His judgment consequently is too correct. This may not be understood,—but the old Goths of Germany would have understood it, who used to debate matters of importance to their State twice, once when drunk,

* This is a common phrase of philosophy. Critics of Poe, ignorant of philosophy, often condemn him ridiculously.—Ed.

and once when sober—sober that they might not be deficient in formality—drunk lest they should be destitute of vigour.

The long wordy discussions by which he tries to reason us into admiration of his poetry, speak very little in his favour: they are full of such assertions as this (I have opened one of his volumes at random)—"Of genius the only proof is the act of doing well what is worthy to be done, and what was never done before";—indeed? then it follows that in doing what is *un*worthy to be done, or what *has* been done before, no genius can be evinced; yet the picking of pockets is an unworthy act, pockets have been picked time immemorial, and Barrington, the pickpocket, in point of genius, would have thought hard of a comparison with William Wordsworth, the poet.

Again, in estimating the merit of certain poems, whether they be Ossian's or Macpherson's, can surely be of little consequence, yet, in order to prove their worthlessness, Mr. W. has expended many pages in the controversy. *Tantæne animis?* Can great minds descend to such absurdity? But worse still: that he may bear down every argument in favour of these poems, he triumphantly drags forward a passage, in his abomination with which he expects the reader to sympathise. It is the beginning of the epic poem "Temora." "The blue waves of Ullin roll in light; the green hills are covered with day; trees shake their dusty heads in the breeze." And this—this gorgeous, yet simple imagery, where all is alive and panting with immortality—this, William Wordsworth, the author of "Peter Bell," has *selected* for his contempt. We shall see what better he, in his own person, has to offer. Imprimis:

> And now she's at the pony's tail,
> And now she's at the pony's head,
> On that side now, and now on this;
> And, almost stifled with her bliss,
> A few sad tears does Betty shed. . . .
> She pats the pony, where or when
> She knows not . . . happy Betty Foy!
> Oh, Johnny, never mind the doctor!

Secondly:

> The dew was falling fast, the stars began to blink;
> I heard a voice: it said—"Drink, pretty creature, drink!"
> And, looking o'er the hedge, before me I espied
> A snow-white mountain lamb, with a maiden at its side.
> No other sheep was near,—the lamb was all alone,
> And by a slender cord was—tether'd to a stone.

Now, we have no doubt this is all true; we *will* believe it, indeed we will, Mr. W. Is it sympathy for the sheep you wish to excite? I love a sheep from the bottom of my heart.

But there are occasions, dear B——, there are occasions when even Wordsworth is reasonable. Even Stamboul, it is said, shall have an end, and the most unlucky blunders must come to a conclusion. Here is an extract from his preface:—

"Those who have been accustomed to the phraseology of modern writers, if they persist in reading this book to a conclusion (*impossible!*) will, no

doubt, have to struggle with feelings of awkwardness; (ha! ha! ha!) they will look round for poetry (ha! ha! ha! ha!), and will be induced to inquire by what species of courtesy these attempts have been permitted to assume that title." Ha! ha! ha! ha! ha!

Yet, let not Mr. W. despair; he has given immortality to a waggon, and the bee Sophocles has transmitted to eternity a sore toe, and dignified a tragedy with a chorus of turkeys.

Of Coleridge, I cannot speak but with reverence. His towering intellect! his gigantic power! To use an author quoted by himself, *"J'ai trouve souvent que la plupart des sectes ont raison dans une bonne partie de ce qu'elles avancent, mais non pas en ce qu'elles nient"*; and to employ his own language, he has imprisoned his own conceptions by the barrier he has erected against those of others. It is lamentable to think that such a mind should be buried in metaphysics, and, like the Nyctanthes, waste its perfume upon the night alone. In reading that man's poetry, I tremble like one who stands upon a volcano, conscious from the very darkness bursting from the crater, of the fire and the light that are weltering below.

What is poetry?—Poetry! that Proteus-like idea, with as many appellations as the nine-titled Corcyra! "Give me," I demanded of a scholar some time ago, "give me a definition of poetry." *"Tres-volontiers"*; and he proceeded to his library, brought me a Dr. Johnson, and overwhelmed me with a definition. Shade of the immortal Shakespeare! I imagine to myself the scowl of your spiritual eye upon the profanity of that scurrilous Ursa Major. Think of poetry, dear B——, think of poetry, and then think of Dr. Samuel Johnson! Think of all that is airy and fairy-like, and then of all that is hideous and unwieldy; think of his huge bulk, the Elephant! and then—and then think of the "Tempest"—the "Midsummer Night's Dream"—Prospero—Oberon—and Titania!

A poem, in my opinion, is opposed to a work of science by having, for its *immediate* object, pleasure, not truth; to romance, by having, for its object, an *indefinite* instead of a *definite* pleasure, being a poem only so far as this object is attained; romance presenting perceptible images with definite, poetry with *in*definite sensations, to which end music is an *essential*, since the comprehension of sweet sound is our most indefinite conception. Music, when combined with a pleasurable idea, is poetry; music, without the idea, is simply music; the idea, without the music, is prose, from its very definitiveness.

What was meant by the invective against him who had no music in his soul?

To sum up this long rigmarole, I have, dear B——, what you, no doubt, perceive, for the metaphysical poets as poets, the most sovereign contempt. That they have followers proves nothing—

No Indian prince has to his palace
More followers than a thief to the gallows.

The Poetic Principle

In speaking of the Poetic Principle, I have no design to be either thorough or profound. While discussing very much at random the essentiality of what we call Poetry, my principal purpose will be to cite for consideration some few of those minor English or American poems which best suit my own taste, or which, upon my own fancy, have left the most definite impression. By "minor poems" I mean, of course, poems of little length. And here, in the beginning, permit me to say a few words in regard to a somewhat peculiar principle, which, whether rightfully or wrongfully, has always had its influence in my own critical estimate of the poem. I hold that a long poem does not exist. I maintain that the phrase, "a long poem," is simply a flat contradiction in terms.

I need scarcely observe that a poem deserves its title only inasmuch as it excites, by elevating the soul. The value of the poem is in the ratio of this elevating excitement. But all excitements are, through a psychal necessity, transient. That degree of excitement which would entitle a poem to be so called at all, cannot be sustained throughout a composition of any great length. After the lapse of half an hour, at the very utmost, it flags—fails—a revulsion ensues—and then the poem is, in effect, and in fact, no longer such.

There are, no doubt, many who have found difficulty in reconciling the critical dictum that the "Paradise Lost" is to be devoutly admired throughout, with the absolute impossibility of maintaining for it, during perusal, the amount of enthusiasm which that critical dictum would demand. This great work, in fact, is to be regarded as poetical only when, losing sight of that vital requisite in all works of Art, Unity, we view it merely as a series of minor poems. If, to preserve its Unity—its totality of effect or impression—we read it (as would be necessary) at a single sitting, the result is but a constant alternation of excitement and depression. After a passage of what we feel to be true poetry, there follows, inevitably, a passage of platitude which no critical pre-judgment can force us to admire; but if, upon completing the work, we read it again, omitting the first book—that is to say, commencing with the second—we shall be surprised at now finding that admirable which we before condemned—that damnable which we had previously so much admired. It follows from all this that the ultimate, aggregate, or absolute effect of even the best epic under the sun, is a nullity—and this is precisely the fact.

In regard to the Iliad, we have, if not positive proof, at least very good reason, for believing it intended as a series of lyrics; but, granting the epic intention, I can say only that the work is based in an imperfect sense of Art. The modern epic is, of the supposititious ancient model, but an inconsiderate and blindfold imitation. But the day of these artistic anomalies is over. If, at any time, any very long poem *were* popular in reality—which I doubt—it is at least clear that no very long poem will ever be popular again.

That the extent of a poetical work is, *ceteris paribus*, the measure of its merit, seems undoubtedly, when we thus state it, a proposition sufficiently absurd—yet we are indebted for it to the Quarterly Reviews. Surely there can be nothing in mere *size*, abstractly considered—there can be nothing in mere *bulk*, so far as a volume is concerned, which has so continuously elicited admiration from these saturnine pamphlets! A mountain, to be sure, by the mere sentiment of physical magnitude which it conveys, *does* impress us with a sense of the sublime—but no man is impressed after *this* fashion by the material grandeur of even "The Columbiad." Even the Quarterlies have not instructed us to be so impressed by it. *As yet*, they have not *insisted* on our estimating Lamartine by the cubic foot, or Pollock by the pound—but what else are we to *infer* from their continual prating about "sustained effort"? If, by "sustained effort," any little gentleman has accomplished an epic, let us frankly commend him for the effort—if this indeed be a thing commendable—but let us forbear praising the epic on the effort's account. It is to be hoped that common sense, in the time to come, will prefer deciding upon a work of Art rather by the impression it makes—by the effect it produces—than by the time it took to impress the effect, or by the amount of "sustained effort" which had been found necessary in effecting the impression. The fact is, that perseverance is one thing and genius quite another—nor can all the Quarterlies in Christendom confound them. By and by, this proposition, with many which I have been just urging, will be received as self-evident. In the meantime, by being generally condemned as falsities, they will not be essentially damaged as truths.

On the other hand, it is clear that a poem may be improperly brief. Undue brevity degenerates into mere epigrammatism. A *very* short poem, while now and then producing a brilliant or vivid, never produces a profound or enduring effect. There must be the steady pressing down of the stamp upon the wax. De Beranger has wrought innumerable things, pungent and spirit-stirring, but in general they have been too imponderous to stamp themselves deeply into the public attention, and thus, as so many feathers of fancy, have been blown aloft only to be whistled down the wind.

A remarkable instance of the effect of undue brevity in depressing a poem, in keeping it out of the popular view, is afforded by the following exquisite little Serenade—

I arise from dreams of thee
  In the first sweet sleep of night,
When the winds are breathing low,
  And the stars are shining bright.
I arise from dreams of thee,
  And a spirit in my feet
Has led me—who knows how?—
  To thy chamber-window, sweet!

The wandering airs they faint
  On the dark the silent stream—
The champak odors fail
  Like sweet thoughts in a dream;
The nightingale's complaint,
  It dies upon her heart,
As I must die on thine,
  O, beloved as thou art!

O, lift me from the grass!
  I die, I faint, I fail!
Let thy love in kisses rain
  On my lips and eyelids pale.
My cheek is cold and white, alas!
  My heart beats loud and fast:
O, press it close to thine again,
  Where it will break at last.

Very few perhaps are familiar with these lines, yet no less a poet than Shelley is their author. Their warm, yet delicate and ethereal imagination will be appreciated by all, but by none so thoroughly as by him who has himself arisen from sweet dreams of one beloved to bathe in the aromatic air of a southern midsummer night.

One of the finest poems by Willis, the very best in my opinion which he has ever written, has no doubt, through this same defect of undue brevity, been kept back from its proper position, not less in the critical than in the popular view:—

The shadows lay along Broadway,
  'Twas near the twilight-tide—
And slowly there a lady fair
  Was walking in her pride.
Alone walk'd she; but, viewlessly,
  Walk'd spirits at her side.

Peace charm'd the street beneath her feet,
  And Honour charm'd the air;
And all astir looked kind on her,
  And called her good as fair—
For all God ever gave to her
  She kept with chary care.

She kept with care her beauties rare
  From lovers warm and true—
For heart was cold to all but gold,
  And the rich came not to woo—
But honour'd well her charms to sell,
  If priests the selling do.

Now walking there was one more fair—
  A slight girl, lily-pale;
And she had unseen company
  To make the spirit quail—
'Twixt Want and Scorn she walk'd forlorn,
  And nothing could avail.

No mercy now can clear her brow
  From this world's peace to pray,
For as love's wild prayer dissolved in air,
  Her woman's heart gave way!—
But the sin forgiven by Christ in Heaven,
  By man is cursed alway!

In this composition we find it difficult to recognise the Willis who has written so many mere "verses of society." The lines are not only richly ideal, but full of energy, while they breathe an earnestness, an evident sincerity of sentiment, for which we look in vain throughout all the other works of this author.

While the epic mania, while the idea that to merit in poetry prolixity is indispensable, has for some years past been gradually dying out of the public mind, by mere dint of its own absurdity, we find it succeeded by a heresy too palpably false to be long tolerated, but one which, in the brief period it has already endured, may be said to have accomplished more in the corruption of our Poetical Literature than all its other enemies combined. I allude to the heresy of *The Didactic*. It has

been assumed, tacitly and avowedly, directly and indirectly, that the ultimate object of all Poetry is Truth. Every poem, it is said, should inculcate a moral, and by this moral is the poetical merit of the work to be adjudged. We Americans especially have patronized this happy idea; and we Bostonians very especially have developed it in full. We have taken it into our heads that to write a poem simply for the poem's sake, and to acknowledge such to have been our design, would be to confess ourselves radically wanting in the true poetic dignity and force: —but the simple fact is that would we but permit ourselves to look into our own souls we should immediately there discover that under the sun there neither exists nor *can* exist any work more thoroughly dignified, more supremely noble, than this very poem, this poem *per se*, this poem which is a poem and nothing more, this poem written solely for the poem's sake.

With as deep a reverence for the True as ever inspired the bosom of man, I would nevertheless limit, in some measure, its modes of inculcation. I would limit to enforce them. I would not enfeeble them by dissipation. The demands of Truth are severe. She has no sympathy with the myrtles. All *that* which is so indispensable in Song is precisely all *that* with which *she* has nothing whatever to do. It is but making her a flaunting paradox to wreathe her in gems and flowers. In enforcing a truth we need severity rather than efflorescence of language. We must be simple, precise, terse. We must be cool, calm, unimpassioned. In a word, we must be in that mood which, as nearly as possible, is the exact converse of the poetical. *He* must be blind indeed who does not perceive the radical and chasmal difference between the truthful and the poetical modes of inculcation. He must be theory-mad beyond redemption who, in spite of these differences, shall still persist in attempting to reconcile the obstinate oils and waters of Poetry and Truth.

Dividing the world of mind into its three most immediately obvious distinctions, we have the Pure Intellect, Taste, and the Moral Sense. I place Taste in the middle, because it is just this position which in the mind it occupies. It holds intimate relations with either extreme; but from the Moral Sense is separated by so faint a difference that Aristotle has not hesitated to place some of its operations among the virtues themselves. Nevertheless we find the *offices* of the trio marked with a sufficient distinction. Just as the Intellect concerns itself with Truth, so Taste informs us of the Beautiful, while the Moral Sense is regardful of Duty. Of this latter, while Conscience teaches the obligation, and Reason the expediency, Taste contents herself with displaying the charms, waging war upon Vice solely on the ground of her deformity, her disproportion, her animosity to the fitting, to the appropriate, to the harmonious, in a word, to Beauty.

An immortal instinct deep within the spirit of man is thus plainly a sense of the beautiful. This it is which administers to his delight in the manifold forms, and sounds, and odors and sentiments amid which he exists. And just as the lily is repeated in the lake, or the eyes of Amaryllis in the mirror, so is the mere oral or written repetition

of these forms, and sounds, and colors, and odors, and sentiments a duplicate source of delight. But this mere repetition is not poetry. He who shall simply sing, with however glowing enthusiasm, or with however vivid a truth of description, of the sights, and sounds, and odors, and colors, and sentiments which greet *him* in common with all mankind—he, I say, has yet failed to prove his divine title. There is still a something in the distance which he has been unable to attain. We have still a thirst unquenchable, to allay which he has not shown us the crystal springs. This thirst belongs to the immortality of Man. It is at once a consequence and an indication of his perennial existence. It is the desire of the moth for the star. It is no mere appreciation of the Beauty before us, but a wild effort to reach the Beauty above. Inspired by an ecstatic prescience of the glories beyond the grave, we struggle by multiform combinations among the things and thoughts of Time to attain a portion of that Loveliness whose very elements perhaps appertain to eternity alone. And thus when by Poetry, or when by Music, the most entrancing of the poetic moods, we find ourselves melted into tears, we weep then, not as the Abbate Gravina supposes, through excess of pleasure, but through a certain petulant, impatient sorrow at our inability to grasp *now*, wholly, here on earth, at once and for ever, those divine and rapturous joys of which *through* the poem, or *through* the music, we attain to but brief and indeterminate glimpses.

The struggle to apprehend the supernal Loveliness—this struggle, on the part of souls fittingly constituted—has given to the world all *that* which it (the world) has ever been enabled at once to understand and *to feel* as poetic.

The Poetic Sentiment, of course, may develop itself in various modes—in Painting, in Sculpture, in Architecture, in the Dance—very especially in Music—and very peculiarly, and with a wide field, in the composition of the Landscape Garden. Our present theme, however, has regard only to its manifestation in words. And here let me speak briefly on the topic of rhythm. Contenting myself with the certainty that Music, in its various modes of metre, rhythm, and rhyme, is of so vast a moment in Poetry as never to be wisely rejected—is so vitally important an adjunct, that he is simply silly who declines its assistance, I will not now pause to maintain its absolute essentiality. It is in Music perhaps that the soul most nearly attains the great end for which, when inspired by the Poetic Sentiment, it struggles—the creation of supernal Beauty. It *may* be, indeed, that here this sublime end is, now and then, attained in *fact*. We are often made to feel, with a shivering delight, that from an earthly harp are stricken notes which *cannot* have been unfamiliar to the angels. And thus there can be little doubt that in the union of Poetry with Music in its popular sense, we shall find the widest field for the Poetic development. The old Bards and Minnesingers had advantages which we do not possess—and Thomas Moore, singing his own songs, was, in the most legitimate manner, perfecting them as poems.

To recapitulate then:—I would de-

fine, in brief, the Poetry of words as *The Rhythmical Creation of Beauty*. Its sole arbiter is Taste. With the Intellect or with the Conscience it has only collateral relations. Unless incidentally, it has no concern whatever either with Duty or with Truth.

A few words, however, in explanation. *That* pleasure which is at once the most pure, the most elevating, and the most intense, is derived, I maintain, from the contemplation of the Beautiful. In the contemplation of Beauty we alone find it possible to attain that pleasurable elevation, or excitement *of the soul*, which we recognise as the Poetic Sentiment, and which is so easily distinguished from Truth, which is the satisfaction of the Reason, or from Passion, which is the excitement of the heart. I make Beauty, therefore—using the word as inclusive of the sublime—I make Beauty the province of the poem, simply because it is an obvious rule of Art that effects should be made to spring as directly as possible from their causes:—no one as yet having been weak enough to deny that the peculiar elevation in question is at least *most readily* attainable in the poem. It by no means follows, however, that the incitements of Passion, or the precepts of Duty, or even the lessons of Truth, may not be introduced into a poem, and with advantage; for they may subserve incidentally, in various ways, the general purposes of the work: but the true artist will always contrive to tone them down in proper subjection to that *Beauty* which is the atmosphere and the real essence of the poem.

I cannot better introduce the few poems which I shall present for your consideration, than by the citation of the Proem to Longfellow's "Waif":—

The day is done, and the darkness
  Falls from the wings of Night,
As a feather is wafted downward
  From an Eagle in its flight.

I see the lights of the village
  Gleam through the rain and the mist,
And a feeling of sadness comes o'er me,
  That my soul cannot resist;

A feeling of sadness and longing,
  That is not akin to pain,
And resembles sorrow only
  As the mist resembles the rain.

Come, read to me some poem,
  Some simple and heartfelt lay,
That shall soothe this restless feeling,
  And banish the thoughts of day.

Not from the grand old masters,
  Not from the bards sublime,
Whose distant footsteps echo
  Through the corridors of Time.

For, like strains of martial music,
  Their mighty thoughts suggest
Life's endless toil and endeavor;
  And to-night I long for rest.

Read from some humbler poet,
  Whose songs gushed from his heart,
As showers from the clouds of summer,
  Or tears from the eyelids start;

Who through long days of labor,
  And nights devoid of ease,
Still heard in his soul the music
  Of wonderful melodies.

Such songs have power to quiet
  The restless pulse of care,
And come like the benediction
  That follows after prayer.

Then read from the treasured volume
  The poem of thy choice,
And lend to the rhyme of the poet
  The beauty of thy voice.

And the night shall be filled with music,
  And the cares that infest the day
Shall fold their tents like the Arabs,
  And as silently steal away.

With no great range of imagination, these lines have been justly admired for their delicacy of expression. Some of the images are very effective. Nothing can be better than—

> ————the bards sublime,
> Whose distant footsteps echo
> Down the corridors of Time.

The idea of the last quatrain is also very effective. The poem on the whole, however, is chiefly to be admired for the graceful *insouciance* of its metre, so well in accordance with the character of the sentiments, and especially for the *ease* of the general manner. This "ease" or naturalness, in a literary style, it has long been the fashion to regard as ease in appearance alone—as a point of really difficult attainment. But not so:—a natural manner is difficult only to him who should never meddle with it—to the unnatural. It is but the result of writing with the understanding, or with the instinct, that *the tone*, in composition, should always be that which the mass of mankind would adopt—and must perpetually vary, of course, with the occasion. The author who, after the fashion of *The North American Review*, should be upon *all* occasions merely "quiet," must necessarily upon *many* occasions be simply silly, or stupid; and has no more right to be considered "easy" or "natural" than a Cockney exquisite, or than the sleeping Beauty in the wax-works.

Among the minor poems of Bryant, none has so much impressed me as the one which he entitles "June." I quote only a portion of it:—

There, through the long, long summer hours,
  The golden light should lie,
And thick young herbs and groups of flowers
  Stand in their beauty by.
The oriole should build and tell
His love-tale, close beside my cell;
  The idle butterfly
Should rest him there, and there be heard
The housewife-bee and humming bird.

And what, if cheerful shouts at noon,
  Come, from the village sent,
Or songs of maids, beneath the moon,
  With fairy laughter blent?
And what if, in the evening light,
Betrothed lovers walk in sight
  Of my low monument?
I would the lovely scene around
Might know no sadder sight nor sound.

I know, I know I should not see
  The season's glorious show,
Nor would its brightness shine for me;
  Nor its wild music flow;
But if, around my place of sleep,

The friends I love should come to weep,
They might not haste to go.
Soft airs and song, and the light and bloom,
Should keep them lingering by my tomb.

These to their soften'd hearts should bear
The thoughts of what has been,
And speak of one who cannot share
The gladness of the scene;
Whose part in all the pomp that fills
The circuit of the summer hills,
Is—that his grave is green;
And deeply would their hearts rejoice
To hear again his living voice.

The rhythmical flow here is even voluptuous—nothing could be more melodious. The poem has always affected me in a remarkable manner. The intense melancholy which seems to well up, perforce, to the surface of all the poet's cheerful sayings about his grave, we find thrilling us to the soul—while there is the truest poetic elevation in the thrill. The impression left is one of a pleasurable sadness. And if, in the remaining compositions which I shall introduce to you, there be more or less of a similar tone always apparent, let me remind you that (how or why we know not) this certain taint of sadness is inseparably connected with all the higher manifestations of true Beauty. It is, nevertheless,

A feeling of sadness and longing
That is not akin to pain,
And resembles sorrow only
As the mist resembles the rain.

The taint of which I speak is clearly perceptible even in a poem so full of brilliancy and spirit as "The Health" of Edward Coate Pinckney:—

I fill this cup to one made up
Of loveliness alone,
A woman, of her gentle sex
The seeming paragon;
To whom the better elements
And kindly stars have given
A form so fair that, like the air,
'Tis less of earth than heaven.

Her every tone is music's own,
Like those of morning birds,
And something more than melody
Dwells ever in her words;
The coinage of her heart are they,
And from her lips each flows
As one may see the burden'd bee
Forth issue from the rose.

Affections are as thoughts to her,
The measures of her hours;
Her feelings have the fragrancy,
The freshness of young flowers;
And lovely passions, changing oft,
So fill her, she appears
The image of themselves by turns,—
The idol of past years!

Of her bright face one glance will trace
A picture on the brain,
And of her voice in echoing hearts
A sound must long remain;
But memory, such as mine of her,
So very much endears,
When death is nigh my latest sigh
Will not be life's, but hers.

I fill'd this cup to one made up
Of loveliness alone,

A woman, of her gentle sex
The seeming paragon—
Her health! and would on earth there stood,
Some more of such a frame,
That life might be all poetry,
And weariness a name.

It was the misfortune of Mr. Pinckney to have been born too far south. Had he been a New Englander, it is probable that he would have been ranked as the first of American lyrists by that magnanimous cabal which has so long controlled the destinies of American Letters, in conducting the thing called *The North American Review*. The poem just cited is especially beautiful; but the poetic elevation which it induces we must refer chiefly to our sympathy in the poet's enthusiasm. We pardon his hyperboles for the evident earnestness with which they are uttered.

It was by no means my design, however, to expatiate upon the *merits* of what I should read you. These will necessarily speak for themselves. Boccalini, in his *Advertisements from Parnassus*, tells us that Zoilus once presented Apollo a very caustic criticism upon a very admirable book:—whereupon the god asked him for the beauties of the work. He replied that he only busied himself about the errors. On hearing this, Apollo, handing him a sack of unwinnowed wheat, bade him pick out *all the chaff* for his reward.

Now this fable answers very well as a hit at the critics—but I am by no means sure that the god was in the right. I am by no means certain that the true limits of the critical duty are not grossly misunderstood. Excellence, in a poem especially, may be considered in the light of an axiom, which need only be properly *put*, to become self-evident. It is *not* excellence if it require to be demonstrated as such:—and thus to point out too particularly the merits of a work of Art, is to admit that they are *not* merits altogether.

Among the "Melodies" of Thomas Moore is one whose distinguished character as a poem proper seems to have been singularly left out of view. I allude to his lines beginning—"Come, rest in this bosom." The intense energy of their expression is not surpassed by anything in Byron. There are two of the lines in which a sentiment is conveyed that embodies the *all in all* of the divine passion of Love—a sentiment which, perhaps, has found its echo in more, and in more passionate, human hearts than any other single sentiment ever embodied in words:—

Come, rest in this bosom, my own stricken deer,
Though the herd have fled from thee, thy home is still here;
Here still is the smile, that no cloud can o'ercast,
And a heart and a hand all thy own to the last.

Oh! what was love made for, if 'tis not the same
Through joy and through torment, through glory and shame?
I know not, I ask not, if guilt's in that heart,
I but know that I love thee, whatever thou art.

Thou hast call'd me thy Angel in moments of bliss,
And thy Angel I'll be, 'mid the horrors of this,—
Through the furnace, unshrinking, thy steps to pursue,
And shield thee, and save thee,—or perish there too!

It has been the fashion of late days to deny Moore Imagination, while granting him Fancy—a distinction originating with Coleridge—than whom no man more fully comprehended the great powers of Moore. The fact is, that the fancy of this poet so far predominates over all his other faculties, and over the fancy of all other men, as to have induced, very naturally, the idea that he is fanciful *only*. But never was there a greater mistake. Never was a grosser wrong done the fame of a true poet. In the compass of the English language I can call to mind no poem more profoundly — more weirdly *imaginative,* in the best sense, than the lines commencing—"I would I were by that dim lake"—which are the composition of Thomas Moore. I regret that I am unable to remember them.

One of the noblest—and, speaking of Fancy—one of the most singularly fanciful of modern poets, was Thomas Hood. His "Fair Ines" had always for me an inexpressible charm:—

O saw ye not fair Ines?
She's gone into the West,
To dazzle when the sun is down,
And rob the world of rest;
She took our daylight with her,
The smiles that we love best,
With morning blushes on her cheek,
And pearls upon her breast.

O turn again, fair Ines,
Before the fall of night,
For fear the moon should shine alone,
And stars unrivall'd bright;
And blessed will the lover be
That walks beneath their light,
And breathes the love against thy cheek
I dare not even write!

Would I had been, fair Ines,
That gallant cavalier,
Who rode so gaily by thy side,
And whisper'd thee so near!
Were there no bonny dames at home,
Or no true lovers here,
That he should cross the seas to win
The dearest of the dear?

I saw thee, lovely Ines,
Descend along the shore,
With bands of noble gentlemen,
And banners waved before;
And gentle youth and maidens gay,
And snowy plumes they wore;
It would have been a beauteous dream,
If it had been no more!

Alas, alas, fair Ines,
She went away with song,
With music waiting on her steps,
And shoutings of the throng;
But some were sad and felt no mirth,
But only Music's wrong,
In sounds that sang Farewell, Farewell,
To her you've loved so long.

Farewell, farewell, fair Ines
That vessel never bore

So fair a lady on its deck,
Nor danced so light before,—
Alas for pleasure on the sea,
And sorrow on the shore!
The smile that blest one lover's heart
Has broken many more!

"The Haunted House," by the same author, is one of the truest poems ever written,—one of the *truest,* one of the most unexceptionable, one of the most thoroughly artistic, both in its theme and in its execution. It is, moreover, powerfully ideal—imaginative. I regret that its length renders it unsuitable for the purposes of this lecture. In place of it permit me to offer the universally appreciated "Bridge of Sighs":—

One more Unfortunate,
Weary of breath,
Rashly importunate
Gone to her death!

Take her up tenderly,
Lift her with care;—
Fashion'd so slenderly,
Young and so fair!

Look at her garments
Clinging like cerements;
Whilst the wave constantly
Drips from her clothing;
Take her up instantly,
Loving, not loathing.

Touch her not scornfully;
Think of her mournfully,
Gently and humanly;
Not of the stains of her,
All that remains of her
Now is pure womanly.

Make no deep scrutiny
Into her mutiny
Rash and undutiful;
Past all dishonor,
Death has left on her
Only the beautiful.

Where the lamps quiver
So far in the river,
With many a light
From window and casement
From garret to basement,
She stood, with amazement,
Houseless by night.

The bleak wind of March
Made her tremble and shiver;
But not the dark arch,
Or the black flowing river:
Mad from life's history,
Glad to death's mystery,
Swift to be hurl'd—
Anywhere, anywhere
Out of the world!

In she plunged boldly,
No matter how coldly
The rough river ran,—
Over the brink of it,
Picture it,—think of it,
Dissolute Man!
Lave in it, drink of it
Then, if you can!

Still, for all slips of hers,
One of Eve's family—
Wipe those poor lips of hers
Oozing so clammily,
Loop up her tresses
Escaped from the comb,
Her fair auburn tresses;
Whilst wonderment guesses
Where was her home?

Who was her father?
Who was her mother?
Had she a sister?

Had she a brother?
Or was there a dearer one
Still, and a nearer one
Yet, than all other?

Alas! for the rarity
Of Christian charity
Under the sun!
Oh! it was pitiful!
Near a whole city full,
Home she had none.

Sisterly, brotherly,
Fatherly, motherly,
Feelings had changed:
Love, by harsh evidence,
Thrown from its eminence;
Even God's providence
Seeming estranged.

Take her up tenderly;
Lift her with care;
Fashion'd so slenderly,
Young, and so fair!
Ere her limbs frigidly
Stiffen too rigidly,
Decently,—kindly,—
Smooth and compose them;
And her eyes, close them,
Staring so blindly!

Dreadfully staring
Through muddy impurity,
As when with the daring
Last look of despairing
Fixed on futurity.

Perishing gloomily,
Spurred by contumely,
Cold inhumanity,
Burning insanity,
Into her rest,—
Cross her hands humbly,
As if praying dumbly,
Over her breast!
Owning her weakness,
Her evil behaviour,
And leaving, with meekness,
Her sins to her Saviour!

The vigor of this poem is no less remarkable than its pathos. The versification, although carrying the fanciful to the very verge of the fantastic, is nevertheless admirably adapted to the wild insanity which is the thesis of the poem.

Among the minor poems of Lord Byron is one which has never received from the critics the praise which it undoubtedly deserves:—

Though the day of my destiny's over,
And the star of my fate hath declined,
Thy soft heart refused to discover
The faults which so many could find;
Though thy soul with my grief was acquainted,
It shrunk not to share it with me,
And the love which my spirit hath painted
It never hath found but in *thee*.

Then when nature around me is smiling,
The last smile which answers to mine,
I do not believe it beguiling,
Because it reminds me of thine;
And when winds are at war with the ocean,
As the breasts I believed in with me,
If their billows excite an emotion,
It is that they bear me from *thee*.

Though the rock of my last hope is shivered,
And its fragments are sunk in the wave,

Though I feel that my soul is delivered
To pain—it shall not be its slave.
There is many a pang to pursue me:
They may crush, but they shall not contemn—
They may torture, but shall not subdue me—
'Tis of *thee* that I think—not of them.

Though human, thou didst not deceive me,
Though woman, thou didst not forsake,
Though loved, thou forborest to grieve me,
Though slandered, thou never couldst shake,—
Though trusted, thou didst not disclaim me,
Though parted, it was not to fly,
Though watchful, 'twas not to defame me,
Nor mute, that the world might belie.

Yet I blame not the world, nor despise it,
Nor the war of the many with one—
If my soul was not fitted to prize it,
'Twas folly not sooner to shun:
And if dearly that error hath cost me,
And more than I once could foresee,
I have found that whatever it lost me,
It could not deprive me of *thee*.

From the wreck of the past, which hath perished,
Thus much I at least may recall,
It hath taught me that which I most cherished
Deserved to be dearest of all:
In the desert a fountain is springing,
In the wide waste there still is a tree,
And a bird in the solitude singing,
Which speaks to my spirit of *thee*.

Although the rhythm here is one of the most difficult, the versification could scarcely be improved. No nobler *theme* ever engaged the pen of poet. It is the soul-elevating idea that no man can consider himself entitled to complain of Fate while in his adversity he still retains the unwavering love of woman.

From Alfred Tennyson, although in perfect sincerity I regard him as the noblest poet that ever lived, I have left myself time to cite only a very brief specimen. I call him, and *think* him the noblest of poets, *not* because the impressions he produces are at *all* times the most profound—*not* because the poetical excitement which he induces is at *all* times the most intense—but because it is at all times the most ethereal—in other words, the most elevating and most pure. No poet is so little of the earth, earthy. What I am about to read is from his last long poem, "The Princess":—

Tears, idle tears, I know not what they mean,
Tears from the depth of some divine despair
Rise in the heart, and gather to the eyes,
In looking on the happy Autumn fields,
And thinking of the days that are no more.

Fresh as the first beam glittering on a sail,
That brings our friends up from the underworld,
Sad as the last which reddens over one

That sinks with all we love below the
verge;
So sad, so fresh, the days that are no
more.

Ah, sad and strange as in dark sum-
mer dawns
The earliest pipe of half-awaken'd birds
To dying ears, when unto dying eyes
The casement slowly grows a glimmer-
ing square;
So sad, so strange, the days that are
no more.

Dear as remember'd kisses after
death,
And sweet as those by hopeless fancy
feign'd
On lips that are for others; deep as
love,
Deep as first love, and wild with all
regret;
O Death in Life, the days that are no
more.

Thus, although in a very cursory and imperfect manner, I have endeavored to convey to you my conception of the Poetic Principle. It has been my purpose to suggest that, while this Principle itself is strictly and simply the Human Aspiration for Supernal Beauty, the manifestation of the Principle is always found in *an elevating excitement of the soul,* quite independent of that passion which is the intoxication of the Heart, or of that truth which is the satisfaction of the Reason. For in regard to passion, alas! its tendency is to degrade rather than to elevate the Soul. Love, on the contrary—Love—the true, the divine Eros—the Uranian as distinguished from the Dionæan Venus—is unquestionably the purest and truest of all poetical themes. And in regard to Truth, if, to be sure, through the attainment of a truth we are led to perceive a harmony where none was apparent before, we experience at once the true poetical effect; but this effect is referable to the harmony alone, and not in the least degree to the truth which merely served to render the harmony manifest.

We shall reach, however, more immediately a distinct conception of what the true Poetry is, by mere reference to a few of the simple elements which induce in the Poet himself the true poetical effect. He recognises the ambrosia which nourishes his soul in the bright orbs that shine in Heaven, in the volutes of the flower, in the clustering of low shrubberies, in the waving of the grain-fields, in the slanting of tall eastern trees, in the blue distance of mountains, in the grouping of clouds, in the twinkling of half-hidden brooks, in the gleaming of silver rivers, in the repose of sequestered lakes, in the star-mirroring depths of lonely wells. He perceives it in the songs of birds, in the harp of Æolus, in the sighing of the night-wind, in the repining voice of the forest, in the surf that complains to the shore, in the fresh breath of the woods, in the scent of the violet, in the voluptuous perfume of the hyacinth, in the suggestive odor that comes to him at eventide from far-distant undiscovered islands, over dim oceans, illimitable and unexplored. He owns it in all noble thoughts, in all unworldly motives, in all holy impulses, in all chivalrous, generous, and self-sacrificing deeds. He feels it in the beauty of woman, in the grace of her step, in the lustre of her eye, in the melody of her voice, in her soft laugh-

ter, in her sigh, in the harmony of the rustling of her robes. He deeply feels it in her winning endearments, in her burning enthusiasms, in her gentle charities, in her meek and devotional endurances, but above all, ah, far above all, he kneels to it, he worships it in the faith, in the purity, in the strength, in the altogether divine majesty of her *love*.

Let me conclude by the recitation of yet another brief poem, one very different in character from any that I have before quoted. It is by Motherwell, and is called "The Song of the Cavalier." With our modern and altogether rational ideas of the absurdity and impiety of warfare, we are not precisely in that frame of mind best adapted to sympathize with the sentiments, and thus to appreciate the real excellence of the poem. To do this fully we must identify ourselves in fancy with the soul of the old cavalier:—

A steed! a steed! of matchless speede!
A sword of metal keene!
Al else to noble heartes is drosse—
Al else on earth is meane.
The neighynge of the war-horse prowde,
The rowleing of the drum,
The clangour of the trumpet lowde—
Be soundes from heaven that come.
And oh! the thundering presse of knightes,
When as their war-cryes welle,
May tole from heaven an angel bright,
And rowse a fiend from hell.

Then mounte! then mounte, brave gallants al,
And don your helmes amaine:
Deathe's couriers, Fame and Honour, call
Us to the field againe.
No shrewish teares shall fill your eye
When the sword-hilt's in our hand,—
Heart-whole we'll part, and no whit sighe
For the fayrest of the land;
Let piping swaine, and craven wight,
Thus weepe and puling crye,
Our business is like men to fight,
And hero-like to die!

The Rationale of Verse

(Published in *Southern Literary Messenger*, October, 1848.—Ed.)

THE word "Verse" is here used not in its strict or primitive sense, but as the term most convenient for expressing generally and without pedantry all that is involved in the consideration of rhythm, rhyme, metre, and versification.

There is, perhaps, no topic in polite literature which has been more pertinaciously discussed, and there is certainly not one about which so much inaccuracy, confusion, misconception, misrepresentation, mystification, and downright ignorance on all sides, can be fairly said to exist. Were the topic really difficult, or did it lie, even, in the cloud-land of metaphysics, where the doubt-vapours may be made to assume any and every shape at the will or at the

fancy of the gazer, we should have less reason to wonder at all this contradiction and perplexity; but in fact the subject is exceedingly simple; one-tenth of it, possibly, may be called ethical; nine-tenths, however, appertain to mathematics; and the whole is included within the limits of the commonest common sense.

"But, if this is the case, how," it will be asked, "can so much misunderstanding have arisen? Is it conceivable that a thousand profound scholars, investigating so very simple a matter for centuries, have not been able to place it in the fullest light, at least, of which it is susceptible?" These queries, I confess, are not easily answered: at all events, a satisfactory reply to them might cost more trouble than would, if properly considered, the whole *vexata quæstio* to which they have reference. Nevertheless, there is little difficulty or danger in suggesting that the "thousand profound scholars" *may* have failed first, because they were scholars; secondly, because they were profound; and thirdly, because they were a thousand—the impotency of the scholarship and profundity having been thus multiplied a thousand fold. I am serious in these suggestions; for, first again, there is something in "scholarship" which seduces us into blind worship of Bacon's Idol of the Theatre—into irrational deference to antiquity; secondly, the proper "profundity" is rarely profound—it is the nature of Truth in general, as of some ores in particular, to be richest when most superficial; thirdly, the clearest subject may be over-clouded by mere superabundance of talk. In chemistry, the best way of separating two bodies is to add a third; in speculation, fact often agrees with fact and argument with argument, until an additional well-meaning fact or argument sets everything by the ears. In one case out of a hundred a point is excessively discussed because it is obscure; in the ninety-nine remaining it is obscure because excessively discussed. When a topic is thus circumstanced, the readiest mode of investigating it is to forget that any previous investigation has been attempted.

But, in fact, while much has been written on the Greek and Latin rhythms, and even on the Hebrew, little effort has been made at examining that of any of the modern tongues. As regards the English, comparatively nothing has been done. It may be said, indeed, that we are without a treatise on our own verse. In our ordinary grammars and in our works on rhetoric or prosody in general, may be found occasional chapters, it is true, which have the heading, "Versification," but these are, in all instances, exceedingly meagre. They pretend to no analysis; they propose nothing like system; they make no attempts at even rule; everything depends upon "authority." They are confined, in fact, to mere exemplification of the supposed varieties of English feet and English lines—although in no work with which I am acquainted are these feet correctly given or these lines detailed in anything like their full extent. Yet what has been mentioned is all—if we except the occasional introduction of some pedagogue-ism, such as this borrowed from the Greek Prosodies: "When a syllable is wanting the verse is said to be catalectic; when the measure is exact, the line is acatalectic; when there is a redundant syllable, it

forms hypermeter." Now, whether a line be termed catalectic or acatalectic is, perhaps, a point of no vital importance—it is even possible that the student may be able to decide, promptly, when the *a* should be employed and when omitted, yet be incognisant, at the same time, of *all* that is worth knowing in regard to the structure of verse.

A leading defect in each of our treatises (if treatises they can be called) is the confining the subject to mere *Versification*, while *Verse* in general, with the understanding given to the term in the heading of this paper, is the real question at issue. Nor am I aware of even one of our Grammars which so much as properly defines the word versification itself. "Versification," says a work now before me, of which the accuracy is far more than usual—the "English Grammar" of Goold Brown—"Versification is the art of arranging words into lines of correspondent length, so as to produce harmony by the regular alternation of syllables differing in quantity." The commencement of this definition might apply, indeed, to the *art* of versification, but not to versification itself. Versification is not the art of arranging, etc., but the actual arranging—a distinction too obvious to need comment. The error here is identical with one which has been too long permitted to disgrace the initial page of every one of our school grammars. I allude to the definitions of English Grammar itself. "English Grammar," it is said, "is the art of speaking and writing the English language correctly." This phraseology, or something essentially similar, is employed, I believe, by Bacon, Miller, Fisk, Greenleaf, Ingersoll, Kirkland, Cooper, Flint, Pue, Comly, and many others. These gentlemen, it is presumed, adopted it without examination from Murray, who derived it from Lily (whose work was *"quam solam Regia Majestas in omnibus scholis docendam præcipit"*), and who appropriated it without acknowledgement, but with some unimportant modification, from the Latin Grammar of Leonicenus. It may be shown, however, that this definition, so complacently received, is not, and cannot be, a proper definition of English Grammar. A definition is that which so describes its object as to distinguish it from all others—it is no definition of any one thing if its terms are applicable to any one other. But if it be asked—"What is the design—the end—the aim of English Grammar?" our obvious answer is, "The art of speaking and writing the English language correctly"—that is to say, we must use the precise words employed as the definition of English Grammar itself. But the object to be obtained by any means is, assuredly, not the means. English Grammar and the end contemplated by English Grammar are two matters sufficiently distinct; nor can the one be more reasonably regarded as the other than a fishing-hook as a fish. The definition, therefore, which is applicable in the latter instance, *cannot*, in the former, be true. Grammar in general is the analysis of language; English Grammar of the English.

But to return to Versification as defined in our extract above. "It is the art," says the extract, "of arranging words into lines *of correspondent length.*" Not so:—a correspondence in the length of lines is by no means es-

sential. Pindaric odes are, surely, instances of versification, yet these compositions are noted for extreme diversity in the length of their lines.

The arrangement is moreover said to be for the purpose of producing "*harmony* by the regular alternation," etc. But *harmony* is not the sole aim—not even the principal one. In the construction of verse, *melody* should never be left out of view; yet this is a point which all our Prosodies have most unaccountably forborne to touch. Reasoned rules on this topic should form a portion of all systems of rhythm.

"So as to produce harmony," says the definition, "by the *regular alternation,*" etc. A *regular* alternation, as described, forms no part of any principle of versification. The arrangement of spondees and dactyls, for example, in the Greek hexameter, is an arrangement which may be termed *at random.* At least it is arbitrary. Without interference with the line as a whole, a dactyl may be substituted for a spondee, or the converse, at any point other than the ultimate and penultimate feet, of which the former is always a spondee, the latter nearly always a dactyl. Here, it is clear, we have no "*regular* alternation of syllables differing in quantity."

"So as to produce harmony," proceeds the definition, "by the regular alternation of *syllables differing in quantity,*"—in other words by the alternation of long and short syllables; for in rhythm all syllables are necessarily either short or long. But not only do I deny the necessity of any *regularity* in the succession of feet and, by consequence, of syllables, but dispute the essentiality of any *alternation,* regular or irregular, of syllables long and short. Our author, observe, is now engaged in a definition of versification in general, not of English versification in particular. But the Greek and Latin metres abound in the spondee and pyrrhic—the former consisting of two long syllables, the latter of two short; and there are innumerable instances of the immediate succession of many spondees and many pyrrhics.

Here is a passage from Silius Italicus:

Fallis te mensas inter quod credis inermem
Tot bellis quæsita viro, tot cædibus armat
Majestas aeterna ducem: si admoveris ora
Cannas et Trebium ante oculos Trasymenaque busta
Et Pauli stare ingentem miraberis umbram.

Making the elisions demanded by the classic Prosodies, we should scan these Hexameters thus:

Fāllīs | tē mēn | sās īn | tēr qūod | crēdĭs ĭn | ērmēm |
Tōt bĕl | līs qūæ | sītă vĭ | rō tōt | cāēdĭbŭs | ārmāt |
Mājēs | tās ē | tērnă dŭ | cēm s' ād | mŏvĕrĭs | ōrā |
Cānnās | ēt Trēbī' | ānt' ŏcŭ | lōs Trăsў | mēnăquē | bŭstă
Et Pāu | lī stă | r' īngēn | tēm mī | rābĕrĭs | ūmbrām |

It will be seen that, in the first and last of these lines, we have only two short syllables in thirteen, with an uninterrupted succession of no less than *nine* long syllables. But how are we to

reconcile all this with a definition of versification which describes it as "the art of arranging words into lines of correspondent length so as to produce harmony by the *regular alternation of syllables differing in quantity*"?

It may be urged, however, that our prosodist's *intention* was to speak of the English metres alone, and that, by omitting all mention of the spondee and pyrrhic, he has virtually avowed their exclusion from our rhythms. A grammarian is never excusable on the ground of good intentions. We demand from him, if from any one, rigorous precision of style. But grant the design. Let us admit that our author, following the example of all authors on English Prosody, has, in defining versification at large, intended a definition merely of the English. All these prosodists, we will say, reject the spondee and pyrrhic. Still all admit the iambus, which consists of a short syllable followed by a long; the trochee, which is the converse of the iambus; the dactyl, formed of one long syllable followed by two short; and the anapæst—two short succeeded by a long. The spondee is improperly rejected, as I shall presently show. The pyrrhic is rightfully dismissed. Its existence in either ancient or modern rhythm is purely chimerical, and the insisting on so perplexing a nonentity as a foot of *two short* syllables, affords, perhaps, the best evidence of the gross irrationality and subservience to authority which characterise our Prosody. In the meantime the acknowledged dactyl and anapæst are enough to sustain my proposition about the "alternation," etc., without reference to feet which are assumed to exist in the Greek and Latin metres alone—for an anapæst and a dactyl may meet in the same line, when, of course, we shall have an uninterrupted succession of four short syllables. The meeting of these two feet, to be sure, is an accident not contemplated in the definition now discussed; for this definition, in demanding a "regular alternation of syllables differing in quantity," insists on a regular succession of similar *feet*. But here is an example:

Sing to me | Isabelle.

This is the opening line of a little ballad now before me which proceeds in the same rhythm—a peculiarly beautiful one. More than all this:—English lines are often well composed, entirely, of a regular succession of syllables *all of the same quantity*:—the first line, for instance, of the following quatrain by Arthur C. Coxe:

March! march! march!
Making sounds as they tread,
Ho! ho! how they step,
Going down to the dead!

The line italicised is formed of three cæsuras. The cæsura, of which I have much to say hereafter, is rejected by the English Prosodies, and grossly misrepresented in the classic. It is a perfect foot—the most important in all verse—and consists of a single *long syllable*; *but the length of this syllable varies.*

It has thus been made evident that there is *not one* point of the definition in question which does not involve an error; and for anything more satisfactory or more intelligible we shall

look in vain to any published treatise on the topic.

So general and so total a failure can be referred only to radical misconception. In fact the English Prosodists have blindly followed the pedants. These latter, like *les moutons de Panurge*, have been occupied in incessant tumbling into ditches, for the excellent reason that their leaders have so tumbled before. The Iliad, being taken as a starting point, was made to stand instead of Nature and common sense. Upon this poem, in place of facts and deduction from fact, or from natural law, were built systems of feet, metres, rhythms, rules,—rules that contradict each other every five minutes, and for nearly all of which there may be found twice as many exceptions as examples. If any one has a fancy to be thoroughly confounded—to see how far the infatuation of what is termed "classical scholarship," can lead a bookworm in the manufacture of darkness out of sunshine, let him turn over for a few moments any of the German Greek Prosodies. The only thing clearly made out in them is a very magnificent contempt for Leibnitz's principle of "a sufficient reason."

To divert attention from the real matter in hand by any further reference to these works is unnecessary, and would be weak. I cannot call to mind at this moment one essential particular of information that is to be gleaned from them, and I will drop them here with merely this one observation,—that, employing from among the numerous "*ancient*" feet the spondee, the trochee, the iambus, the anapæst, the dactyl, and the cæsura alone, I will engage to scan *correctly* any of the Horatian rhythms, or any true rhythm that human ingenuity can conceive. And this excess of chimerical feet is perhaps the very least of the scholastic supererogations. *Ex uno disce omnia.* The fact is that *quantity* is a point in whose investigation the lumber of mere learning may be dispensed with, if ever in any. Its appreciation is universal. It appertains to no region, nor race, nor era in special. To melody and to harmony the Greeks hearkened with ears precisely similar to those which we employ for similar purposes at present, and I should not be condemned for heresy in asserting that a pendulum at Athens would have vibrated much after the same fashion as does a pendulum in the city of Penn.

Verse originates in the human enjoyment of equality, fitness. To this enjoyment, also, all the moods of verse, rhythm, metre, stanza, rhyme, alliteration, the *refrain*, and other analagous effects, are to be referred. As there are some readers who habitually confound rhythm and metre, it may be as well here to say that the former concerns the *character* of feet (that is arrangements of syllables) while the latter has to do with the *number* of these feet. Thus by "a dactylic *rhythm*" we express a sequence of dactyls. By "a dactylic *hexameter*" we imply a line or measure consisting of six of these dactyls.

To return to *equality*. Its idea embraces those of similarity, proportion, identity, repetition, and adaptation or fitness. It might not be very difficult to go even behind the idea of equality, and show both how and why it is that the human nature takes pleasure in it, but such an investigation would, for

any purpose now in view, be supererogatory. It is sufficient that the *fact* is undeniable—the fact that man derives enjoyment from his perception of equality. Let us examine a crystal. We are at once interested by the equality between the sides and between the angles of one of its faces; the equality of the sides pleases us, that of the angles doubles the pleasure. On bringing to view a second face in all respects similar to the first, this pleasure seems to be squared; on bringing to view a third it appears to be cubed, and so on. I have no doubt, indeed, that the delight experienced, if measurable, would be found to have exact mathematical relation such as I suggest, that is to say, as far as a certain point, beyond which there would be a decrease in similar relations.

The perception of pleasure in the equality of *sounds* is the principle of *Music*. Unpractised ears can appreciate only simple equalities, such as are found in ballad airs. While comparing one simple sound with another they are too much occupied to be capable of comparing the equality subsisting between these two simple sounds taken conjointly, and two other similar simple sounds taken conjointly. Practised ears, on the other hand, appreciate both equalities at the same instant, although it is absurd to suppose that both are *heard* at the same instant. One is heard and appreciated from itself, the other is heard by the memory, and the instant glides into and is confounded with the secondary appreciation. Highly cultivated musical taste in this manner enjoys not only these double equalities, all appreciated at once, but takes pleasurable cognisance, through memory, of equalities the members of which occur at intervals so great that the uncultivated taste loses them altogether. That this latter can properly estimate or decide on the merits of what is called scientific music is of course impossible. But scientific music has no claim to intrinsic excellence; it is fit for scientific ears alone. In its excess it is the triumph of the *physique* over the *morale* of music. The sentiment is overwhelmed by the sense. On the whole, the advocates of the simpler melody and harmony have infinitely the best of the argument, although there has been very little of real argument on the subject.

In *verse*, which cannot be better designated than as an inferior or less capable Music, there is, happily, little chance for complexity. Its rigidly simple character not even Science—not even Pedantry can greatly pervert.

The rudiment of verse may possibly be found in the *spondee*. The very germ of a thought seeking satisfaction in equality of sound would result in the construction of words of two syllables, equally accented. In corroboration of this idea we find that spondees most abound in the most ancient tongues. The second step we can easily suppose to be the comparison, that is to say, the collocation of two spondees—or two words composed each of a spondee. The third step would be the juxtaposition of three of these words. By this time the perception of monotone would induce further consideration; and thus arises what Leigh Hunt so flounders in discussing under the title of "The *Principle* of Variety in Uniformity." Of course there is no principle in the case—nor in maintaining it. The

"Uniformity" is the principle—the "Variety" is but the principle's natural safeguard from self-destruction by excess of self. "Uniformity," besides, is the very worst word that could have been chosen for the expression of the *general* idea at which it aims.

The perception of monotone having given rise to an attempt at its relief, the first thought in this new direction would be that of collating two or more words formed each of two syllables differently accented (that is to say, short and long) but having the same order in each word—in other terms, of collating two or more iambuses, or two or more trochees. And here let me pause to assert that more pitiable nonsense has been written on the topic of *long* and *short* syllables than on any other subject under the sun. In general, a syllable is long or short, just as it is difficult or easy of enunciation. The *natural* long syllables are those encumbered—the *natural* short syllables are those *un*encumbered with consonants; all the rest is mere artificiality and jargon. The Latin Prosodies have a rule that a "vowel before two consonants is long." This rule is deduced from "authority"—that is, from the observation that vowels so circumstanced, in the ancient poems, are always in syllables long by the laws of scansion. The philosophy of the rule is untouched, and lies simply in the physical difficulty of giving voice to such syllables—of performing the lingual evolutions necessary for their utterance. Of course, it is not the *vowel* that is long (although the rule says so), but the syllable of which the vowel is a part. It will be seen that the length of a syllable, depending on the facility or difficulty of its enunciation, must have great variation in various syllables; but for the purposes of verse we suppose a long syllable equal to two short ones, and the natural deviation from this relativeness we correct in perusal. The more closely our long syllables approach this relation with our short ones, the better, *ceteris paribus*, will be our verse: but if the relation does not exist of itself we force it by emphasis, which can, of course, make any syllable as long as desired;—or, by an effort we can pronounce with unnatural brevity a syllable that is naturally too long. *Accented* syllables are, of course, always long, but where *un*encumbered with consonants, must be classed among the *unnaturally* long. Mere custom has declared that we shall accent them—that is to say, dwell upon them; but no inevitable lingual difficulty forces us to do so. In fine, every long syllable must of its own accord occupy in its utterance, or must be *made* to occupy, precisely the time demanded for two short ones. The only exception to this rule is found in the cæsura—of which more anon.

The success of the experiment with the trochees or iambuses (the one would have suggested the other) must have led to a trial of dactyls or anapæsts—natural dactyls or anapæsts—dactylic or anapæstic *words*. And now some degree of complexity has been attained. There is an appreciation, first, of the equality between the several dactyls or anapæsts, and secondly, of that between the long syllable and the two short conjointly. But here it may be said, that step after step would have

been taken, in continuation of this routine, until all the feet of the Greek Prosodies became exhausted. Not so; these remaining feet have no existence except in the brains of the scholiasts. It is needless to imagine men inventing these things, and folly to explain how and why they invented them, until it shall be first shown that they are actually invented. All other "feet" than those which I have specified are, if not impossible at first view, merely combinations of the specified; and, although this assertion is rigidly true, I will, to avoid misunderstanding, put it in a somewhat different shape. I will say, then, that at present I am aware of no *rhythm*—nor do I believe that any one can be constructed—which, in its last analysis, will not be found to consist altogether of the feet I have mentioned, either existing in their individual and obvious condition, or interwoven with each other in accordance with simple natural laws which I will endeavour to point out hereafter.

We have now gone so far as to suppose men constructing indefinite sequences of spondaic, iambic, trochaic, dactylic, or anapæstic words. In *extending* these sequences, they would be again arrested by the sense of monotone. A succession of spondees would *immediately* have displeased; one of iambuses or of trochees, on account of the variety included within the foot itself, would have taken longer to displease; one of dactyls or anapæsts, still longer; but even the last, if extended very far, must have become wearisome. The idea first of curtailing, and secondly of defining, the length of a sequence would thus at once have arisen. Here then is the *line* of verse proper.* The principle of equality being constantly at the bottom of the whole process, lines would naturally be made, in the first instance, equal in the number of their feet; in the second instance, there would be variation in the mere number; one line would be twice as long as another; then one would be some less obvious multiple of another; then still less obvious proportions would be adopted—nevertheless there would be *proportion*, that is to say, a phase of equality, still.

Lines being once introduced, the necessity of distinctly defining these lines *to the ear* (as yet written verse does not exist), would lead to a scrutiny of their capabilities *at their terminations*—and now would spring up the idea of equality in sound between the final syllables—in other words, of *rhyme*. First, it would be used only in the iambic, anapæstic, and spondaic rhythms (granting that the latter had not been thrown aside long since, on account of its tameness), because in these rhythms the concluding syllable, being long, could best sustain the necessary protraction of the voice. No great while could elapse, however, before the effect, found pleasant as well as useful, would be applied to the two remaining rhythms. But as the chief force of

* Verse, from the Latin *vertere*, to turn, is so called on account of the turning or re-commencement of the series of feet. Thus a verse strictly speaking is a line. In this sense, however, I have preferred using the latter word alone; employing the former in the general acceptation given it in the heading of this paper.—E. A. P.

rhyme must lie in the accented syllable, the attempt to create rhyme at all in these two remaining rhythms, the trochaic and dactylic, would necessarily result in double and triple rhymes, such as *beauty* with *duty* (trochaic), and *beautiful* with *dutiful* (dactylic).

It must be observed that in suggesting these processes I assign them no date; nor do I even insist upon their order. Rhyme is supposed to be of modern origin, and were this proved my positions remain untouched. I may say, however, in passing, that several instances of rhyme occur in the "Clouds" of Aristophanes, and that the Roman poets occasionally employed it. There is an effective species of ancient rhyming which has never descended to the moderns: that in which the ultimate and penultimate syllables rhyme with each other. For example:

Parturiunt montes; nascetur ridicu*lus mus*.

And again:

Litoreis ingens inventa sub ilici*bus sus*.

The terminations of Hebrew verse (as far as understood) show no signs of rhyme; but what thinking person can doubt that it did actually exist? That men have so obstinately and blindly insisted, *in general*, even up to the present day, in confining rhyme to the *ends* of lines, when its effect is even better applicable elsewhere, intimates in my opinion the sense of some *necessity* in the connection of the ends with the rhyme—hints that the origin of rhyme lay in a necessity which connected it with the end—shows that neither mere accident nor mere fancy gave rise to the connection—points, in a word, at the very necessity which I have suggested (that of some mode of defining lines *to the ear*), as the true origin of rhyme. Admit this and we throw the origin far back in the night of Time—beyond the origin of written verse.

But to resume. The amount of complexity I have now supposed to be attained is very considerable. Various systems of equalization are appreciated at once (or nearly so) in their respective values and in the value of each system with reference to all the others. As our present *ultimatum* of complexity, we have arrived at triple-rhymed, natural-dactylic lines, existing proportionally as well as equally with regard to other triple-rhymed, natural-dactylic lines. For example:

Virginal Lilian, rigidly, humblily dutiful;
Saintlily, lowlily,
Thrillingly, holily
Beautiful!

Here we appreciate, first, the absolute equality between the long syllable of each dactyl and the two short conjointly; secondly, the absolute equality between each dactyl and any other dactyl, in other words, among all the dactyls; thirdly, the absolute equality between the two middle lines; fourthly, the absolute equality between the first line and the three others taken conjointly; fifthly, the absolute equality between the last two syllables of the respective words "dutiful" and "beautiful"; sixthly, the absolute equality between the two last syllables of the respective words "lowlily" and "holily";

seventhly, the proximate equality between the first syllable of "dutiful" and the first syllable of "beautiful"; eighthly, the proximate equality between the first syllable of "lowlily" and that of "holily"; ninthly, the proportional equality (that of five to one) between the first line and each of its members, the dactyls; tenthly, the proportional equality (that of two to one) between each of the middle lines and its members, the dactyls; eleventhly, the proportional equality between the first line and each of the two middle, that of five to two; twelfthly, the proportional equality between the first line and the last, that of five to one; thirteenthly, the proportional equality between each of the middle lines and the last, that of two to one; lastly, the proportional equality, as concerns number, between all the lines taken collectively and any individual line, that of four to one.

The consideration of this last equality would give birth immediately to the idea of *stanza*,* that is to say, the insulation of lines into equal or obviously proportional masses. In its primitive (which was also its best) form the stanza would most probably have had absolute unity. In other words, the removal of any one of its lines would have rendered it imperfect, as in the case above, where if the last line, for example, be taken away there is left no rhyme to the "dutiful" of the first. Modern stanza is excessively loose, and where so, ineffective as a matter of course.

*A stanza is often vulgarly, and with gross impropriety, called a *verse*.—E. A. P.

Now, although in the deliberate written statement which I have here given of these various systems of equalities, there seems to be an infinity of complexity so much that it is hard to conceive the mind taking cognisance of them all in the brief period occupied by the perusal or recital of the stanza, yet the difficulty is in fact apparent only when we will it to become so. Any one fond of mental experiment may satisfy himself, by trial, that in listening to the lines he does actually (although with a seeming unconsciousness, on account of the rapid evolutions of sensation) recognise and instantaneously appreciate (more or less intensely as his ear is cultivated) each and all of the equalisations detailed. The pleasure received or receivable has very much such progressive increase, and in very nearly such mathematical relations as those which I have suggested in the case of the crystal.

It will be observed that I speak of merely a proximate equality between the first syllable of "dutiful" and that of "beautiful," and it may be asked why we cannot imagine the earliest rhymes to have had absolute instead of proximate equality of sound. But absolute equality would have involved the use of identical words, and it is the duplicate sameness or monotony, that of sense as well as that of sound, which would have caused these rhymes to be rejected in the very first instance.

The narrowness of the limits within which verse composed of natural feet alone must necessarily have been confined would have led, after a *very* brief interval, to the trial and immediate adoption of artificial feet, that is to say, of feet *not* constituted each of a single

word but two, or even three words, or of parts of words. These feet would be intermingled with natural ones. For example:

ă brēath | căn māke | thĕm ās | ă
breāth | hăs māde.

This is an iambic line in which each iambus is formed of two words. Again:

Thĕ ūn | ĭmā | gĭnā | blĕ mīght | ŏf Jŏve.

This is an iambic line in which the first foot is formed of a word and a part of a word; the second and third of parts taken from the body or interior of a word; the fourth of a part and a whole; the fifth of two complete words. There are no *natural* feet in either line. Again:

Căn ĭt bĕ | fānciĕd thăt | Dēĭtў | ēvĕr
vĭn | dĭctĭvelў
Māde ĭn hĭs | ĭmăge ă | mānnĭkĭn |
mērelў tŏ | mādděn ĭt?

These are two dactylic lines in which we find natural feet ("Deity," "mannikin"); feet composed of two words ("fancied that," "image a," "merely to," "madden it"); feet composed of three words ("can it be," "made in his"); a foot composed of a part of a word ("dictively"); and a foot composed of a word and a part of a word ("ever vin").

And now, in our suppositional progress, we have gone so far as to exhaust all the *essentialities* of verse. What follows may, strictly speaking, be regarded as embellishment merely, but even in this embellishment the rudimental sense of *equality* would have been the never-ceasing impulse. It would, for example, be simply in seeking further administration to this sense that men would come in time to think of the *refrain* or burden, where, at the closes of the several stanzas of a poem, one word or phrase is *repeated;* and of alliteration, in whose simplest form a consonant is *repeated* in the commencements of various words. This effect would be extended so as to embrace repetitions both of vowels and of consonants in the bodies as well as in the beginnings of words, and at a later period would be made to infringe on the province of rhyme by the introduction of general similarity of sound between whole feet occurring in the body of a line—all of which modifications I have exemplified in the line above.

*M*ade in his *i*mage *a mannikin m*erely to *madden it.*

Further cultivation would improve also the *refrain* by relieving its monotone in slightly varying the phrase at each repetition, or (as I have attempted to do in "The Raven") in retaining the phrase and varying its application, although this latter point is not strictly a rhythmical effect *alone.* Finally, poets when fairly wearied with following precedent, following it the more closely the less they perceived it in company with Reason, would adventure so far as to indulge in positive rhyme at other points than the ends of lines. First, they would put it in the middle of the line, then at some point where the multiple would be less obvious, then, alarmed at their own audacity, they would undo all their work by cutting

these lines in two. And here is the fruitful source of the infinity of "short metre" by which modern poetry, if not distinguished, is at least disgraced. It would require a high degree, indeed, both of cultivation and of courage on the part of any versifier to enable him to place his rhymes, and let them remain at unquestionably their best position, that of unusual and *unanticipated* intervals.

On account of the stupidity of some people, or (if talent be a more respectable word), on account of their talent for misconception—I think it necessary to add here, first, that I believe the "processes" above detailed to be nearly, if not accurately, those which *did* occur in the gradual creation of what we now call verse; secondly, that, although I so believe, I yet urge neither the assumed fact nor my belief in it as a part of the true propositions of this paper; thirdly, that in regard to the aim of this paper, it is of no consequence whether these processes did occur either in the order I have assigned them, or at all; my design being simply, in presenting a general type of what such processes *might* have been and *must* have resembled, to help *them*, the "some people," to an easy understanding of what I have further to say on the topic of Verse.

There is one point, which, in my summary of the processes, I have purposely forborne to touch; because this point, being the most important of all, on account of the immensity of error usually involved in its consideration, would have led me into a series of detail inconsistent with the object of a summary.

Every reader of verse must have observed how seldom it happens that even any one line proceeds uniformly with a succession, such as I have supposed, of absolutely equal feet; that is to say, with a succession of iambuses only, or of trochees only, or of dactyls only, or of anapæsts only, or of spondees only. Even in the most musical lines we find the succession interrupted. The iambic pentameters of Pope, for example, will be found on examination, frequently varied by trochees in the beginning, or by (what seem to be) anapæsts in the body of the line.

ŏh thōu | whătē | vĕr tī | tlē pleāse | thĭne eār |
Dĕan Drā | pĭĕr Bĭck | ĕrstāff | ŏr Gūll | ĭvĕr |
Whēthēr | thōu choōse | Cĕrvān | tēs' sē | rĭoŭs āir |
ŏr laūgh | ănd shāke | ĭn Rāb | ĕlaĭs' eā | sў chaīr |

Were any one weak enough to refer to the Prosodies for the solution of the difficulty here, he would find it *solved* as usual by a *rule*, stating the fact (or what it, the rule, supposes to be the fact), but without the slightest attempt at the *rationale*. "By a *synæresis* of the two short syllables," say the books, "an anapæst may sometimes be employed for an iambus, or dactyl for a trochee. . . . In the beginning of a line a trochee is often used for an iambus."

Blending is the plain English for *synæresis*—but there should be *no* blending; neither is an anapæst *ever* employed for an iambus, or a dactyl for a trochee. These feet differ in time; and *no* feet so differing can ever be legitimately used in the same line. An anapæst is equal to four short sylla-

bles—an iambus only to three. Dactyls and trochees hold the same relation. The principle of *equality*, in verse, admits, it is true, of variation at certain points, for the relief of monotone, as I have already shown, but the point of *time* is that point which, being the rudimental one, must never be tampered with at all.

To explain:—In further efforts for the relief of monotone than those to which I have alluded in the summary, men soon came to see that there was no absolute necessity for adhering to the precise number of syllables, provided the time required for the whole foot was preserved inviolate. They saw, for instance, that in such a line as

ŏr lâugh | ănd shāke | ĭn Rāb | ĕlaĭs'
ēa | sў chāir, |

the equalisation of the three syllables *elais ea* with the two syllables composing any of the other feet, could be readily effected by pronouncing the two syllables *elais* in double quick time. By pronouncing each of the syllables *e* and *lais* twice as rapidly as the syllable *sy*, or the syllable *in*, or any other short syllable, they could bring the two of them, taken together, to the length, that is to say to the time, of any one short syllable. This consideration enabled them to effect the agreeable variation of three syllables in place of the uniform two. And variation was the object—variation to the ear. What sense is there, then, in supposing this object rendered null by the *blending* of the two syllables so as to render them, in absolute effect, one? Of course, there must be *no* blending. Each syllable must be pronounced as distinctly as possible (or the variation is lost), but with twice the rapidity in which the ordinary short syllable is enunciated. That the syllables *elais ea* do not compose an *anapæst* is evident, and the signs (˘ ˘ –) of their accentuation are erroneous. The foot might be written thus (◠ ◠ –) the inverted crescents expressing double quick time; and might be called a bastard iambus.

Here is a trochaic line:

Sēe thĕ | dĕlĭcāte—fōotĕd | rēin-deĕr. |

The prosodies—that is to say the most considerate of them—would here decide that *"delicate"* is a dactyl used in place of a trochee, and would refer to what they call their "rule" for justification. Others, varying the stupidity, would insist upon a Procrustean adjustment thus (del'cate) an adjustment recommended to all such words as *silvery, murmuring*, etc., which, it is said, should be not only pronounced but written *silv'ry, murm'ring*, and so on, whenever they find themselves in trochaic predicament. I have only to say that "delicate," when circumstanced as above, is neither a dactyl nor a dactyl's equivalent; that I would suggest for it this (– ◠ ◠) accentuation; that I think it as well to call it a bastard trochee; and that all words, at all events, should be written and pronounced *in full*, and as nearly as possible as nature intended them.

About eleven years ago, there appeared in "The American Monthly Magazine" (then edited, I believe, by Messrs Hoffman and Benjamin,) a review of Mr. Willis's Poems; the critic putting forth his strength, or his weakness, in an endeavor to show that the

poet was either absurdly affected, or grossly ignorant of the laws of verse; the accusation being based altogether on the fact that Mr. W. made occasional use of this very word "delicate," and other similar words, in "the Heroic measure, which every one knew consisted of feet of two syllables." Mr. W. has often, for example, such lines as

That binds him to a woman's *delicate* love—
In the gay sunshine, *reverent* in the storm
With its *invisible* fingers my loose hair.

Here of course, the feet *licate love, verent in* and *sible fin,* are bastard iambuses; are *not anapaests* and are *not* improperly used. Their employment, on the contrary, by Mr. Willis, is but one of the innumerable instances he has given of keen sensibility in all those matters of taste which may be classed under the general head of *fanciful embellishment.*

It is also about eleven years ago, if I am not mistaken, since Mr. Horne (of England,) the author of "Orion," one of the noblest epics in any language, thought it necessary to preface his "Chaucer Modernised" by a very long and evidently a very elaborate essay, of which the greater portion was occupied in a discussion of the seemingly anomalous foot of which we have been speaking. Mr. Horne upholds Chaucer in its frequent use; maintains his superiority, *on account of* his so frequently using it, over all English versifiers; and indignantly repelling the common idea of those who make verse on their fingers—that the superfluous syllable is a roughness and an error—very chivalrously makes battle for it as a "grace." That a grace it is, there can be no doubt; and what I complain of is, that the author of the most happily versified long poem in existence, should have been under the necessity of discussing this grace merely *as* a grace, through forty or fifty vague pages, solely because of his inability to show *how* and *why* it is a grace—by which showing the question would have been settled in an instant.

About the trochee used for an iambus, as we see in the beginning of the line,

Whēthĕr thou choose Cervantes' serious air,

there is little that need be said. It brings me to the general proposition that, in all rhythms, the prevalent or distinctive feet may be varied at will, and nearly at random, by the *occasional* introduction of equivalent feet—that is to say, feet the sum of whose syllabic times is equal to the sum of the syllabic times of the distinctive feet. Thus, the trochee, *whēthĕr* is equal, in the sum of the times of its syllables, to the iambus, *thŏu choōse,* in the sum of the times of *its* syllables; each foot being in time equal to three short syllables. Good versifiers who happen to be also good poets, contrive to relieve the monotony of a series of feet by the use of equivalent feet only at rare intervals, and at such points of their subject as seem in accordance with the *startling* character of the variation. Nothing of this care is seen in the line quoted above—although Pope has some fine instances of the duplicate effect. Where vehemence is to be strongly expressed,

I am not sure that we should be wrong in venturing on *two consecutive* equivalent feet—although I cannot say that I have ever known the adventure made, except in the following passage, which occurs in "Al Aaraaf," a boyish poem written by myself when a boy. I am referring to the sudden and rapid advent of a star:

Dim was its little disk, and angel eyes
Alone could see the phantom in the skies,
Whĕn fīrst thĕ phāntŏm's cōurse wās fōund tŏ bē
*Hēadlŏng hīthĕr*ward o'er the starry sea.

In the "general proposition" above, I speak of the *occasional* introduction of equivalent feet. It sometimes happens that unskilful versifiers, without knowing what they do, or why they do it, introduce so many "variations" as to exceed in number the "distinctive" feet, when the ear becomes at once balked by the *bouleversement* of the rhythm. Too many trochees, for example, inserted in an iambic rhythm would convert the latter to a trochaic. I may note here that in all cases the rhythm designed should be commenced and continued, *without* variation, until the ear has had full time to comprehend what *is* the rhythm. In violation of a rule so obviously founded in common sense, many even of our best poets do not scruple to begin an iambic rhythm with a trochee, or the converse; or a dactylic with an anapæst, or the converse; and so on.

A somewhat less objectionable error, although still a decided one, is that of commencing a rhythm not with a different equivalent foot, but with a "bastard" foot of the rhythm intended. For example:

Mānў ă | thoūght wĭll | cōme tŏ | mēmŏrў. |

Here *many a* is what I have explained to be a bastard trochee, and to be understood should be accented with inverted crescents. It is objectionable solely on account of its position as the *opening* foot of a trochaic rhythm. *Memory,* similarly accented is also a bastard trochee, but *un*objectionable, although by no means demanded.

The further illustration of this point will enable me to take an important step.

One of our finest poets, Mr. Christopher Pearse Cranch, begins a very beautiful poem thus:

Many are the thoughts that come to me
In my lonely musing;
And they drift so strange and swift
There's no time for choosing
Which to follow; for to leave
Any, seems a losing.

"A losing" to Mr. Cranch, of course—but this *en passant*. It will be seen here that the intention is trochaic;—although we do *not* see this intention by the opening foot as we should do, or even by the opening line. Reading the whole stanza, however, we perceive the trochaic rhythm as the general design, and so after some reflection, we divide the first line thus:

Many are the | thoughts thăt | cōme tŏ | mē.

Thus scanned, the line will seem

musical. It *is*—highly so. And it is because there is no end to instances of just such lines of apparently incomprehensible music, that Coleridge thought proper to invent his nonsensical *system* of what he calls "scanning by accents"—as if "scanning by accents" were anything more than a phrase. Whenever "Christabel" is really *not rough*, it can be as readily scanned by the true *laws* (not the supposititious *rules*) of verse, as can the simplest pentameter of Pope; and where it *is* rough (*passim*) these same laws will enable any one of common sense to show *why* it is rough and to point out, instantaneously the remedy for the roughness.

A reads and re-reads a certain line, and pronounces it false in rhythm—unmusical. *B*, however, reads it *to A*, and *A* is at once struck with the perfection of the rhythm, and wonders at his dulness in not "catching" it before. Henceforward he admits the line to be musical. *B*, triumphant, asserts that, to be sure the line is musical—for it is the work of Coleridge—and that it is *A* who is *not;* the fault being in *A's* false reading. Now here *A* is right and *B* wrong. *That* rhythm is erroneous (at some point or other more or less obvious), which *any* ordinary reader *can*, without design, read improperly. It is the business of the poet so to construct his line that the intention *must* be caught *at once*. Even when these men have precisely the same understanding of a sentence, they differ, and often widely, in their modes of enunciating it. Any one who has taken the trouble to examine the topic of emphasis (by which I here mean not *accent* of particular syllables, but the dwelling on entire words), must have seen that men emphasise in the most singularly arbitrary manner. There are certain large classes of people, for example, who persist in emphasising their monosyllables. Little uniformity of emphasis prevails; because the thing itself—the idea, emphasis—is referable to no natural—at least to no well comprehended and therefore uniform—law. Beyond a very narrow and vague limit, the whole matter is conventionality. And if we differ in emphasis even when we agree in comprehension, how much more so in the former when in the latter too! Apart, however, from the consideration of natural disagreement, is it not clear that, by tripping here and mouthing there, any sequence of words may be twisted into any species of rhythm? But are we thence to deduce that all sequences of words are rhythmical in a rational understanding of the term?—for this is the deduction precisely to which the *reductio ad absurdum* will, in the end, bring all the propositions of Coleridge. Out of a hundred readers of "Christabel," fifty will be able to make nothing of its rhythm, while forty-nine of the remaining fifty will, with some ado, fancy they comprehend it, after the fourth or fifth perusal. The one out of the whole hundred who shall both comprehend and admire it at first sight—must be an unaccountably clever person—and I am by far too modest to assume, for a moment, that that very clever person is myself.

In illustration of what is here advanced I cannot do better than quote a poem:

Pease porridge hot pease porridge cold
Pease porridge in the pot—nine days old.

Now those of my readers who have never *heard* this poem pronounced according to the nursery conventionality, will find its rhythm as obscure as an explanatory note; while those who *have* heard it, will divide it thus, declare it musical, and wonder how there can be any doubt about it.

Pease | porridge | hot | pease | porridge | cold |
Pease | porridge | in the | pot | nine | days | old. |

The chief thing in the way of this species of rhythm, is the necessity which it imposes upon the poet of travelling in constant company with his compositions, so as to be ready at a moment's notice, to avail himself of a well-understood poetical license—that of reading aloud one's own doggerel.

In Mr. Cranch's line,

Many are the | thoughts that | come to | me, |

the general error of which I speak is, of course, very partially exemplified, and the purpose for which, chiefly, I cite it, lies yet further on in our topic. The two divisions (*thoughts that*) and (*come to*) are ordinary trochees. The first division (many are the) would be thus accented by the Greek Prosodies (mānў ăre thĕ), and would be called by them *astrologos*. The Latin books would style the foot *Pæon Primus*, and both Greek and Latin would swear that it was composed of a trochee and what they term a pyrrhic—that is to say, a foot of two *short* syllables—a thing that *cannot be*, as I shall presently show.

But now, there is an obvious difficulty. The *astrologos*, according to the Prosodies' own showing, is equal to *five* short syllables, and the trochee to *three*—yet, in the line quoted, these two feet are equal. They occupy, *precisely*, the same time. In fact, the whole music of the line depends upon their being *made* to occupy the same time. The Prosodies then, have demonstrated what all mathematicians have stupidly failed in demonstrating—that three and five are one and the same thing. After what I have already said, however, about the bastard trochee and the bastard iambus, no one can have any trouble in understanding that *many are the* is of similar character. It is merely a bolder variation than usual from the routine of trochees, and introduces to the bastard trochee one additional syllable. But this syllable is not *short*. That is, it is not short in the sense of *"short"* as applied to the final syllable of the ordinary trochee, where the word means merely *the half of long*.

In this case (that of the additional syllable) "short," if used at all, must be used in the sense of *the sixth of long*. And all the three final syllables can be called *short* only with the same understanding of the term. The three together are equal only to the one short syllable (whose place they supply) of the ordinary trochee. It follows that there is no sense in thus (˘) accenting these syllables. We must devise for them some new character which shall denote the sixth of long. Let it be (ˊ)—the crescent placed with the curve to the left. The whole foot (many are the) might be called a *quick trochee*.

We now come to the final division

(*me*) of Mr. Cranch's line. It is clear that this foot, short as it appears, is fully equal in time to each of the preceding. It is, in fact, the cæsura—the foot which, in the beginning of this paper, I called the most important in all verse. Its chief office is that of pause or termination; and here—at the end of a line—its use is easy, because there is no danger of misapprehending its value. We pause on it, by a seeming necessity, just so long as it has taken us to pronounce the preceding feet, whether iambuses, trochees, dactyls, or anapæsts. It is thus a *variable foot,* and, with some care, may be well introduced into the body of a line, as in a little poem of great beauty by Mrs. Welby:

I have | a lit | tle step | son | of on | ly
three | years old. |

Here we dwell on the cæsura, *son,* just as long as it requires us to pronounce either of the preceding or succeeding iambuses. Its value, therefore, in this line, is that of three short syllables. In the following dactylic line its value is that of four short syllables.

Pale as a | lily was | Emily | Gray.

I have accented the cæsura with a (——) by way of expressing this variability of value.

I observed just now that there could be no such foot as one of two short syllables. What we start from in the very beginning of all idea on the topic of verse, is quantity, *length.* Thus when we enunciate an independent syllable it is long, as a matter of course. If we enunciate two, dwelling on both equally, we express equality in the enunciation, or length, and have a right to call them two long syllables. If we dwell on one more than the other, we have also a right to call one short, because it is short in relation to the other. But if we dwell on both equally, and with a tripping voice, saying to ourselves here are two short syllables, the query might well be asked of us—"in relation to what are they short?" Shortness is but the negation of length. To say, then, that two syllables, placed independently of any other syllable, are short, is merely to say that they have no positive length, or enunciation—in other words, that they are no syllables—that they do not exist at all. And if, persisting, we add anything about their equality, we are merely floundering in the idea of an identical equation, where, x being equal to x, nothing is shown to be equal to zero. In a word, we can form no conception of a pyrrhic as of an independent foot. It is a mere chimera bred in the mad fancy of a pedant.

From what I have said about the equalisation of the several feet of a *line,* it must not be deduced that any *necessity* for equality in time exists between the rhythm of *several* lines. A poem, or even a stanza, may begin with iambuses in the first line, and proceed with anapæsts in the second, or even with the less accordant dactyls, as in the opening of quite a pretty specimen of verse by Miss Mary A. S. Aldrich:

The wa | ter li | ly sleeps | in pride |
Dŏwn ĭn thĕ | dĕpths ŏf thĕ | ăzūre |
lake. |

Here *azure* is a spondee, equivalent to a dactyl; *lake* a cæsura.

I shall now best proceed in quoting the initial lines of Byron's "Bride of Abydos":

Know ye the land where the cypress and myrtle
Are emblems of deeds that are done in their clime,
Where the rage of the vulture, the love of the turtle
Now melt into softness, now madden to crime?
Know ye the land of the cedar and vine,
Where the flowers ever blossom, the beams ever shine,
And the light wings of Zephyr, oppressed with perfume,
Wax faint o'er the gardens of Gul in their bloom?
Where the citron and olive are fairest of fruit
And the voice of the nightingale never is mute—
Where the virgins are soft as the roses they twine,
And all save the spirit of man is divine?
'Tis the land of the East—'tis the clime of the Sun—
Can he smile on such deeds as his children have done?
Oh, wild as the accents of lovers' farewell
Are the hearts that they bear and the tales that they tell.

Now the flow of these lines (as times go) is very sweet and musical. They have been often admired, and justly—as times go—that is to say, it is a rare thing to find better versification of its kind. And where verse is pleasant to the ear, it is silly to find fault with it because it refuses to be scanned. Yet I have heard men, professing to be scholars, who made no scruple of abusing these lines of Byron's on the ground that they were musical in spite of *all law*. Other gentlemen, *not* scholars, abused "all law" for the same reason—and it occurred neither to the one party nor to the other that the law about which they were disputing might possibly be no law at all—an ass of a law in the skin of a lion.

The Grammars said nothing about dactylic lines, and it was easily seen that *these* lines were at least meant for dactylic. The first one was, therefore, thus divided:

Knōw yĕ thĕ | lānd whĕre thĕ | cўprĕss
ănd | mўrtlĕ. |

The concluding foot was a mystery; but the Prosodies said something about the dactylic "measure" calling now and then for a double rhyme; and the court of inquiry were content to rest in the double rhyme, without exactly perceiving what a double rhyme had to do with the question of an irregular foot. Quitting the first line, the second was thus scanned:

āre ĕmblĕms | ōf deĕds thăt | āre dōne
ĭn | thēir clĭme. |

It was immediately seen, however, that *this* would not do—it was at war with the whole emphasis of the reading. It could not be supposed that Byron, or any one in his senses, intended to place stress upon such monosyllables as "are," "of," and "their," nor could "their clime," collated with "to crime," in the corresponding line below, be fairly twisted into anything like a "double rhyme," so as to bring everything with-

in the category of the Grammars. But further these grammars spoke not. The inquirers, therefore, in spite of their sense of harmony in the lines, when considered without reference to scansion, fell upon the idea that the "Are" was a blunder—an excess for which the poet should be sent to Coventry—and, striking it out, they scanned the remainder of the line as follows:

— ēmblĕms ŏf | deēds thăt ăre | dōne
ĭn thĕir | clīme. |

This answered pretty well; but the Grammars admitted no such foot as a foot of one syllable; and besides the rhythm was dactylic. In despair, the books are well searched, however, and at last the investigators are gratified by a full solution of the riddle in the profound "Observation" quoted in the beginning of this article:—"When a syllable is wanting, the verse is said to be catalectic; when the measure is exact, the line is acatalectic; when there is a redundant syllable it forms hypermeter." This is enough. The anomalous line is pronounced to be catalectic at the head and to form hypermeter at the tail—and so on, and so on; it being soon discovered that nearly all the remaining lines are in a similar predicament, and that what flows so smoothly to the ear, although so roughly to the eye, is, after all, a mere jumble of catalecticism, acatalecticism, and hypermeter—not to say worse.

Now, had this court of inquiry been in possession of even the shadow of the *philosophy* of Verse, they would have had no trouble in reconciling this oil and water of the eye and ear, by merely scanning the passage without reference to lines, and, continuously, thus:

Know ye the | land where the| cypress and | myrtle Are | emblems of | deeds that are | done in their | clime | Where the | rage of the | vulture the | love of the | turtle Now | melt into | softness now | madden to | *crime* | Know ye the | land of the | cedar and | vine Where the | flowers ever | blossom the | beams ever | shine And the | light wings of | Zephyr op | pressed by per | *fume Wax* † faint o'er the | gardens of | Gul in their | bloom Where the | citron and | olive are | fairest of | fruit And the | voice of the | nightingale | never is | mute Where the | virgins are | soft as the | roses they | *twine And* | all save the | spirit of | man is di | vine. 'Tis the | land of the | East 'tis the | clime of the | Sun Can he | smile on such | deeds as his | children have | *done Oh* | wild as the | accents of | lovers' fare | well Are the | hearts that they | bear and the | tales that they | *tell.*

Here "crime" and "tell" (italicised) are cæsuras, each having the value of a dactyl, four short syllables, while "fume Wax," "twine and," and "done Oh," are spondees which, of course, being composed of two long syllables are also equal to four short, and are the dactyl's natural equivalent. The nicety of Byron's ear has led him into a succession of feet which, with two trivial exceptions as regards melody, are absolutely accurate, a very rare occurrence this in dactylic or anapæstic rhythms. The exceptions are found in the spondee *"twine And,"* and the dactyl *"smile on such."* Both feet are false in point of melody. In *"twine And"* to make out

the rhyme we must force *"And"* into a length which it will not naturally bear. We are called on to sacrifice either the proper length of the syllable as demanded by its position as a member of a spondee, or the customary accentuation of the word in conversation. There is no hesitation, and should be none. We at once give up the sound for the sense, and the rhythm is imperfect. In this instance it is *very* slightly so, not one person in ten thousand could by ear detect the inaccuracy. But the *perfection* of verse as regards melody, consists in its *never* demanding any such sacrifice as is here demanded. The rhythmical must agree *thoroughly* with the reading flow. This perfection has in no instance been attained, but is unquestionably attainable. *"Smile on such,"* the dactyl, is incorrect, because *"such,"* from the character of the two consonants *ch* cannot *easily* be enunciated in the ordinary time of a short syllable, which its position declares that it is. Almost every reader will be able to appreciate the slight difficulty here, and yet the error is by no means so important as that of the *"and"* in the spondee. By dexterity we *may* pronounce *"such"* in the true time, but the attempt to remedy the rhythmical deficiency of the *And* by drawing it out, merely aggregates the offence against natural enunciation by directing attention to the offence.

My main object, however, in quoting these lines is to show that in spite of the Prosodies, the length of a line is entirely an arbitrary matter. We might divide the commencement of Byron's poem thus:—

Know ye the | land where the |

or thus:

Know ye the | land where the | cypress and |

or thus:

Know ye the | land where the | cypress and | myrtle are |

or thus:

Know ye the | land where the | cypress and | myrtle are | emblems of |

In short, we may give it any division we please, and the lines will be good, provided we have at least *two* feet in a line. As in mathematics two units are required to form number, so rhythm (from the Greek *arithmos*, number) demands for its formation at least two feet. Beyond doubt, we often see such lines as

Know ye the—
Land where the—

lines of one foot, and our Prosodies admit such, but with impropriety, for common sense would dictate that every so obvious division of a poem as is made by a line, should include within itself all that is necessary for its own comprehension, but in a line of one foot we can have no appreciation of *rhythm*, which depends upon the equality between *two* or more pulsations. The false lines, consisting sometimes of a single cæsura, which are seen in mock Pindaric odes, are, of course, "rhythmical" only in connection with some other line, and it is this want of independent rhythm which adapts them to the purposes of burlesque alone. Their

effect is that of incongruity (the principle of mirth), for they include the blankness of prose amid the harmony of verse.

My second object in quoting Byron's lines was that of showing how absurd it often is to cite a single line from amid the body of a poem for the purpose of instancing the perfection or imperfection of the line's rhythm. Were we to see by itself

Know ye the land where the cypress and myrtle,

we might justly condemn it as defective in the final foot, which is equal to only three, instead of being equal to four short syllables.

In the foot *"flowers ever"* we shall find a further exemplification of the principle of the bastard iambus, bastard trochee, and quick trochee, as I have been at some pains in describing these feet above. All the Prosodies on English verse would insist upon making an elision in "flowers," thus (flow'rs), but this is nonsense. In the quick trochee (mănў ăre thĕ) occurring in Mr. Cranch's *trochaic* line, we had to equalise the time of the three syllables (*ny, are, the*) to that of the one *short* syllable whose position they usurp. Accordingly each of these syllables is equal to the third of a short syllable, that is to say, the *sixth of a long*. But in Byron's *dactylic* rhythm, we have to equalise the time of the three syllables (*ers, ev, er*) to that of the one *long* syllable whose position they usurp, or (which is the same thing) of the *two short*. Therefore the value of each of the syllables (*ers, ev,* and *er*) is the *third of a long*. We enunciate them with only half the rapidity we employ in enunciating the three final syllables of the quick trochee—which latter is a rare foot. The *"flowers ever,"* on the contrary, is as common in the dactylic rhythm as is the *bastard* trochee in the trochaic, or the bastard iambus in the iambic. We may as well accent it with the curve of the crescent to the right and call it a *bastard dactyl*. A *bastard anapæst,* whose nature I now need be at no trouble in explaining, will of course occur now and then in an anapæstic rhythm.

In order to avoid any chance of that confusion which is apt to be introduced in an essay of this kind by too sudden and radical an alteration of the conventionalities to which the reader has been accustomed, I have thought it right to suggest for the accent marks of the bastard trochee, bastard iambus, etc. etc., certain characters which, in merely varying the direction of the ordinary short accent (˘) should imply, what is the fact, that the feet themselves are not *new* feet, in any proper sense, but simply modifications of the feet, respectively, from which they derive their names. Thus a bastard iambus is, in its essentiality, that is to say, in its time an iambus. The variation lies only in the *distribution* of this time. The time, for example, occupied by the one short (*or half of long*) syllable in the ordinary iambus is in the bastard spread equally over two syllables, which are accordingly the *fourth of long*.

But this fact—the fact of the essentiality, or whole time, of the foot being unchanged, is now so fully before the reader, that I may venture to propose, finally, an accentuation which shall answer the real purpose—that is to say,

what should be the real purpose, of all accentuation—the purpose of expressing to the eye the exact relative value of every syllable employed in Verse.

I have already shown that enunciation, or *length*, is the point from which we start. In other words, we begin with a *long syllable*. This then is our unit; and there will be no need of accenting it at all. An unaccented syllable, in a system of accentuation, is to be regarded always as a long syllable. Thus a spondee would be without accent. In an iambus, the first syllable being "short," or the *half* of long, should be accented with a small 2, placed *beneath* the syllable; the last syllable, being long, should be unaccented; the whole would be thus (control). In a trochee,

these accents would be merely conversed, thus (manly). In a dactyl, each

of the two final syllables, being the half of long, should also be accented with a small 2 beneath the syllable; and the first syllable left unaccented, the whole would be thus (happiness). In an anapæst we should converse the dactyl thus (in the land). In the bastard dactyl, each of the three concluding syllables being the *third* of long, should be accented with a small 3 beneath the syllable, and the whole foot would stand thus (flowers ever). In the bastard anapæst we should converse the bastard dactyl thus (in the rebound). In the

bastard iambus, each of the two initial syllables, being the fourth of long, should be accented below with a small 4; the whole foot would be thus, (in the rain). In the bastard trochee, we should converse the bastard iambus thus (many a). In the quick trochee, each

of the three concluding syllables, being the *sixth* of long, should be accented below with a small 6; the whole foot would be thus (many are the). The quick iambus is not yet created, and most probably never will be; for it will be excessively useless, awkward, and liable to misconception—as I have already shown that even the quick trochee is;—but, should it appear, we must accent it by conversing the quick trochee. The cæsura, being variable in length, but always *longer than "long,"* should be accented *above*, with a number expressing the length or value of the distinctive foot of the rhythm in which it occurs. Thus a cæsura, occurring in a spondaic rhythm, would be accented with a small 2 above the syllable, or rather foot. Occurring in a dactylic or anapæstic rhythm, we also accent it with the 2 above the foot. Occurring in an iambic rhythm, however, it must be accented above with 1½; for this is the relative value of the iambus. Occurring in the trochaic rhythm, we give it of course the same accentuation. For the complex 1½, however, it would be advisable to substitute the simpler expression 3/2, which amounts to the same thing.

In this system of accentuation Mr. Cranch's lines quoted above, would thus be written:

Many are the | thoughts that | come to |
6 6 6' 2 2

3/2
| me

In my | lonely | musing |
2 2 2

2
And they | drift so | strange and | swift
2 2 2

There's no | time for | choosing |
2 2 2

3/2
Which to | follow | for to | leave
2 2 2

Any, | seems a | losing. |
2 2

In the ordinary system the accentuation would be thus:

Mānў arĕ thĕ | thōughts thăt | cōme
tŏ | mē
īn mў | lōnelў | mūsĭng, |
ānd thēy | drīft sŏ | strānge ănd | swīft |
Thēre's nŏ | tīme fŏr | choōsĭng |
Whīch tŏ | fōllōw, | fŏr tŏ | lēave
ānў, | seēms ă | lōsĭng. |

It must be observed here that I do not grant this to be the "ordinary" *scansion*. On the contrary, I never yet met the man who had the faintest comprehension of the true scanning of these lines, or of such as these. But granting this to be the mode in which our Prosodies would divide the feet they would accentuate the syllables as just above.

Now let any reasonable person compare the two modes. The first advantage seen in my mode is that of simplicity, of time, labour, and ink saved. Counting the fractions as *two* accents even there will be found only *twenty-six* accents to the stanza. In the common accentuation there are *forty-one*. But admit that all this is a trifle, which it is *not*, and let us proceed to points of importance. Does the common accentuation express the truth in particular, in general, or in any regard? Is it consistent with itself? Does it convey either to the ignorant or to the scholar a just conception of the rhythm of the lines? Each of these questions must be answered in the negative. The crescents being precisely similar must be understood as expressing, all of them, one and the same thing, and so all prosodies have always understood them and wished them to be understood. They express indeed "short," but this word has all kinds of meanings. It serves to represent (the reader is left to guess *when*) sometimes the half, sometimes the third, sometimes the fourth, sometimes the sixth, of "long," while "long" itself in the books is left undefined and undescribed. On the other hand, the horizontal accent, it may be said, expresses sufficiently well and unvaryingly the syllables which are meant to be long. It does nothing of the kind. This horizontal accent is placed over the cæsura (wherever, as in the Latin Prosodies, the cæsura is recognised) as well as over the ordinary long syllable, and implies anything and everything, just as the crescent. But grant that it does express the ordinary long syllables (leaving the cæsura out of question) have I not given the identical expression by not employing any expression at all? In a word, while the Prosodies, with a certain number of accents, express *precisely nothing whatever*, I with scarcely half the number, have expressed everything which in a system of accentuation demands expression. In glancing at my mode in the lines of Mr. Cranch, it will be seen that it conveys

not only the exact relation of the syllables and feet, among themselves, in those particular lines, but their precise value in relation to any other existing or conceivable feet or syllables in any existing or conceivable system of rhythm.

The object of what we call *scansion* is the distinct marking of the rhythmical flow. Scansion with accents or perpendicular lines between the feet, that is to say scansion *by* the voice only, is scansion *to* the ear only, and all very good in its way. The written scansion addresses the ear through the eye. In either case the object is the distinct marking of the rhythmical, musical, or reading flow. There *can* be no other object, and there is none. Of course, then, the scansion and the reading flow should go hand in hand. The former must agree with the latter. The former represents and expresses the latter, and is good or bad as it truly or falsely represents and expresses it. If by the written scansion of a line we are not enabled to perceive any rhythm or music in the line, then either the line is unrhythmical or the scansion false. Apply all this to the English lines which we have quoted at various points in the course of this article. It will be found that the scansion exactly conveys the rhythm, and thus thoroughly fulfils the only purpose for which scansion is required.

But let the scansion *of the schools* be applied to the Greek and Latin verse, and what result do we find?—that the verse is one thing and the scansion quite another. The ancient verse *read* aloud is in general musical, and occasionally *very* musical. *Scanned* by the Prosodial rules we can, for the most part, make nothing of it whatever. In the case of the English verse the more emphatically we dwell on the divisions between the feet the more distinct is our perception of the kind of rhythm intended. In the case of the Greek and Latin the more we dwell the *less* distinct is this perception. To make this clear by an example:

Mæcenas, atavis edite regibus,
O, et præsidium et dulce decus meum,
Sunt quos curriculo pulverem Olympicum
Collegisse juvat, metaque fervidis
Evitata rotis, palmaque nobilis
Terrarum dominos evehit ad Deos.

Now in *reading* these lines there is scarcely one person in a thousand who, if even ignorant of Latin, will not immediately feel and appreciate their flow, their music. A prosodist, however, informs the public that the *scansion* runs thus:

Mæce | nas ata | vis | edite | regibus |
O, et | præsidi' | et | dulce de | cus meum |
Sunt quos | curricu | lo | pulver' O | lympicum |
Colle | gisse ju | vat | metaque | fervidis |
Evi | tata ro | tis | palmaque | nobilis |
Terra | rum domi | nos | evehit | ad Deos. |

Now I do not deny that we get a *certain sort* of music from the lines if we read them according to this scansion, but I wish to call attention to the fact that this scansion and the certain sort of music which grows out of it are entirely at war, not only with the reading

flow which any ordinary person would naturally give the lines, but with the reading flow universally given them, and never denied them by even the most obstinate and stolid of scholars.

And now these questions are forced upon us—"Why exists this discrepancy between the modern verse with its scansion and the ancient verse with its scansion?"—"Why in the former case are there agreement and representation, while in the latter there is neither the one or the other?" or, to come to the point, "How are we to reconcile the ancient verse with the scholastic scansion of it?" This absolutely necessary conciliation—shall we bring it about by supposing the scholastic scansion wrong because the ancient verse is right, or by maintaining that the ancient verse is wrong because the scholastic scansion is not to be gainsaid?

Were we to adopt the latter mode of arranging the difficulty, we might, in some measure at least, simplify the expression of the arrangement by putting it thus—Because the pedants have no eyes therefore the old poets had no ears.

"But," say the gentlemen without the eyes, "the scholastic scansion, although certainly not handed down to us in form from the old poets themselves (the gentlemen without the ears), is nevertheless deduced from certain facts which are supplied us by careful observation of the old poems."

And let us illustrate this strong position by an example from an American poet, who must be a poet of some eminence or he will not answer the purpose. Let us take Mr. Alfred B. Street. I remember these two lines of his:

His sinuous path, by blazes, wound
Among trunks grouped in myriads round.

With the *sense* of these lines I have nothing to do. When a poet is in a "fine frenzy," he may as well imagine a large forest as a small one—and "by blazes!" is *not* intended for an oath. My concern is with the rhythm, which is iambic.

Now let us suppose that, a thousand years hence, when the "American language" is dead, a learned prosodist should be deducing from "careful observation" of our best poets, a system of scansion for our poetry. And let us suppose that this prosodist had so little dependence in the generality and immutability of the laws of Nature as to assume in the outset that, because we lived a thousand years before his time, and made use of steam engines instead of mesmeric balloons, we must therefore have had a *very* singular fashion of mouthing our vowels, and altogether of *Hudsonising* our verse. And let us suppose that with these and other fundamental propositions carefully put away in his brain, he should arrive at the line—

Among | trunks grouped | in my | riads round.

Finding it an obviously iambic rhythm, he would divide it as above; and observing that "trunks" made the first member of an iambus, he would call it short, as Mr. Street intended it to be. Now further:—if instead of admitting the possibility that Mr. Street (who by that time would be called Street simply, just as we say Homer)—that Mr. Street

might have been in the habit of writing carelessly, as the poets of the prosodist's own era did, and as all poets will do (on account of being geniuses)—instead of admitting this, suppose the learned scholar should make a "rule" and put it in a book, to the effect that, in the American verse, the vowel *u, when found imbedded among nine consonants,* was *short:* what, under such circumstances, would the sensible people of the scholar's day have a right not only to think, but to say of that scholar?—why, that he was a "fool—by blazes!"

I have put an extreme case, but it strikes at the root of the error. The "rules" are grounded in "authority;" and this "authority"—can any one tell us what it means? or can any one suggest anything that it may *not* mean? Is it not clear that the "scholar" above referred to, might as readily have deduced from authority a totally false system as a partially true one? To deduce from authority a consistent prosody of the ancient metres would indeed have been within the limits of the barest possibility; and the task has *not* been accomplished, for the reason that it demands a species of ratiocination altogether out of keeping with the brain of a bookworm. A rigid scrutiny will show that the very few "rules" which have not as many exceptions as examples, are those which have, by accident, their true bases not in authority, but in the omniprevalent laws of syllabification; such, for example, as the rule which declares a vowel before two consonants to be long.

In a word, the gross confusion and antagonism of the scholastic prosody, as its marked inapplicability to the reading flow of the rhythms it pretends to illustrate, are attributable, first, to the utter absence of natural principle as a guide in the investigations which have been undertaken by inadequate men; and secondly, to the neglect of the obvious consideration that the ancient poems, which have been the *criteria* throughout, were the work of men who must have written as loosely, and with as little definitive system as ourselves.

Were Horace alive to-day, he would divide for us his first Ode thus, and "make great eyes" when assured by the prosodists that he had no business to make any such division!

Mæcenas | atavis | edite | regibus |
2 2 2 3 2 2 2 2

O et præ | sidium et | dulce de | cus
2 2 3 3 3 2 2

meum |
2 2

Sunt quos cur | riculo | pulverem O |
2 2 2 2 3 3 3

lympicum |
2 2

Collegisse | juvat | metaque | fervidis |
3 3 3 2 2 2 2

Evitata | rotis | palmaque | nobilis |
3 3 3 2 2 2 2

Terrarum | dominos | evehit | ad Deos. |
2 2 2 2 2 2 2 2

Read by this scansion, the flow is preserved; and the more we dwell on the divisions, the more the intended rhythm becomes apparent. Moreover, the feet have all the same time; while in the scholastic scansions, trochees—admitted trochees—are absurdly employed as equivalents to spondees and dactyls. The books declare, for instance, that the first foot of this species of verse

may be a trochee, and seem to be gloriously unconscious that to put a trochee in apposition with a longer foot, is to violate the inviolable principle of all music, *time*.

It will be said, however, by some people, that I have no business to make a dactyl out of such obviously long syllables as *sunt quos cur*. Certainly I have no business to do so. I *never* do so. And Horace should not have done so. But he did. Mr. Bryant and Mr. Longfellow do the same thing every day. And merely because these gentlemen now and then forget themselves in this way, it would be hard if some future prosodist should insist upon twisting the "Thanatopsis," or the "Spanish Student," into a jumble of trochees, spondees, and dactyls.

It may be said also by some other people that, in the word *decus*, I have succeeded no better than the books, in making the scansional agree with the reading flow; and that *decus* was not pronounced de*cus*. I reply, that there can be no doubt of the word having been pronounced, in this case, de*cus*. It must be observed that the Latin inflection, or variation of a word in its terminating syllables, caused the Romans—*must* have caused them—to pay greater attention to the termination of a word than to its commencement, or than we do to the termination of our words. The end of the Latin word established that relation of the word with other words which we establish by preposition or auxiliary verbs. Therefore it would seem infinitely less odd to them, than it does to us, to dwell at any time, for any slight purpose, abnormally, on a terminating syllable. In verse, this license—scarcely a license—would be frequently admitted. These ideas unlock the secret of such lines as the

Litoreis ingens inventa sub illici*bus sus*,

and the

Parturiunt montes; nascetur ridicu*lus mus*.

which I quoted some time ago while speaking of rhyme.

As regards the prosodial elisions, such as that of *rem* before O, in *pulverem Olympicum*, it is really difficult to understand how so dismally silly a notion could have entered the brain even of a pedant. Were it demanded of me why the books cut off one *vowel* before another, I might say—It is perhaps because the books think that, since a bad reader is so apt to slide the one vowel into the other at any rate, it is just as well to print them *ready-slided*. But in the case of the terminating *m*, which is the most readily pronounced of all consonants (as the infantile *mamma* will testify), and the most impossible to cheat the ear of by any system of sliding—in the case of the *m*, I should be driven to reply that, to the best of my belief, the prosodists did the thing, because they had a fancy for doing it, and wished to see how funny it would look after it was done. The thinking reader will perceive that, from the great facility with which *em* may be enunciated, it is admirably suited to form one of the rapid short syllables in the bastard dactyl (pulverem O); but because

* * *

the books had no conception of a bastard dactyl, they knocked it on the head at once—by cutting off its tail!

Let me now give a specimen of the true scansion of another Horatian meas-

ure—embodying an instance of proper elision.

Integer | vitæ | scelerisque | purus |
2 2 3 3 3

Non eget | Mauri | jaculis ne | que arcu |
2 2 3 3 3

Nec vene | natis | gravida sa | gittis,
2 2 3 3 3

Fusce, pha | retrâ.

Here the regular recurrence of the bastard dactyl gives great animation to the rhythm. The *e* before the *a* in *que arcu,* is, almost of sheer necessity, cut off—that is to say, run into the *a* so as to preserve the spondee. But even this license it would have been better not to take.

Had I space, nothing would afford me greater pleasure than to proceed with the scanscion of *all* the ancient rhythms, and to show how easily, by the help of common sense, the intended music of each and all can be rendered instantaneously apparent. But I have already overstepped my limits, and must bring this paper to an end.

It will never do, however, to omit all mention of the heroic hexameter.

I began the "processes" by a suggestion of the spondee as the first step towards verse. But the innate monotony of the spondee has caused its disappearance as the basis of rhythm from all modern poetry. We *may* say, indeed, that the French heroic—the most wretchedly monotonous verse in existence—is to all intents and purposes spondaic. But it is not designedly spondaic, and if the French were ever to examine it at all, they would no doubt pronounce it iambic. It must be observed that the French language is strangely peculiar in this point—*that it is without accentuation and consequently without verse.* The genius of the people, rather than the structure of the tongue, declares that their words are for the most part enunciated with a uniform dwelling on each syllable. For example *we* say "syllabification." A Frenchman would say syl-la-bi-fi-ca-ti-on, dwelling on no one of the syllables with any noticeable particularity. Here again I put an extreme case in order to be well understood, but the general fact is as I give it—that, comparatively, the French have *no* accentuation; and there can be nothing worth the name of verse without. Therefore, the French have no verse worth the name—which is the fact put in sufficiently plain terms. Their iambic rhythm so superabounds in absolute spondees as to warrant me in calling its basis spondaic; but French is the *only* modern tongue which has any rhythm with such basis, and even in the French it is, as I have said, unintentional.

Admitting, however, the validity of my suggestion, that the spondee was the first approach to verse, we should expect to find, first, natural spondees (words each forming just a spondee) most abundant in the most ancient languages; and, secondly, we should expect to find spondees forming the basis of the most ancient rhythms. These expectations are in both cases confirmed.

Of the Greek hexameter the intentional basis is spondaic. The dactyls are the *variation* of the theme. It will be observed that there is no absolute certainty about *their* points of interposition. The penultimate foot, it is true, is usually a dactyl, but not uniformly so, while the ultimate, on which

the ear *lingers,* is always a spondee. Even that the penultimate is usually a dactyl may be clearly referred to the necessity of winding up with the *distinctive* spondee. In corroboration of this idea, again, we should look to find the penultimate spondee most usual in the most ancient verse, and, accordingly, we find it more frequent in the Greek than in the Latin hexameter.

But besides all this, spondees are not only more prevalent in the heroic hexameter than dactyls, but occur to such an extent as is even unpleasant to modern ears, on account of monotony. What the modern chiefly appreciates and admires in the Greek hexameter is the *melody of the abundant vowel sounds.* The Latin hexameters *really* please very few moderns—although so many pretend to fall into ecstasies about them. In the hexameters quoted several pages ago, from Silius Italicus, the preponderance of the spondee is strikingly manifest. Besides the natural spondees of the Greek and Latin, numerous artificial ones arise in the verse of these tongues, on account of the tendency which inflection has to throw full accentuation on terminal syllables, and the preponderance of the spondee is further ensured by the comparative infrequency of the small prepositions which *we* have to serve us *instead* of case, and also the absence of the diminutive auxiliary verbs with which *we* have to eke out the expression of our primary ones. These are the monosyllables whose abundance serves to stamp the poetic genius of a language as tripping or dactylic.

Now paying no attention to these facts, Sir Philip Sidney, Professor Longfellow, and innumerable other persons, more or less modern, have busied themselves in constructing what they supposed to be "English hexameters on the model of the Greek." The only difficulty was that (even leaving out of question the melodious masses of vowel) these gentlemen never could get their English hexameters to *sound* Greek. Did they *look* Greek?—that should have been the query, and the reply might have led to a solution of the riddle. In placing a copy of ancient hexameters side by side with a copy (in similar type) of such hexameters as Professor Longfellow, or Professor Felton, or the Frogpondian Professors collectively, are in the shameful practice of composing "on the model of the Greek," it will be seen that the latter (hexameters, not professors) are about one-third longer *to the eye,* on an average, than the former. The more abundant dactyls make the difference. And it is the greater number of spondees in the Greek than in the English, in the ancient than in the modern tongue, which has caused it to fall out that while these eminent scholars were groping about in the dark for a Greek hexameter, which is a spondaic rhythm varied now and then by dactyls, they merely stumbled, to the lasting scandal of scholarship, over something which, on account of its long-leggedness, we may as well term a Feltonian hexameter, and which is a dactylic rhythm interrupted rarely by artificial spondees which are no spondees at all, and which are curiously thrown in by the heels at all kinds of improper and impertinent points.

Here is a specimen of the Longfellowine hexameter:

Also the | church with | in was a | dorned
for | this was the | season |

In which the | young their | parents' | hope and the | loved ones of | Heaven | Should at the | foot of the | altar re | new the | vows of their | baptism | Therefore each | nook and | corner was | swept and | cleaned and the | dust was |
Blown from the | walls and | ceiling and | from the | oil-painted | benches. |

Mr. Longfellow is a man of imagination, but *can* he imagine that any individual, with a proper understanding of the danger of lockjaw, would make the attempt of twisting his mouth into the shape necessary for the emission of such spondees as "par*ents*," and "from the," or such dactyls as "cleaned and the," and "loved ones of"? "Baptism" is by no means a bad spondee—perhaps because it happens to be a dactyl,—of all the rest, however, I am dreadfully ashamed.

But these feet, dactyls and spondees, all together, should thus be put at once into their proper position:

"Also, the church within was adorned; for this was the season in which the young, their parents' hope, and the loved ones of Heaven, should, at the foot of the altar, renew the vows of their baptism. Therefore, each nook and corner was swept and cleaned; and the dust was blown from the walls and ceiling, and from the oil-painted benches."

There!—That is respectable prose, and it will incur no danger of ever getting its character ruined by anybody's mistaking it for verse.

But even when we let these modern hexameters go as Greek, and merely hold them fast in their proper character of Longfellowine, or Feltonian, or Frogpondian, we must still condemn them as having been committed in a radical misconception of the philosophy of verse. The spondee, as I observed, is the *theme* of the Greek line. Most of the ancient hexameters *begin* with spondees, for the reason that the spondee *is* the theme, and the ear is filled with it as with a burden. Now the Feltonian dactylics have, in the same way, dactyls for the theme, and most of them begin with dactyls—which is all very proper if not very Greek—but unhappily, the one point at which they *are* very Greek is that point, precisely, at which they should be nothing but Feltonian. They always *close* with what is meant for a spondee. To be consistently silly they should die off in a dactyl.

That a truly Greek hexameter *cannot*, however, be readily composed in English, is a proposition which I am by no means inclined to admit. I think I could manage the point myself. For example:

Do tell! | when may we | hope to make | men of sense | out of the | Pundits
Born and brought | up with their | snouts deep | down in the | mud of the | Frog-ponds?
Why ask? | who ever | yet saw | money made | out of a | fat old
Jew, or | downright | upright | nutmegs | out of a | pine-knot?

The proper spondee predominance is here preserved. Some of the dactyls are not so good as I could wish, but, upon the whole the rhythm is very decent—to say nothing of its excellent sense.

The Philosophy of Composition

(Published in *Graham's Magazine,* April, 1846.—Ed.)

Charles Dickens, in a note now lying before me, alluding to an examination I once made of the mechanism of "Barnaby Rudge," says—"By the way, are you aware that Godwin wrote his Caleb Williams backwards? He first involved his hero in a web of difficulties, forming the second volume, and then, for the first, cast about him for some mode of accounting for what had been done."

I cannot think this the *precise* mode of procedure on the part of Godwin—and indeed what he himself acknowledges is not altogether in accordance with Mr. Dickens's idea—but the author of "Caleb Williams" was too good an artist not to perceive the advantage derivable from at least a somewhat similar process. Nothing is more clear than that every plot, worth the name, must be elaborated to its *denouement* before anything be attempted with the pen. It is only with the *denouement* constantly in view that we can give a plot its indispensable air of consequence, or causation, by making the incidents, and especially the tone, at all points, tend to the development of the intention.

There is a radical error, I think, in the usual mode of constructing a story. Either history affords a thesis—or one is suggested by an incident of the day—or, at best, the author sets himself to work in the combination of striking events to form merely the basis of his narrative—designing, generally, to fill in with description, dialogue, or authorial comment, whatever crevices of fact or action may, from page to page, render themselves apparent.

I prefer commencing with the consideration of an *effect.* Keeping originality *always* in view—for he is false to himself who ventures to dispense with so obvious and so easily attainable a source of interest—I say to myself, in the first place, "Of the innumerable effects or impressions of which the heart, the intellect, or (more generally) the soul is susceptible, what one shall I, on the present occasion, select?" Having chosen a novel first, and secondly, a vivid effect, I consider whether it can be best wrought by incident or tone—whether by ordinary incidents and peculiar tone, or the converse, or by peculiarity both of incident and tone—afterwards looking about me (or rather within) for such combinations of event or tone as shall best aid me in the construction of the effect.

I have often thought how interesting a magazine paper might be written by any author who would—that is to say, who could—detail, step by step, the processes by which any one of his compositions attained its ultimate point of completion. Why such a paper has never been given to the world, I am much at a loss to say—but perhaps the authorial vanity has had more to do with the omission than any one other cause. Most writers—poets in especial—prefer having it understood that they compose by a species of fine frenzy—an ecstatic intuition—and would posi-

tively shudder at letting the public take a peep behind the scenes, at the elaborate and vacillating crudities of thought —at the true purposes seized only at the last moment—at the innumerable glimpses of idea that arrived not at the maturity of full view—at the fully-matured fancies discarded in despair as unmanageable—at the cautious selections and rejections—at the painful erasures and interpolations—in a word, at the wheels and pinions—the tackle for scene-shifting—the step-ladders, and demon-traps—the cock's feathers, the red paint and the black patches, which, in ninety-nine cases out of the hundred, constitute the properties of the literary *histrio*.

I am aware, on the other hand, that the case is by no means common, in which an author is at all in condition to retrace the steps by which his conclusions have been attained. In general, suggestions, having arisen pell-mell, are pursued and forgotten in a similar manner.

For my own part, I have neither sympathy with the repugnance alluded to, nor, at any time, the least difficulty in recalling to mind the progressive steps of any of my compositions, and, since the interest of an analysis, or reconstruction, such as I have considered a *desideratum*, is quite independent of any real or fancied interest in the thing analysed, it will not be regarded as a breach of decorum on my part to show the *modus operandi* by which some one of my own works was put together. I select "The Raven" as most generally known. It is my design to render it manifest that no one point in its composition is referable either to accident or intuition—that the work proceeded step by step, to its completion, with the precision and rigid consequence of a mathematical problem.

Let us dismiss, as irrelevant to the poem, *per se*, the circumstance—or say the necessity—which, in the first place, gave rise to the intention of composing *a* poem that should suit at once the popular and the critical taste.

We commence, then, with this intention.

The initial consideration was that of extent. If any literary work is too long to be read at one sitting, we must be content to dispense with the immensely important effect derivable from unity of impression—for, if two sittings be required, the affairs of the world interfere, and everything like totality is at once destroyed. But since, *ceteris paribus*, no poet can afford to dispense with *anything* that may advance his design, it but remains to be seen whether there is, in extent, any advantage to counterbalance the loss of unity which attends it. Here I say no, at once. What we term a long poem is, in fact, merely a succession of brief ones—that is to say, of brief poetical effects. It is needless to demonstrate that a poem is such only inasmuch as it intensely excites, by elevating the soul; and all intense excitements are, through a psychal necessity, brief. For this reason, at least, one-half of the "Paradise Lost" is essentially prose—a succession of poetical excitements interspersed, *inevitably*, with corresponding depressions—the whole being deprived, through the extremeness of its length, of the vastly important artistic element, totality, or unity of effect.

It appears evident, then, that there is a distinct limit, as regards length, to

all works of literary art—the limit of a single sitting—and that, although in certain classes of prose composition, such as "Robinson Crusoe" (demanding no unity), this limit may be advantageously overpressed, it can never properly be overpassed in a poem. Within this limit, the extent of a poem may be made to bear mathematical relation to its merit—in other words, to the excitement or elevation—again, in other words, to the degree of the true poetical effect which it is capable of inducing; for it is clear that the brevity must be in direct ratio of the intensity of the intended effect—this, with one proviso—that a certain degree of duration is absolutely requisite for the production of any effect at all.

Holding in view these considerations, as well as that degree of excitement which I deemed not above the popular, while not below the critical taste, I reached at once what I conceived the proper *length* for my intended poem—a length of about one hundred lines. It is, in fact, a hundred and eight.

My next thought concerned the choice of an impression, or effect, to be conveyed: and here I may as well observe that, throughout the construction, I kept steadily in view the design of rendering the work *universally* appreciable. I should be carried too far out of my immediate topic were I to demonstrate a point upon which I have repeatedly insisted, and which, with the poetical, stands not in the slightest need of demonstration—the point, I mean, that Beauty is the sole legitimate province of the poem. A few words, however, in elucidation of my real meaning, which some of my friends have evinced a disposition to misrepresent. That pleasure which is at once the most intense, the most elevating, and the most pure is, I believe, found in the contemplation of the beautiful. When, indeed, men speak of Beauty, they mean, precisely, not a quality, as is supposed, but an effect—they refer, in short, just to that intense and pure elevation of *soul—not* of intellect, or of heart—upon which I have commented, and which is experienced in consequence of contemplating the "beautiful." Now I designate Beauty as the province of the poem, merely because it is an obvious rule of Art that effects should be made to spring from direct causes—that objects should be attained through means best adapted for their attainment—no one as yet having been weak enough to deny that the peculiar elevation alluded to is *most readily* attained in the poem. Now the object Truth, or the satisfaction of the intellect, and the object Passion, or the excitement of the heart, are, although attainable to a certain extent in poetry, far more readily attainable in prose. Truth, in fact, demands a precision, and Passion, a *homeliness* (the truly passionate will comprehend me), which are absolutely antagonistic to that Beauty which, I maintain, is the excitement, or pleasurable elevation of the soul. It by no means follows, from anything here said, that passion, or even truth, may not be introduced, and even profitably introduced, into a poem for they may serve in elucidation, or aid the general effect, as do discords in music, by contrast—but the true artist will always contrive, first, to tone them into proper subservience to the predominant aim, and, secondly, to enveil them, as far as possible, in

that Beauty which is the atmosphere and the essence of the poem.

Regarding, then, Beauty as my province, my next question referred to the *tone* of its highest manifestation—and all experience has shown that this tone is one of *sadness*. Beauty of whatever kind, in its supreme development, invariably excites the sensitive soul to tears. Melancholy is thus the most legitimate of all the poetical tones.

The length, the province, and the tone, being thus determined, I betook myself to ordinary induction, with the view of obtaining some artistic piquancy which might serve me as a key-note in the construction of the poem—some pivot upon which the whole structure might turn. In carefully thinking over all the usual artistic effects—or more properly *points*, in the theatrical sense—I did not fail to perceive immediately that no one had been so universally employed as that of the *refrain*. The universality of its employment sufficed to assure me of its intrinsic value, and spared me the necessity of submitting it to analysis. I considered it, however, with regard to its susceptibility of improvement, and soon saw it to be in a primitive condition. As commonly used, the *refrain*, or burden, not only is limited to lyric verse, but depends for its impression upon the force of monotone—both in sound and thought. The pleasure is deduced solely from the sense of identity—of repetition. I resolved to diversify, and so heighten the effect, by adhering in general to the monotone of sound, while I continually varied that of thought: that is to say, I determined to produce continuously novel effects, by the variation *of the application* of the *refrain*—the *refrain* itself remaining, for the most part, unvaried.

These points being settled, I next bethought me of the *nature* of my *refrain*. Since its application was to be repeatedly varied it was clear that the *refrain* itself must be brief, for there would have been an insurmountable difficulty in frequent variations of application in any sentence of length. In proportion to the brevity of the sentence would, of course, be the facility of the variation. This led me at once to a single word as the best *refrain*.

The question now arose as to the character of the word. Having made up my mind to a *refrain*, the division of the poem into stanzas was of course a corollary, the *refrain* forming the close to each stanza. That such a close, to have force, must be sonorous and susceptible of protracted emphasis, admitted no doubt, and these considerations inevitably led me to the long *o* as the most sonorous vowel in connection with *r* as the most producible consonant.

The sound of the *refrain* being thus determined, it became necessary to select a word embodying this sound, and at the same time in the fullest possible keeping with that melancholy which I had pre-determined as the tone of the poem. In such a search it would have been absolutely impossible to overlook the word "Nevermore." In fact it was the very first which presented itself.

The next *desideratum* was a pretext for the continuous use of the one word "nevermore." In observing the difficulty which I had at once found in inventing a sufficiently plausible reason for its continuous repetition, I did not

fail to perceive that this difficulty arose solely from the preassumption that the word was to be so continuously or monotonously spoken by a *human* being—I did not fail to perceive, in short, that the difficulty lay in the reconciliation of this monotony with the exercise of reason on the part of the creature repeating the word. Here, then, immediately arose the idea of a *non*-reasoning creature capable of speech, and very naturally, a parrot, in the first instance, suggested itself, but was superseded forthwith by a Raven as equally capable of speech, and infinitely more in keeping with the intended *tone*.

I had now gone so far as the conception of a Raven, the bird of ill-omen, monotonously repeating the one word "Nevermore" at the conclusion of each stanza in a poem of melancholy tone, and in length about one hundred lines. Now, never losing sight of the object—*supremeness* or perfection at all points, I asked myself—"Of all melancholy topics what, according to the *universal* understanding of mankind, is the *most* melancholy?" Death, was the obvious reply. "And when," I said, "is this most melancholy of topics most poetical?" From what I have already explained at some length the answer here also is obvious—"When it most closely allies itself to *Beauty:* the death then of a beautiful woman is unquestionably the most poetical topic in the world, and equally is it beyond doubt that the lips best suited for such topic are those of a bereaved lover."

I had now to combine the two ideas of a lover lamenting his deceased mistress and a Raven continuously repeating the word "Nevermore." I had to combine these, bearing in mind my design of varying at every turn the *application* of the word repeated, but the only intelligible mode of such combination is that of imagining the Raven employing the word in answer to the queries of the lover. And here it was that I saw at once the opportunity afforded for the effect on which I had been depending, that is to say, the effect of the *variation of application.* I saw that I could make the first query propounded by the lover—the first query to which the Raven should reply "Nevermore"—that I could make this first query a commonplace one, the second less so, the third still less, and so on, until at length the lover, startled from his original *nonchalance* by the melancholy character of the word itself, by its frequent repetition, and by a consideration of the ominous reputation of the fowl that uttered it, is at length excited to superstition, and wildly propounds queries of a far different character—queries whose solution he has passionately at heart—propounds them half in superstition and half in that species of despair which delights in self-torture—propounds them not altogether because he believes in the prophetic or demoniac character of the bird (which reason assures him is merely repeating a lesson learned by rote), but because he experiences a frenzied pleasure in so modelling his questions as to receive from the *expected* "Nevermore" the most delicious because the most intolerable of sorrows. Perceiving the opportunity thus afforded me, or, more strictly, thus forced upon me in the progress of the construction, I first established in my mind the climax or concluding query—that query to which "Nevermore" should be in the last

place an answer—that query in reply to which this word "Nevermore" should involve the utmost conceivable amount of sorrow and despair.

Here then the poem may be said to have had its beginning, at the end where all works of art should begin, for it was here at this point of my preconsiderations that I first put pen to paper in the composition of the stanza:

"Prophet!" said I, "thing of evil!
prophet still if bird or devil!
By that Heaven that bends above us—
by that God we both adore,
Tell this soul with sorrow laden, if,
within the distant Aidenn,
It shall clasp a sainted maiden whom
the angels name Lenore—
Clasp a rare and radiant maiden whom
the angels name Lenore."
Quoth the Raven—"Nevermore."

I composed this stanza, at this point, first, that, by establishing the climax, I might the better vary and graduate, as regards seriousness and importance, the preceding queries of the lover, and secondly, that I might definitely settle the rhythm, the metre, and the length and general arrangement of the stanza, as well as graduate the stanzas which were to precede, so that none of them might surpass this in rhythmical effect. Had I been able in the subsequent composition to construct more vigorous stanzas I should without scruple have purposely enfeebled them so as not to interfere with the climacteric effect.

And here I may as well say a few words of the versification. My first object (as usual) was originality. The extent to which this has been neglected in versification is one of the most unaccountable things in the world. Admitting that there is little possibility of variety in mere *rhythm*, it is still clear that the possible varieties of metre and stanza are absolutely infinite, and yet, *for centuries, no man, in verse, has ever done, or ever seemed to think of doing, an original thing.* The fact is that originality (unless in minds of very unusual force) is by no means a matter, as some suppose, of impulse or intuition. In general, to be found, it must be elaborately sought, and although a positive merit of the highest class, demands in its attainment less of invention than negation.

Of course I pretend to no originality in either the rhythm or metre of the "Raven." The former is trochaic—the latter is octametre acatalectic, alternating with heptametre catalectic repeated in the *refrain* of the fifth verse, and terminating with tetrametre catalectic. Less pedantically—the feet employed throughout (trochees) consist of a long syllable followed by a short; the first line of the stanza consists of eight of these feet, the second of seven and a half (in effect two-thirds), the third of eight, the fourth of seven and a half, the fifth the same, the sixth three and a half. Now, each of these lines taken individually has been employed before, and what originality the "Raven" has, is in their *combination into stanza*—nothing even remotely approaching this combination has ever been attempted. The effect of this originality of combination is aided by other unusual and some altogether novel effects, arising from an extension of the application of the principles of rhyme and alliteration.

The next point to be considered was the mode of bringing together the lover and the Raven—and the first branch of this consideration was the *locale*. For this the most natural suggestion might seem to be a forest, or the fields—but it has always appeared to me that a close *circumscription of space* is absolutely necessary to the effect of insulated incident—it has the force of a frame to a picture. It has an indisputable moral power in keeping concentrated the attention, and, of course, must not be confounded with mere unity of place.

I determined, then, to place the lover in his chamber—in a chamber rendered sacred to him by memories of her who had frequented it. The room is represented as richly furnished—this in mere pursuance of the ideas I have already explained on the subject of Beauty, as the sole true poetical thesis.

The *locale* being thus determined, I had now to introduce the bird—and the thought of introducing him through the window was inevitable. The idea of making the lover suppose, in the first instance, that the flapping of the wings of the bird against the shutter, is a "tapping" at the door, originated in a wish to increase, by prolonging, the reader's curiosity, and in a desire to admit the incidental effect arising from the lover's throwing open the door, finding all dark, and thence adopting the half-fancy that it was the spirit of his mistress that knocked.

I made the night tempestuous, first to account for the Raven's seeking admission, and secondly, for the effect of contrast with the (physical) serenity within the chamber.

I made the bird alight on the bust of Pallas, also for the effect of contrast between the marble and the plumage—it being understood that the bust was absolutely *suggested* by the bird—the bust of *Pallas* being chosen, first, as most in keeping with the scholarship of the lover, and secondly, for the sonorousness of the word, Pallas, itself.

About the middle of the poem, also, I have availed myself of the force of contrast, with a view of deepening the ultimate impression. For example, an air of the fantastic—approaching as nearly to the ludicrous as was admissible—is given to the Raven's entrance. He comes in "with many a flirt and flutter."

Not the *least obeisance made he*—not a moment stopped or stayed he,
But with mien of lord or lady, perched above my chamber door.

In the two stanzas which follow, the design is more obviously carried out:—

Then this ebony bird, beguiling my sad fancy into smiling
By the *grave and stern decorum of the countenance it wore*,
"Though thy *crest be shorn and shaven*, thou," I said, "art sure no craven,
Ghastly grim and ancient Raven wandering from the Nightly shore—
Tell me what thy lordly name is on the Night's Plutonian shore?"
Quoth the Raven—"Nevermore."

Much I marvelled *this ungainly fowl* to hear discourse so plainly,
Though its answer little meaning—little relevancy bore;
For we cannot help agreeing that no living human being

Ever yet was blessed with seeing bird above his chamber door—
Bird or beast upon the sculptured bust above his chamber door,
With such name as "Nevermore."

The effect of the *denouement* being thus provided for, I immediately drop the fantastic for a tone of the most profound seriousness—this tone commencing in the stanza directly following the one last quoted, with the line,

But the Raven, sitting lonely on that placid bust, spoke only, etc.

From this epoch the lover no longer jests—no longer sees anything even of the fantastic in the Raven's demeanour. He speaks of him as a "grim, ungainly, ghastly, gaunt, and ominous bird of yore," and feels the "fiery eyes" burning into his "bosom's core." This revolution of thought, or fancy, on the lover's part, is intended to induce a similar one on the part of the reader—to bring the mind into a proper frame for the *denouement*—which is now brought about as rapidly and as *directly* as possible.

With the *denouement* proper—with the Raven's reply, "Nevermore," to the lover's final demand if he shall meet his mistress in another world—the poem, in its obvious phase, that of a simple narrative, may be said to have its completion. So far, everything is within the limits of the accountable—of the real. A raven, having learned by rote the single word "Nevermore," and having escaped from the custody of its owner, is driven at midnight, through the violence of a storm, to seek admission at a window from which a light still gleams—the chamber-window of a student, occupied half in poring over a volume, half in dreaming of a beloved mistress deceased. The casement being thrown open at the fluttering of the bird's wings, the bird itself perches on the most convenient seat out of the immediate reach of the student, who amused by the incident and the oddity of the visitor's demeanour, demands of it, in jest and without looking for a reply, its name. The raven addressed, answers with its customary word, "Nevermore"—a word which finds immediate echo in the melancholy heart of the student, who, giving utterance aloud to certain thoughts suggested by the occasion, is again startled by the fowl's repetition of "Nevermore." The student now guesses the state of the case, but is impelled, as I have before explained, by the human thirst for self-torture, and in part by superstition, to propound such queries to the bird as will bring him, the lover, the most of the luxury of sorrow, through the anticipated answer, "Nevermore." With the indulgence, to the extreme, of this self-torture, the narration, in what I have termed its first or obvious phase, has a natural termination, and so far there has been no overstepping of the limits of the real.

But in subjects so handled, however skillfully, or with however vivid an array of incident, there is always a certain hardness or nakedness which repels the artistical eye. Two things are invariably required—first, some amount of complexity, or more properly, adaptation; and, secondly, some amount of suggestiveness — some under-current, however indefinite, of meaning. It is this latter, in especial, which imparts

to a work of art so much of that *richness* (to borrow from colloquy a forcible term), which we are too fond of confounding with *the ideal*. It is the *excess* of the suggested meaning—it is the rendering this the upper instead of the under-current of the theme—which turns into prose (and that of the very flattest kind), the so-called poetry of the so-called transcendentalists.

Holding these opinions, I added the two concluding stanzas of the poem—their suggestiveness being thus made to pervade all the narrative which has preceded them. The under-current of meaning is rendered first apparent in the line—

"Take thy beak from out *my heart*,
and take thy form from off my
door!"
Quoth the Raven "Nevermore!"

It will be observed that the words, "from out my heart," involve the first metaphorical expression in the poem. They, with the answer, "Nevermore," dispose the mind to seek a moral in all that has been previously narrated. The reader begins now to regard the Raven as emblematical—but it is not until the very last line of the very last stanza that the intention of making him emblematical of *Mournful and never ending Remembrance* is permitted distinctly to be seen:

And the Raven, never flitting, still is
sitting, still is sitting,
On the pallid bust of Pallas just above
my chamber door;
And his eyes have all the seeming of a
demon that is dreaming,
And the lamplight o'er him streaming
throws his shadow on the floor;
And my soul *from out that shadow* that
lies floating on the floor
Shall be lifted—nevermore.

Eureka

An Essay on the Material and Spiritual Universe.

(About the same period of the publication of this essay (1848) appeared a tale, Ourika.—Ed.)

(To the few who love me and whom I love—to those who feel rather than to those who think—to the dreamers and those who put faith in dreams as in the only realities—I offer this Book of Truths, not in its character of Truth-Teller, but for the Beauty that abounds in its Truth—constituting it true. To these I present the composition as an Art-Product alone—let us say as a Romance; or, if I be not urging too lofty a claim, as a Poem.

What I here propound is true—therefore it cannot die:—or if by any means it be now trodden down so that it die, it will "rise again to the Life Everlasting."

Nevertheless, it is as a Poem only that I wish this work to be judged after I am dead.—E. A. P.)

It is with humility really unassumed—it is with a sentiment even of awe—that I pen the opening sentence of this work:

for of all conceivable subjects I approach the reader with the most solemn —the most comprehensive—the most difficult—the most august.

What terms shall I find sufficiently simple in their sublimity—sufficiently sublime in their simplicity—for the mere enunciation of my theme?

I design to speak *of the Physical, Metaphysical, and Mathematical—of the Material and Spiritual Universe: of its Essence, its Origin, its Creation, its present Condition and its Destiny.* I shall be so rash, moreover, as to challenge the conclusions, and thus, in effect, to question the sagacity of many of the greatest and most justly reverenced of men.

In the beginning, let me as distinctly as possible announce—not the theorem which I hope to demonstrate—for, whatever the mathematicians may assert, there is, in this world at least, *no such thing* as demonstration; but the ruling idea which, throughout this volume, I shall be continually endeavoring to suggest.

My general proposition, then, is this: —*in the Original Unity of the First Thing lies the Secondary Cause of All Things, with the germ of their Inevitable Annihilation.*

In illustration of this idea, I propose to take such a survey of the Universe that the mind may be able really to receive and to perceive an individual impression.

He who from the top of Ætna casts his eyes leisurely around, is affected chiefly by the *extent* and *diversity* of the scene. Only by a rapid whirling on his heel could he hope to comprehend the panorama in the sublimity of its *oneness.* But as on the summit of Ætna, *no* man has thought of whirling on his heel, so no man has ever taken into his brain the full uniqueness of the prospect; and so, again, whatever considerations lie involved in this uniqueness, have as yet no practical existence for mankind.

I do not know a treatise in which a survey of the *Universe*—using the word in its most comprehensive and only legitimate acceptation—is taken at all; and it may be as well here to mention that by the term "Universe," wherever employed without qualification in this essay, I mean to designate *the utmost conceivable expanse of space with all things, spiritual and material, that can be imagined to exist within the compass of that expanse.* In speaking of what is *ordinarily* implied by the expression "Universe," I shall take a phrase of limitation, "the Universe of stars." Why this distinction is considered necessary will be seen in the sequel.

But even of treatises on the really limited, although always assumed as the *un*limited, Universe of *stars,* I know none in which a survey, even of this limited Universe, is so taken as to warrant deductions from its *individuality.* The nearest approach to such a work is made in the "Cosmos" of Alexander Von Humboldt. He presents the subject, however, *not* in its individuality but in its generality. His theme, in its last result, is the law of *each* portion of the merely physical Universe, as this law is related to the laws of *every other* portion of this merely physical Universe. His design is simply synæretical. In a word, he discusses the universality of material relation, and discloses to the eye of Philosophy whatever inferences have hitherto lain

hidden *behind* this universality. But however admirable be the succinctness with which he has treated each particular point of his topic, the mere multiplicity of these points occasions, necessarily, an amount of detail, and thus an involution of idea, which preclude all *individuality* of impression.

It seems to me that in aiming at this latter effect, and through it at the consequences, the conclusions, the suggestions, the speculations, or, if nothing better offer itself, the mere guesses which may result from it, we require something like a mental gyration on the heel. We need so rapid a revolution of all things about the central point of sight that, while the minutiæ vanish altogether, even the more conspicuous objects become blended into one. Among the vanishing minutiæ, in a survey of this kind, would be all exclusively terrestrial matters. The Earth would be considered in its planetary relations alone. A man in this view becomes mankind, mankind a member of the cosmical family of Intelligences.

And now, before proceeding to our subject proper, let me beg the reader's attention to an extract or two from a somewhat remarkable letter which appears to have been found corked in a bottle and floating on the *Mare tenebrarum*—an ocean well described by the Nubian geographer, Ptolemy Hephestion, but little frequented in modern days unless by the Transcendentalists and some other divers for crotchets. The date of this letter, I confess, surprises me even more particularly than its contents; for it seems to have been written in the year *two* thousand eight hundred and forty-eight. As for the passages I am about to transcribe, they, I fancy, will speak for themselves.

"Do you know, my dear friend," says the writer, addressing, no doubt, a contemporary, "Do you know that it is scarcely more than eight or nine hundred years ago since the metaphysicians first consented to relieve the people of the singular fancy that there exist *but two practicable roads to Truth!* Believe it if you can! It appears, however, that long, long ago, in the night of Time, there lived a Turkish philosopher called Aries and surnamed Tottle." [Here, possibly, the letter-writer means Aristotle; the best names are wretchedly corrupted in two or three thousand years.] "The fame of this great man depended mainly upon his demonstration that sneezing is a natural provision, by means of which over-profound thinkers are enabled to expel superfluous ideas through the nose; but he obtained a scarcely less valuable celebrity as the founder, or at all events as the principal propagator, of what was termed the *deductive* or *a priori* philosophy. He started with what he maintained to be axioms, or self-evident truths: and the now well-understood fact that *no* truths are *self*-evident, really does not make in the slightest degree against his speculations: it was sufficient for his purpose that the truths in question were evident at all. From axioms he proceeded, logically, to results. His most illustrious disciples were one Tuclid, a geometrician" [meaning Euclid], "and one Kant, a Dutchman, the originator of that species of Transcendentalism which, with the change merely of a C for a K, now bears his peculiar name.

"Well, Aries Tottle flourished su-

preme, until the advent of one Hogg, surnamed 'the Ettrick Shepherd,' who preached an entirely different system, which he called the *a posteriori* or *inductive*. His plan referred altogether to sensation. He proceeded by observing, analysing, and classifying facts—instantiæ Naturæ, as they were somewhat affectedly called—and arranging them into general laws. In a word, while the mode of Aries rested on *noumena* that of Hogg depended on *phenomena;* and so great was the admiration excited by this latter system that, at its first introduction, Aries fell into general disrepute. Finally, however, he recovered ground, and was permitted to divide the empire of Philosophy with his more modern rival; the savants contenting themselves with proscribing all *other* competitors, past, present, and to come; putting an end to all controversy on the topic by the promulgation of a Median law, to the effect that the Aristotelian and Baconian roads are, and of right ought to be, the sole possible avenues to knowledge: "Baconian, you must know, my dear friend," adds the letter-writer at this point, "was an adjective invented as equivalent to Hogg-ian, and at the same time more dignified and euphonious.

"Now I do assure you most positively," proceeds the epistle, "that I represent these matters fairly; and you can easily understand how restrictions so absurd on their very face must have operated in those days to retard the progress of true Science, which makes its most important advances—as all History will show—by seemingly intuitive *leaps*. These ancient ideas confined investigation to crawling; and I need not suggest to you that crawling, among varieties of locomotion, is a very capital thing of its kind; but because the tortoise is sure of foot, for this reason must we clip the wings of the eagles? For many centuries, so great was the infatuation about Hogg especially, that a virtual stop was put to all thinking, properly so called. No man dared utter a truth for which he felt himself indebted to his soul alone. It mattered not whether the truth was even demonstrably such; for the dogmatising philosophers of that epoch regarded only *the road* by which it professed to have been attained. The end, with them, was a point of no moment whatever: 'the means!' they vociferated—"let us look at the means!"—and if on scrutiny of the means it was found to come neither under the category Hogg, nor under the category Aries (which means ram), why, then, the savants went no further, but calling the thinker a fool and branding him a 'theorist,' would never, thenceforward, have anything to do either with *him* or with his truths.

"Now, my dear friend," continues the letter-writer, "it cannot be maintained that by the crawling system, exclusively adopted, men would arrive at the maximum amount of truth, even in any long series of ages, for the repression of imagination was an evil not to be counterbalanced even by *absolute* certainty in the snail processes. But their certainty was very far from absolute. The error of our progenitors was quite analogous with that of the wiseacre who fancies he must necessarily see an object the more distinctly the more closely he holds it to his eyes. They blinded themselves, too, with the

impalpable titillating Scotch snuff of *detail;* and thus the boasted facts of the Hogg-ites were by no means always facts—a point of little importance but for the assumption that they always *were.* The vital taint, however, in Baconianism—its most lamentable fount of error—lay in its tendency to throw power and consideration into the hands of merely perceptive men, of those inter-Tritonic minnows, the microscopical savants, the diggers and pedlers of minute *facts,* for the most part in physical science—facts, all of which they retailed at the same price upon the highway; their value depending, it was supposed, simply upon the *fact of their fact,* without reference to their applicability or inapplicability in the development of those ultimate and only legitimate facts called Law.

"Than the persons," the letter goes on to say, "than the persons thus suddenly elevated by the Hogg-ian philosophy into a station for which they were unfitted, thus transferred from the sculleries into the parlours of Science, from its pantries into its pulpits; than these individuals a more intolerant, a more intolerable set of bigots and tyrants never existed on the face of the earth. Their creed, their text, and their sermon were alike the one word *'fact'*—but for the most part, even of this one word, they knew not even the meaning. On those who ventured to *disturb* their facts with the view of putting them in order and to use, the disciples of Hogg had no mercy whatever. All attempts at generalisation were met at once by the words 'theoretical,' 'theory,' 'theorist'—all *thought,* to be brief, was very properly resented as a personal affront to themselves. Cultivating the natural sciences to the exclusion of Metaphysics, the Mathematics, and Logic, many of these Bacon-engendered philosophers — one-idead, one-sided, and lame of a leg—were more wretchedly helpless—more miserably ignorant, in view of all the comprehensible objects of knowledge, than the veriest unlettered hind who proves that he knows something, at least, in admitting that he knows absolutely nothing.

"Nor had our forefathers any better right to talk about *certainty,* when pursuing, in blind confidence, the *a priori* path of axioms, or of the Ram. At innumerable points this path was scarcely as straight as a ram's-horn. The simple truth is, that the Aristotelians erected their castles upon a basis far less reliable than air; *for no such things as axioms ever existed or can possibly exist at all.* This they must have been very blind indeed not to see, or at least to suspect; for even in their own day many of their long-admitted 'axioms' had been abandoned: *'ex nihilo nihil fit,'* for example, and a 'thing cannot act where it is not,' and 'there cannot be antipodes,' and 'darkness cannot proceed from light.' These and numerous similar propositions formerly accepted, without hesitation, as axioms, or undeniable truths, were, even at the period of which I speak, seen to be altogether untenable: how absurd in these people, then, to persist in relying upon a basis, as immutable, whose mutability had become so repeatedly manifest!

"But, even through evidence afforded by themselves against themselves, it is easy to convict these *a priori* reasoners of the grossest unreason—it is easy to show the futility—the impalpability of their axioms in general. I have now

lying before me"—it will be observed that we still proceed with the letter—"I have now lying before me a book printed about a thousand years ago. Pundit assures me that it is decidedly the cleverest ancient work on its topic, which is 'Logic.' The author, who was much esteemed in his day, was one Miller, or Mill; and we find it recorded of him, as a point of some importance, that he rode a mill-horse whom he called Jeremy Bentham:—but let us glance at the volume itself.

"'Ah!—Ability or inability to conceive,' says Mr. Mill, very properly, 'is *in no case* to be received as a criterion of axiomatic truth.' Now that this is a palpable truism, no one in his senses will deny. *Not* to admit the proposition, is to insinuate a charge of variability in Truth itself, whose very title is a synonym of the Steadfast. If ability to conceive be taken as a criterion of Truth, then a truth to *David Hume* would very seldom be a truth to *Foe;* and ninety-nine hundredths of what is undeniable in Heaven, would be demonstrable falsity upon Earth. The proposition of Mr. Mill, then, is sustained. I will not grant it to be an *axiom;* and this merely because I am showing that *no* axioms exist; but with a distinction which could not have been cavilled at even by Mr. Mill himself, I am ready to grant that, *if* an axiom *there be,* then the proposition of which we speak has the fullest right to be considered an axiom—that no *more* absolute axiom *is*—and consequently, that any subsequent proposition which shall conflict with this one primarily advanced must be either a falsity in itself—that is to say, no axiom—or, if admitted axiomatic, must at once neutralise both itself and its predecessor.

"And now, by the logic of their own propounder, let us proceed to test any one of the axioms propounded. Let us give Mr. Mill the fairest of play. We will bring the point to no ordinary issue. We will select for investigation no commonplace axiom—no axiom of what, not the less preposterously because only impliedly, he terms his secondary class—as if a positive truth by definition could be either more or less positively a truth: we will select, I say, no axiom of an unquestionability so questionable as is to be found in Euclid. We will not talk, for example, about such propositions as that two straight lines cannot enclose a space, or that the whole is greater than any one of its parts. We will afford the logician *every* advantage. We will come at once to a proposition which he regards as the acme of the unquestionable—as the quintessence of axiomatic undeniability. Here it is:—'Contradictions cannot *both* be true—that is, cannot coexist in nature.' Here Mr. Mill means, for instance—and I give the most forcible instance conceivable—that a tree must be either a tree or not a tree—that it cannot be at the same time a tree *and* not a tree: all which is quite reasonable of itself, and will answer remarkably well as an axiom, until we bring it into collation with an axiom insisted upon a few pages before; in other words—words which I have previously employed—until we test it by the logic of its own propounder. 'A tree,' Mr. Mill asserts, 'must be either a tree or not a tree.' Very well: and now let me ask him *why?* To this little query there is but one response—I defy any man living to

invent a second. The sole answer is this:—'Because we find it *impossible to conceive* that a tree can be anything else than a tree or not a tree.' This, I repeat, is Mr. Mill's sole answer—he will not *pretend* to suggest another; and yet, by his own showing, his answer is clearly no answer at all—for has he not already required us to admit, *as an axiom,* that ability or inability to conceive is *in no case* to be taken as a criterion of axiomatic truth? Thus all —absolutely *all* his argumentation is at sea without a rudder. Let it not be urged that an exception from the general rule is to be made in cases where the 'impossibility to conceive,' is so peculiarly great as when we are called upon to conceive a tree *both* a tree and not a tree. Let no attempt, I say, be made at urging this sotticism; for, in the first place, there are no *degrees* of 'impossibility,' and thus no one impossible conception can be *more* peculiarly impossible than another impossible conception: in the second place, Mr. Mill himself—no doubt after thorough deliberation—has most distinctly and most rationally excluded all opportunity for exception by the emphasis of his proposition, that *in no case* is ability or inability to conceive to be taken as a criterion of axiomatic truth: in the third place, even were exceptions admissible at all, it remains to be shown how any exception is admissible *here.* That a tree can be both a tree and not a tree is an idea which the angels, or the devils, *may* entertain, and which no doubt many an earthly Bedlamite or Transcendentalist *does.*

"Now, I do not quarrel with these ancients," continues the letter-writer, "*so much* on account of the transparent frivolity of their logic—which, to be plain, was baseless, worthless, and fantastic altogether—as on account of their pompous and infatuate proscription of all *other* roads to Truth than the two narrow and crooked paths—the one of creeping and the other of crawling—to which, in their ignorant perversity, they have dared to confine the Soul—the Soul which loves nothing so well as to soar in those regions of illimitable intuition which are utterly incognisant of *'path.'*

"By-the-bye, my dear friend, is it not an evidence of the mental slavery entailed upon those bigoted people by their Hogs and Rams, that in spite of the eternal prating of their savants about *roads* to Truth, none of them fell, even by accident, into what we now so distinctly perceive to be the broadest, the straightest, and most available of all mere roads—the great thoroughfare—the majestic highway of the *Consistent?* Is it not wonderful that they should have failed to deduce from the works of God the vitally momentous consideration that a *perfect consistency can be nothing but an absolute truth?* How plain—how rapid our progress since the late announcement of this proposition! By its means investigation has been taken out of the hands of the ground-moles and given as a duty rather than as a task to the true—to the *only* true thinkers—to the generally educated men of ardent imagination. These latter—our Keplers—our Laplaces —'speculate'—'theorise'—these are the terms—can you not fancy the shout of scorn with which they would be received by our progenitors, were it possible for them to be looking over my shoulders as I write? The Keplers, I repeat, speculate—theorise—and their

heories are merely corrected—reduced
-sifted—cleared, little by little, of
heir chaff of inconsistency—until at
ength there stands apparent an unen-
umbered *Consistency*—a consistency
hich the most stolid admit—because
is a consistency—to be an absolute
nd unquestionable *Truth*.

"I have often thought, my friend,
hat it must have puzzled these dogma-
icians of a thousand years ago, to de-
ermine even by which of their two
oasted roads it is that the cryptog-
aphist attains the solution of the more
omplicated cyphers—or by which of
hem Champollion guided mankind to
hose important and innumerable truths
hich, for so many centuries, have lain
ntombed amid the phonetical hiero-
lyphics of Egypt. In especial, would
not have given these bigots some
rouble to determine by which of their
wo roads was reached the most mo-
nentous and sublime of *all* their truths
—the truth—the fact of *gravitation?*
Newton deduced it from the laws of
Kepler. Kepler admitted that these
aws he *guessed*—these laws whose in-
vestigation disclosed to the greatest of
British astronomers that principle, the
basis of all (existing) physical principle,
n going behind which we enter at once
he nebulous kingdom of Metaphysics.
Yes! these vital laws Kepler *guessed*—
hat is to say, he *imagined* them. Had
e been asked to point out either the
*de*ductive or *in*ductive route by which
e attained them, his reply might have
been—'I know nothing about *routes*—
ut I *do* know the machinery of the
Universe. Here it is. I grasped it with
ny soul—I reached it through mere
lint of *intuition*.' Alas, poor ignorant
ld man! Could not any metaphysician
have told him that what he called 'intuition' was but the conviction resulting from *de*ductions or *in*ductions of which the processes were so shadowy as to have escaped his consciousness, eluded his reason, or bidden defiance to his capacity of expression? How great a pity it is that some 'moral philosopher' had not enlightened him about all this? How it would have comforted him on his death-bed to know that instead of having gone intuitively and thus unbecomingly, he had, in fact, proceeded decorously and legitimately—that is to say, Hogg-ishly, or at least Ram-ishly—into the vast halls where lay gleaming, untended, and hitherto untouched by mortal hand—unseen by mortal eye—the imperishable and priceless secrets of the Universe!

"Yes, Kepler was essentially a *theorist;* but this title, *now* of so much sanctity, was in those ancient days a designation of supreme contempt. It is only *now* that men begin to appreciate that divine old man—to sympathise with the prophetical and poetical rhapsody of his ever memorable words. For *my* part," continues the unknown correspondent, "I glow with a sacred fire when I even think of them, and feel that I shall never grow weary of their repetition:—In concluding this letter, let me have the real pleasure of transcribing them once again:—*'I care not whether my work be read now or by posterity. I can afford to wait a century for readers when God himself has waited six thousand years for an observer. I triumph. I have stolen the golden secret of the Egyptians. I will indulge my sacred fury.'*"

Here end my quotations from this very unaccountable and, perhaps, some-

what impertinent epistle; and perhaps it would be folly to comment, in any respect, upon the chimerical, not to say revolutionary, fancies of the writer—whoever he is—fancies so radically at war with the well-considered and well-settled opinions of this age. Let us proceed, then, to our legitimate thesis, The *Universe*.

This thesis admits a choice between two modes of discussion:—We may *as*cend or *de*scend. Beginning at our own point of view, at the Earth on which we stand, we may pass to the other planets of our system, thence to the Sun, thence to our system considered collectively, and thence, through other systems, indefinitely outwards; or, commencing on high at some point as definite as we can make it, or conceive it, we may come down to the habitation of Man. Usually, that is to say, in ordinary essays on Astronomy, the first of these two modes is, with certain reservation, adopted: this for the obvious reason that astronomical *facts*, merely, and principles, being the object, that object is best fulfilled in stepping from the known because proximate, gradually onward to the point where all certitude becomes lost in the remote. For my present purpose, however, that of enabling the mind to take in, as if from afar and at one glance, a distant conception of the *individual* Universe—it is clear that a descent to small from great—to the outskirts from the centre (if we could establish a centre)—to the end from the beginning (if we could fancy a beginning) would be the preferable course, but for the difficulty, if not impossibility, of presenting, in this course, to the unastronomical, a picture at all comprehensible in regard to such considerations as are involved in *quantity*—that is to say, in number, magnitude, and distance.

Now, distinctness—intelligibility, at all points, is a primary feature in my general design. On important topics it is better to be a good deal prolix than even a very little obscure. But abstruseness is a quality appertaining to no subject *per se*. All are alike, in facility of comprehension, to him who approaches them by properly graduated steps. It is merely because a stepping-stone, here and there, is heedlessly left unsupplied in our road to Differential Calculus, that this latter is not altogether as simple a thing as a sonnet by Mr. Solomon Seesaw.

By way of admitting, then, no *chance* for misapprehension, I think it advisable to proceed as if even the more obvious facts of Astronomy were unknown to the reader. In combining the two modes of discussion to which I have referred, I propose to avail myself of the advantages peculiar to each—and very especially of the *iteration in detail* which will be unavoidable as a consequence of the plan. Commencing with a descent, I shall reserve for the return upwards those indispensable considerations of *quantity* to which allusion has already been made.

Let us begin, then, at once, with that merest of words, "Infinity." This, like "God," "spirit," and some other expressions of which the equivalents exist in all languages, is by no means the expression of an idea, but of an effort at one. It stands for the possible attempt at an impossible conception. Man needed a term by which to point out the *direction* of this effort—the cloud behind which lay, for ever invisible, the

bject of this attempt. A word, in fine, was demanded, by means of which one human being might put himself in relation at once with another human being and with a certain *tendency* of the human intellect. Out of this demand arose the word "Infinity"; which is thus the representative but of the *thought of a thought.*

As regards *that* infinity now considered—the infinity of space—we often hear it said that "its idea is admitted by the mind—is acquiesced in—is entertained—on account of the greater difficulty which attends the conception of a limit." But this is merely one of those *phrases* by which even profound thinkers, time out of mind, have occasionally taken pleasure in deceiving *themselves.* The quibble lies concealed in the word "difficulty." "The mind," we are told, "entertains the idea of *limitless,* through the greater *difficulty* in the case. The assertion intended, if presented *according* to its intention, and without sophistry, would run thus:—"The mind admits the idea of limitless, through the greater *impossibility* of entertaining that of limited, space."

It must be immediately seen that this is not a question of two statements between whose respective credibilities—or of two arguments between whose respective validities—the *reason* is called upon to decide—it is a matter of two conceptions, directly conflicting, and each avowedly impossible, one of which the *intellect* is supposed to be capable of entertaining, on account of the greater *impossibility* of entertaining the other. The choice is *not* made between two difficulties; it is merely *fancied* to be made between two impossibilities. Now of the former, there *are* degrees, but of the latter, none—just as our impertinent letter-writer has already suggested. A task *may* be more or less difficult; but it is either possible or not possible—there are no gradations. It *might* be more *difficult* to overthrow the Andes than an ant-hill; but it *can* be no more *impossible* to annihilate the matter of the one than the matter of the other. A man may jump ten feet with less *difficulty* than he can jump twenty, but the *impossibility* of his leaping to the moon is not a whit less than that of his leaping to the dog-star.

Since all this is undeniable; since the choice of the mind is to be made between *impossibilities* of conception; since one impossibility cannot be greater than another; and since thus, one cannot be preferred to another; the philosophers who not only maintain, on the grounds mentioned, man's *idea* of infinity, but on account of such supposititious idea, *infinity itself*—are plainly engaged in demonstrating one impossible thing to be possible by showing how it is that some one other thing is impossible too. This, it will be said is nonsense, and perhaps it is; indeed I think it very capital nonsense, but forego all claim to it as nonsense of mine.

The readiest mode, however, of displaying the fallacy of the philosophical argument on this question is by simply adverting to a *fact* respecting it which has been hitherto quite overlooked—the fact that the argument alluded to both proves and disproves its own proposition. "The mind is impelled," say the theologians and others, "to admit a *First Cause,* by the superior difficulty it experiences in conceiving cause beyond cause without end." The quibble, as

before, lies in the word "difficulty," but *here* what is it employed to sustain? A First Cause. And what is a First Cause? An ultimate termination of causes? And what is an ultimate termination of causes? Finity—the Finite. Thus the one quibble in two processes, by God knows how many philosophers, is made to support now Finity and now Infinity; could it not be brought to support something besides? As for the quibbles, *they*, at least, are insupportable. But, to dismiss them; what they prove in the one case is the identical nothing which they demonstrate in the other.

Of course, no one will suppose that I here contend for the absolute impossibility of *that* which we attempt to convey in the word "Infinity." My purpose is but to show the folly of endeavouring to prove Infinity itself, or even our conception of it, by any such blundering ratiocination as that which is ordinarily employed.

Nevertheless, as an individual, I may be permitted to say that I *cannot* conceive Infinity, and am convinced that no human being can. A mind not thoroughly self-conscious, not accustomed to the introspective analysis of its own operations, will, it is true, often deceive itself by supposing that it *has* entertained the conception of which we speak. In the effort to entertain it, we proceed step beyond step, we fancy point still beyond point; and so long as we *continue* the effort it may be said, in fact, that we are *tending* to the formation of the idea designed; while the strength of the impression that we actually form or have formed is in the ratio of the period during which we keep up the mental endeavour. But it is in the act of discontinuing the endeavour—of fulfilling (as we think) the idea—of putting the finishing stroke (as we suppose) to the conception—that we overthrow at once the whole fabric of our fancy by resting upon some one ultimate, and therefore, definite point. This fact, however, we fail to perceive on account of the absolute coincidence in time between the settling down upon the ultimate point and the act of cessation in thinking. In attempting, on the other hand, to frame the idea of a *limited* space, we merely converse the processes which involve the impossibility.

We *believe* in a God. We may or may not *believe* in finite or in infinite space: but our belief in such cases is more properly designated as *faith*, and is a matter quite distinct from that belief proper—from that *intellectual* belief—which presupposes the mental conception.

The fact is, that, upon the enunciation of any one of that class of terms to which "Infinity" belongs—the class representing *thoughts of thought*—he who has a right to say that he thinks *at all*, feels himself called upon *not* to entertain a conception, but simply to direct his mental vision toward some given point in the intellectual firmament, where lies a nebula never to be resolved. To solve it, indeed, he makes no effort; for with a rapid instinct he comprehends not only the impossibility, but as regards all human purposes, the *inessentiality* of its solution. He perceives that the Deity has not *designed* it to be solved. He sees at once that it lies *out* of the brain of man, and even *how*, if not exactly *why*, it lies out of it. There *are* people, I am aware, who busying themselves in attempts at the

nattainable, acquire very easily, by dint f the jargon they emit, among those hinkers - that - they - think with whom larkness and depth are synonymous, a ind of cuttle-fish reputation for profundity; but the finest quality of Thought is its self-cognisance; and with ome little equivocation, it may be said hat no fog of the mind can well be reater than that which, extending to he very boundaries of the mental domain, shuts out even these boundaries hemselves from comprehension.

It will now be understood that in using the phrase "Infinity of Space," I make no call upon the reader to entertain the impossible conception of an *absolute* infinity. I refer simply to the *"utmost conceivable expanse"* of space —a shadowy and fluctuating domain, now shrinking, now swelling, in accordance with the vacillating energies of the imagination.

Hitherto, the Universe of stars has always been considered as coincident with the Universe proper, as I have defined it in the commencement of this Discourse. It has been always either directly or indirectly assumed—at least since the dawn of intelligible Astronomy —that, were it possible for us to attain any given point in space, we should still find on all sides of us an interminable succession of stars. This was the unbroken idea of Pascal when making perhaps the most successful attempt ever made at periphrasing the conception for which we struggle in the word "Universe." "It is a sphere," he says, "of which the centre is everywhere, the circumference nowhere." But although his intended definition is, in fact, *no* definition of the Universe of *stars,* we may accept it, with some mental reservation, as a definition (rigorous enough for all practical purposes) of the Universe *proper*—that is to say, of the Universe of *space.* This latter, then, let us regard as *"a sphere of which the centre is everywhere, the circumference nowhere."* In fact, while we find it impossible to fancy an *end* to space, we have no difficulty in picturing to ourselves any one of an infinity of *beginnings.*

As our starting point, then, let us adopt the *Godhead.* Of this Godhead, *in itself,* he alone is not imbecile—he alone is not impious who propounds—nothing. *"Nous ne connaissons rein,"* says the Baron de Bielfeld—*"Nous ne connaissons rein de la nature ou de l'essence de Dieu:—pour savoir ce qu'il est, il faut etre Dieu meme."*—"We know absolutely *nothing* of the nature or essence of God—in order to comprehend what He is, we should have to be God ourselves."

"We should have to be God ourselves!"—With a phrase so startling as this yet ringing in my ears, I nevertheless venture to demand if this our present ignorance of the Deity is an ignorance to which the soul is *everlastingly* condemned.

By *Him,* however—*now,* at least, the Incomprehensible—by Him — assuming Him as *Spirit*—that is to say, as *not Matter*—a distinction which for all intelligible purposes will stand well instead of a definition—by Him, then, existing as Spirit, let us content ourselves to-night with supposing to have been *created,* or made out of Nothing by dint of his Volition—at some point of Space which we will take as a centre —at some period into which we do not pretend to inquire, but at all events im-

mensely remote—by Him, then again, let us suppose to have been created—*What?* This is a vitally momentous epoch in our considerations. *What* is it that we are justified—that alone we are justified in supposing to have been primarily and solely *created?*

We have attained a point where only *Intuition* can aid us—but now let me recur to the idea which I have already suggested as that alone which we can properly entertain of intuition. It is but *the conviction arising from those inductions or deductions of which the processes are so shadowy as to escape our consciousness, elude our reason or defy our capacity of expression.* With this understanding, I now assert—that an intuition altogether irresistible, although inexpressible, forces me to the conclusion that what God originally created—that that Matter which, by dint of his Volition, He first made from His spirit, or from Nihility, *could* have been nothing but Matter in its utmost conceivable state of—what?—of *Simplicity?*

This will be found the sole absolute *assumption* of my Discourse. I use the word "assumption" in its ordinary sense; yet I maintain that even this my primary proposition is very, very far indeed from being really a mere assumption. Nothing was ever more certainly—no human conclusion was ever, in fact, more regularly—more rigorously *de*duced:—but, alas! the processes lie out of the human analysis—at all events are beyond the utterance of human tongue.

Let us now endeavour to conceive what Matter must be when, or if, in its absolute extreme of *Simplicity*. Here the Reason flies at once to Imparticularity—to a particle—to *one* particle—a particle of *one* kind—of *one* character—of *one* nature—of *one* size—of *one* form—a particle, therefore, "*without* form and void"—a particle, positively a particle at all points—a particle absolutely unique, individual, undivided, and not indivisible only because He who *created* it, by dint of His Will, can by an infinitely less energetic exercise of the same Will, as a matter of course, divide it.

Oneness, then, is all that I predicate of the originally created Matter; but I propose to show that this *Oneness is a principle abundantly sufficient to account for the constitution, the existing phenomena, and the plainly inevitable annihilation of at least the material Universe.*

The willing into being the primordial particle has completed the act, or more properly the *conception* of Creation. We now proceed to the ultimate purpose for which we are to suppose the Particle created—that is to say, the ultimate purpose so far as our considerations *yet* enable us to see it—the constitution of the Universe from it, the Particle.

This constitution has been effected by *forcing* the originally and therefore normally *One* into the abnormal condition of *Many*. An action of this character implies reaction. A diffusion from Unity, under the conditions, involves a tendency to return into Unity—a tendency ineradicable until satisfied. But on these points I will speak more fully hereafter.

The assumption of absolute Unity in the primordial Particle includes that of infinite divisibility. Let us conceive the Particle then to be only not totally

exhausted by diffusion into Space. From the one particle as a centre, let us suppose to be irradiated spherically—in all directions—to immeasurable but still definite distances in the previously vacant space—a certain inexpressibly great yet limited number of unimaginably yet not infinitely minute atoms.

Now, of these atoms thus diffused, or upon diffusion, what conditions are we permitted—not to assume but to infer, from consideration as well of their source as of the character of the design apparent in their diffusion? *Unity* being their source, the *difference from Unity* the character of the design manifested in their diffusion, we are warranted in supposing this character to be at least *generally* preserved throughout the design and to form a portion of the design itself—that is to say, we shall be warranted in conceiving continual differences at all points from the uniquity and simplicity of the origin. But for these reasons shall we be justified in imagining the atoms heterogeneous, dissimilar, unequal, and inequidistant? More explicitly, are we to consider no two atoms as, at their diffusion, of the same nature, or of the same form, or of the same size?—and after fulfilment of their diffusion into Space, is absolute inequidistance, each from each, to be understood of all of them? In such arrangements, under such conditions, we most easily and immediately comprehend the subsequent most feasible carrying out to completion of any such design as that which I have suggested—the design of variety out of unity—diversity out of sameness—heterogeneity out of homogeneity—complexity out of simplicity—in a word, the utmost possible multiplicity of *relation* out of the emphatically irrelative, *One*. Undoubtedly, therefore, we *should* be warranted in assuming all that has been mentioned but for the reflection, first, that supererogation is not presumable of any Divine Act; and, secondly, that the object supposed in view appears as feasible when some of the conditions in question are dispensed with in the beginning as when all are understood immediately to exist. I mean to say that some are involved in the rest, or so instantaneous a consequence of them as to make the distinction inappreciable. Difference of *size*, for example, will at once be brought about through the tendency of one atom to a second, in preference to a third, on account of particular inequidistance; which is to be comprehended as *particular inequidistances between centres of quantity in neighbouring atoms of different form*—a matter not at all interfering with the generally equable distribution of the atoms. Difference of *kind*, too, is easily conceived to be merely a result of differences in size and form, taken more or less conjointly;—in fact, since the *Unity* of the Particle Proper implies absolute homogeneity, we cannot imagine the atoms, at their diffusion, differing in kind without imagining at the same time a special exercise of the Divine Will at the emission of each atom, for the purpose of effecting in each a change of its essential nature:—so fantastic an idea is the less to be indulged as the object proposed is seen to be thoroughly attainable without such minute and elaborate interposition. We perceive, therefore, upon the whole, that it would be supererogatory, and consequently unphilosophical, to pred-

icate of the atoms, in view of their purposes, anything more than *difference of form* at their dispersion, with particular inequidistance after it—all other differences arising at once out of these in the very first processes of mass-constitution:—We thus establish the Universe on a purely *geometrical* basis. Of course, it is by no means necessary to assume absolute difference even of form among *all* the atoms irradiated—any more than absolute particular inequidistance of each from each. We are required to conceive merely that no *neighbouring* atoms are of similar form—no atoms which can ever approximate, until their inevitable reunition at the end.

Although the immediate and perpetual *tendency* of the disunited atoms to return into their normal Unity is implied, as I have said, in their abnormal diffusion, still it is clear that this tendency will be without consequence—a tendency and no more—until the diffusive energy, in ceasing to be exerted, shall leave *it*, the tendency, free to seek its satisfaction. The Divine Act, however, being considered as determinate, and discontinued on fulfilment of the diffusion, we understand, at once, a *reaction*—in other words, a *satisfiable* tendency of the disunited atoms to return into *One*.

But the diffusive energy being withdrawn, and the reaction having commenced in furtherance of the ultimate design—*that of the utmost possible Relation*—this design is now in danger of being frustrated, in detail, by reason of that very tendency to return which is to effect its accomplishment in general. *Multiplicity* is the object; but there is nothing to prevent proximate atoms from lapsing *at once*, through the now satisfiable tendency—*before* the fulfilment of any ends proposed in multiplicity—into absolute oneness among themselves; there is nothing to impede the aggregation of various *unique* masses, at various points of space—in other words, nothing to interfere with the accumulation of various masses, each absolutely One.

For the effectual and thorough completion of the general design, we thus see the necessity for a repulsion of limited capacity—a separative *something* which, on withdrawal of the diffusive Volition, shall at the same time allow the approach, and forbid the junction, of the atoms: suffering them infinitely to approximate, while denying them positive contact; in a word, having the power—*up to a certain epoch*—of preventing their *coalition*, but no ability to interfere with their *coalescence* in any respect *or degree*. The repulsion, already considered as so peculiarly limited in other regards, must be understood, let me repeat, as having power to prevent absolute coalition, *only up to a certain epoch*. Unless we are to conceive that the appetite for Unity among the atoms is doomed to be satisfied *never*:—unless we are to conceive that what had a beginning is to have no end—a conception which cannot *really* be entertained, however much we may talk or dream of entertaining it—we are forced to conclude that the repulsive influence imagined, will, finally—under pressure of the *Uni-tendency collectively* applied, but never and in no degree *until*, on fulfilment of the Divine purposes, such collective application shall be naturally made—yield to a force which, at that

ultimate epoch, shall be the superior force precisely to the extent required, and thus permit the universal subsidence into the inevitable, because original and therefore normal, *One*. The conditions here to be reconciled are difficult indeed; we cannot even comprehend the possibility of their conciliation; nevertheless, the apparent impossibility is brilliantly suggestive.

That the repulsive something actually exists, *we see*. Man neither employs, nor knows, a force sufficient to bring two atoms into contact. This is but the well-established proposition of the impenetrability of matter. All Experiment proves—all Philosophy admits it. The *design* of the repulsion—the necessity for its existence—I have endeavoured to show; but from all attempt at investigating its nature have religiously abstained; this on account of an intuitive conviction that the principle at issue is strictly spiritual—lies in a recess impervious to our present understanding—lies involved in a consideration of what now—in our human state—is *not* to be considered—in a consideration of *Spirit in itself*. I feel, in a word, that here the God has interposed, and here only, because here and here only the knot demanded the interposition of the God.

In fact, while the tendency of the diffused atoms to return into Unity, will be recognised at once as the principle of the Newtonian Gravity, what I have spoken of as a repulsive influence prescribing limits to the (immediate) satisfaction of the tendency, will be understood as *that* which we have been in the practice of designating now as heat, now as magnetism, now as electricity; displaying our ignorance of its awful character in the vacillation of the phraseology with which we endeavour to circumscribe it.

Calling it, merely for the moment, electricity, we know that all experimental analysis of electricity has given, as an ultimate result, the principle, or seeming principle, *heterogeneity*. *Only* where things differ is electricity apparent; and it is presumable that they *never* differ where it is not developed at least, if not apparent. Now, this result is in the fullest keeping with that which I have reached unempirically. The design of the repulsive influence I have maintained to be that of preventing immediate Unity among the diffused atoms; and these atoms are represented as different each from each. *Difference* in their character—their essentiality—just as *no-difference* was the essentiality of their course. When we say, then, that an attempt to bring any two of these atoms together would induce an effort, on the part of the repulsive influence, to prevent the contact, we may as well use the strictly convertible sentence that an attempt to bring together any two differences will result in a development of electricity. All existing bodies, of course, are composed of these atoms in proximate contact, and are therefore to be considered as mere assemblages of more or fewer differences; and the resistance made by the repulsive spirit, on bringing together any two such assemblages, would be in the ratio of the two sums of the differences in each—an expression which, when reduced, is equivalent to this:—*The amount of electricity developed on the approximation of two bodies is proportional to the difference between the respective sums of the*

atoms of which the bodies are composed. That *no* two bodies are absolutly alike, is a simple corollary from all that has been here said. Electricity, therefore, existing always, is *developed* whenever *any* bodies, but *manifested* only when bodies *of appreciable difference*, are brought into approximation.

To electricity—so, for the present, continuing to call it—we *may* not be wrong in referring the various physical appearances of light, heat, and magnetism but far less shall we be liable to err in attributing to this strictly spiritual principle the more important phenomena of vitality, consciousness, and *Thought*. On this topic, however, I need pause *here* merely to suggest that these phenomena, whether observed generally or in detail, seem to proceed *at least in the ratio of the heterogeneous.*

Discarding now the two equivocal terms "gravitation" and "electricity," let us adopt the more definite expressions, *"attraction"* and *"repulsion."* The former is the body; the latter the soul: the one is the material, the other the spiritual, principle of the Universe. *No other principles exist.* All phenomena are referable to one or to the other, or to both combined. So rigorously is this the case—so thoroughly demonstrable is it that attraction and repulsion are the *sole* properties through which we perceive the Universe—in other words, by which Matter is manifested to Mind—that, for all merely argumentative purposes, we are fully justified in assuming that matter *exists* only as attraction and repulsion—that attraction and repulsion *are* matter—there being no conceivable case in which we may not employ the term "matter" and the terms "attraction" and "repulsion," taken together, as equivalent, and therefore convertible, expressions in Logic.

I said just now that what I have described as the tendency of the diffused atoms to return into their original unity would be understood as the principle of the Newtonian law of gravity; and, in fact, there can be but little difficulty in such an understanding if we look at the Newtonian gravity in a merely general view, as a force impelling matter to seek matter; that is to say, when we pay no attention to the known *modus operandi* of the Newtonian force. The general coincidence satisfies us; but, upon looking closely, we see in detail much that appears *in*coincident, and much in regard to which no coincidence, at least, is established. For example: the Newtonian gravity, when we think of it in certain moods, does *not* seem to be a tendency to *oneness* at all, but rather a tendency of all bodies in all directions —a phrase apparently expressive of a tendency to diffusion. Here, then, is an *in*coincidence. Again; when we reflect on the mathematical *law* governing the Newtonian tendency, we see clearly that no coincidence has been made good in respect of the *modus operandi*, at least between gravitation as known to exist and that seemingly simple and direct tendency which I have assumed.

In fact, I have attained a point at which it will be advisable to strengthen my position by reversing my processes. So far, we have gone on *a priori*, from an abstract consideration of *Simplicity*, as that quality most likely to have characterised the original action of God. Let us now see whether the es-

tablished facts of the Newtonian Gravitation may not afford us, *a posteriori*, some legitimate inductions.

What does the Newtonian law declare? That all bodies attract each other with forces proportional to the squares of their distances. Purposely, I have given, in the first place, the vulgar version of the law; and I confess that in this, as in most other vulgar versions of great truths, we find little of a suggestive character. Let us now adopt a more philosophical phraseology:—*Every atom, of every body, attracts every other atom, both of its own and of every other body, with a force which varies inversely as the squares of the distances between the attracting and attracted atom.* Here, indeed, a flood of suggestion bursts upon the mind.

But let us see distinctly what it was that Newton *proved*—according to the grossly irrational definitions of *proof* prescribed by the metaphysical schools. He was forced to content himself with showing how thoroughly the motions of an imaginary Universe, composed of attracting and attracted atoms obedient to the law he announced, coincide with those of the actually existing Universe so far as it comes under our observation. This was the amount of his *demonstration*—that is to say, this was the amount of it according to the conventional cant of the "philosophies." His successes added proof multiplied by proof—such proof as a sound intellect admits—but the *demonstration* of the law itself, persist the metaphysicians, had not been strengthened in any degree. *"Ocular, physical* proof," however, of attraction here upon Earth, in accordance with the Newtonian theory, was at length, much to the satisfaction of some intellectual grovellers, afforded. This proof arose collaterally and incidentally (as nearly all important truths have arisen) out of an attempt to ascertain the mean density of the Earth. In the famous Maskelyne, Cavendish, and Bailly experiments for this purpose, the attraction of the mass of a mountain was seen, felt, measured, and found to be mathematically consistent with the immortal theory of the British astronomer.

But in spite of this confirmation of that which needed none—in spite of the so-called corroboration of the "theory" by the so-called "ocular and physical proof"—in spite of the *character* of this corroboration—the ideas which even really philosophical men cannot help imbibing of gravity—and, especially the ideas of it which ordinary men get and contentedly maintain, are *seen* to have been derived, for the most part, from a consideration of the principle as they find it developed—*merely in the planet upon which they stand.*

Now, to what does so partial a consideration tend—to what species of error does it give rise? On the Earth we *see* and *feel* only that gravity impels all bodies towards the *centre* of the Earth. No man in the common walks of life could be *made* to see or feel anything else—could be made to perceive that anything, anywhere, has a perpetual gravitating tendency in any *other* direction than to the centre of the Earth; yet (with an exception hereafter to be specified) it is a fact that every earthly thing (not to speak now of every heavenly thing) has a tendency not *only* to the Earth's centre,

but in every conceivable direction besides.

Now, although the philosophic cannot be said to *err with* the vulgar in this matter, they nevertheless permit themselves to be influenced, without knowing it, by the *sentiment* of the vulgar idea. "Although the Pagan fables are not believed," says Bryant, in his very erudite "Mythology," "yet we forget ourselves continually and make inferences from them as from existing realities." I mean to assert that the merely *sensitive perception* of gravity as we experience it on Earth beguiles mankind into the fancy of *concentralisation or especiality* respecting it—has been continually biasing towards this fancy even the mightiest intellects—perpetually, although imperceptibly, leading them away from the real characteristics of the principle; thus preventing them, up to this date, from ever getting a glimpse of that vital truth which lies in a diametrically opposite direction—behind the principle's *essential* characteristics—those, *not* of concentralisation or especiality —but of universality and diffusion. This "vital truth" is *Unity* as the *source* of the phenomenon.

Let me now repeat the definition of gravity:—*Every atom of every body attracts every other atom, both of its own and of every other body,* with a force which varies inversely as the squares of the distances of the attracting and attracted atom.

Here let the reader pause with me for a moment in contemplation of the miraculous—of the ineffable—of the altogether unimaginable complexity of relation involved in the fact that *each atom attracts every other atom*—involved merely in this fact of the attraction, without reference to the law or mode in which the attraction is manifested—involved *merely* in the fact that each atom attracts every other atom *at all,* in a wilderness of atoms so numerous that those which go to the composition of a cannon-ball exceed probably, in mere point of number, all the stars which go to the constitution of the Universe.

Had we discovered, simply, that each atom tended to some one favourite point—to some especially attractive atom—we should still have fallen upon a discovery which, in itself, would have sufficed to overwhelm the mind:—but what is it that we are actually called upon to comprehend? That each atom attracts—sympathises with the most delicate movements of every other atom, and with each and with all at the same time, and for ever, and according to a determinate law of which the complexity, even considered by itself solely, is utterly beyond the grasp of the imagination of man. If I propose to ascertain the influence of one mote in a sunbeam upon its neighbouring mote, I cannot accomplish my purpose without first counting and weighing all the atoms in the Universe, and defining the precise positions of all at one particular moment. If I venture to displace, by even the billionth part of an inch, the microscopical speck of dust which lies now upon the point of my finger, what is the character of that act upon which I have ventured? I have done a deed which shakes the Moon in her path, which causes the Sun to be no longer the sun, and which alters for ever the destiny of the multitudinous myriads

of stars that roll and glow in the majestic presence of their Creator.

These ideas—conceptions such as *these* unthought-like thoughts—soul-reveries rather than conclusions or even considerations of the intellect:—ideas, I repeat, such as these, are such as we can alone hope profitably to entertain in any effort at grasping the great principle, *Attraction.*

But now, *with* such ideas—with such a *vision* of the marvelous complexity of Attraction fairly in his mind—let any person competent of thought on such topics as these, set himself to the task of imagining a *principle* for the phenomena observed—a condition from which they sprang.

Does not so evident a brotherhood among the atoms point to a common parentage? Does not a sympathy so omniprevalent, so ineradicable, and so thoroughly irrespective, suggest a common paternity as its source? Does not one extreme impel the reason to the other? Does not the infinitude of division refer to the utterness of individuality? Does not the entireness of the complex hint at the perfection of the simple? It is *not* that the atoms, as we see them, are divided or that they are inconceivably divided and unutterably complex: it is the extremeness of the conditions to which I now allude, rather than to the conditions themselves. In a word, is it not because the atoms were, at some remote epoch of time, even *more than together* —is it not because originally, and therefore normally, they were *One*—that now in all circumstances—at all points—in all directions—by all modes of approach—in all relations and through all conditions—they struggle *back* to this absolutely, this irrelatively, this unconditionally *one?*

Some person may here demand:—"Why—since it is to the *One* that the atoms struggle back—do we not find and define Attraction 'a merely general tendency to a centre'? why, in especial, do not *your* atoms—the atoms which you describe as having been irradiated from a centre—proceed at once, rectilinearly, back to the central point of their origin?"

I reply that *they do;* as will be distinctly shown; but that the cause of their so doing is quite irrespective of the centre *as such.* They all tend rectilinearly towards a centre, because of the sphericity with which they have been irradiated into space. Each atom, forming one of a generally uniform globe of atoms, finds more atoms in the direction of the centre, of course, than in any other, and in that direction, therefore, is impelled—but is *not* thus impelled because the centre is *the point of its origin.* It is not to any *point* that the atoms are allied. It is not any *locality,* either in the concrete or in the abstract, to which I suppose them bound. Nothing like *location* was conceived as their origin. Their source lies in the principle *Unity. This* is their lost parent. *This* they seek always—immediately—in all directions—wherever it is even partially to be found; thus appeasing in some measure the ineradicable tendency while on the way to its absolute satisfaction in the end. It follows from all this, that any principle which shall be adequate to account for the *law* or *modus operandi* of the attractive force in general, will account for this law in particular—that is to say, any principle which will

show why the atoms should tend to their *general centre of irradiation* with forces inversely proportional to the squares of the distances will be admitted as satisfactorily accounting at the same time for the tendency, according to the same law, of these atoms each to each;—for the tendency to the centre is merely the tendency each to each, and not any tendency to a centre as such.—Thus it will be seen, also, that the establishment of my propositions would involve no *necessity* of modification in the terms of the Newtonian definition of Gravity, which declares that each atom attracts each other atom and so forth, and declares this merely; but (always under the supposition that what I propose be, in the end, admitted) it seems clear that some error might occasionally be avoided in the future processes of Science were a more ample phraseology adopted—for instance:—"Each atom tends to every other atom, etc., with a force, etc.: *the general result being a tendency of all, with a similar force, to a general centre.*"

The reversal of our processes has thus brought us to an identical result; but while in the one process *intuition* was the starting point, in the other it was the goal. In commencing the former journey I could only say that, with an irresistible intuition, I *felt* Simplicity to have been made the characteristic of the original action of God—in ending the latter I can only declare that with an irresistible intuition, I perceive Unity to have been the source of the observed phenomena of the Newtonian gravitation. Thus, according to the schools, I *prove* nothing. So be it:—I design but to suggest—and to *convince* through the suggestion. I am proudly aware that there exist many of the most profound and cautiously discriminative human intellects which cannot *help* being abundantly content with my suggestions. To these intellects—as to my own—there is no mathematical demonstration which *could* bring the least additional *true proof* of the great *Truth* which I have advanced—*the truth of Original Unity as the source—as the principle of the Universal Phenomena.* For my part I am not so sure that I speak and see—I am not so sure that my heart beats and that my soul lives—of the rising of to-morrow's sun—a probability that as yet lies in the Future—I do not pretend to be one thousandth part as sure—as I am of the irretrievably bygone *Fact,* that All Things and all Thoughts of Things, with all their ineffable Multiplicity of Relation, sprang at once into being from the primordial and irrelative *One.*

Referring to the Newtonian Gravity, Dr. Nichol, the eloquent author of "The Architecture of the Heavens," says:—"In truth we have no reason to suppose this great Law as now revealed to be the ultimate or simplest, and therefore the universal and all-comprehensive form of a great Ordinance. The mode in which its intensity diminishes with the element of distance, has not the aspect of an ultimate *principle;* which always assumes the simplicity and self-evidence of those axioms which constitute the basis of Geometry."

Now, it is quite true that "ultimate principles," in the common understanding of the words, always assume the simplicity of geometrical axioms—(as for "self-evidence," there is no such

thing)—but these principles are clearly *not* "ultimate;" in other terms, what we are in the habit of calling principles are no principles, properly speaking—since there can be but one *principle*, the Volition of God. We have no right to assume, then, from what we observe in rules that we choose foolishly to name "principles," anything at all in respect to the characteristics of a principle proper. The "ultimate principles" of which Dr. Nichol speaks as having geometrical simplicity, may and do have this geometrical turn, as being part and parcel of a vast geometrical system, and thus a system of simplicity itself—in which, nevertheless, the *truly* ultimate principle is, *as we know*, the consummation of the complex—that is to say, of the unintelligible—for is it not the Spiritual Capacity of God?

I quoted Dr. Nichol's remark, however, not so much to question its philosophy, as by way of calling attention to the fact that while all men have admitted *some* principle as existing behind the law of Gravity no attempt has been yet made to point out what this principle in particular *is*:—if we except perhaps occasional fantastic efforts at referring it to Magnetism, or Mesmerism, or Swedenborgianism, or Transcendentalism, or some other equally delicious *ism* of the same species, and invariably patronised by one and the same species of people. The great mind of Newton, while boldly grasping the Law itself, shrank from the principle of the Law. The more fluent and comprehensive at least, if not the more patient and profound, sagacity of Laplace had not the courage to attack it. But hesitation on the part of these two astronomers it is perhaps not so very difficult to understand. They, as well as all the first class of mathematicians, were mathematicians *solely*—their intellect at least had a firmly-pronounced mathematico-physical tone. What lay not distinctly within the domain of Physics or of Mathematics seemed to them either Non-Entity or Shadow. Nevertheless, we may well wonder that Leibnitz, who was a marked exception to the general rule in these respects and whose mental temperament was a singular admixture of the mathematical with the physico-metaphysical, did not at once investigate and establish the point at issue. Either Newton or Laplace, seeking a principle and discovering none *physical* would have rested contentedly in the conclusion that there was absolutely none; but it is almost impossible to fancy of Leibnitz that, having exhausted in his search the physical dominions, he would not have stepped at once, boldly and hopefully, amid his old familiar haunts in the kingdom of Metaphysics. Here, indeed, it is clear that he *must* have adventured in search of the treasure—that he did not find it after all was perhaps because his fairy guide, Imagination, was not sufficiently well-grown or well-educated to direct him aright.

I observed just now that, in fact, there had been certain vague attempts at referring Gravity to some very uncertain *isms*. These attempts, however, although considered bold, and justly so considered, looked no further than to the generality—the merest generality—of the Newtonian Law. Its *modus operandi* has never, to my knowledge, been approached in the way of an effort at explanation. It is therefore with no

unwarranted fear of being taken for a madman at the outset, and before I can bring my propositions fairly to the eye of those who alone are competent to decide upon them, that I here declare the *modus operandi* of the Law of Gravity to be an exceedingly simple and perfectly explicable thing—that is to say, when we make our advances towards it in just gradations and in the true direction—when we regard it from the proper point of view.

Whether we reach the idea of absolutely *Unity* as the source of All Things from a consideration of Simplicity as the most probable characteristic of the original action of God;—whether we arrive at it from an inspection of the universality of relation in the gravitating phenomena;—or whether we attain it as a result of the mutual corroboration afforded by both processes;—still, the idea itself, if entertained at all, is entertained in inseparable connection with another idea—that of the condition of the Universe of stars as we *now* perceive it—that is to say, a condition of immeasurable *diffusion* through space. Now a connection between these two ideas—unity and diffusion—cannot be established unless through the entertainment of a third idea—that of *irradiation*. Absolute Unity being taken as a centre, then the existing Universe of stars is the result of *irradiation* from that centre.

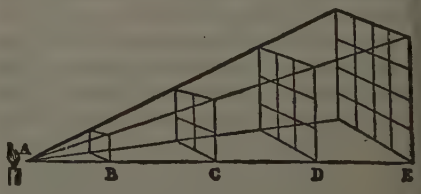
Now, the laws of irradiation are *known*. They are part and parcel of the *sphere*. They belong to the class of *indisputable geometrical properties*. We say of them, "they are true—they are evident." To demand *why* they are true would be to demand why the axioms are true upon which their demonstration is based. *Nothing* is demonstrable, strictly speaking; but *if* anything *be*, then the properties—the laws in question are demonstrated.

But these laws—what do they declare? Irradiation — how — by what steps does it proceed outwardly from a centre?

From a *luminous* centre *Light* issues by irradiation, and the quantities of light received upon any given plane, supposed to be shifting its position so as to be now nearer the centre and now farther from it, will be diminished in the same proportion as the squares of the distances of the plane from the luminous body are increased; and will be increased in the same proportion as these squares are diminished.

The expression of the law may be thus generalised:—the number of light-particles (or, if the phrase be preferred, the number of light-impressions) received upon the shifting plane, will be *inversely* proportional to the squares of the distances of the plane. Generalising yet again, we may say that the diffusion—the scattering—the irradiation, in a word—is *directly* proportional to the squares of the distances.

For example: at the distance B, from the luminous centre A, a certain number of particles are so diffused as to occupy the surface B. Then at double the distance—that is to say, at C—they



will be so much farther diffused as to occupy four such surfaces:—at treble the distance, or at D, they will be so much farther separated as to occupy nine such surfaces;—while, at quadruple the distance, or at E, they will have become so scattered as to spread themselves over sixteen such surfaces —and so on for ever.

In saying generally that the irradiation proceeds in direct proportion with the squares of the distances, we use the term irradiation to express *the degree of the diffusion* as we proceed outwardly from the centre. Conversing the idea, and employing the word "concentralisation," to express *the degree of the drawing together* as we come back towards the centre from an outward position, we may say that concentralisation proceeds *inversely* as the squares of the distances. In other words, we have reached the conclusion that, on the hypothesis that matter was originally irradiated from a centre, and is now returning to it, the concentralisation, in the return, proceeds *exactly as we know the force of gravitation to proceed.*

Now here, if we could be permitted to assume that concentralisation exactly represented the *force of the tendency to the centre*—that the one was exactly proportional to the other, and that the two proceeded together—we should have shown all that is required. The sole difficulty existing, then, is to establish a direct proportion between "concentralisation" and the *force* of concentralisation; and this is done, of course, if we establish such proportion between "irradiation" and the *force* of irradiation.

A very slight inspection of the Heavens assures us that the stars have a certain general uniformity, equability, or equidistance, of distribution through that region of space in which, collectively, and in a roughly globular form, they are situated:—this species of very general, rather than absolute equability, being in full keeping with my deduction of inequidistance, within certain limits, among the originally diffused atoms, as a corollary from the evident design of infinite complexity of relation out of irrelation. I started, it will be remembered, with the idea of a generally uniform but particularly *un*uniform distribution of the atoms;—an idea, I repeat, which an inspection of the stars, as they exist, confirms.

But even in the merely general equability of distribution, as regards the atoms, there appears a difficulty which, no doubt, has already suggested itself to those among my readers who have borne in mind that I suppose this equability of distribution effected through *irradiation from a centre.* The very first glance at the idea, irradiation, forces us to the entertainment of the hitherto unseparated and seemingly inseparable idea of agglomeration about a centre, with dispersion as we recede from it—the idea, in a word, of *in*equability of distribution in respect to the matter irradiated.

Now, I have elsewhere observed, that it is by just such difficulties as the one now in question—such roughnesses—such peculiarities—such protuberances above the plane of the ordinary—that Reason feels her way, if at all, in her search for the True. By the difficulty—the "peculiarity"—now presented, I leap at once to *the* secret—a secret which I might never have at-

tained *but* for the peculiarity and the inferences which *in its mere character of peculiarity,* it affords me.

The process of thought, at this point, may be thus roughly sketched:—I say to myself—"Unity, as I have explained it, is a truth—I feel it. Diffusion is a truth—I see it. Irradiation, by which alone these two truths are reconciled, is a consequent truth—I perceive it. *Equability* of diffusion, first deduced *a priori* and then corroborated by the inspection of phenomena, is also a truth—I fully admit it. So far all is clear around me:—there are no clouds behind which *the* secret—the great secret of the gravitating *modus operandi*—can possibly lie hidden; but this secret lies *hereabouts,* most assuredly; and *were* there but a cloud in view, I should be driven to suspicion of that cloud." And now, just as I say this, there actually comes a cloud into view. This cloud is the seeming impossibility of reconciling my truth, *irradiation,* with my truth *equability of diffusion.* I say now:—"Behind this *seeming* impossibility is to be found what I desire." I do not say *"real* impossibility"; for invincible faith in my truths assures me that it is a mere difficulty after all; but I go on to say, with unflinching confidence, that, *when* this *difficulty* shall be solved, we shall find, *wrapped up in the process of solution,* the key to the secret at which we aim. Moreover—I *feel* that we shall discover *but one* possible solution of the difficulty; this for the reason that, were there two, one would be supererogatory—would be fruitless—would be empty—would contain no key—since no duplicate key can be needed to any secret of Nature.

And now, let us see—our usual notions of irradiation—in fact, *all* our distinct notions of it—are caught merely from the process as we see it *exemplified* in *Light.* Here there is a *continuous* outpouring of *ray-streams,* and *with a force which we have at least no right to suppose varies at all.* Now, in any such irradiation *as this*—continuous and of unvarying force—the regions nearer the centre must *inevitably* be always more crowded with the irradiated matter than the regions more remote. But I have assumed *no* such irradiation *as this.* I assumed no *continuous* irradiation; and for the simple reason that such an assumption would have involved, first, the necessity of entertaining a conception which I have shown no man *can* entertain, and which (as I will more fully explain hereafter) all observation of the firmament refutes —the conception of the absolute infinity of the Universe of stars—and would have involved, secondly, the impossibility of understanding a reaction—that is, gravitation—as existing now—since, while an act is continued, no reaction, of course, can take place. My assumption, then, or rather my inevitable deduction from just premises—was that of a *determinate* irradiation—one finally *dis*continued.

Let me now describe the sole possible mode in which it is conceivable that matter could have been diffused through space, so as to fulfil the conditions at once of irradiation and of generally equable distribution.

For convenience of illustration, let us imagine, in the first place, a hollow sphere of glass, or of anything else, occupying the space throughout which the universal matter is to be thus

equally diffused, by means of irradiation, from the absolute, irrelative, unconditional particle, placed in the centre of the sphere.

Now, a certain exertion of the diffusive power (presumed to be the Divine Volition)—in other words, a certain *force*—whose measure is the quantity of matter, that is to say, the number of atoms, emitted—emits, by irradiation, this certain number of atoms; forcing them in all directions outwardly from the centre—their proximity to each other diminishing as they proceed—until, finally, they are distributed, loosely, over the interior surface of the sphere.

When these atoms have attained this position, or while proceeding to attain it, a second and inferior exercise of the same force—or a second and inferior force of the same character—emits, in the same manner—that is to say, by irradiation as before—a second stratum of atoms which proceeds to deposit itself upon the first; the number of atoms, in this case as in the former, being, of course, the measure of the force which emitted them; in other words, the force being precisely adapted to the purpose it effects—the force, and the number of atoms sent out by the force, being *directly proportional.*

When this second stratum has reached its destined position—or while approaching it—a third still inferior exertion of the force, or a third inferior force of a similar character—the number of atoms emitted being in *all* cases the measure of the force—proceeds to deposit a third stratum upon the second, and so on, until these concentric strata, growing gradually less and less, come down at length to the central point, and the diffusive matter, simultaneously with the diffusive force, is exhausted.

We have now the sphere filled, through means of irradiation, with atoms equably diffused. The two necessary conditions—those of irradiation and of equable diffusion—are satisfied; and by the *sole* process in which the possibility of their simultaneous satisfaction is conceivable. For this reason I confidently expect to find, lurking in the present condition of the atoms as distributed throughout the sphere, the secret of which I am in search—the all-important principle of the *modus operandi* of the Newtonian Law. Let us examine then, the actual condition of the atoms.

They lie in a series of concentric strata. They are equably diffused throughout the sphere. They have been irradiated into these states.

The atoms being *equably* distributed, the greater the superficial extent of any of these concentric strata or spheres, the more atoms will lie upon it. In other words, the number of atoms lying upon the surface of any one of the concentric spheres, is directly proportional to the extent of that surface.

But, in any series of concentric spheres, the surfaces are directly proportional to the squares of the distances from the centre.

Therefore the number of atoms in any stratum is directly proportional to the square of that stratum's distance from the centre.

But the number of atoms in any stratum is the measure of the force which emitted that stratum—that is to

say, is *directly proportional* to the force.

Therefore the force which irradiated any stratum is directly proportional to the square of that stratum's distance from the centre—or, generally,

The force of the irradiation has been directly proportional to the squares of the distances.

Now, Reaction, as far as we know anything of it, is Action conversed. The *general* principle of Gravity being, in the first place, understood as the reaction of an act—as the expression of a desire on the part of Matter, while existing in a state of diffusion, to return into the Unity whence it was diffused; and, in the second place, the mind being called upon to determine the *character* of the desire—the manner in which it would naturally be manifested; in other words, being called upon to conceive a probable law or *modus operandi* for the return, could not well help arriving at the conclusion that this law of return would be precisely the converse of the law of departure. That such would be the case any one at least would be abundantly justified in taking for granted, until such time as some person should suggest something like a plausible reason why it should *not* be the case—until such period as a law of return shall be imagined which the intellect can consider as preferable.

Matter, then, irradiated into space with a force varying as the squares of the distances, might *a priori* be supposed to return towards its centre of irradiation with a force varying *inversely* as the squares of the distances: and I have already shown that any principle which will explain why the atoms should tend, according to any law, to the general centre, must be admitted as satisfactorily explaining at the same time why, according to the same law, they should tend each to each. For, in fact, the tendency to the general centre is not to a centre as such, but because of its being a point in tending towards which each atom tends most directly to its real and essential centre, *Unity*—the absolute and final Union of all.

The consideration here involved presents to my own mind no embarrassment whatever—but this fact does not blind me to the possibility of its being obscure to those who may have been less in the habit of dealing with abstractions:—and, upon the whole, it may be as well to look at the matter from one or two other points of view.

The absolute, irrelative particle primarily created by the Volition of God, must have been in a condition of positive *normality*, or rightfulness—for wrongfulness implies *relation*. Right is positive; wrong is negative—is merely the negation of right; as cold is the negation of heat—darkness of light. That a thing may be wrong in *relation* to which it *is* wrong—some condition which it fails to satisfy; some law which it violates; some being whom it aggrieves. If there be no such being, law, or condition, in respect to which the thing is wrong—and, still more especially, if no beings, laws, or conditions exist at all—then the thing can*not* be wrong, and consequently must be *right*. Any deviation from normality involves a tendency to return to it. A difference from the normal—from the right—from the just—can be understood as effected only by the overcoming a difficulty; and if the force which

overcomes the difficulty be not infinitely continued, the ineradicable tendency to return will at length be permitted to act for its own satisfaction. Upon withdrawal of the force, the tendency acts. This is the principle of reaction as the inevitable consequence of finite action. Employing a phraseology of which the seeming affectation will be pardoned for its expressiveness, we may say that Reaction is the return from the condition of *as it is and ought not to be* into the condition of *as it was originally and therefore ought to be*:—and let me add here that the *absolute* force of Reaction would no doubt be always found in direct proportion with the reality—the truth—the absoluteness—of the *originality*—if ever it were possible to measure this latter:—and, consequently, the greatest of all conceivable reactions must be that produced by the tendency which we now discuss—the tendency to return into the *absolutely original*—into the *supremely* primitive. Gravity, then, *must be the strongest of forces*—an idea reached *a priori* and abundantly confirmed by induction. What use I make of the idea will be seen in the sequel.

The atoms, now, having been diffused from their normal condition of Unity, seek to return to—what? Not to any particular *point*, certainly; for it is clear that if, upon the diffusion, the whole Universe of matter had been projected, collectively, to a distance from the point of irradiation, the atomic tendency to the general centre of the sphere would not have been disturbed in the least—the atoms would not have sought the point *in absolute space* from which they were originally impelled. It is merely the *condition*, and not the point or locality at which this condition took its rise, that these atoms seek to re-establish:—it is merely *that condition which is their normality* that they desire. "But they seek a centre," it will be said, "and a centre is a point." True; but they seek this point not in its character of point—(for, were the whole sphere moved from its position, they would seek, equally, the centre; and the centre *then* would be a *new* point)—but because it so happens, on account of the form in which they collectively exist—(that of the sphere)—that only *through* the point in question—the sphere's centre—they can attain their true object, Unity. In the direction of the centre each atom perceives more atoms than in any other direction. Each atom is impelled towards the centre, because along the straight line joining it and the centre and passing on to the circumference beyond, there lie a greater number of atoms than along any other straight line—a greater number of objects that seek it, the individual atom—a greater number of tendencies to Unity—a greater number of satisfactions for its own tendency to Unity—in a word, because in the direction of the centre lies the utmost possibility of satisfaction, generally for its own individual appetite. To be brief, the *condition*, Unity, is all that is really sought; and if the atoms *seem* to seek the centre of the sphere, it is only impliedly, through implication—because such centre happens to imply, to include, or to involve, the only essential centre, Unity. But *on account of* this implication or involution, there is no possibility of practically separating the tendency to Unity in the abstract, from

the tendency to the concrete centre. Thus the tendency of the atoms to the general centre *is*, to all practical intents and for all logical purposes, the tendency each to each; and the tendency each to each *is* the tendency to the centre; and the one tendency may be assumed *as* the other; whatever will apply to the one must be thoroughly applicable to the other; and, in conclusion, whatever principle will satisfactorily explain the one, cannot be questioned as an explanation of the other.

In looking carefully around me for a rational objection to what I have advanced, I am able to discover *nothing* but of that class of objections usually urged by the doubters for Doubt's sake, I very readily perceive *three;* and proceed to dispose of them in order.

It may be said, first—"That the proof that the force of irradiation (in the case described) is directly proportional to the squares of the distances, depends upon an unwarranted assumption—that of the number of atoms in each stratum being the measure of the force with which they are emitted."

I reply, not only that I am warranted in such assumption, but that I should be utterly *un*warranted in any other. What I assume is, simply, that an effect is the measure of its cause—that every exercise of the Divine Will will be proportional to that which demands the exertion—that the means of Omnipotence, or Omniscience, will be exactly adapted to its purposes. Neither can a deficiency nor an excess of cause bring to pass any effect. Had the force which irradiated any stratum to its position, been either more or less than was needed for the purpose; that is to say, not *directly proportional* to the purpose, then to its position that stratum could not have been irradiated. Had the force, which with a view to general equability of distribution, emitted the proper number of atoms for each stratum been not *directly proportional* to the number, then the number would *not* have been the number demanded for the equable distribution.

The second supposable objection is somewhat better entitled to an answer.

It is an admitted principle in Dynamics that every body on receiving an impulse, or disposition to move, will move onward in a straight line, in the direction imparted by the impelling force, until deflected, or stopped by some other force. How then, it may be asked, is my first or external stratum of atoms to be understood as discontinuing their movement at the circumference of the imaginary glass sphere, when no second force of more than an imaginary character appears to account for the discontinuance?

I reply that the objection in this case actually does arise out of an "unwarranted assumption"—on the part of the objector—the assumption of a principle in Dynamics, at an epoch when *no* "principles" in *anything* exist. I use the word "principle," of course in the objector's understanding of the word.

"In the beginning" we can admit—indeed we can comprehend but one *First Cause*, the truly ultimate *Principle*, the volition of God. The primary *act*, that of Irradiation from Unity, must have been independent of all that which the world now calls "principle"—because all that we so designate is but a consequence of the reaction of

that primary act. I say *"primary"* act, for the creation of the absolute material particle is more properly to be regarded as a *conception* than as an *"act"* in the ordinary meaning of the term. Thus we must regard the primary act as an act for the establishment of what we now call "principles." But this primary act itself is to be considered as *continuous Volition.* The Thought of God is to be understood as originating the Diffusion—as proceeding with it—as regulating it—and finally, as being withdrawn from it upon its completion. *Then* commences Reaction, and through Reaction "Principle," as we employ the word. It will be advisable, however, to limit the application of this word to the two *immediate* results of the discontinuance of the Divine Volition—that is, to the two agents, *Attraction* and *Repulsion.* Every other Natural agent depends, either more or less, immediately upon these two, and therefore would be more conveniently designated as *sub*-principle.

It may be objected, thirdly, that in general the peculiar mode of distribution which I have suggested for the atoms is "an hypothesis and nothing more."

Now I am aware that the word hypothesis is a ponderous sledge-hammer, grasped immediately, if not lifted, by all very diminutive thinkers, upon the first appearance of any proposition, wearing in any particular, the garb of *a theory.* But "hypothesis" cannot be wielded *here* to any good purpose, even by those who succeed in lifting it—little men or great.

I maintain, first, that *only* in the mode described is it conceivable that Matter could have been diffused so as to fulfil at once the conditions of irradiation and of generally equable distribution. I maintain, secondly, that these conditions themselves have been imposed upon me as necessities, in a train of ratiocination *as rigorously logical as that which establishes any demonstration in Euclid:* and I maintain, thirdly, that even if the charge of "hypothesis" were as fully sustained as it is, in fact, unsustained and untenable, still the validity and indisputability of my result would not, even in the slightest particular, be disturbed.

To explain: The Newtonian Gravity —a law of Nature—a law whose existence as such no one out of Bedlam questions—a law whose admission as such enables us to account for nine-tenths of the Universal phenomena—a law which merely because it does so enable us to account for these phenomena, we are perfectly willing, without reference to any other considerations, to admit, and cannot help admitting as a law—a law, nevertheless, of which neither the principle nor the *modus operandi* of the principle, has ever yet been traced by the human analysis—a law, in short, which, neither in its detail nor in its generality, has been found susceptible of explanation *at all* —is at length seen to be at every point thoroughly explicable, provided we only yield our assent to—what? To an hypothesis? Why *if* an hypothesis—if the merest hypothesis—if an hypothesis for whose assumption—as in the case of that *pure* hypothesis the Newtonian law itself—no shadow of *a priori* reason could be assigned—if an hypothesis, even so absolute as all this implies, would enable us to perceive a principle for the Newtonian law—would enable

us to understand as satisfied conditions so miraculously—so ineffably complex and seemingly irreconcilable as those involved in the relations of which Gravity tells us; what rational being *could so* expose his fatuity as to call even this absolute hypothesis an hypothesis any longer—unless, indeed, he were to persist in so calling it, with the understanding that he did so simply for the sake of consistency *in words?*

But what is the true state of our present case? What is *the fact.* Not only that it is *not* an hypothesis which we are required *to adopt,* in order to admit the principle at issue explained, but that it *is* a logical conclusion which we are requested *not* to adopt if we can avoid it—which we are simply invited to *deny if we can*—a conclusion of so accurate a logicality that to dispute it would be the effort—to doubt its validity beyond our power—a conclusion from which we see no mode of escape, turn as we will; a result which confronts us either at the end of an *in*ductive journey from the phenomena of the very Law discussed, or at the close of a *de*ductive career from the most rigorously simple of all conceivable assumptions—*the assumption, in a word, of simplicity itself.*

And if here, for the mere sake of cavilling, it be urged that although my starting-point is, as I assert, the assumption of absolute Simplicity, yet Simplicity, considered merely in itself, is no axiom; and that only deductions from axioms are indisputable—it is thus that I reply:—

Every other science than Logic is the science of certain concrete relations. Arithmetic, for example, is the science of the relations of number—Geometry, of the relations of form—Mathematics in general, of the relations of quantity n general—of whatever can be increased or diminished. Logic, however, is the science of Relation in the abstract—of absolute Relation—of Relation considered solely in itself. An axiom in any particular science other than Logic, is thus merely a proposition announcing certain concrete relations which seem to be too obvious for dispute—as when we say, for instance, that the whole is greater than its part; and thus again, the principle of the *Logical axiom*—in other words, of an axiom in the abstract—is simply *obviousness of relation.* Now, it is clear, not only that what is obvious to one mind may not be obvious to another, but that what is obvious to one mind at one epoch may be anything but obvious at another epoch to the same mind. It is clear, moreover, that what to-day is obvious even to the majority of mankind, or to the majority of the best intellects of mankind, may to-morrow be to either majority more or less obvious, or in no respect obvious at all. It is seen, then, that the *axiomatic principle* itself is susceptible of variation, and of course that axioms are susceptible of similar change. Being mutable, the "truths" which grow out of them are necessarily mutable, too; or, in other words, are never to be positively depended upon as truths at all—since Truth and Immutability are one.

It will now be readily understood that no axiomatic idea—no idea founded in the fluctuating principle, obviousness of relation, can possibly be so secure, so reliable a basis for any structure erected by the Reason, as *that*

idea—(whatever it is, wherever we can find it, or *if* it be practicable to find it anywhere)—which is *ir*relative altogether—which not only presents to the understanding *no obviousness* of relation, either greater or less to be considered, but subjects the intellect, not in the slightest degree, to the necessity of even looking at *any relation at all.* If such an idea be not what we too heedlessly term "an axiom," it is at least preferable, as a Logical basis, to any axiom ever propounded or to all imaginable axioms combined; and such precisely is the idea with which my deductive process, so thoroughly corroborated by induction, commences. My *particle proper* is but *absolute Irrelation.* To sum up what has been advanced:—As a starting point I have taken it for granted, simply, that the Beginning had nothing behind it or before it—that it was a beginning in fact—that it was a beginning and nothing different from a beginning—in short, that this Beginning was—*that which it was.* If this be a "mere assumption," then a "mere assumption" let it be.

To conclude this branch of the subject:—I am fully warranted in announcing that *the law which we have been in the habit of calling Gravity exists on account of Matter's having been irradiated, at its origin, atomically, into a limited* sphere of Space, from one, individual, unconditional, irrelative, and absolute Particle Proper, by the sole process in which it was possible to satisfy at the same time the two conditions, irradiation and generally-equable distribution throughout the sphere—that is to say, by a force varying in direct proportion with the squares of the distances between the irradiated atoms respectively and the particular centre of Irradiation.*

I have already given my reasons for presuming Matter to have been diffused by a determinate rather than by a continuous or infinitely continued force. Supposing a continuous force, we should be unable, in the first place, to comprehend a reaction at all; and we should be required, in the second place, to entertain the impossible conception of an infinite extension of Matter. Not to dwell upon the impossibility of the conception, the infinite extension of Matter is an idea which, if not positively disproved, is at least not in any respect warranted by telescopic observation of the stars—a point to be explained more fully hereafter; and this empirical reason for believing in the original finity of Matter is unempirically confirmed. For example:—Admitting, for the moment, the possibility of understanding Space *filled* with the irradiated atoms—that is to say, admitting, as well as we can, for argument's sake, that the succession of the irradiated atoms had absolutely *no end*—then it is abundantly clear that, even when the Volition of God had been withdrawn from them, and thus the tendency to return into Unity permitted (abstractly) to be satisfied, this permission would have been nugatory and invalid—practically valueless and of no effect whatever. No Reaction could have taken place; no movement towards

* "Limited sphere." A sphere is *necessarily* limited. I prefer tautology to a chance of misconception.—E. A. P.

Unity could have been made; no Law of Gravity could have obtained.

To explain:—Grant the *abstract* tendency of any one atom to any one other as the inevitable result of diffusion from the normal Unity—or, what is the same thing, admit any given atom as *proposing* to move in any given direction—it is clear that, since there is an *infinity* of atoms on all sides of the atom proposing to move, it never can actually move towards the satisfaction of its tendency in the direction given, on account of a precisely equal and counter-balancing tendency in the direction diametrically opposite. In other words, exactly as many tendencies to Unity are behind the hesitating atom as before it; for it is a mere sotticism to say that one infinite line is longer or shorter than another infinite line, or that one infinite number is greater or less than another number that is infinite. Thus the atom in question must remain stationary for ever. Under the impossible circumstances which we have been merely endeavouring to conceive for argument's sake, there could have been no aggregation of Matter—no stars—no worlds—nothing but a perpetually atomic and inconsequential Universe. In fact, view it as we will, the whole idea of unlimited Matter is not only untenable, but impossible and preposterous.

With the understanding of a *sphere* of atoms, however, we perceive, at once, a *satisfiable* tendency to union. The general result of the tendency each to each, being a tendency of all to the centre, the *general* process of condensation or approximation commences immediately, by a common and simultaneous movement, on withdrawal of the Divine Volition; the *individual* approximations or coalescences—*not* coalitions—of atom with atom, being subject to almost infinite variations of time, degree, and condition, on account of the excessive multiplicity of relation, arising from the differences of form assumed as characterising the atoms at the moment of their quitting the Particle Proper; as well as from the subsequent particular inequidistance, each from each.

What I wish to impress upon the reader is the certainty of there arising, at once (on withdrawal of the diffusive force, or Divine Volition), out of the condition of the atoms as described, at innumerable points throughout the Universal sphere, innumerable agglomerations, characterized by innumerable specific differences of form, size, essential nature, and distance, each from each. The development of Repulsion (Electricity) must have commenced of course with the very earliest particular efforts at Unity, and must have proceeded constantly in the ratio of Coalescence—that is to say, *in that of condensation,* or, again, of Heterogeneity.

Thus the two Principles Proper, *Attraction and Repulsion*—the Material and the Spiritual—accompany each other, in the strictest fellowship for ever. Thus *the Body and the Soul walk hand in hand.*

If now, in fancy, we select *any one* of the agglomerations considered as in their primary stages throughout the Universal sphere, and suppose this incipient agglomeration to be taking place at that point where the centre of our Sun exists—or rather where it *did* exist originally; for the Sun is per-

petually shifting this position—we shall find ourselves met, and borne onward for a time at least, by the most magnificent of theories—by the Nebular Cosmogony of Laplace:—although "Cosmogony" is far too comprehensive a term for what he really discusses—which is the constitution of our solar system alone—of one among the myriad of similar systems which make up the Universe Proper—that Universal sphere—that all-inclusive and absolute *Cosmos* which forms the subject of my present Discourse.

Confining himself to an *obviously limited* region—that of our solar system with its comparatively immediate vicinity—and *nearly* assuming—that is to say, assuming without any basis whatever, either deductive or inductive—*much* of what I have been just endeavouring to place upon a more stable basis than assumption; assuming, for example, matter as diffused (without pretending to account for the diffusion) throughout, and somewhat beyond, the space occupied by our system—diffused in a state of heterogeneous nebulosity and obedient to that omniprevalent law of Gravity at whose principle he ventured to make no guess; assuming all this (which is quite true, although he had no logical right to its assumption) Laplace has shown, dynamically and mathematically, that the results in such case necessarily ensuing are those and those alone which we find manifested in the actually existing condition of the system itself.

To explain: Let us conceive *that* particular agglomeration of which we have just spoken—the one at the point designated by our Sun's centre—to have so far proceeded that a vast quantity of nebulous matter has here assumed a roughly globular form; its centre being of course coincident with what is now, or rather was originally, the centre of our Sun; and its periphery extending out beyond the orbit of Neptune, the most remote of our planets—in other words, let us suppose the diameter of this rough sphere to be some 6,000 millions of miles. For ages this mass of matter has been undergoing condensation, until at length it has become reduced into the bulk we imagine; having proceeded gradually of course from its atomic and imperceptible state into what we understand of visible, palpable, or otherwise appreciable nebulosity.

Now, the condition of this mass implies a rotation about an imaginary axis—a rotation which, commencing with the absolute incipiency of the aggregation, has been ever since acquiring velocity. The very first two atoms which met, approaching each other from points not diametrically opposite, would, in rushing partially past each other, form a nucleus for the rotary movement described. How this would increase in velocity, is readily seen. The two atoms are joined by others—an aggregation is formed. The mass continues to rotate while condensing. But any atom at the circumference has of course a more rapid motion than one nearer the centre. The outer atom, however, with its superior velocity, approaches the centre; carrying this superior velocity with it as it goes. Thus every atom, proceeding inwardly, and finally attaching itself to the condensed centre, adds something to the original velocity of that centre—that

is to say, increases the rotary movement of the mass.

Let us now suppose this mass so far condensed that it occupies *precisely* the space circumscribed by the orbit of Neptune, and that the velocity with which the surface of the mass moves, in the general rotation, is precisely that velocity which Neptune now revolves about the Sun. At this epoch, then, we are to understand that the constantly increasing centrifugal force, having got the better of the non-increasing centripetal, loosened and separated the exterior and least condensed stratum, or a few of the exterior and least condensed strata, at the equator of the sphere, where the tangential velocity predominated; so that these strata formed about the main body an independent ring encircling the equatorial regions—just as the exterior portion thrown off, by excessive velocity of rotation, from a grindstone, would form a ring about the grindstone, but for the solidity of the superficial material: were this caoutchouc, or anything similar in consistency, precisely the phenomenon I describe would be presented.

The ring thus whirled from the nebulous mass, *revolved* of course *as* a separate ring, with just that velocity with which, while the surface of the mass, it *rotated*. In the meantime, condensation still proceeding, the interval between the discharged ring and the main body continued to increase, until the former was left at a vast distance from the latter.

Now, admitting the ring to have possessed, by some seemingly accidental arrangement of its heterogeneous materials, a constitution nearly uniform, then this ring, *as* such, would never have ceased revolving about its primary; but, as might have been anticipated, there appears to have been enough irregularity in the disposition of the materials, to make them cluster about centres of superior solidity; and thus the annular form was destroyed.* No doubt, the band was soon broken up into several portions, and one of these portions, predominating in mass, absorbed the others into itself; the whole settling, spherically, into a planet. That this latter, *as* a planet, continued the revolutionary movement which characterised it while a ring, is sufficiently clear; and that it took upon itself, also, an additional movement in its new condition of sphere, is readily explained. The ring being understood as yet unbroken, we see that its exterior, while the whole revolves about the parent body, moves more rapidly than its interior. When the rupture occurred, then, some portion in each fragment must have been moving with greater velocity than the others. The superior movement prevailing, must have whirled each fragment round—that is to say, have caused it to rotate; and the direction of the rotation must of course have been the direction of

* Laplace assumed his nebulosity heterogeneous, merely that he might be thus enabled to account for the breaking up of the rings; for had the nebulosity been homogeneous, they would not have broken. I reach the same result—heterogeneity of the secondary masses immediately resulting from the atoms—purely from an *a priori* consideration of their general design—*Relation*.—E. A. P.

the revolution whence it arose. *All* the fragments having become subject to the rotation described, must, in coalescing, have imparted it to the one planet constituted by their coalescence.—This planet was Neptune. Its material continuing to undergo condensation, and the centrifugal force generated in its rotation, getting, at length, the better of the centripetal, as before in the case of the parent orb, a ring was whirled also from the equatorial surface of this planet: this ring, having been *un*uniform in its constitution, was broken up, and its several fragments, being absorbed by the most massive, were collectively spherified into a moon. Subsequently, the operation was repeated, and a second moon was the result. We thus account for the planet Neptune, with the two satellites which accompany him.

In throwing off a ring from its equator, the Sun reestablished that equilibrium between its centripetal and centrifugal forces which had been disturbed in the process of condensation; but, as this condensation still proceeded, the equilibrium was again immediately disturbed through the increase of rotation. By the time the mass had so far shrunk that it occupied a spherical space just that circumscribed by the orbit of Uranus, we are to understand that the centrifugal force had so far obtained the ascendency that new relief was needed: a second equatorial band was consequently thrown off, which, proving ununiform, was broken up, as before in the case of Neptune; the fragments settling into the planet Uranus; the velocity of whose actual revolution about the Sun indicates, of course, the rotary speed of that Sun's equatorial surface at the moment of the separation. Uranus, adopting a rotation from the collective rotations of the fragments composing it, as previously explained, now threw off ring after ring; each of which, becoming broken up, settled into a moon:—other moons, at different epochs, having been formed in this manner by the rupture and general spherification of as many distinct uniform rings.

By the time the Sun had shrunk until it occupied a space just that circumscribed by the orbit of Saturn, the balance, we are to suppose, between its centripetal and centrifugal forces had again become so far disturbed, through increase of rotary velocity, the result of condensation, that a third effort at equilibrium became necessary; and an annular band was therefore whirled off, as twice before; which, on rupture through ununiformity, became consolidated into the planet Saturn. This latter threw off, in the first place, seven uniform bands, which, on rupture, were spherified respectively into as many moons; but, subsequently, it appears to have discharged, at three distinct but not very distant epochs, three rings whose equability of constitution was, by apparent accident, so considerable as to present no occasion for their rupture; thus they continue to revolve as rings. I use the phrase "*apparent* accident"; for of accident in the ordinary sense there was of course nothing—the term is properly applied only to the result of indistinguishable or not immediate traceable *law*.

Shrinking still farther, until it occupied just the space circumscribed by the orbit of Jupiter, the Sun now found

need of farther effort to restore the counterbalance of its two forces, continually disarranged in the still continued increase of rotation. Jupiter, accordingly, was now thrown off; passing from the annular to the planetary condition; and, on attaining this latter, threw off in its turn, at four different epochs, four rings, which finally resolved themselves into so many moons.

Still shrinking, until its sphere occupied just the space defined by the orbit of the Asteroids, the Sun now discarded a ring which appears to have had *eight* centres of superior solidity, and, on breaking up, to have separated into eight fragments, no one of which so far predominated in mass as to absorb the others. All therefore, as distinct although comparatively small planets, proceeded to revolve in orbits whose distances, each from each, may be considered as in some degree the measure of the force which drove them asunder —all the orbits, nevertheless, being so closely coincident as to admit of our calling them *one*, in view of the other planetary orbits.

Continuing to shrink, the Sun, on becoming so small as just to fill the orbit of Mars, now discharged this planet—of course by the process repeatedly described. Having no moon, however, Mars could have thrown off no ring. In fact, an epoch had now arrived in the career of the parent body, the centre of the system. The *de*crease of its nebulosity, which is the *in*crease of its density, and which again is the *de*crease of its condensation, out of which latter arose the constant disturbance of equilibrium—must, by this period, have attained a point at which the efforts for restoration would have been more and more ineffectual just in proportion as they were less frequently needed. Thus the processes of which we have been speaking would everywhere show signs of exhaustion—in the planets first, and secondly in the original mass. We must not fall into the error of supposing the decrease of interval observed among planets as we approach the Sun to be in any respect indicative of an increase of frequency in the periods at which they were discarded. Exactly the converse is to be understood. The longest interval of time must have occurred between the discharges of the two interior; the shortest, between those of the two exterior planets. The decrease of the interval of space is, nevertheless, the measure of the density, and thus inversely of the condensation, of the Sun, throughout the processes detailed.

Having shrunk, however, so far as to fill only the orbit of our Earth, the parent sphere whirled from itself still one other body—the Earth—in a condition so nebulous as to admit of this body's discarding, in its turn, yet another, which is our Moon;—but here terminated the lunar formations.

Finally, subsiding to the orbits first of Venus and then of Mercury, the Sun discarded these two interior planets; neither of which has given birth to any moon.

Thus from his original bulk—or, to speak more accurately, from the condition in which we first considered him —from a partially spherified nebular mass, *certainly* much more than 5600 millions of miles in diameter—the great central orb and origin of our solar-planetary-lunar system, has gradually descended, by condensation, in obedience

to the law of Gravity, to a globe only 882,000 miles in diameter; but it by no means follows, either that its condensation is yet complete, or that it may not still possess the capacity of whirling from itself another planet.

I have here given—in outline, of course, but still with all the detail necessary for distinctness—a view of the Nebular Theory as its author himself conceived it. From whatever point we regard it, we shall find it *beautifully true*. It is by far too beautiful, indeed, *not* to possess Truth as its essentiality—and here I am very profoundly serious in what I say. In the revolution of the satellites of Uranus, there does appear something *seemingly* inconsistent with the assumptions of Laplace; but that *one* apparent inconsistency can invalidate a theory constructed from a million of intricate consistencies, is a fancy fit only for the fantastic. In prophesying, confidently, that the apparent anomaly to which I refer, will, sooner or later, be found one of the strongest possible corroborations of the general hypothesis, I pretend to no especial spirit of divination. It is a matter which the only difficulty seems *not* to foresee.*

The bodies whirled off in the processes described, would exchange, it has been seen, the superficial *rotation* of the orbs whence they originated, for a *revolution* of equal velocity about these orbs as distant centres; and the revolution thus engendered must proceed, so long as the centripetal force, or that with which the discarded body gravitates towards its parent, is neither greater nor less than that by which it was discarded—that is, than the centrifugal, or far more properly, than the tangential, velocity. From the unity, however, of the origin of these two forces, we might have expected to find them as they are found—the one accurately counterbalancing the other. It has been shown, indeed, that the act of whirling-off is, in every case, merely an act for the preservation of the counter-balance.

After referring, however, the centripetal force to the omniprevalent law of Gravity, it has been the fashion with astronomical treaties, to seek beyond the limits of mere Nature—that is to say, of *Secondary* Cause—a solution of the phenomenon of tangential velocity. This latter they attribute directly to a *First Cause*—to God. The force which carries a stellar body around its primary they assert to have originated in an impulse given immediately by the finger—this is the childish phraseology employed—by the finger of Deity itself. In this view, the planets, fully formed, are conceived to have been hurled from the Divine hand, to a position in the vicinity of the suns, with an impetus mathematically adapted to the masses, or attractive capacities, of the suns themselves. An idea so grossly unphilosophical, although so supinely adopted, could have arisen only from the difficulty of otherwise accounting for the absolutely accurate adaptation, each to each, of two forces so seemingly independent one of the other, as are the gravitating and tangential. But it should be remembered that, for a long

* I am prepared to show that the anomalous revolution of the satellites of Uranus is a simply perspective anomaly arising from the inclination of the axis of the planet.—E. A. P.

time, the coincidence between the moon's rotation and her sidereal revolution—two matters seemingly far more independent than those now considered—was looked upon as positively miraculous; and there was a strong disposition, even among astronomers, to attribute the marvel to the direct and continual agency of God—who, in this case, it was said, had found it necessary to interpose, specially among his general laws, a set of subsidiary regulations, for the purpose of for ever concealing from mortal eyes the glories, or perhaps the horrors, of the other side of the Moon—of that mysterious hemisphere which has always avoided, and must perpetually avoid, the telescopic scrutiny of mankind. The advance of Science, however, soon demonstrated—what to the philosophical instinct needed *no* demonstration—that the one movement is but a portion—something more even than a consequence—of the other.

For my part, I have no patience with fantasies at once so timorous, so idle, and so awkward. They belong to the veriest *cowardice* of thought. That Nature and the God of Nature are distinct, no thinking being can long doubt. By the former we imply merely the laws of the latter. But with the very idea of God, omnipotent, omniscient, we entertain also the idea of *the infallibility* of his laws. With Him there being neither Past nor Future—with Him all being *Now*—do we not insult him in supposing his laws so contrived as not to provide for every possible contingency?—or rather, what idea *can* we have of *any* possible contingency, except that it is at once a result and a manifestation of his laws? He who, divesting himself of prejudice, shall have the rare courage to think absolutely for himself, cannot fail to arrive, in the end, at the condensation of *laws* into *Law*—cannot fail of reaching the conclusion that *each law of Nature is dependent at all points upon all other laws,* and that all are but consequences of one primary exercise of the Divine Volition. Such is the principle of the Cosmogony which, with all necessary deference, I here venture to suggest and to maintain.

In this view, it will be seen that, dismissing as frivolous, and even impious, the fancy of the tangential force having been imparted to the planets immediately by "the finger of God," I consider this force as originating in the rotation of the stars—this rotation as brought about by the in-rushing of the primary atoms towards their respective centres of aggregation—this in-rushing as the consequence of the law of Gravity—this law as but the mode in which is necessarily manifested the tendency of the atoms to return into imparticularity—this tendency to return as but the inevitable reaction of the first and most sublime of Acts—that act by which a God, self-existing and alone existing, became all things at once through dint of his volition, while all things were thus constituted a portion of God.

The radical assumptions of this Discourse suggest to me, and in fact imply, certain important *modifications* of the Nebular Theory as given by Laplace. The efforts of the repulsive power I have considered as made for the purpose of preventing contact among the atoms, and thus as made in the ratio of the approach to contact—that is to say, in the ratio of condensation. In other words, *electricity,* with its invo-

lute phenomena, heat, light, and magnetism, is to be understood as proceeding as condensation proceeds, and of course, inversely, as destiny proceeds, or the *cessation to condense*. Thus the Sun in the process of its aggregation, must soon, in developing repulsion, have become excessively heated—perhaps incandescent; and we can perceive how the operation of discarding its rings must have been materially assisted by the slight incrustation of its surface consequent on cooling. Any common experiment shows us how readily a crust of the character suggested, is separated, through heterogeneity, from the interior mass. But on every successive rejection of the crust, the new surface would appear incandescent as before; and the period at which it would again become so far incrusted as to be readily loosened and discharged, may well be imagined as exactly coincident with that at which a new effort would be needed, by the whole mass, to restore the equilibrium of its two forces, disarranged through condensation. In other words —by the time the electric influence (Repulsion) has prepared the surface for rejection, we are to understand that the gravitating influence (Attraction) is precisely ready to reject it. Here then, as everywhere, *the Body and the soul walk hand in hand.*

These ideas are empirically confirmed at all points. Since condensation can never, in any body, be considered as absolutely at an end, we are warranted in anticipating that, whenever we have an opportunity of testing the matter, we shall find indications of resident luminosity in *all* the stellar bodies—moons and planets as well as suns. That our Moon is strongly self-luminous, we see at every total eclipse, when, if not so, she would disappear. On the dark part of the satellite, too, during her phases, we often observe flashes like our own Auroras; and that these latter, with our various other so-called electrical phenomena, without reference to any more steady radiance, must give our Earth a certain appearance of luminosity to an inhabitant of the Moon, is quite evident. In fact, we should regard all the phenomena referred to as mere manifestations, in different moods and degrees, of the Earth's feebly-continued condensation.

If my views are tenable, we should be prepared to find the newer planets —that is to say, those nearer the Sun—more luminous than those older and more remote—and the extreme brilliancy of Venus (on whose dark portions, during her phases, the Auroras are frequently visible) does not seem to be altogether accounted for by her mere proximity to the central orb. She is no doubt vividly self-luminous, although less so than Mercury; while the luminosity of Neptune may be comparatively nothing.

Admitting what I have urged, it is clear that, from the moment of the Sun's discarding a ring, there must be a continuous diminution both of his heat and light on account of the continuous incrustation of his surface; and that a period would arrive—the period immediately previous to a new discharge—when a *very material* decrease of both light and heat must become apparent. Now, we know that tokens of such changes are distinctly recognisable. On the Melville islands—to adduce merely one out of a hundred examples—we find traces of *ultra-tropi-*

cal vegetation—of plants that never could have flourished without immensely more light and heat than are at present afforded by our Sun to any portion of the surface of the Earth. Is such vegetation referable to an epoch immediately subsequent to the whirling-off of Venus? At this epoch must have occurred to us our greatest access of solar influence; and, in fact, this influence must then have attained its maximum—leaving out of view of course the period when the Earth itself was discarded—the period of its mere organization.

Again:—we know that there exist *non-luminous suns*—that is to say, suns whose existence we determine through the movements of others, but whose luminosity is not sufficient to impress us. Are these suns invisible merely on account of the length of time elapsed since their discharge of a planet? And yet again:—may we not—at least in certain cases—account for the sudden appearances of suns where none had been previously suspected, by the hypothesis that, having rolled with incrusted surfaces throughout the few thousand years of our astronomical history, each of these suns, in whirling off a new secondary, has at length been enabled to display the glories of its still incandescent interior?—To the well-ascertained fact of the proportional increase of heat as we descend into the Earth, I need of course do nothing more than refer—it comes in the strongest possible corroboration of all that I have said on the topic now at issue.

In speaking, not long ago, of the repulsive or electrical influence, I remarked that "the important phenomena of vitality, consciousness, and thought, whether we observe them generally or in detail, seem to proceed at least in the ratio of the *heterogeneous*."

I mentioned, too, that I would recur to the suggestion—and this is the proper point at which to do so. Looking at the matter first in detail, we perceive that not merely the *manifestation* of vitality, but its importance, consequences, and elevation of character keep pace very closely with the heterogeneity or complexity of the animal structure. Looking at the question, now in its generality, and referring to the first movements of the atoms towards mass-constitution, we find that heterogeneousness, brought about directly through condensation, proportional with it for ever. We thus reach the proposition that *the importance of the development of the terrestrial vitality proceeds equably with the terrestrial condensation.*

Now this is in precise accordance with what we know of the succession of animals on the Earth. As it has proceeded in its condensation, superior and still superior races have appeared. Is it impossible that the successive geological revolutions which have attended at least, if not immediately caused, these successive elevations of vitalic character—is it improbable that these revolutions have themselves been produced by the successive planetary discharges from the Sun—in other words, by the successive variations in the solar influence on the Earth? Were this idea tenable, we should not be unwarranted in the fancy that the discharge of yet a new planet, interior to Mercury, may give rise to yet a new modification of the terrestrial surface—a modification from which may spring a race both materially and spiritually superior to Man.

These thoughts impress me with all the force of truth—but I throw them out of course merely in their obvious character of suggestion.

The Nebular Theory of Laplace has lately received far more confirmation than it needed, at the hands of the philosopher Comte. These two have thus together shown—*not*, to be sure, that Matter at any period actually existed as described, in a state of nebular diffusion, but that, admitting it so to have existed throughout the space and much beyond the space now occupied by our solar system, *and to have commenced a movement towards a centre*—it must gradually have assumed the various forms and motions which are now seen, in that system, to obtain. A demonstration such as this—a dynamical and mathematical demonstration, as far as demonstration can be—unquestionable and unquestioned—unless, indeed, by that unprofitable and disreputable tribe, the professional questioners—the mere madmen who deny the Newtonian law of Gravity on which the results of the French mathematicians are based—a demonstration, I say, such as this, would to most intellects be conclusive—and I confess that it is so to mine—of the validity of the nebular hypothesis upon which the demonstration depends.

That the demonstration does not *prove* the hypothesis according to the common understanding of the word "proof," I admit, of course. To show that certain existing results—that certain established facts—may be, even mathematically, accounted for by the assumption of a certain hypothesis, is by no means to establish the hypothesis itself. In other words:—to show that certain *data* being given, a certain existing result might, or even *must*, have ensued, will fail to prove that this result *did* ensue *from the data*, until such time as it shall be also shown that there are, *and can be*, no other *data* from which the result in question might *equally* have ensued. But in the case now discussed, although all must admit the deficiency of what we are in the habit of terming "proof," still there are many intellects, and those of the loftiest order, to which *no* proof could bring one iota of additional *conviction*. Without going into details which might impinge upon the Cloud-Land of Metaphysics, I may as well here observe that the force of conviction, in cases such as this, will always with the right-thinking be proportional to the amount of *complexity* intervening between the hypothesis and the result. To be less abstract:—The greatness of the complexity found existing among cosmical conditions, by rendering great in the same proportion the difficulty of accounting for all these conditions, *at once* strengthens also in the same proportion our faith in that hypothesis which does in such manner satisfactorily account for them; and as *no* complexity can well be conceived greater than that of the astronomical conditions, so no conviction can be stronger, to *my* mind at least, than that with which I am impressed by an hypothesis that not only reconciles these conditions with mathematical accuracy, and reduces them into a consistent and intelligible whole, but is at the same time the *sole* hypothesis, by means of which the human intellect has been ever enabled to account for them *at all*.

A most unfounded opinion has been latterly current in gossiping and even

in scientific circles, the opinion that the so-called Nebular Cosmogony has been overthrown. This fancy has arisen from the report of late observations made among what hitherto have been termed the "nebulæ," through the large telescope of Cincinnati, and the world-renowned instrument of Lord Rosse. Certain spots in the firmament which presented, even to the most powerful of the old telescopes, the appearance of nebulosity or haze, had been regarded for a long time as confirming the theory of Laplace. They were looked upon as stars in that very process of condensation which I have been attempting to describe. Thus it was supposed that we "had ocular evidence"—an evidence by the way which has always been found very questionable—of the truth of the hypothesis, and although certain telescopic improvements every now and then enabled us to perceive that a spot here and there, which we had been classing among the nebulæ was, in fact, but a cluster of stars deriving its nebular character only from its immensity of distance, still it was thought that no doubt could exist as to the actual nebulosity of numerous other masses, the strongholds of the nebulists, bidding defiance to every effort at segregation. Of these latter the most interesting was the great nebula in the constellation Orion, but this, with innumerable other miscalled "nebulæ," when viewed through the magnificent modern telescopes, has become resolved into a simple collection of stars. Now this fact has been very generally understood as conclusive against the Nebular Hypothesis of Laplace, and on announcement of the discoveries in question the most enthusiastic defender and most eloquent populariser of the theory, Dr. Nichol, went so far as to "admit the necessity of abandoning" an idea which had formed the material of his most praiseworthy book.

Many of my readers will no doubt be inclined to say that the result of these new investigations *has* at least a strong tendency to overthrow the hypothesis, while some of them, more thoughtful, will suggest that although the theory is by no means disproved through the segregation of the particular nebulæ alluded to, still a *failure* to segregate them with such telescopes might well have been understood as a triumphant *corroboration* of the theory, and this latter class will be surprised perhaps to hear me say that even with *them* I disagree.' If the propositions of this Discourse have been comprehended, it will be seen that in my view a failure to segregate the nebulæ would have tended to the refutation rather than to the confirmation of the Nebular Hypothesis.

Let me explain:—The Newtonian Law of Gravity we may of course assume as demonstrated. This law, it will be remembered, I have referred to the reaction of the first Divine Act—to the reaction of an exercise of the Divine Volition temporarily over-coming a difficulty. This difficulty is that of forcing the normal into the abnormal—of impelling that whose originality, and therefore whose rightful condition, was *One*, to take upon itself the wrongful condition of Many. It is only by conceiving this difficulty as *temporarily* overcome that we can comprehend a reaction. There could have been no reaction had the act been infinitely continued. So long as the act *lasted* no

reaction of course could commence; in other words, no *gravitation* could take place, for we have considered the one as but the manifestation of the other. But gravitation *has* taken place, therefore the act of Creation has ceased, and gravitation has long ago taken place, therefore the act of Creation has long ago ceased. We can no more expect, then, to observe *the primary processes* of Creation, and to these primary processes the condition of nebulosity has already been explained to belong.

Through what we know of the propagation of light, we have direct proof that the more remote of the stars have existed under the forms in which we now see them for an inconceivable number of years. So far back *at least*, then, as the period when these stars underwent condensation, must have been the epoch at which the mass-constitutive processes began. That we may conceive these processes, then, as still going on in the case of certain nebulæ, while in all other cases we find them thoroughly at an end, we are forced into assumptions for which we have really *no* basis whatever—we have to thrust in again upon the revolting Reason the blasphemous idea of special interposition—we have to suppose that in the particular instances of these nebulæ, an unerring God found it necessary to introduce certain supplementary regulations, certain improvements of the general law, certain re-touchings and emendations, in a word, which had the effect of deferring the completion of these individual stars for centuries of centuries beyond the era during which all the other stellar bodies had time, not only to be fully constituted, but to grow hoary with an unspeakable old age.

Of course, it will be immediately objected that since the light by which we recognised the nebulæ now must be merely that which left their surfaces a vast number of years ago, the processes at present observed, or supposed to be observed, are, in fact, *not* processes now actually going on, but the phantoms of processes completed long in the Past—just as I maintain all these mass-constitutive processes *must* have been.

To this I reply that neither is the now-observed condition of the condensed stars their actual condition, but a condition completed long in the Past, so that my argument drawn from the *relative* condition of the stars and the nebulæ is in no manner disturbed. Moreover, those who maintain the existence of nebulæ do *not* refer the nebulosity to extreme distance, they declare it a real and not merely a perspective nebulosity. That we may conceive indeed a nebular mass as visible at all, we must conceive it as *very near us* in comparison with the condensed stars brought into view by the modern telescopes. In maintaining the appearances in question, then, to be really nebulous we maintain their comparative vicinity to our point of view. Thus, their condition, as we see them now, must be referred to an epoch *far less remote* than that to which we may refer the now-observed condition of at least the majority of the stars. In a word, should Astronomy ever demonstrate a nebula, in the sense at present intended, I should consider the Nebular Cosmogony, *not* indeed as corroborated by the demonstration, but as thereby irretrievably overthrown.

By way, however, of rendering unto Cæsar *no more* than the things that are Cæsar's, let me here remark that the assumption of the hypothesis which led him to so glorious a result seems to have been suggested to Laplace in great measure by a misconception—by the very misconception of which we have just been speaking—by the generally prevalent misunderstanding of the character of the nebulæ, so misnamed. These he supposed to be, in reality, what their designation implies. The fact is, this great man had very properly an inferior faith in his own merely *perceptive* powers. In respect, therefore, to the actual existence of nebulæ, an existence so confidently maintained by his telescopic contemporaries, he depended less upon what he saw than upon what he heard.

It will be seen that the only valid objections to his theory are those made to its hypothesis *as* such, to what suggested it, not to what it suggests, to its propositions rather than to its results. His most unwarranted assumption was that of giving the atoms a movement towards a centre, in the very face of his evident understanding that these atoms, in unlimited succession, extended throughout the Universal space. I have already shown that under such circumstances there could have occurred no movement at all, and Laplace consequently assumed one on no more philosophical ground than that something of the kind was necessary for the establishment of what he intended to establish.

His original idea seems to have been a compound of the true Epicurean atoms with the false nebulæ of his contemporaries, and thus his theory presents us with the singular anomaly of absolute truth deduced, as a mathematical result, from a hybrid *datum* of ancient imagination intertangled with modern inacumen. Laplace's real strength lay, in fact, in an almost miraculous mathematical instinct:—on this he relied, and in no instance did it fail or deceive him:—in the case of the Nebular Cosmogony it led him, blindfolded, through a labyrinth of Error into one of the most luminous and stupendous temples of Truth.

Let us now fancy, for the moment, that the ring first thrown off by the Sun, that is to say the ring whose breaking-up constituted Neptune, did not, in fact, break up until the throwing-off of the ring out of which Uranus arose; that this latter ring again remained perfect until the discharge of that out of which sprang Saturn; that this latter again remained entire until the discharge of that form which originated Jupiter—and so on. Let us imagine, in a word, that no dissolution occurred among the rings until the final rejection of that which gave birth to Mercury. We thus paint to the eye of the mind a series of co-existent concentric circles, and looking as well at *them* as at the processes by which, according to Laplace's hypothesis, they were constructed, we perceive at once a very singular analogy with the atomic strata and the process of the original irradiation as I have described it. Is it impossible that on measuring the *forces*, respectively, by which each successive planetary circle was thrown off —that is to say, on measuring the successive excesses of rotation over gravitation which occasioned the successive discharges—we should find the analogy

in question more decidedly confirmed? *Is it improbable that we should discover these forces to have varied, as in the original radiation—proportionally to the squares of the distances?*

Our solar system, consisting, in chief, of one sun, with sixteen planets certainly, and possibly a few more, revolving about it at various distances, and attended by seventeen moons assuredly, but *very* probably by several others—is now to be considered as *an example* of the innumerable agglomerations which proceeded to take place throughout the Universal Sphere of atoms on withdrawal of the Divine Volition. I mean to say that our solar system is to be understood as affording a *generic instance* of these agglomerations, or, more correctly, of the ulterior conditions at which they arrived. If we keep our attention fixed on the idea of *the utmost possible Relation* as the Omnipotent design, and on the precautions taken to accomplish it through difference of form, among the original atoms, and particular inequidistance, we shall find it impossible to suppose for a moment that even any two of the incipient agglomerations reached precisely the same result in the end. We shall rather be inclined to think that no *two* stellar bodies in the Universe—whether suns, planets or moons—are particularly, while *all* are generally, similar. Still less, then, can we imagine any two *assemblages* of such bodies—any two "systems"—as having more than a general resemblance.* Our telescopes, at this point, thoroughly confirm our deductions. Taking our own solar system, then, as merely a loose or general type of all, we have so far proceeded in our subject as to survey the universe under the aspect of a spherical space, throughout which, dispersed with merely general equability, exist a number of but generally similar *systems*.

Let us now, expanding our conceptions, look upon each of these systems as in itself an atom; which in fact it is, when we consider it as but one of the countless myriads of systems which constitute the Universe. Regarding all, then, as but colossal atoms, each with the same ineradicable tendency to Unity which characterises the actual atoms of which it consists—we enter at once upon a new order of aggregation. The smaller systems, in the vicinity of a larger one, would inevitably be drawn into still closer vicinity. A thousand would assemble here; a million there—perhaps here, again, even a billion—leaving, thus, immeasurable vacancies in space. And if, now, it be demanded why, in the case of these systems—of these merely Titanic atoms—I speak simply of an "assemblage," and not, as in the case of the actual atoms, of a more or less consolidated agglomeration:—if it be asked, for instance, why I do not carry what I suggest to its legitimate conclusion, and describe at once these assemblages of system-atoms as rushing to consolidation in spheres—

---

* It is not *impossible* that some unlooked-for optical improvement may disclose to us, among innumerable varieties of systems, a luminous sun, encircled by luminous and non-luminous rings, within and without and between which revolve luminous and non-luminous planets, attended by moons having moons—and even these latter again having moons.—E. A. P.

as each becoming condensed into one magnificent sun—my reply is that mellonta tauta*—I am but pausing for a moment on the threshold of *the Future*. For the present, calling these assemblages "clusters," we see them in the incipient stages of their consolidation. Their *absolute* consolidation is to *come*.

We have now reached a point from which we behold the Universe as a spherical space interspersed, *unequably*, with *clusters*. It will be noticed that I here prefer the adverb "unequably" to the phrase "with a merely general equability," employed before. It is evident, in fact, that the equability of distribution will diminish in the ratio of the agglomerative processes—that is to say, as the things distributed diminish in number. Thus the increase of *in*equability—an increase which must continue until, sooner or later, an epoch will arrive at which the largest agglomeration will absorb all the others—should be viewed as, simply, a corroborative indication of the *tendency to One*.

And here, at length, it seems proper to inquire whether the ascertained *facts* of Astronomy confirm the general arrangement which I have thus, deductively, assigned to the Heavens. Thoroughly they *do*. Telescopic observation, guided by the laws of perspective, enables us to understand that the perceptible Universe exists as a *cluster of clusters, irregularly disposed*.

The "clusters" of which this Universal "*cluster of clusters*" consists, are merely what we have been in the practice of designating "nebulæ"—and of these nebulæ *one* is of paramount interest to mankind. I allude to the Galaxy or Milky Way. This interests us, first and most obviously, on account of its great superiority in apparent size, not only to any one other cluster in the firmament, but to all the other clusters taken together. The largest of these latter occupies a mere point comparatively, and is distinctly seen only with the aid of a telescope. The Galaxy sweeps throughout the Heaven and is brilliantly visible to the naked eye. But it interests man chiefly, although less immediately, on account of its being his home; the home of the Earth on which he exists; the home of the Sun about which this Earth revolves; the home of that "system" of orbs of which the Sun is the centre and primary—the Earth one of sixteen secondaries, or planets—the Moon one of seventeen tertiaries, or satellites. The Galaxy, let me repeat, is but one of the *clusters* which I have been describing—but one of the miscalled "nebulæ" revealed to us—by the telescope alone, sometimes—as faint hazy spots in various quarters of the sky. We have no reason to suppose the Milky Way *really* more extensive than the least of these nebulæ. Its vast superiority in size is but an apparent superiority arising from our position in regard to it—that is to say, from our position in its midst. However strange the assertion may at first appear to those unversed in Astronomy, still the astronomer himself has no hesitation in asserting that we are *in the midst* of that inconceivable host of stars—of suns—of systems—which constitute the Galaxy. Moreover, not only have *we*—not only has *our* Sun a right to claim the Galaxy as its own especial cluster, but, with slight reservation, it may be said that all the distinctly vis-

* See Tale bearing this title—Ed.

ible stars of the firmament—all the stars visible to the naked eye—have equally a right to claim it as *their* own.

There has been a great deal of misconception in respect to the *shape* of the Galaxy; which, in nearly all our astronomical treatises, is said to resemble that of a capital Y. The cluster in question has, in reality, a certain general—*very* general resemblance to the planet Saturn, with its encompassing triple ring. Instead of the solid orb of that planet, however, we must picture to ourselves a lenticular star-island, or collection of stars; our Sun lying excentrically —near the shore of the island—on that side of it which is nearest the constellation of the Cross and farthest from that of Cassiopeia. The surrounding ring, where it approaches our position, has in it a longitudinal *gash*, which does, in fact, cause *the ring in our vicinity* to assume, loosely, the appearance of a capital Y.

We must not fall into the error, however, of conceiving the somewhat indefinite girdle as at all *remote*, comparatively speaking, from the also indefinite lenticular cluster which it surrounds; and thus, for mere purpose of explanation, we may speak of our Sun as actually situated at that point of the Y where its three component lines unite; and, conceiving this letter to be of a certain solidity—of a certain thickness, very trivial in comparison with its length—we may even speak of our position as *in the middle* of this thickness. Fancying ourselves thus placed, we shall no longer find difficulty in accounting for the phenomena presented—which are perspective altogether. When we look upwards or downwards—that is to say, when we cast our eyes in the direction of the letter's *thickness*—we look through fewer stars than when we cast them in the direction of its *length* or *along* either of the three component lines. Of course, in the former case the stars appear scattered—in the latter crowded. To reverse this explanation: —An inhabitant of the Earth when looking, as we commonly express ourselves, *at* the Galaxy, *is* then beholding it in some of the directions of its length—is looking *along* the lines of the Y—but when, looking out into the general Heaven, he turns his eyes *from* the Galaxy, he is then surveying it in the direction of the letter's thickness; and on this account the stars seem to him scattered; while, in fact, they are as close together, on an average, as in the mass of the cluster. *No* consideration could be better adapted to convey an idea of this cluster's stupendous extent.

If, with a telescope of high space-penetrating power, we carefully inspect the firmament, we shall become aware of *a belt of clusters*—of what we have hitherto called "nebulæ"—a *band*, of varying breadth, stretching from horizon to horizon, at right angles to the general course of the Milky Way. This band is the ultimate *cluster of clusters*. This belt is *The Universe*. Our Galaxy is but one, and perhaps one of the most inconsiderable of the clusters which go to the constitution of this ultimate Universal *belt* or *band*. The appearance of this cluster of clusters to our eyes, *as* a belt or band, is altogether a perspective phenomenon of the same character as that which causes us to behold our own individual and roughly-spherical cluster, the Galaxy, under guise also of a belt, traversing the Heavens at right angles to the Universal one. The

shape of the all-inclusive cluster is of course *generally* that of each individual cluster which it includes. Just as the scattered stars which, on looking *from* the Galaxy, we see in the general sky, are in fact but a portion of that Galaxy itself, and as closely intermingled with it as any of the telescopic points in what seems the densest portion of its mass—so are the scattered nebulæ which on casting our eyes *from* the Universal *belt,* we perceive at all points of the firmament—so, I say, are these scattered nebulæ to be understood as only perspectively scattered, and as part and parcel of the one supreme and Universal *sphere.*

No astronomical fallacy is more untenable, and none has been more pertinaciously adhered to, than that of the absolute *illimitation* of the Universe of Stars. The reasons for limitation, as I have already assigned them, *a priori,* seem to me unanswerable; but, not to speak of these, *observation* assures us that there is, in numerous directions around us, certainly if not in all, a positive limit—or, at the very least, affords us no basis whatever for thinking otherwise. Were the succession of stars endless, then the background of the sky would present us an uniform luminosity like that displayed by the Galaxy—*since there could be absolutely no point, in all that background, at which would not exist a star.* The only mode, therefore, in which, under such a state of affairs, we could comprehend the *voids* which our telescopes find in innumerable directions, would be by supposing the distance of the invisible background so immense that no ray from it has yet been able to reach us at all. That this *may* be so, who shall venture to deny? I maintain, simply, that we have not even the shadow of a reason for believing that it *is* so.

When speaking of the vulgar propensity to regard all bodies on the Earth as tending merely to the Earth's centre, I observed that, "with certain exceptions to be specified hereafter, every body on the Earth tended not only to the Earth's centre, but in every conceivable direction." The "exceptions" refer to those frequent gaps in the Heavens, where our utmost scrutiny can detect not only no stellar bodies, but no indications of their existence—where yawning chasms, blacker than Erebus, seem to afford us glimpses, through the boundary walls of the Universe of Stars, into the illimitable Universe of Vacancy, beyond. Now as any body, existing on the Earth, chances to pass, either through its own movement or the Earth's, into a line with any one of these voids or cosmical abysses, it clearly is no longer attracted *in the direction of that void,* and for the moment, consequently, is "heavier" than at any period either after or before. Independently of the consideration of these voids, however, and looking only at the generally unequable distribution of the stars, we see that the absolute tendency of bodies on the Earth to the Earth's centre is in a state of perpetual variation.

We comprehend, then, the insulation of our Universe. We perceive the isolation of *that*—of *all* that which we grasp with the senses. We know that there exists one *cluster of clusters*—a collection around which, on all sides, extend the immeasurable wildernesses of a Space *to all human perception* untenanted. But *because* upon the confines of this Universe of Stars we are com-

pelled to pause, through want of further evidence from the senses, is it right to conclude that, in fact, there *is* no material point beyond that which we have thus been permitted to attain? Have we, or have we not, an analogical right to the inference that this perceptible Universe—that this cluster of clusters—is but one of *a series* of clusters, the rest of which are invisible through distance—through the diffusion of their light being so excessive, ere it reaches us, as not to produce upon our retinas a light impression—or from there being no such emanation as light at all in these unspeakably distant worlds—or, lastly, from the mere interval being so vast that the electric tidings of their presence in Space have not yet—through the lapsing myriads of years—been enabled to traverse that interval?

Have we any right to inferences—have we any ground whatever for visions such as these? If we have a right to them in *any* degree, we have a right to their infinite extension.

The human brain has obviously a leaning to the *"Infinite,"* and fondles the phantom of the idea. It seems to long with a passionate fervour for this impossible conception, with the hope of intellectually believing it when conceived. What is general among the whole race of Man, of course no individual of that race can be warranted in considering abnormal; neverthless, there *may* be a class of superior intelligences, to whom the human bias alluded to may wear all the character of monomania.

My question, however, remains unanswered:—Have we any right to infer—let us say rather, to imagine—an interminable succession of the "clusters of clusters," or of "Universes" more or less similar?

I reply that the "right," in a case such as this, depends absolutely upon the hardihood of that imagination which ventures to claim the right. Let me declare only that, as an individual, I myself feel impelled to *fancy*—without daring to call it more—that there *does* exist a *limitless* succession of Universes, more or less similar to that of which we have cognisance—to that of which *alone* we shall ever have cognisance—at the very least until the return of our own particular Universe into Unity. *If* such clusters of clusters exist, however—*and they do*—it is abundantly clear that, having had no part in our origin, they have no portion in our laws. They neither attract us, nor we them. Their material—their spirit is not ours—is not that which obtains in any part of our Universe. They could not impress our senses or our souls. Among them and us—considering all, for the moment, collectively—there are no influences in common. Each exists, apart and independently, *in the bosom of its proper and particular God.*

In the conduct of this discourse, I am aiming less at physical than at metaphysical order. The clearness with which even material phenomena are presented to the understanding depends very little, I have long since learned to perceive, upon a merely natural, and almost altogether upon a moral, arrangement. If then I seem to step somewhat too discursively from point to point of my topic, let me suggest that I do so in the hope of thus the better keeping unbroken that chain of *graduated impression* by which alone

the intellect of Man can expect to encompass the grandeurs of which I speak, and in their majestic totality, to comprehend them.

So far our attention has been directed almost exclusively to a general and relative grouping of the stellar bodies in space. Of specification there has been little; and whatever ideas of *quantity* have been conveyed—that is to say, of number, magnitude, and distance—have been conveyed incidentally and by way of preparation for more definitive conceptions. These latter let us now attempt to entertain.

Our solar system, as has been already mentioned, consists in chief, of one sun and sixteen planets certainly, but in all probability a few others, revolving around it as a centre, and attended by seventeen moons of which we know, with possibly several more of which as yet we know nothing. These various bodies are not true spheres, but oblate spheroids—spheres flattened at the poles of the imaginary axes about which they rotate—the flattening being a consequence of the rotation. Neither is the Sun absolutely the centre of the system; for this Sun itself, with all the planets, revolves about a perpetually shifting point of space, which is the system's general centre of gravity. Neither are we to consider the paths through which these different spheroids move—the moons about the planets, the planets about the Sun, or the Sun about the common centre—as circles in an accurate sense. They are, in fact, *ellipses —one of the foci being the point about which the revolution is made.* An ellipse is a curve, returning into itself, one of whose diameters is longer than the other. In the longer diameter are two points equidistant from the middle of the line, and so situated otherwise that, if from each of them a straight line be drawn to any one point of the curve, the two lines taken together will be equal to the long diameter itself. Now let us conceive such an ellipse. At one of the points mentioned, which are the *foci,* let us fasten an orange. By an elastic thread let us connect this orange with a pea; and let us place this latter on the circumference of the ellipse. Let us now move the pea continuously around the orange—keeping always on the circumference of the ellipse. The elastic thread, which of course varies in length as we move the pea, will form what in geometry is called a *radius vector.* Now if the orange be understood as the sun, and the pea as a planet revolving about it, then the revolution should be made at such a rate—with a velocity so varying —that the *radius vector* may pass over *equal areas of space in equal times.* The progress of the pea *should be*— in other words, the progress of the planet—*is* of course slow in proportion to its distance from the Sun—swift in proportion to its proximity. Those planets, moreover, move the more slowly which are the farther from the Sun; *the squares of their periods of revolution having the same proportion to each other as have to each other the cubes of their mean distances from the Sun.*

The wonderfully complex laws of revolution here described, however, are not to be understood as obtaining in our system alone. They *everywhere* prevail where Attraction prevails. They control *the Universe.* Every shining speck in the firmament is, no doubt, a luminous

Sun, resembling our own, at least in its general features, and having in attendance upon it a greater or less number of planets, greater or less, whose still lingering luminosity is not sufficient to render them visible to us at so vast a distance, but which, nevertheless, revolve, moon-attended, about their starry centres, in obedience to the principles just detailed—in obedience to the three omniprevalent laws of revolution—the three immortal laws *guessed* by the imaginative Kepler, and but subsequently demonstrated and accounted for by the patient and mathematical Newton. Among a tribe of philosophers who pride themselves excessively upon matter of fact, it is far too fashionable to sneer at all speculation under the comprehensive *sobriquet*, "guess-work." The point to be considered is, *who* guesses. In guessing with Plato, we spend our time to better purpose, now and then, than in hearkening to a demonstration by Alcmæon.

In many works on Astronomy, I find it distinctly stated that the laws of Kepler are *the basis* of the great principle, Gravitation. This idea must have arisen from the fact that the suggestion of these laws by Kepler, and his proving them *a posteriori* to have an actual existence, led Newton to account for them by the Hypothesis of Gravitation, and finally, to demonstrate them *a priori*, as necessary consequences of the hypothetical principle. Thus so far from the laws of Kepler being the basis of Gravity, Gravity is the basis of these laws—as it is, indeed, of all the laws of the material Universe, which are not referable to Repulsion alone.

The mean distance of the Earth from the Moon—that is to say, from the heavenly body in our closest vicinity—is 237,000 miles. Mercury, the planet nearest the Sun, is distant from him 37 millions of miles. Venus, the next, revolves at a distance of 68 millions:—the Earth, which comes next, at a distance of 95 millions:—Mars, then, at a distance of 144 millions. Now come the eight Asteroids (Ceres, Juno, Vesta, Pallas, Astræa, Flora, Iris, and Hebe), at an average distance of about 250 millions. Then we have Jupiter, distant 490 millions; then Saturn, 900 millions; then Uranus, 19 hundred millions; finally Neptune, lately discovered, and revolving at a distance, say of 28 hundred millions. Leaving Neptune out of the account—of which as yet we know little accurately, and which is possibly one of a system of Asteroids—it will be seen that, within certain limits, there exists an *order of interval* among the planets. Speaking loosely, we may say that each outer planet is twice as far from the Sun as is the next inner one. May not the *order* here mentioned—*may not the law of Bode—be deduced from consideration of the analogy suggested by me as having place between the solar discharge of rings and the mode of the atomic irradiation?*

The numbers hurriedly mentioned in this summary of distance, it is folly to attempt comprehending, unless in the light of abstract arithmetical facts. They are not practically tangible ones. They convey no precise ideas. I have stated that Neptune, the planet farthest from the Sun, revolves about him at a distance of 28 hundred millions of miles. So far good:—I have stated a mathematical fact; and, without comprehending it in the least, we may put it to use—mathematically. But in

mentioning, even, that the Moon revolves about the Earth at the comparatively trifling distance of 237,000 miles, I entertained no expectation of giving any one to understand—to know—to feel—how far from the Earth the Moon actually *is*. 237,000 *miles*. There are, perhaps, few of my readers who have not crossed the Atlantic ocean; yet how many of them have a distinct idea of even the 3000 miles intervening between shore and shore? I doubt, indeed, whether the man lives who can force into his brain the most remote conception of the interval between one milestone and its next neighbour upon the turnpike. We are in some measure aided, however, in our consideration of distance, by combining this consideration with the kindred one of velocity. Sound passes through 1100 feet of space in a second of time. Now were it possible for an inhabitant of the Earth to see the flash of a cannon discharged in the Moon, and to hear the report, he would have to wait, after perceiving the former, more than 13 entire days and nights before getting any intimation of the latter.

However feeble be the impression, even thus conveyed, of the Moon's real distance from the Earth, it will, nevertheless, effect a good object in enabling us more clearly to see the futility of attempting to grasp such intervals as that of the 28 hundred millions of miles between our Sun and Neptune; or even that of the 95 millions between the Sun and the Earth we inhabit. A cannon-ball, flying at the greatest velocity with which such a ball has ever been known to fly, could not traverse the latter interval in less than 20 years; while for the former it would require 590.

Our Moon's real diameter is 2160 miles; yet she is comparatively so trifling an object that it would take nearly 50 such orbs to compose one as great as the Earth.

The diameter of our own globe is 7912 miles—but from the enunciation of these numbers what positive idea do we derive?

If we ascend an ordinary mountain and look around us from its summit, we behold a landscape stretching, say 40 miles, in every direction, forming a circle 250 miles in circumference, and including an area of 5000 square miles. The extent of such a prospect, on account of the *successiveness* with which its portions necessarily present themselves to view, can be only very feebly and very partially appreciated—yet the entire panorama would comprehend no more than one 40,000th part of the mere *surface* of our globe. Were this panorama, then, to be succeeded, after the lapse of an hour, by another of equal extent; this again by a third, after the lapse of an hour; this again by a fourth after lapse of another hour—and so on, until the scenery of the whole Earth were exhausted; and were we to be engaged in examining these various panoramas for twelve hours of every day; we should, nevertheless, be 9 years and 48 days in completing the general survey.

But if the mere surface of the Earth eludes the grasp of the imagination, what are we to think of its cubical contents? It embraces a mass of matter equal in weight to at least two sextillions, two hundred quintillions of tons. Let us suppose it in a state of quies-

cence; and now let us endeavour to conceive a mechanical force sufficient to set it in motion! Not the strength of all the myriads of beings whom we may conclude to inhabit the planetary worlds of our system—not the combined physical strength of *all* these beings—even admitting all to be more powerful than man—would avail to stir the ponderous mass *a single inch* from its position.

What are we to understand, then, of the force which, under similar circumstances, would be required to move the *largest of our planets*, Jupiter? This is 86,000 miles in diameter, and would include within its periphery more than a thousand orbs of the magnitude of our own. Yet this stupendous body is actually flying around the sun at the rate of 29,000 miles an hour—that is to say, with a velocity forty times greater than that of a cannon-ball! The thought of such a phenomenon cannot well be said to *startle* the mind—it palsies and appals it. Not unfrequently we task our imagination in picturing the capacities of an angel. Let us fancy such a being at a distance of some hundred miles from Jupiter—a close eye-witness of this planet as it speeds on its annual revolution. Now, *can* we, I demand, fashion for ourselves any conception so distinct of this ideal being's spiritual exaltation, as *that* involved in the supposition that, even by this immeasurable mass of matter, whirled immediately before his eyes, with a velocity so unutterable, he—an angel—angelic though he be—is not at once struck into nothingness and overwhelmed?

At this point, however, it seems proper to suggest that, in fact, we have been speaking of comparative trifles. Our Sun—the central and controlling orb of the system to which Jupiter belongs—is not only greater than Jupiter, but greater by far than all the planets of the system taken together. This fact is an essential condition indeed of the stability of the system itself. The diameter of Jupiter has been mentioned; it is 86,000 miles—that of the Sun is 882,000 miles. An inhabitant of the latter, travelling ninety miles a day, would be more than eighty years in going round a great circle of its circumference. It occupies a cubical space of 681 quadrillions, 472 trillions of miles. The Moon, as has been stated, revolves about the earth at a distance of 237,000 miles—in an orbit, consequently, of nearly a million and a half. Now, were the Sun placed upon the Earth, centre over centre, the body of the former would extend, in every direction, not only to the line of the Moon's orbit but beyond it, a distance of 200,000 miles.

And here, once again, let me suggest that, in fact, we have *still* been speaking of comparative trifles. The distance of the planet Neptune from the Sun has been stated; it is 28 hundred millions of miles; the circumference of its orbit, therefore, is about 17 billions. Let this be borne in mind while we glance at some one of the brightest stars. Between this and the star of *our* system (the Sun), there is a gulf of space, to convey any idea of which we should need the tongue of an archangel. From *our* system, then, and from *our* Sun, or star, the star at which we suppose ourselves glancing, is a thing altogether apart:—still, for the moment, let us imagine it placed upon our Sun,

centre over centre, as we just now imagined this Sun itself placed upon the Earth. Let us now conceive the particular star we have in mind, extending, in every direction, beyond the orbit of Mercury—of Venus—of the Earth:—still *on*, beyond the orbit of Mars—of Jupiter—of Uranus—until, finally, we fancy it filling the circle—*seventeen billions of miles in circumference*—which is described by the revolution of Leverrier's planet. When we have conceived all this, we shall have entertained no extravagant conception. There is the very best reason for believing that many of the stars are even far larger than the one we have imagined. I mean to say, that we have the very best *empirical* basis for such belief—and, in looking back at the original, atomic arrangements for *diversity*, which have been assumed as a part of the Divine plan in the constitution of the Universe, we shall be enabled easily to understand and to credit the existence of even far vaster disproportions in stellar size than any to which I have hitherto alluded. The largest orbs of course we must expect to find rolling through the widest vacancies of Space.

I remarked, just now, that to convey an idea of the interval between our Sun and any one of the other stars, we should require the eloquence of an archangel. In so saying, I should not be accused of exaggeration; for, in simple truth, these are topics on which it is scarcely possible to exaggerate. But let us bring the matter more distinctly before the eye of the mind.

In the first place, we may get a general, *relative* conception of the interval referred to by comparing it with the inter-planetary spaces. If, for example, we suppose the Earth, which is in reality 95 millions of miles from the Sun, to be only *one foot* from that luminary, then Neptune would be forty feet distant, *and the star Alpha Lyræ, at the very least, one hundred and fifty-nine.*

Now I presume that, in the termination of my last sentence, few of my readers have noticed anything especially objectionable—particularly wrong. I said that the distance of the Earth from the Sun being taken at *one foot*, the distance of Neptune would be forty feet, and that of Alpha Lyræ one hundred and fifty-nine. The proportion between one foot and one hundred and fifty-nine has appeared, perhaps, to convey a sufficiently definite impression of the proportion between the two intervals—that of the Earth from the Sun, and that of Alpha Lyræ from the same luminary. But my account of the matter should in reality have run thus:—The distance of the Earth from the Sun being taken at one foot, the distance of Neptune would be forty feet, and that of Alpha Lyræ one hundred and fifty-nine —*miles*:—that is to say, I had assigned to Alpha Lyræ, in my first statement of the case, only the 528*th part* of that distance which is the *least distance possible* at which it can actually lie.

To proceed:—However distant a mere *planet* is, yet when we look at it through a telescope, we see it under a certain form—of a certain appreciable size. Now I have already hinted at the probable bulk of many of the stars; nevertheless, when we view any one of them, even through the most powerful telescope, it is found to present us with *no form*, and consequently with *no magnitude* whatever. We see it as a point, and nothing more.

Again:—Let us suppose ourselves walking at night on a highway. In a field on one side of the road is a line of tall objects, say trees, the figures of which are distinctly defined against the background of the sky. This line of objects extends at right angles to the road, and from the road to the horizon. Now, as we proceed along the road, we see these objects changing their positions, respectively, in relation to a certain fixed point in that portion of the firmament which forms the background of the view. Let us suppose this fixed point—sufficiently fixed for our purpose—to be the rising moon. We become aware, at once, that while the tree nearest us so far alters its position in respect to the moon, as to seem flying behind us, the tree in the extreme distance has scarcely changed at all its relative position with the satellite. We then go on to perceive that the farther the objects are from us, the less they alter their positons; and the converse. Then we begin, unwittingly, to estimáte the distances of individual trees by the degrees in which they evince the relative alteration. Finally, we come to understand how it might be possible to ascertain the actual distance of any given tree in the line, by using the amount of relative alteration as a basis in a simple geometrical problem. Now, this relative alteration is what we call "parallax"; and by parallax we calculate the distances of the heavenly bodies. Applying the principle to the trees in question, we should of course be very much at a loss to comprehend the distance of *that* tree, which, however far we proceeded along the road, should evince *no* parallax at all. This in the case described is a thing impossible; but impossible only because all distances on our Earth are trivial indeed:—in comparison with the vast cosmical quantities, we may speak of them as absolutely nothing.

Now, let us suppose the star Alpha Lyræ directly overhead; and let us imagine that, instead of standing on the Earth, we stand at one end of a straight road stretching through Space to a distance equalling the diameter of the Earth's orbit—that is to say, to a distance of *one hundred and ninety millions of miles*. Having observed, by means of the most delicate micrometrical instruments, the exact position of the star, let us now pass along this inconceivable road, until we reach the other extremity. Now, once again, let us look at the star. It is *precisely* where we left it. Our instruments, however delicate, assure us that its relative position is absolutely—is identically the same, as at the commencement of our unutterable journey. *No* parallax—none whatever—has been found.

The fact is that, in regard to the distance of the fixed stars—of any one of the myriads of suns glistening on the farther side of that awful chasm which separates our system from its brothers in the cluster to which it belongs—astronomical science, until very lately, could speak only with a negative certainty. Assuming the brightest as the nearest, we could say, even of *them*, only that there is a certain incomprehensible distance on the *hither* side of which they cannot be:—how far they are beyond it we had in no case been able to ascertain. We perceived, for example, that Alpha Lyræ cannot be nearer to us than 19 trillions, 200 billions of miles; but, for all we knew, and

indeed for all we now know, it may be distant from us the square, or the cube, or any other power of the number mentioned. By dint, however, of wonderfully minute and cautious observations, continued with novel instruments, for many laborious years, Bessel, not long ago deceased, has lately succeeded in determining the distance of six or seven stars; among others, that of the star numbered 61 in the constellation of the Swan. The distance in this latter instance ascertained is 670,000 times that of the Sun; which last, it will be remembered, is 95 millions of miles. The star 61 Cygni, then, is nearly 64 trillions of miles from us—or more than three times the distance assigned, *as the least possible*, for Alpha Lyræ.

In attempting to appreciate this interval by the aid of any considerations of *velocity*, as we did in endeavouring to estimate the distance of the moon, we must leave out of sight altogether such nothings as the speed of a cannon ball, or of sound. Light, however, according to the latest calculations of Struve, proceeds at the rate of 167,000 miles in a second. Thought itself cannot pass through this interval more speedily—if, indeed, thought can traverse it at all. Yet, in coming from 61 Cygni to us, even at this inconceivable rate, light occupies more than *ten years;* and, consequently, were the star this moment blotted out from the Universe, still, *for ten years*, would it continue to sparkle on, undimmed in its paradoxical glory.

Keeping now in mind whatever feeble conception we may have attained of the interval between our Sun and 61 Cygni, let us remember that this interval, however unutterably vast, we are permitted to consider as but the *average* interval among the countless host of stars composing that cluster, or "nebula," to which our system, as well as that of 61 Cygni, belongs. I have, in fact, stated the case with great moderation. We have excellent reason for believing 61 Cygni to be one of the *nearest* stars, and thus for concluding, at least for the present, that its distance from us is *less* than the average distance between star and star in the magnificent cluster of the Milky Way.

And here, once again and finally, it seems proper to suggest that even as yet we have been speaking of trifles. Ceasing to wonder at the space between star and star in our own or in any particular cluster, let us rather turn our thoughts to the intervals between cluster and cluster in the all-comprehensive cluster of the Universe.

I have already said that light proceeds at the rate of 167,000 miles in a second—that is about 10 millions of miles in a minute, or about 600 millions of miles in an hour:—yet so far removed from us are some of the nebulæ, that even light, speeding with this velocity, could not and does not reach us, from those mysterious regions, in less than 3 *millions of years*. This calculation, moreover, is made by the elder Herschel, and in reference merely to those comparatively proximate clusters within the scope of his own telescope. There *are* nebulæ, however, which, through the magical tube of Lord Rosse, are this instant whispering in our ears the secrets of *a million of ages* by-gone. In a word, the events which we behold now—at this moment—in those worlds—are the identical events which interested

their inhabitants *ten hundred thousand centuries ago*. In intervals—in distance such as this suggestion forces upon the *soul*—rather than upon the mind—we find at length a fitting climax to all hitherto frivolous considerations of *quantity*.

Our fancies thus occupied with the cosmical distances, let us take the opportunity of referring to the difficulty which we have so often experienced, while pursuing *the beaten path* of astronomical reflection *in accounting* for the immeasurable voids alluded to—in comprehending why chasms so totally unoccupied, and therefore apparently so needless, have been made to intervene between star and star—between cluster and cluster—in understanding, to be brief, a sufficient reason for the Titanic scale, in respect of mere *Space*, on which the Universe is seen to be constructed. A rational cause for the phenomenon, I maintain that Astronomy has palpably failed to assign—but the considerations through which, in this Essay, we have proceeded step by step, enable us clearly and immediately to perceive that *Space and Duration are one*. That the Universe might *endure* throughout an era at all commensurate with the grandeur of its component material portions and with the high majesty of its spiritual purposes, it was necessary that the original atomic diffusion be made to so inconceivable an extent as to be only not infinite. It was required, in a word, that the stars should be gathered into visibility from invisible nebulosity—proceed from nebulosity to consolidation—and so grow grey in giving birth and death to unspeakably numerous and complex variations of vitalic development:—it was required that the stars should do all this—should have time thoroughly to accomplish all these Divine purposes—*during the period* in which all things were effecting their return into Unity with a velocity accumulating in the inverse proportion of the squares of the distances at which lay the inevitable End.

Throughout all this we have no difficulty in understanding the absolute accuracy of the Divine *adaptation*. The density of the stars, respectively, proceeds of course as their condensation diminishes; condensation and heterogeneity keep pace with each other, through the latter, which is the index of the former, we estimate the vitalic and spiritual development. Thus in the density of the globes, we have the measure in which their purposes are fulfilled. *As* density proceeds—*as* the divine intentions *are* accomplished—*as* less and still less remains *to be* accomplished—so, in the same ratio, should we expect to find an acceleration of *the End*:—and thus the philosophical mind will easily comprehend that the Divine designs in constituting the stars advance, *mathematically*, to their fulfillment; and more, it will readily give the advance a mathematical expression; it will decide that this advance is inversely proportional to the squares of the distances of all created things from the starting-point and goal of their creation.

Not only is this Divine adaptation, however, mathematically accurate, but there is that about it which stamps it *as divine*, in distinction from that which is merely the work of human constructiveness. I allude to the complete *mutuality* of adaptation. For example: in human constructions a particular cause has a

particular effect; a particular intention brings to pass a particular object; but this is all; we see no reciprocity. The effect does not re-act upon the cause; the intention does not change relations with the object. In Divine constructions, the object is either design or object as we choose to regard it—and we may take at any time a cause for an effect, or the converse—so that we can never absolutely decide which is which.

To give an instance:—In polar climates the human frame, to maintain its animal heat, requires for combustion in the capillary system an abundant supply of highly azotised food, such as train-oil. But again:—in polar climates nearly the sole food afforded man is the oil of abundant seals and whales. Now, whether is oil at hand because imperatively demanded, or the only thing demanded because the only thing to be obtained? It is impossible to decide. There is an absolute *reciprocity of adaptation.*

The pleasure which we derive from any display of human ingenuity is in the ratio of *the approach* to this species of reciprocity. In the construction of *plot,* for example, in fictitious literature, we should aim at so arranging the incidents that we shall not be able to determine, of any one of them, whether it depends from any one other or upholds it. In this sense, of course, *perfection of plot* is really or practically unattainable—but only because it is a finite intelligence that constructs. The plots of God are perfect. The Universe is a plot of God.

And now we have reached a point at which the intellect is forced, again, to struggle against its propensity for analogical inference—against its monomaniac grasping at the infinite. Moons have been seen *revolving* about planets; planets about stars; and the poetical instinct of humanity—its instinct of the symmetrical, if the symmetry be but a symmetry of surface;—this *instinct,* which the Soul, not only of Man but of all created beings, took up in the beginning from the *geometrical* basis of the Universal irradiation—impels us to the fancy of an endless extension of this system of *cycles.* Closing our eyes equally to *de*duction and *in*duction, we insist upon imagining a *revolution* of all the orbs of the Galaxy about some gigantic globe which we take to be the central pivot of the whole. Each cluster in the great cluster of clusters is imagined of course to be similarly supplied and constructed; while, that the "analogy" may be wanting at no point, we go on to conceive these clusters themselves, again, *as revolving* about some still more august sphere:—this latter, still again, *with* its incircling clusters, as but one of a yet more magnificent series of agglomerations, *gyrating* about yet another orb central *to them*—some orb still more unspeakably sublime—some orb, let us rather say, of infinite sublimity endlessly multiplied by the infinitely sublime. Such are the conditions, continued in perpetuity, which the voice of what some people term "analogy" calls upon the Fancy to depict and the Reason to contemplate, if possible, without becoming dissatisfied with the picture. Such, in *general,* is the interminable gyration beyond gyration which we have been instructed by Philosophy to comprehend and to account for, at least in the best manner we can. Now and then, however, a

philosopher proper—one whose frenzy takes a very determinate turn—whose genius, to speak more reverentially, has a strongly-pronounced washer-woman-ish bias, doing everything up by the dozen—enables us to see *precisely* that point out of sight, at which the revolutionary processes in question do, and of right ought to, come to an end.

It is hardly worth while, perhaps, even to sneer at the reveries of Fourier:—but much has been said latterly of the hypothesis of Madler—that there exists in the centre of the Galaxy a stupendous globe about which all the systems of the cluster revolve. The *period* of our own, indeed, has been stated—117 millions of years.

That our Sun has a motion in space, independently of its rotation and its revolution about the system's centre of gravity has long been suspected. This motion, granting it to exist, would be manifested perspectively. The stars in that firmamental region which we were leaving behind us, would, in a very long series of years, become crowded; those in the opposite quarter, scattered. Now, by means of astronomical History, we ascertain, cloudily, that some such phenomena have occurred. On this ground it has been declared that our system is moving to a point in the heavens diametrically opposite the star Zeta Herculis;—but this inference is, perhaps, the maximum to which we have any logical right. Madler, however, has gone so far as to designate a particular star, Alcyone in the Pleiades, as being at or about the very spot around which a general *revolution* is performed.

Now, since by "analogy" we are led, in the first instance, to these dreams, it is no more than proper that we should abide by analogy, at least in some measure, during their development; and that analogy which suggests the revolution suggests at the same time a central orb about which it should be performed:—so far the astronomer was consistent. This central orb, however, should, dynamically, be greater than all the orbs taken together which surround it. Of these there are about 100 millions. "Why, then," it was of course demanded, "do we not *see* this vast central sun—*at least equal* in mass to 100 millions of such suns as ours—why do we not *see* it—*we*, especially, who occupy the mid-region of the cluster—the very locality *near* which, at all events, must be situated this incomparable star?" The reply was ready—"It must be non-luminous, as are our planets." Here, then, to suit a purpose, analogy is suddenly let fall. "Not so," it may be said; "we know that non-luminous suns actually exist." It is true that we have reason at least for supposing so; but we have certainly no reason whatever for supposing that the non-luminous suns in question are encircled by *luminous* suns, while these again are surrounded by non-luminous planets:—and it is precisely all this with which Madler is called upon to find anything analogous in the heavens—for it is precisely all this which he imagines in the case of the Galaxy. Admitting the thing to be so, we cannot help here picturing to ourselves how sad a puzzle the *why is it so* must prove to all *a priori* philosophers.

But granting, in the very teeth of analogy and of everything else, the non-luminosity of the vast central orb, we may still inquire how this orb, so enormous, could fail of being rendered

visible by the flood of light thrown upon it from the 100 millions of glorious suns glaring in all directions about it. Upon the urging of this question, the idea of an actually solid central sun appears in some measure to have been abandoned; and speculation proceeded to assert that the systems of the cluster perform their revolutions merely about an immaterial centre of gravity common to all. Here again, then, to suit a purpose, analogy is let fall. The planets of our system revolve, it is true, about a common centre of gravity; but they do this in connection with, and in consequence of, a material sun whose mass more than counterbalances the rest of the system.

The mathematical circle is a curve composed of an infinity of straight lines. But this idea of the circle—an idea which, in view of all ordinary geometry, is merely the mathematical, as contradistinguished from the practical, idea—is, in sober fact, the *practical* conception which alone we have any right to entertain in regard to the majestic circle with which we have to deal, at least in fancy, when we suppose our system revolving about a point in the centre of the Galaxy. Let the most vigorous of human imaginations attempt but to take a single step towards the comprehension of a sweep so ineffable! It would scarcely be paradoxical to say that a flash of lightning itself, travelling *for ever* upon the circumference of this unutterable circle, would still, *for ever*, be travelling in a straight line. That the path of our Sun in such an orbit would, to any human perception, deviate in the slightest degree from a straight line, even in a million of years, is a proposition not to be entertained; yet we are required to believe that a curvature has become apparent during the brief period of our astronomical history—during a mere point—during the utter nothingness of two or three thousand years.

It may be said that Madler *has* really ascertained a curvature in the direction of our system's now well-established progress through Space. Admitting, if necessary, this fact to be in reality such, I maintain that nothing is thereby shown except the reality of this fact—the fact of a curvature. For its *thorough* determination, ages will be required; and, when determined, it will be found indicative of some binary or other multiple relation between our Sun and some one or more of the proximate stars. I hazard nothing, however, in predicting that, after the lapse of many centuries, all efforts at determining the path of our Sun through Space will be abandoned as fruitless. This is easily conceivable when we look at the infinity of perturbation it must experience from its perpetually-shifting relations with other orbs, in the common approach of all to the nucleus of the Galaxy.

But in examining other nebulæ than that of the Milky Way—in surveying, generally, the clusters which overspread the heavens—do we or do we not find confirmation of Madler's hypothesis? We do *not*. The forms of the clusters are exceedingly diverse when casually viewed; but on close inspection, through powerful telescopes, we recognize the sphere very distinctly as at least the proximate form of all—their constitution in general being at variance with the idea of revolution about a common centre.

"It is difficult," says Sir John Her-

schel, "to form any conception of the dynamical state of such systems. On one hand, without a rotary motion and a centrifugal force, it is hardly possible not to regard them as in a state of *progressive collapse*. On the other, granting such a motion and such a force, we find it no less difficult to reconcile their forms with the rotation of the whole system [meaning cluster] around any single axis, without which internal collision would appear to be inevitable."

Some remarks lately made about the nebulæ by Dr. Nichol, in taking quite a different view of the cosmical conditions from any taken in this Discourse—have a very peculiar applicability to the point now at issue. He says:

"When our greatest telescopes are brought to bear upon them, we find that those which were thought to be irregular are not so; they approach nearer to a globe. Here is one that looked oval; but Lord Rosse's telescope brought it into a circle. . . . Now there occurs a very remarkable circumstance in reference to these comparatively speaking circular masses of nebulæ. We find they are not entirely circular, but the reverse; and that all around them, on every side, there are volumes of stars, *stretching out apparently as if they were rushing towards a great central mass in consequence of the action of some great power.*"*

Were I to describe, in my own words, what must necessarily be the existing condition of each nebula on the hypothesis that all matter is, as I suggest, now returning to its original Unity, I should simply be going over, nearly verbatim, the language here employed by Dr. Nichol, without the faintest suspicion of that stupendous truth which is the key to these nebular phenomena.

And here let me fortify my position still farther, by the voice of a greater than Madler—of one, moreover, to whom all the data of Madler have long been familiar things, carefully and thoroughly considered. Referring to the elaborate calculations of Argelander—the very researches which form Madler's basis—*Humboldt*, whose generalising powers have never perhaps been equaled, has the following observation:

"When we regard the real, proper, or non-perspective motions of the stars, we find *many groups of them moving in opposite directions;* and the data as yet in hand render it not necessary at least to conceive that the systems composing the Milky Way, or the clusters generally composing the Universe, are revolving about any particular centre unknown, whether luminous or non-luminous. It is but Man's longing for a fundamental First Cause that impels both his intellect and fancy to the adoption of such an hypothesis."

The phenomenon here alluded to—that of "many groups moving in opposite directions"—is quite inexplicable by Madler's idea; but arises, as a necessary consequence, from that which forms the basis of this Discourse. While the *merely general direction* of each atom—of each moon, planet, star or cluster—would, on my hypothesis,

*I must be understood as denying, *especially*, only the *revolutionary* portion of Madler's hypothesis. Of course, if no great central orb exists *now* in our cluster, such will exist hereafter. Whenever existing, it will be merely the *nucleus* of the consolidation.—E. A. P.

be of course absolutely rectilinear, while the *general* path of all bodies would be a right line leading to the centre of all; it is clear, nevertheless, that this general rectilinearity would be compounded of what, with scarcely any exaggeration, we may term an infinity of particular curves—an infinity of local deviations from rectilinearity—the result of continuous differences of relative position among the multitudinous masses, as each proceeded on its own proper journey to the End.

I quoted just now from Sir John Herschel the following words, used in reference to the clusters:—"On one hand, without a rotary motion and a centrifugal force, it is hardly possible not to regard them as in a state of *progressive collapse*." The fact is, that in surveying the "nebulæ" with a telescope of high power, we shall find it quite impossible, having once conceived this idea of "collapse," not to gather, at all points, corroboration of the idea. A nucleus is always apparent in the direction of which the stars seem to be precipitating themselves; nor can these nuclei be mistaken for merely perspective phenomena—the clusters are *really* denser near the centre, sparser in the regions more remote from it. In a word, we see everything as we *should* see it were a collapse taking place; but, in general, it may be said of these clusters, that we can fairly entertain, while looking at them, the idea of *orbitual movement about a centre*, only by admitting the *possible* existence, in the distant domains of space, of dynamical laws with which *we* are unacquainted.

On the part of Herschel, however, there is evidently *a reluctance* to regard the nebulæ as in "a state of progressive collapse." But if facts—if even appearances justify the supposition of their being in this state, *why*, it may well be demanded, is he disinclined to admit it? Simply on account of a prejudice; merely because the suspicion is at war with a pre-conceived and utterly baseless notion—that of the endlessness—that of the eternal stability of the Universe.

If the propositions of this Discourse are tenable, the "state of progressive collapse" is *precisely* that state in which alone we are warranted in considering All Things; and, with due humility, let me here confess that, for my part, I am at a loss to conceive how any *other* understanding of the existing condition of affairs could ever have made its way into the human brain. "The tendency to collapse" and "the attraction of gravitation" are convertible phrases. In using either, we speak of the reaction of the First Act. Never was necessity less obvious than that of supposing matter imbued with an ineradicable *quality* forming part of its material nature—a quality or instinct *for ever* inseparable from it, and by dint of which inalienable principle every atom is *perpetually* impelled to seek his fellow-atom. Never was necessity less obvious than that of entertaining this unphilosophical idea. Going boldly behind the vulgar thought, we have to conceive, metaphysically, that the gravitating principle appertains to Matter *temporarily*—only while diffused—only while existing as Many instead of as One—appertains to it by virtue of its state of irradiation alone—appertains, in a word, altogether to its *condition*, and not in the slightest degree to *itself*.

In this view, when the irradiation shall have returned into its source—when the reaction shall be completed—the gravitating principle will no longer exist. And, in fact, astronomers, without at any time reaching the idea here suggested, seem to have been approximating it, in the assertion that, "if there were but one body in the universe, it would be impossible to understand how the principle Gravity could obtain"; that is to say, from a consideration of Matter as they find it, they reach a conclusion at which I deductively arrive. That so pregnant a suggestion as the one quoted should have been permitted to remain so long unfruitful is, nevertheless, a mystery which I find it difficult to fathom.

It is, perhaps, in no little degree, however, our propensity for the continuous—for the analogical—in the present case more particularly for the symmetrical—which has been leading us astray. And, in fact, the sense of the symmetrical is an instinct which may be depended upon with an almost blindfold reliance. It is the poetical essence of the Universe—*of the Universe* which, in the supremeness of its symmetry, is but the most sublime of poems. Now symmetry and consistency are convertible terms:—thus Poetry and Truth are one. A thing is consistent in the ratio of its truth—true in the ratio of its consistency. *A perfect consistency, I repeat, can be nothing but an absolute truth.* We may take it for granted, then, that Man cannot long or widely err if he suffer himself to be guided by his poetical, which I have maintained to be his truthful, in being his symmetrical, instinct. He must have a care, however, lest, in pursuing too heedlessly the superficial symmetry of forms and motions, he leave out of sight the really essential symmetry of the principles which determine and control them.

That the stellar bodies would finally be merged in one, that at last all would be drawn into the substance of *one stupendous central orb already existing*, is an idea which for some time past seems vaguely and indeterminately to have held possession of the fancy of mankind. It is an idea, in fact, which belongs to the class of the *excessively obvious*. It springs, instantly, from a superficial observation of the cyclic and seemingly *gyrating* or *vortical* movements of those individual portions of the Universe which come most immediately and most closely under our observation. There is not perhaps a human being of ordinary education and of average reflective capacity to whom, at some period, the fancy in question has not occurred, as if spontaneously, or intuitively, and wearing all the character of a very profound and very original conception. This conception, however, so commonly entertained, has never, within my knowledge, arisen out of any abstract considerations; being, on the contrary, always suggested, as I say, by the vortical movements about centres, a reason for it also—a *cause* for the ingathering of all the orbs into one, *imagined to be already existing*, was naturally sought in the same direction, among these cyclic movements themselves.

Thus it happened that on announcement of the gradual and perfectly regular decrease observed in the orbit of Encke's comet, at every successive revolution about our Sun, astronomers were nearly unanimous in the opinion

that the cause in question was found—that a principle was discovered sufficient to account, physically, for that final, universal agglomeration which, I repeat, the analogical, symmetrical, or poetical instinct of man had predetermined to understand as something more than a simple hypothesis.

This cause, this sufficient reason for the final ingathering, was declared to exist in an exceedingly rare but still material medium pervading space; which medium, by retarding in some degree the progress of the comet, perpetually weakened its tangential force, thus giving a predominance to the centripetal, which, of course, drew the comet nearer and nearer at each revolution, and would eventually precipitate it upon the Sun.

All this was strictly logical—admitting the medium or ether, but this ether was assumed most illogically, on the ground that no *other* mode than the one spoken of could be discovered of accounting for the observed decrease in the orbit of the comet:—as if from the fact that we could *discover* no other mode of accounting for it, it followed, in any respect, that no other mode of accounting for it existed. It is clear that innumerable causes might operate, in combination, to diminish the orbit, without even a possibility of our ever becoming acquainted with one of them. In the meantime, it has never been fairly shown, perhaps, why the retardation occasioned by the skirts of the Sun's atmosphere, through which the comet passes at perihelion, is not enough to account for the phenomenon. That Encke's comet will be absorbed into the Sun is probable; that all the comets of the system will be absorbed is more than merely possible; but in such case the principle of absorption must be referred to eccentricity of orbit—to the close approximation to the Sun of the comets at their perihelia; and is a principle not affecting in any degree the ponderous *spheres* which are to be regarded as the true material constituents of the Universe. Touching comets in general, let me here suggest, in passing, that we cannot be far wrong in looking upon them as the *lightning flashes of the cosmical Heaven.*

The idea of a retarding ether, and through it of a final agglomeration of all things, seemed at one time, however, to be confirmed by the observation of a positive decrease in the orbit of the solid moon. By reference to eclipses recorded 2500 years ago, it was found that the velocity of the satellite's revolution *then* was considerably less than it is *now;* that on the hypothesis that its motions in its orbit are uniformly in accordance with Kepler's law, and were accurately determined *then,* 2500 years ago, it is now in advance of the position it *should* occupy by nearly 9000 miles. The increase of velocity proved of course a diminution of orbit, and astronomers were fast yielding to a belief in an ether as the sole mode of accounting for the phenomenon when Lagrange came to the rescue. He showed that owing to the configurations of spheroids the shorter axis of their ellipses are subject to variation in length; the longer axis being permanent; and that this variation is continuous and vibratory, so that every orbit is in a state of transition either from circle to ellipse or from ellipse to circle. In the case of the moon,

where the shorter axis is *de*creasing, the orbit is passing from circle to ellipse, and consequently is *de*creasing too; but after a long series of ages the ultimate eccentricity will be attained, then the shorter axis will proceed to increase until the orbit becomes a circle, when the process of shortening will again take place, and so on for ever. In the case of the Earth the orbit is passing from ellipse to circle. The facts thus demonstrated do away of course with all necessity for supposing an ether, and with all apprehension of the system's instability on the ether's account.

It will be remembered that I have myself assumed what we may term *an ether*. I have spoken of a subtle *influence* which we know to be ever in attendance upon matter, although becoming manifest only through matter's heterogeneity. To this *influence*, without daring to touch it at all in any effort at explaining its awful *nature*, I have referred the various phenomena of electricity, heat, light, magnetism, and more—of vitality, consciousness, and thought—in a word, of spirituality. It will be seen at once, then, that the ether thus conceived is radically distinct from the ether of the astronomers, inasmuch as theirs is *matter* and mine *not*.

With the idea of material ether seems, thus, to have departed altogether the thought of that universal agglomeration so long predetermined by the poetical fancy of mankind—an agglomeration in which a sound Philosophy might have been warranted in putting faith, at least to a certain extent, if for no other reason than that by this poetical fancy it *had* been so predetermined. But so far as Astronomy—so far as mere Physics has yet spoken, the cycles of the Universe have no conceivable end. Had an end been demonstrated, however, from so purely collateral a cause as an ether, Man's instinct of the Divine *capacity to adapt* would have rebelled against the demonstration. We should have been forced to regard the Universe with some such sense of dissatisfaction as we experience in contemplating an unnecessarily complex work of human art. Creation would have affected us as an imperfect *plot* in a romance, where the *denouement* is awkwardly brought about by interposed incidents external and foreign to the main subject, instead of springing out of the bosom of the thesis, out of the heart of the ruling idea, instead of arising as a result of the primary proposition, as inseparable and inevitable part and parcel of the fundamental conception of the book.

What I mean by the symmetry of mere surface will now be more clearly understood. It is simply by the blandishment of this symmetry that we have been beguiled into the general idea of which Madler's hypothesis is but a part—the idea of the vortical indrawing of the orbs. Dismissing this nakedly physical conception, the symmetry of principle sees the end of all things metaphysically involved in the thought of a beginning; seeks and finds in this origin of all things the *rudiment* of this end; and perceives the impiety of supposing this end likely to be brought about less simply—less directly—less obviously — less artistically — than through *the reaction of the originating Act*.

Recurring, then, to a previous sug-

gestion, let us understand the systems—let us understand each star with its attendant planets—as but a Titanic atom existing in space with precisely the same inclination for Unity which characterised, in the beginning, the actual atoms after their irradiation throughout the Universal sphere. As these original atoms rushed towards each other in generally straight lines, so let us conceive as at least generally rectilinear, the paths of the system-atoms towards their respective centres of aggregation:—and in this direct drawing together of the systems into clusters, with a similar and simultaneous drawing together of the clusters themselves while undergoing consolidation, we have at length attained the great *Now*—the awful Present—the Existing Condition of the Universe.

Of the still more awful Future a not irrational analogy may guide us in framing an hypothesis. The equilibrium between the centripetal and centrifugal forces of each system, being necessarily destroyed upon attainment of a certain proximity to the nucleus of the cluster to which it belongs, there must occur, at once, a chaotic or seemingly chaotic precipitation, of the moons upon the planets, of the planets upon the suns, and of the suns upon the nuclei; and the general result of this precipitation must be the gathering of the myriad now-existing stars of the firmament into an almost infinitely less number of almost infinitely superior spheres. In being immeasurably fewer, the worlds of that day will be immeasurably greater than our own. Then, indeed, amid unfathomable abysses, will be glaring unimaginable suns. But all this will be merely a climatic magnificence foreboding the great End. Of this End the new genesis described can be but a very partial postponement. While undergoing consolidation, the clusters themselves, with a speed prodigiously accumulative, have been rushing towards their own general centre—and now, with a thousand-fold electric velocity, commensurate only with their material grandeur and with the spiritual passion of their appetite for oneness, the majestic remnants of the tribe of Stars flash at length into a common embrace. The inevitable catastrophe is at hand.

But this catastrophe—what is it? We have seen accomplished the ingathering of the orbs. Henceforward, are we not to understand *one material globe of globes* as constituting and comprehending the Universe? Such a fancy would be altogether at war with every assumption and consideration of this Discourse.

I have already alluded to that absolute *reciprocity of adaptation* which is the idiosyncrasy of the divine Art—stamping it divine. Up to this point of our reflections, we have been regarding the electrical influence as a something by dint of whose repulsion alone Matter is enabled to exist in that state of diffusion demanded for the fulfilment of its purposes:—so far, in a word, we have been considering the influence in question as ordained for Matter's sake to subserve the objects of matter. With a perfectly legitimate reciprocity, we are now permitted to look at Matter as created *solely for the sake of this influence*—solely to serve the objects of this spiritual Ether. Through the aid—by the means—through the agency of matter, and by

dint of its heterogeneity—is this Ether manifested—is *Spirit individualised*. It is merely in the development of this Ether, through heterogeneity, that particular masses of Matter become animate—sensitive—and in the ratio of their heterogeneity;—some reaching a degree of sensitiveness involving what we call *Thought*, and thus attaining Conscious Intelligence.

In this view, we are enabled to perceive Matter as a Means not as an End. Its purposes are thus seen to have been comprehended in its diffusion; and with the return into Unity these purposes cease. The absolutely consolidated globe of globes would be *objectless*—therefore not for a moment could it continue to exist. Matter, created for an end, would unquestionably, on fulfilment of that end, be Matter no longer. Let us endeavour to understand that it would disappear, and that God would remain all in all.

That every work of Divine conception must coexist and coexpire with its particular design, seems to me especially obvious; and I make no doubt that, on perceiving the final globe of globes to be *objectless*, the majority of my readers will be satisfied with my "*therefore* it cannot continue to exist." Nevertheless, as the startling thought of its instantaneous disappearance is one which the most powerful intellect cannot be expected readily to entertain on grounds so decidedly abstract, let us endeavour to look at the idea from some other and more ordinary point of view; let us see how thoroughly and beautifully it is corroborated in an *a posteriori* consideration of Matter as we actually find it.

I have before said that "Attraction and Repulsion being undeniably the sole properties by which Matter is manifested to Mind, we are justified in assuming that Matter *exists* only as Attraction and Repulsion—in other words, that Attraction and Repulsion *are* Matter; there being no conceivable case in which we may not employ the term Matter and the terms 'Attraction' and 'Repulsion' taken together, as equivalent, and therefore convertible, expressions of Logic."

Now the very definition of Attraction implies particularity—the existence of parts, particles, or atoms; for we define it as the tendency of "each atom, etc., to every other atom," etc., according to a certain law. Of course where there are *no* parts—where there is absolute Unity—where the tendency to oneness is satisfied—there can be no Attraction:—this has been fully shown, and all philosophy admits it. When, on fulfilment of its purposes, then, Matter shall have returned into its original condition of *One*—a condition which presupposes the expulsion of the separative ether, whose province and whose capacity are limited to keeping the atoms apart until that great day when, this ether being no longer needed, the overwhelming pressure of the finally collective Attraction shall at length just sufficiently predominate and expel it:—when, I say, Matter, finally expelling the Ether, shall have returned into absolute Unity—it will then (to speak paradoxically for the moment) be Matter without Attraction and without Repulsion—in other words, Matter without Matter—in other words, again, *Matter no more*. In sinking into Unity, it will sink at once into that Nothingness which, to all Finite Perception,

Unity must be—into that Material Nihility from which alone we can conceive it to have been evoked—to have been *created* by the Volition of God.

I repeat, then, let us endeavour to comprehend that the final globe of globes will instantaneously disappear, and that God will remain all in all.

But are we here to pause? Not so. On the Universal agglomeration and dissolution, we can readily conceive that a new and perhaps totally different series of conditions may ensue—another creation and irradiation, returning into itself—another action and reaction of the Divine Will. Guiding our imagination by that omniprevalent law of laws, the law of periodicity, are we not, indeed, more than justified in entertaining a belief—let us say, rather, in indulging a hope—that the processes we have here ventured to contemplate will be renewed for ever, and for ever, and for ever; a novel Universe swelling into existence, and then subsiding into nothingness, at every throb of the Heart Divine?

And now—this Heart Divine—what is it? *It is our own.*

Let not the merely seeming irreverence of this idea frighten our souls from that cool exercise of consciousness—from that deep tranquillity of self-inspection—through which alone we can hope to attain the presence of this, the most sublime of truths, and look it leisurely in the face.

The *phenomena* on which our conclusions must at this point depend are merely spiritual shadows, but not the less thoroughly substantial.

We walk about, amid the destinies of our world-existence, encompassed by dim but ever present *Memories* of a Destiny more vast—very distant in the by-gone time, and infinitely awful.

We live out a Youth peculiarly haunted by such dreams; yet never mistaking them for dreams. As Memories we *know* them. *During our Youth* the distinction is too clear to deceive us even for a moment.

So long as this Youth endures, the feeling *that we exist* is the most natural of all feelings. We understand it *thoroughly*. That there was a period at which we did *not* exist—or that it might so have happened that we never had existed at all—are the considerations, indeed, which *during this youth* we find difficulty in understanding. Why we should *not* exist is, *up to the epoch of our Manhood*, of all queries the most unanswerable. Existence—self-existence—existence from all Time and to all Eternity—seems, up to the epoch of Manhood, a normal and unquestionable condition:—*seems, because it is.*

But now comes the period at which a conventional World-Reason awakens us from the truth of our dream. Doubt, Surprise, and Incomprehensibility arrive at the same moment. They say:—"You live, and the time was when you lived not. You have been created. An Intelligence exists greater than your own; and it is only through this Intelligence you live at all." These things we struggle to comprehend and cannot—*cannot*, because these things, being untrue, are thus, of necessity, incomprehensible.

No thinking being lives who, at some luminous point of his life of thought, has not felt himself lost amid the surges of futile efforts at understanding or believing that anything exists *greater*

than his own soul. The utter impossibility of any one soul feeling itself inferior to another; the intense, overwhelming dissatisfaction and rebellion at the thought;—these, with the omni-prevalent aspirations at perfection, are but the spiritual, coincident with the material, struggles towards the original Unity—are, to my mind at least, a species of proof far surpassing what Man terms demonstration, that no one soul *is* inferior to another—that nothing is, or can be, superior to any one soul—that each soul is, in part, its own God—its own Creator:—in a word, that God—the material *and* spiritual God—*now* exists solely in the diffused Matter and Spirit of the Universe; and that the re-gathering of this diffused Matter and Spirit will be but the reconstitution of the *purely* Spiritual and Individual God.

In this view, and in this view alone, we comprehend the riddles of Divine Injustice—of Inexorable Fate. In this view alone the existence of Evil becomes intelligible; but in this view it becomes more—it becomes endurable. Our souls no longer rebel at a *Sorrow* which we ourselves have imposed upon ourselves, in furtherance of our own purposes—with a view—if even with a futile view—to the extension of our own *Joy*.

I have spoken of *Memories* that haunt us during our youth. They sometimes pursue us even in our Manhood:—assume gradually less and less indefinite shapes:—now and then speak to us with low voices, saying:

"There was an epoch in the Night of Time when a still-existent Being existed—one of an absolutely infinite number of similar Beings that people the absolutely infinite domains of the absolutely infinite space. It was not and is not in the power of this Being—any more than it is in your own—to extend, by actual increase, the joy of his Existence; but just as it *is* in your power to expand or to concentrate your pleasures (the absolute amount of happiness remaining always the same) so did and does a similar capability appertain to this divine being, who thus passes his Eternity in perpetual variation of Concentrated Self and almost Infinite Self-Diffusion. What you call The Universe is but his present expansive existence. He now feels his life through an infinity of imperfect pleasures—the partial and pain-intertangled pleasures of those inconceivably numerous things which you designate as his creatures, but which are really but infinite individualisations of Himself. All these creatures—*all*—those which you term animate, as well as those to whom you deny life for no better reason than that you do not behold it in operation—*all* these creatures have, in a greater or less degree, a capacity for pleasure and for pain:—*but the general sum of their sensations is precisely that amount of Happiness which appertains by right to the Divine Being when concentrated within Himself.* These creatures are all, too, more or less conscious Intelligences; conscious, first, of a proper identity; conscious, secondly, and by faint indeterminate glimpses, of an identity with the Divine Being of whom we speak—of an identity with God. Of the two classes of consciousness, fancy that the former will grow weaker, the latter stronger, during the long succession of ages which must elapse before these myriads of in-

dividual Intelligences become blended—when the bright stars become blended—into One. Think that the sense of individual identity will be gradually merged in the general consciousness—that Man, for example, ceasing imperceptibly to feel himself Man, will at length attain that awfully triumphant epoch when he shall recognize his existence as that of Jehovah. In the meantime bear in mind that all is Life—Life—Life within Life—the less within the greater, and all within the *Spirit Divine.*"

Many of the so-called "Unpublished Notes" to Eureka are contained verbatim in the tale The Unparalleled Adventures of One, Hans Pfaall.—Ed.

VOLUME IX

Maelzel's Chess-Player

(Published in *Southern Literary Messenger,* April, 1836.—Ed.)

PERHAPS no exhibition of the kind has ever elicited so general attention as the Chess-Player of Maelzel. Wherever seen it has been an object of intense curiosity to all persons who think. Yet the question of its *modus operandi* is still undetermined. Nothing has been written on this topic which can be considered as decisive—and accordingly we find everywhere men of mechanical genius, of great general acuteness and discriminative understanding, who make no scruple in pronouncing the Automaton a *pure machine,* unconnected with human agency in its movements, and consequently, beyond all comparison, the most astonishing of the inventions of mankind. And such it would undoubtedly be, were they right in their supposition. Assuming this hypothesis, it would be grossly absurd to compare with the Chess-player any similar thing of either modern or ancient days. Yet there have been many and wonderful automata. In Brewster's "Letters on Natural Magic," we have an account of the most remarkable. Among these may be mentioned, as having beyond doubt existed, firstly, the coach invented by M. Camus for the amusement of Louis XIV. when a child. A table was placed a carriage six inches troduced into the room and appropriated for the exhibition. Upon this table was placed a carriage six inches in length, made of wood, and drawn by two horses of the same material. One window being down, a lady was seen on the back seat. A coachman held the reins on the box, and a footman and page were in their places behind. M. Camus now touched a spring; whereupon the coachman smacked his whip, and the horses proceeded in a natural manner along the edge of the table, drawing after them the carriage. Having gone as far as possible in this direction, a sudden turn was made to the left, and the vehicle was driven at right angles to its former course, and still closely along the edge of the table. In this way the coach proceeded until it arrived opposite the chair of the young prince. It then stopped, the page descended and opened the door, the lady alighted and presented a petition to her sovereign. She then reentered. The page put up the steps, closed the door, and resumed his station. The coachman whipped his horses, and the carriage was driven back to its original position.

The Magician of M. Maillardet is also worthy of notice. We copy the following account of it from the "Letters" before mentioned of Dr. B., who derived his information principally from the "Edinburgh Encylopædia."

"One of the most popular pieces of mechanism which we have seen is the Magician constructed by M. Maillardet, for the purpose of answering certain given questions. A figure, dressed like a magician, appears seated at the bot-

tom of a wall, holding a wand in one hand, and a book in the other. A number of questions, ready prepared, are inscribed on oval medallions, and the spectator takes any of these he chooses, and to which he wishes an answer, and having placed it in a drawer ready to receive it, the drawer shuts with a spring till the answer is returned. The magician then arises from his seat, bows his head, describes circles with his wand, and consulting the book as if in deep thought, he lifts it toward his face. Having thus appeared to ponder over the proposed question, he raises his wand, and striking with it the wall above his head, two folding-doors fly open, and display an appropriate answer to the question. The doors again close, the magician resumes his original position, and the drawer opens to return the medallion. There are twenty of these medallions, all containing different questions, to which the magician returns the most suitable and striking answers. The medallions are thin plates of brass, of an elliptical form, exactly resembling each other. Some of the medallions have a question inscribed on each side, both of which the magician answers in succession. If the drawer is shut without a medallion being put in it, the magician rises, consults his book, shakes his head, and resumes his seat; the folding doors remain shut, and the drawer is returned empty. If two medallions are put into the drawer together, an answer is returned only to the lower one. When the machinery is wound up, the movements continue about an hour, during which time about fifty persons may be answered. The inventor stated that the means by which the different medallions acted upon the machinery, so as to produce the proper answers to the questions which they contained, were extremely simple."

The Duck of Vaucanson was still more remarkable. It was of the size of life, and so perfect an imitation of the living animal that all the spectators were deceived. It executed, says Brewster, all the natural movements and gestures, it ate and drank with avidity, performed all the quick motions of the head and throat which are peculiar to the duck, and like it muddled the water which it drank with its bill. It produced also the sound of quacking in the most natural manner. In the anatomical structure the artists exhibited the highest skill. Every bone in the real duck had its representative in the automaton, and its wings were anatomically exact. Every cavity, apophysis, and curvature was imitated, and each bone executed its proper movements. When corn was thrown down before it, the duck stretched out its neck to pick it up, swallowed, and digested it.

But if these machines were ingenious, what shall we think of the calculating machine of Mr. Babbage? What shall we think of an engine of wood and metal which can not only compute astronomical and navigation tables to any given extent, but render the exactitude of its operations mathematically certain through its power of correcting its possible errors? What shall we think of the machine which can not only accomplish all this, but actually print off its elaborate results, when obtained, without the slightest intervention of the intellect of man? It will, perhaps, be said in reply, that a machine such as we have described is altogether above

comparison with the Chess-Player of Maelzel. By no means—it is altogether beneath it—that is to say, provided we assume (what should never for a moment be assumed) that the Chess-Player is a *pure machine*, and performs its operations without any immediate human agency. Arithmetical or algebraical calculations are, from their very nature, fixed and determinate. Certain *data* being given, certain results necessarily and inevitably follow. These results have dependence upon nothing, and are influenced by nothing but the *data* originally given. And the question to be solved proceeds, or should proceed, to its final determination, by a succession of unerring steps liable to no change, and subject to no modification. This being the case, we can without difficulty conceive the *possibility* of so arranging a piece of mechanism, that upon starting it in accordance with the *data* of the question to be solved, it should continue its movements regularly, progressively, and undeviatingly toward the required solution, since these movements, however complex, are never imagined to be otherwise than finite and determinate. But the case is widely different with the Chess-Player. With him there is no determinate progression. No one move in chess necessarily follows upon any one other. From no particular disposition of the men at one period of a game can we predicate their disposition at a different period. Let us place the *first move* in a game of chess, in juxtaposition with the *data* of an algebraical question, and their great difference will be immediately perceived. From the latter—from the *data*—the second step of the question, dependent thereupon, inevitably follows. It is modelled by the *data*. It must be *thus* and not otherwise. But from the first move in the game of chess no especial second move follows of necessity. In the algebraical question, as it proceeds toward solution, the *certainty* of its operations remains altogether unimpaired. The second step having been a consequence of the *data*, the third step is equally a consequence of the second, the fourth of the third, the fifth of the fourth, and so on, *and not possibly otherwise*, to the end. But in proportion to the progress made in a game of chess, is the *uncertainty* of each ensuing move. A few moves having been made, *no* step is certain. Different spectators of the game would advise different moves. All is then dependent upon the variable judgment of the players. Now even granting (what should not be granted) that the movements of the Automaton Chess-Player were in themselves determinate, they would be necessarily interrupted and disarranged by the indeterminate will of his antagonist. There is then no analogy whatever between the operations of the Chess-Player and those of the calculating machine of Mr. Babbage, and if we choose to call the former a *pure machine* we must be prepared to admit that it is, beyond all comparison, the most wonderful of the inventions of mankind. Its original projector, however, Baron Kempelen, had no scruple in declaring it to be a "very ordinary piece of mechanism—a *bagatelle* whose effects appeared so marvellous only from the boldness of the conception, and the fortunate choice of the methods adopted for promoting the illusion." But it is needless to dwell upon this point. It is quite

certain that the operations of the Automaton are regulated by *mind*, and by nothing else. Indeed this matter is susceptible of a mathematical demonstration, *a priori*. The only question then is of the *manner* in which human agency is brought to bear. Before entering upon this subject it would be as well to give a brief history and description of the Chess-Player for the benefit of such of our readers as may never have had an opportunity of witnessing Mr. Maelzel's exhibition.

The Automaton Chess-Player was invented in 1769 by Baron Kempelen, a nobleman of Presburg, in Hungary, who afterward disposed of it, together with the secret of its operations, to its present possessor.* Soon after its completion it was exhibited in Presburg, Paris, Vienna, and other continental cities. In 1783 and 1784 it was taken to London by Mr. Maelzel. Of late years it has

visited the principal towns in the United States. Wherever seen, the most intense curiosity was excited by its appearance, and numerous have been the attempts, by men of all classes, to fathom the mystery of its evolutions.

The cut on this page gives a tolerable representation of the figure as seen by the citizens of Richmond a few weeks ago. The right arm, however, should lie more at length upon the box, a chess-board should appear upon it, and the cushion should not be seen while the pipe is held. Some immaterial alterations have been made in the costume of the player since it came into the possession of Maelzel—the plume, for example, was not originally worn.

At the hour appointed for exhibition, a curtain is withdrawn, or folding-doors are thrown open, and the machine rolled to within about twelve feet of the nearest of the spectators, between whom and it (the machine) a rope is stretched. A figure is seen habited as a Turk, and seated, with its legs crossed, at a large box apparently of maple-wood, which serves it as a table. The exhibitor will, if requested, roll the machine to any portion of the room, suffer it to remain altogether on any designated spot, or even shift its location repeatedly during the progress of a game. The bottom of the box is elevated considerably above the floor by means of the castors or brazen rollers on which it moves, a clear view of the surface immediately beneath the Automaton being thus afforded to the spectators. The chair on which the figure sits is affixed permanently to the box. On the top of this latter is a chess-board, also permanently affixed. The right arm of the Chess-Player is extended at full length before him, at right angles with his body, and lying, in an apparently careless position, by the side of the board. The back of the hand is upward. The board itself is eighteen inches square. The left arm of the

* See *Contents*, tale, Von Kempelen and His Discovery.—Ed.

figure is bent at the elbow, and in the left hand is a pipe. A green drapery conceals the back of the Turk, and falls partially over the front of both shoulders. To judge from the external appearance of the box, it is divided into five compartments—three cupboards of equal dimensions and two drawers occupying that portion of the chest lying beneath the cupboards. The foregoing observations apply to the appearance of the Automaton upon its first introduction into the presence of the spectators.

Maelzel now informs the company that he will disclose to their view the mechanism of the machine. Taking from his pocket a bunch of keys, he unlocks with one of them a door marked 1 in the cut on page 894 and throws the cupboard fully open to the inspection of all present. Its whole interior is apparently filled with wheels, pinions, levers, and other machinery, crowded very closely together, so that the eye can penetrate but a little distance into the mass. Leaving this door open to its full extent, he goes now round to the back of the box, and raising the drapery of the figure, opens another door situated precisely in the rear of the one first opened. Holding a lighted candle at this door, and shifting the position of the whole machine repeatedly at the same time, a bright light is thrown entirely through the cupboard, which is now clearly seen to be full, completely full, of machinery. The spectators being satisfied of this fact, Maelzel closes the back door, locks it, takes the key from the lock, lets fall the drapery of the figure, and comes round to the front. The door marked 1, it will be remembered, is still open. The exhibitor now proceeds to open the drawer which lies beneath the cupboards at the bottom of the box—for although there are apparently two drawers, there is really only one—the two handles and two key-holes being intended merely for ornament. Having opened this drawer to its full extent, a small cushion, and a set of chessmen, fixed in a framework made to support them perpendicularly, are discovered. Leaving this drawer, as well as cupboard No. 1, open, Maelzel now unlocks door No. 2, and door No. 3, which are discovered to be folding-doors, opening into one and the same compartment. To the right of this compartment, however (that is to say to the spectators' right), a small division, six inches wide, and filled with machinery, is partitioned off. The main compartment itself (in speaking of that portion of the box visible upon opening doors 2 and 3, we shall always call it the main compartment) is lined with dark cloth and contains no machinery whatever beyond two pieces of steel, quadrant-shaped, and situated one in each of the rear top corners of the compartment. A small protuberance about eight inches square, and also covered with dark cloth, lies on the floor of the compartment near the rear corner on the spectators' left hand. Leaving doors No. 2 and No. 3 open, as well as the drawer and door No. 1, the exhibitor now goes round to the back of the main compartment, and, unlocking another door there, displays clearly all the interior of the main compartment, by introducing a candle behind it and within it. The whole box being thus apparently disclosed to the scrutiny of the company, Maelzel, still leaving the doors and drawer open, rolls the Autom-

aton entirely round, and exposes the back of the Turk by lifting up the drapery. A door about ten inches square is thrown open in the loins of the figure, and a smaller one also in the left thigh. The interior of the figure, as seen through these apertures, appears to be crowded with machinery. In general, every spectator is now thoroughly satisfied of having beheld and completely scrutinized, at one and the same time, every individual portion of the Automaton, and the idea of any person being concealed in the interior, during so complete an exhibition of that interior, if ever entertained, is immediately dismissed as preposterous in the extreme.

M. Maelzel, having rolled the machine back into its original position, now informs the company that the Automaton will play a game of chess with any one disposed to encounter him. This challenge being accepted, a small table is prepared for the antagonist, and placed close by the rope, but on the spectators' side of it, and so situated as not to prevent the company from obtaining a full view of the Automaton. From a drawer in this table is taken a set of chess-men, and Maelzel arranges them generally, but not always, with his own hands, on the chess-board, which consists merely of the usual number of squares painted upon the table. The antagonist having taken his seat, the exhibitor approaches the drawer of the box, and takes therefrom the cushion, which, after removing the pipe from the hand of the Automaton, he places under its left arm as a support. Then taking also from the drawer the Automaton's set of chess-men, he arranges them upon the chess-board before the figure. He now proceeds to close the doors and to lock them—leaving the bunch of keys in door No. 1. He also closes the drawer, and, finally, winds up the machine, by applying a key to an aperture in the left end (the spectators' left) of the box. The game now commences—the Automaton taking the first move. The duration of the contest is usually limited to half an hour, but if it be not finished at the expiration of this period, and the antagonist still contends that he can beat the Automaton, M. Maelzel has seldom any objection to continue it. Not to weary the company is the ostensible and no doubt the real object of the limitation. It will, of course, be understood that when a move is made at his own table, by the antagonist, the corresponding move is made at the box of the Automaton, by Maelzel himself, who then acts as the representative of the antagonist. On the other hand, when the Turk moves, the corresponding move is made at the table of the antagonist, also by M. Maelzel, who then acts as the representative of the Automaton. In this manner it is necessary that the exhibitor should often pass from one table to the other. He also frequently goes in the rear of the figure to remove the chess-men which it has taken, and which it deposits, when taken, on the box to the left (to its own left) of the board. When the Automaton hesitates in relation to its move, the exhibitor is occasionally seen to place himself very near its right side, and to lay his hand now and then, in a careless manner, upon the box. He has also a peculiar shuffle with his feet, calculated to induce suspicion of collusion with the machine in minds which are more cunning than sagacious.

These peculiarities are, no doubt, mere mannerisms of M. Maelzel, or, if he is aware of them at all, he puts them in practice with a view of exciting in the spectators a false idea of the pure mechanism in the Automaton.

The Turk plays with his left hand. All the movements of the arm are at right angles. In this manner, the hand (which is gloved and bent in a natural way), being brought directly above the piece to be moved, descends finally upon it, the fingers receiving it, in most cases, without difficulty. Occasionally, however, when the piece is not precisely in its proper situation the Automaton fails in his attempt at seizing it. When this occurs, no second effort is made, but the arm continues its movements in the direction originally intended, precisely as if the piece were in the fingers. Having thus designated the spot whither the move should have been made, the arm returns to its cushion, and Maelzel performs the evolution which the Automaton pointed out. At every movement of the figure machinery is heard in motion. During the progress of the game, the figure now and then rolls its eyes, as if surveying the board, moves its head, and pronounces the word *echec* (check) when necessary. If a false move be made by his antagonist, he raps briskly on the box with the fingers of his right hand, shakes his head roughly, and replacing the piece falsely moved, in its former situation, assumes the next move himself. Upon beating the game, he waves his head with an air of triumph, looks around complacently upon the spectators, and drawing his left arm farther back than usual, suffers his fingers alone to rest upon the cushion. In general, the Turk is victorious —once or twice he has been beaten. The game being ended, Maelzel will again, if desired, exhibit the mechanism of the box, in the same manner as before. The machine is then rolled back, and a curtain hides it from the view of the company.

There have been many attempts at solving the mystery of the Automaton. The most general opinion in relation to it, an opinion too not unfrequently adopted by men who should have known better, was, as we have before said, that no immediate human agency was employed—in other words, that the machine was purely a machine and nothing else. Many, however, maintained that the exhibitor himself regulated the movements of the figure by mechanical means operating through the feet of the box. Others, again, spoke confidently of a magnet. Of the first of these opinions we shall say nothing at present more than we have already said. In relation to the second it is only necessary to repeat what we have before stated, that the machine is rolled about on castors, and will, at the request of a spectator, be moved to and fro to any portion of the room, even during the progress of the game. The supposition of the magnet is also untenable—for if a magnet were the agent, any other magnet in the pocket of a spectator would disarrange the entire mechanism. The exhibitor, however, will suffer the most powerful loadstone to remain even upon the box during the whole of the exhibition.

The first attempt at a written explanation of the secret, at least the first attempt of which we ourselves have any knowledge, was made in a

large pamphlet printed at Paris in 1785. The author's hypothesis amounted to this—that a dwarf actuated the machine. This dwarf he supposed to conceal himself during the opening of the box by thrusting his legs into two hollow cylinders, which were represented to be (but which are not) among the machinery in the cupboard No. 1, while his body was out of the box entirely, and covered by the drapery of the Turk. When the doors were shut, the dwarf was enabled to bring his body within the box—the noise produced by some portion of the machinery allowing him to do so unheard, and also to close the door by which he entered. The interior of the Automaton being then exhibited, and no person discovered, the spectators, says the author of this pamphlet, are satisfied that no one is within any portion of the machine. The whole hypothesis was too obviously absurd to require comment or refutation, and accordingly we find that it attracted very little attention.

In 1789 a book was published at Dresden by M. I. F. Freyhere in which another endeavor was made to unravel the mystery. Mr. Freyhere's book was a pretty large one, and copiously illustrated by colored engravings. His supposition was that "a well taught boy, very thin and tall of his age (sufficiently so that he could be concealed in a drawer almost immediately under the chess-board)" played the game of chess and effected all the evolutions of the Automaton. This idea, although even more silly than that of the Parisian author, met with a better reception, and was in some measure believed to be the true solution of the wonder, until the inventor put an end to the discussion by suffering a close examination of the top of the box.

These bizarre attempts at explanation were followed by others equally bizarre. Of late years, however, an anonymous writer, by a course of reasoning exceedingly unphilosophical, has contrived to blunder upon a plausible solution—although we cannot consider it altogether the true one. His Essay was first published in a Baltimore weekly paper, was illustrated by cuts, and was entitled "An Attempt to Analyze the Automaton Chess-Player of M. Maelzel." This Essay we suppose to have been the original of the *pamphlet* to which Sir David Brewster alludes in his "Letters on Natural Magic," and which he has no hesitation in declaring a thorough and satisfactory explanation. The *results* of the analysis are undoubtedly, in the main, just; but we can only account for Brewster's pronouncing the Essay a thorough and satisfactory explanation, by supposing him to have bestowed upon it a very cursory and inattentive perusal. In the compendium of the Essay, made use of in the "Letters on Natural Magic," it is quite impossible to arrive at any distinct conclusion in regard to the adequacy or inadequacy of the analysis, on account of the gross misarrangement and deficiency of the letters of reference employed. The same fault is to be found in the "Attempt," etc., as we originally saw it. The solution consists in a series of minute explanations, (accompanied by wood-cuts, the whole occupying many pages,) in which the object is to show the *possibility* of *so shifting the partitions* of the box as to allow a human being, concealed in the interior, to move portions of his body

from one part of the box to another, during the exhibition of the mechanism —thus eluding the scrutiny of the spectators. There can be no doubt, as we have before observed, and as we will presently endeavor to show, that the principle, or rather the result of this solution is the true one. Some person *is* concealed in the box during the whole time of exhibiting the interior. We object, however, to the whole verbose description of the *manner* in which the partitions are shifted, to accommodate the movements of the person concealed. We object to it as a mere theory assumed in the first place, and to which circumstances are afterward made to adapt themselves. It was not, and could not have been, arrived at by any inductive reasoning. In whatever way the shifting is managed, it is of course concealed at every step from observation. To show that certain movement might possibly be effected in a certain way, is very far from showing that they are actually so effected. There may be an infinity of other methods by which the same results may be obtained. The probability of the one assumed proving the correct one is then as unity to infinity. But, in reality, this particular point, the shifting of the partitions, is of no consequence whatever. It was altogether unnecessary to devote seven or eight pages for the purpose of proving what no one in his senses would deny—viz.: that the wonderful mechanical genius of Baron Kempelen could invent the necessary means for shutting a door or slipping aside a panel, with a human agent too at his service in actual contact with the panel or the door, and the whole operations carried on, as the author of the Essay himself shows, and as we shall attempt to show more fully hereafter, entirely out of reach of the observation of the spectators.

In attempting ourselves an explanation of the Automaton, we will, in the first place, endeavor to show how its operations are effected, and afterward describe, as briefly as possible, the nature of the *observations* from which we have deduced our result.

It will be necessary for a proper understanding of the subject, that we repeat here in a few words, the routine adopted by the exhibitor in disclosing the interior of the box—a routine from which he *never* deviates in any material particular. In the first place he opens the door No. 1. Leaving this open, he goes round to the rear of the box, and opens a door precisely at the back of door No. 1. To this back door he holds a lighted candle. He then *closes the back door,* locks it, and, coming round to the front, opens the drawer to its full extent. This done, he opens the doors No. 2 and No. 3 (the folding-doors), and displays the interior of the main compartment. Leaving open the main compartment, the drawer, and the front door of cupboard No. 1, he now goes to the rear again, and throws open the back door of the main compartment. In shutting up the box no particular order is observed, except that the folding-doors are always closed before the drawer.

Now, let us suppose that when the machine is first rolled into the presence of the spectators, a man is already within it. His body is situated behind the dense machinery in cupboard No. 1 (the rear portion of which machinery

is so contrived as to slip *en masse* from the main compartment to the cupboard No. 1, as occasion may require), and his legs lie at full length in the main compartment. When Maelzel opens the door No. 1, the man within is not in any danger of discovery, for the keenest eye cannot penetrate more than about two inches into the darkness within. But the case is otherwise when the back door of the cupboard No. 1, is opened. A bright light then pervades the cupboard, and the body of the man would be discovered if it were there. But it is not. The putting the key in the lock of the back door was a signal on hearing which the person concealed brought his body forward to an angle as acute as possible—throwing it altogether, or nearly so, into the main compartment. This, however, is a painful position, and cannot be long maintained. Accordingly we find that Maelzel *closes the back door*. This being done, there is no reason why the body of the man may not resume its former situation—for the cupboard is again so dark as to defy scrutiny. The drawer is now opened, and the legs of the person within drop down behind it in the space it formerly occupied.* There is, consequently, now no longer any part of the man in the main compartment—his body being behind the machinery in cupboard No. 1, and his legs in the space occupied by the drawer. The exhibitor, therefore, finds himself at liberty to display the main compartment. This he does—opening both its back and front doors—and no person is discovered. The spectators are now satisfied that the whole of the box is exposed to view—and exposed, too, all portions of it at one and the same time. But of course this is not the case. They neither see the space behind the drawer, nor the interior of cupboard No. 1—the front door of which latter the exhibitor virtually shuts in shutting its back door. Maelzel, having now rolled the machine around, lifted up the drapery of the Turk, opened the doors in its back and thigh, and shown his trunk to be full of machinery, brings the whole back into its original position, and closes the doors. The man within is now at liberty to move about. He gets up into the body of the Turk just so high as to bring his eyes above the level of the chess-board. It is very probable that he seats himself upon the little square block or protuberance which is seen in a corner of the main compartment when the doors are open. In this position he sees the chess-board through the bosom of the Turk, which is of gauze. Bringing his right arm across his breast he actuates the little machinery necessary to guide the left arm and the fingers of the figure. This machinery is situated just beneath the left shoulder of the Turk, and is consequently easily reached by the right hand of the man concealed, if we sup-

* Sir David Brewster supposes that there is always a large space behind this drawer even when shut—in other words, that the drawer is a "false drawer," and does not extend to the back of the box. But the idea is altogether untenable. So commonplace a trick would be immediately discovered—especially as the drawer is always opened to its full extent, and an opportunity thus offered of comparing its depth with that of the box.—E. A. P.

pose his right arm brought across the breast. The motion of the head and eyes, and of the right arm of the figure, as well as the sound *echec*, are produced by other mechanism in the interior, and actuated at will by the man within. The whole of this mechanism—that is to say, all the mechanism essential to the machine—is most probably contained within the little cupboard (of about six inches in breadth) partitioned off at the right (the spectators' right) of the main compartment.

In this analysis of the operations of the Automaton, we have purposely avoided any allusion to the manner in which the partitions are shifted, and it will now be readily comprehended that this point is a matter of no importance, since, by mechanism within the ability of any common carpenter, it might be effected in an infinity of different ways, and since we have shown that, however performed, it is performed out of the view of the spectators. Our result is founded upon the following *observations* taken during frequent visits to the exhibition of Maelzel.*

1. The moves of the Turk are not made at regular intervals of time, but accommodate themselves to the moves of the antagonist—although this point (of regularity), so important in all kinds of mechanical contrivance, might have been readily brought about by limiting the time allowed for the moves of the antagonist. For example, if this limit were three minutes, the moves of the Automaton might be made at any given intervals longer than three minutes. The fact then of irregularity, when regularity might have been so easily attained, goes to prove that regularity is unimportant to the action of the Automaton—in other words, that the Automaton is not *a pure machine*.

2. When the Automaton is about to move a piece, a distinct motion is observable just beneath the left shoulder, and which motion agitates in a slight degree the drapery covering the front of the left shoulder. This motion invariably precedes, by about two seconds, the movement of the arm itself; and the arm never, in any instance, moves without this preparatory motion in the shoulder. Now let the antagonist move a piece, and let the corresponding move be made by Maelzel, as usual, upon the board of the Automaton. Then let the antagonist narrowly watch the Automaton, until he detect the preparatory motion in the shoulder. Immediately upon detecting this motion, and before the arm itself begins to move, let him withdraw his piece, as if perceiving an error in his manœuvre. It will then be seen that the movement of the arm, which, in all other cases, immediately succeeds the motion in the shoulder, is withheld —is not made—although Maelzel has not yet performed, on the board of the Automaton, any move corresponding to the withdrawal of the antagonist. In

---

* Some of these *observations* are intended merely to prove that the machine must be regulated *by mind*, and it may be thought a work of supererogation to advance further arguments in support of what has been already fully decided. But our object is to convince, in especial, certain of our friends upon whom a train of suggestive reasoning will have more influence than the most positive *a priori* demonstration.—E. A. P.

this case, that the Automaton was about to move is evident; and that he did not move was an effect plainly produced by the withdrawal of the antagonist, and without any intervention of Maelzel.

This fact fully proves (1) that the intervention of Maelzel, in performing the moves of the antagonist on the board of the Automaton, is not essential to the movements of the Automaton; (2) that its movements are regulated by *mind*—by some person who sees the board of the antagonist; (3) that its movements are not regulated by the mind of Maelzel, whose back was turned toward the antagonist at the withdrawal of his move.

3. The Automaton does not invariably win the game. Were the machine a pure machine, this would not be the case—it would always win. The *principle* being discovered by which a machine can be made to *play* a game of chess, an extension of the same principle would enable it to *win* a game; a further extension would enable it to *win all* games—that is, to beat any possible game of an antagonist. A little consideration will convince any one that the difficulty of making a machine beat all games is not in the least degree greater, as regards the principle of the operations necessary, than that of making it beat a single game. If, then, we regard the Chess-Player as a machine, we must suppose (what is highly improbable) that its inventor preferred leaving it incomplete to perfecting it—a supposition rendered still more absurd when we reflect that the leaving it incomplete would afford an argument against the possibility of its being a pure machine—the very argument we now adduce.

4. When the situation of the game is difficult or complex, we never perceive the Turk either shake his head or roll his eyes. It is only when his next move is obvious, or when the game is so circumstanced that to a man in the Automaton's place there would be no necessity for reflection. Now, these peculiar movements of the head and eyes are movements customary with persons engaged in meditation, and the ingenious Baron Kempelen would have adapted these movements (were the machine a pure machine) to occasions proper for their display—that is, to occasions of complexity. But the reverse is seen to be the case, and this reverse applies precisely to our supposition of a man in the interior. When engaged in meditation about the game he has no time to think of setting in motion the mechanism of the Automaton by which are moved the head and the eyes. When the game, however, is obvious, he has time to look about him, and, accordingly, we see the head shake and the eyes roll.

5. When the machine is rolled round to allow the spectators an examination of the back of the Turk, and when his drapery is lifted up and the doors in the trunk and thigh thrown open, the interior of the trunk is seen to be crowded with machinery. In scrutinizing this machinery while the Automaton was in motion—that is to say, while the whole machine was moving on the castors—it appeared to us that certain portions of the mechanism changed their shape and position in a degree too great to be accounted for by the simple laws of perspective; and subsequent

examinations convinced us that these undue alterations were attributable to mirrors in the interior of the trunk. The introduction of mirrors among the machinery could not have been intended to influence, in any degree, the machinery itself. Their operation—whatever that operation should prove to be—must necessarily have reference to the eye of the spectator. We at once concluded that these mirrors were so placed to multiply to the vision some few pieces of machinery within the trunk so as to give it the appearance of being crowded with mechanism. Now the direct inference from this is that the machine is not a pure machine. For if it were, the inventor, so far from wishing its mechanism to appear complex, and using deception for the purpose of giving it this appearance, would have been especially desirous of convincing those who witnessed his exhibition of the *simplicity* of the means by which results so wonderful were brought about.

6. The external appearance, and, especially, the deportment of the Turk, are, when we consider them as imitations of *life* but very indifferent imitations. The countenance evinces no ingenuity, and is surpassed, in its resemblance to the human face, by the very commonest of wax-works. The eyes roll unnaturally in the head, without any corresponding motions of the lids or brows. The arm, particularly, performs its operations in an exceedingly stiff, awkward, jerking, and rectangular manner. Now, all this is the result either of inability in Maelzel to do better, or of intentional neglect—accidental neglect being out of the question, when we consider that the whole time of the ingenious proprietor is occupied in the improvement of his machines. Most assuredly we must not refer the unlife-like appearances to inability—for all the rest of Maelzel's automata are evidence of his full ability to copy the notions and peculiarities of life with the most wonderful exactitude. The rope-dancers, for example, are inimitable. When the clown laughs, his lips, his eyes, his eyebrows, and eyelids—indeed, all the features of his countenance—are imbued with their appropriate expressions. In both him and his companion, every gesture is so entirely easy, and free from the semblance of artificiality, that, were it not for the diminutiveness of their size, and the fact of their being passed from one spectator to another previous to their exhibition on the rope, it would be difficult to convince any assemblage of persons that these wooden automata were not living creatures. We cannot, therefore, doubt Mr. Maelzel's ability, and we must necessarily suppose that he intentionally suffered his Chess-Player to remain the same artificial and unnatural figure which Baron Kempelen (no doubt also through design) originally made it. What this design was it is not difficult to conceive. Were the Automaton life-like in its motions, the spectator would be more apt to attribute its operations to their true cause (that is, to human agency within), than he is now, when the awkward and rectangular manœuvres convey the idea of pure and unaided mechanism.

7. When, a short time previous to the commencement of the game, the Automaton is wound up by the exhibitor as usual, an ear in any degree accustomed to the sounds produced in wind-

ing up a system of machinery, will not fail to discover, instantaneously, that the axis turned by the key in the box of the Chess-Player cannot possibly be connected with either a weight, a spring, or any system of machinery whatever. The inference here is the same as in our last observation. The winding up is inessential to the operations of the Automaton, and is performed with the design of exciting in the spectators the false idea of mechanism.

8. When the question is demanded explicitly of Maelzel: "Is the Automaton a pure machine or not?" his reply is invariably the same: "I will say nothing about it." Now the notoriety of the Automaton, and the great curiosity it has everywhere excited, are owing more especially to the prevalent opinion that it *is* a pure machine, than to any other circumstance. Of course, then, it is the interest of the proprietor to represent it as a pure machine. And what more obvious, and more effectual method could there be of impressing the spectators with this desired idea, than a positive and explicit declaration to that effect? On the other hand, what more obvious and effectual method could there be of exciting a disbelief in the Automaton's being a pure machine than by withholding such explicit declaration? For, people will naturally reason thus: It is Maelzel's interest to represent this thing a pure machine; he refuses to do so, directly, in words, although he does not scruple and is evidently anxious to do so indirectly, by actions; were it actually what he wishes to represent it by actions, he would gladly avail himself of the more direct testimony of words; the inference is, that the consciousness of its *not* being a pure machine is the reason of his silence; his actions cannot implicate him in a falsehood, his words may.

9. When, in exhibiting the interior of the box, Maelzel has thrown open the door No. 1, and also the door immediately behind it, he holds a lighted candle at the back door (as before mentioned) and moves the entire machine to and fro with a view of convincing the company that the cupboard No. 1 is entirely filled with machinery. When the machine is thus moved about, it will be apparent to any careful observer, that whereas that portion of the machinery near the front door No. 1 is perfectly steady and unwavering, the portion farther within fluctuates, in a very slight degree, with the movements of the machine. This circumstance first aroused in us the suspicion that the more remote portion of the machinery was so arranged as to be easily slipped, *en masse*, from its position when occasion should require it. This occasion we have already stated to occur when the man concealed within brings his body into an erect position upon the closing of the back door.

10. Sir David Brewster states the figure of the Turk to be of the size of life—but in fact it is far above the ordinary size. Nothing is more easy than to err in our notions of magnitude. The body of the Automaton is generally insulated, and, having no means of immediately comparing it with any human form, we suffer ourselves to consider it as of ordinary dimensions. This mistake may, however, be corrected by observing the Chess-Player when, as is sometimes the case, the exhibitor approaches it. Mr. Maelzel, to be sure, is not very tall, but upon drawing

near the machine his head will be found at least eighteen inches below the head of the Turk, although the latter, it will be remembered, is in a sitting position.

11. The box, behind which the Automaton is placed, is precisely three feet six inches long, two feet four inches deep, and two feet six inches high. These dimensions are fully sufficient for the accommodation of a man very much above the common size—and the main compartment alone is capable of holding any ordinary man in the position we have mentioned as assumed by the person concealed. As these are facts, which any one who doubts them may prove by actual calculation, we deem it unnecessary to dwell upon them. We will only suggest that, although the top of the box is apparently a board of about three inches in thickness, the spectator may satisfy himself, by stooping and looking up at it when the main compartment is open, that it is in reality very thin. The height of the drawer also will be misconceived by those who examine it in a cursory manner. There is a space of about three inches between the top of the drawer as seen from the exterior, and the bottom of the cupboard—a space which must be included in the height of the drawer. These contrivances to make the room within the box appear less than it actually is are referable to a design on the part of the inventor, to impress the company again with a false idea, viz., that no human being can be accommodated within the box.

12. The interior of the main compartment is lined throughout with *cloth*. This cloth we suppose to have a twofold object. A portion of it may form, when tightly stretched, the only partitions which there is any necessity for removing during the changes of the man's position, viz., the partition between the rear of the main compartment and the rear of cupboard No. 1, and the partition between the main compartment and the space behind the drawer when open. If we imagine this to be the case, the difficulty of shifting the partitions vanishes at once, if indeed any such difficulty could be supposed under any circumstances to exist. The second object of the cloth is to deaden and render indistinct all sounds occasioned by the movements of the person within.

13. The antagonist (as we have before observed) is not suffered to play at the board of the Automaton, but is seated at some distance from the machine. The reason which, most probably, would be assigned for this circumstance, if the question were demanded, is that, were the antagonist otherwise situated, his person would intervene between the machine and the spectators, and preclude the latter from a distinct view. But this difficulty might be easily obviated, either by elevating the seats of the company, or by turning the end of the box toward them during the game. The true cause of the restriction is, perhaps, very different. Were the antagonist seated in contact with the box, the secret would be liable to discovery, by his detecting, with the aid of a quick ear, the breathings of the man concealed.

14. Although M. Maelzel, in disclosing the interior of the machine, sometimes slightly deviates from the *routine* which we have pointed out, yet *never* in any instance does he *so* deviate from it

as to interfere with our solution. For example, he has been known to open, first of all, the drawer—but he never opens the main compartment without first closing the back door of cupboard No. 1—he never opens the main compartment without first pulling out the drawer—he never shuts the drawer without first shutting the main compartment—he never opens the back door of cupboard No. 1 while the main compartment is open—and the game of chess is never commenced until the whole machine is closed. Now, if it were observed that *never, in any single instance,* did M. Maelzel differ from the routine we have pointed out as necessary to our solution, it would be one of the strongest possible arguments in corroboration of it; but the argument becomes infinitely strengthened if we duly consider the circumstances that he *does occasionally* deviate from the routine, but never does *so* deviate as to falsify the solution.

15. There are six candles on the board of the Automaton during exhibition. The question naturally arises: "Why are so many employed, when a single candle, or, at farthest, two, would have been amply sufficient to afford the spectators a clear view of the board, in a room otherwise so well lit up as the exhibition room always is—when, moreover, if we suppose the machine a *pure machine,* there can be no necessity for so much light, or indeed any light at all, to enable *it* to perform its operations—and when, especially, only a single candle is placed upon the table of the antagonist?" The first and most obvious inference is, that so strong a light is requisite to enable the man within to see through the transparent material (probably fine gauze) of which the breast of the Turk is composed. But when we consider the *arrangement* of the candles, another reason immediately presents itself. There are six lights (as we have said before) in all. Three of these are on each side of the figure. Those most remote from the spectators are the longest—those in the middle are about two inches shorter—and those nearest the company about two inches shorter still—and the candles on one side differ in height from the candles respectively opposite on the other, by a ratio different from two inches—that is to say, the longest candle on one side is about three inches shorter than the longest candle on the other, and so on. Thus it will be seen that no two of the candles are of the same height, and thus also the difficulty of ascertaining the *material* of the breast of the figure (against which the light is especially directed) is greatly augmented by the dazzling effect of the complicated crossings of the rays—crossings which are brought about by placing the centres of radiation all upon different levels.

16. While the Chess-Player was in possession of Baron Kempelen, it was more than once observed, first, that an Italian in the suite of the Baron was never visible during the playing of a game at chess by the Turk; and, secondly, that the Italian being taken seriously ill, the exhibition was suspended until his recovery. This Italian professed a *total* ignorance of the game of chess, although all others of the suite played well. Similar observations have been made since the Automaton has been purchased by Maelzel. There is

a man, *Schlumberger*, who attends him wherever he goes, but who has no ostensible occupation other than that of assisting in the packing and unpacking of the Automaton. This man is about the medium size, and has a remarkable stoop in the shoulders. Whether he professes to play chess or not, we are not informed. It is quite certain, however, that he is never to be seen during the exhibition of the Chess-Player, although frequently visible just before and just after the exhibition. Moreover, some years ago Maelzel visited Richmond with his automata, and exhibited them, we believe, in the house now occupied by M. Bossieux as a dancing academy. *Schlumberger* was suddenly taken ill, and during his illness there was no exhibition of the Chess-Player. These facts are well known to many of our citizens. The reason assigned for the suspension of the Chess-Player's performances was *not* the illness of *Schlumberger*. The inferences from all this we leave, without farther comment, to the reader.

17. The Turk plays with his *left* arm. A circumstance so remarkable cannot be accidental. Brewster takes no notice of it whatever, beyond a mere statement, we believe, that such is the fact. The early writers of treatises on the Automaton seem not to have observed the matter at all, and have no reference to it. The author of the pamphlet alluded to by Brewster mentions it, but acknowledges his inability to account for it. Yet it is obviously from such prominent discrepancies or incongruities as this that deductions are to be made (if made at all) which shall lead us to the truth.

The circumstance of the Automaton's playing with his left hand cannot have connection with the operations of the machine, considered merely as such. Any mechanical arrangement which would cause the figure to move, in any given manner, the left arm, could, if reversed, cause it to move, in the same manner, the right. But these principles cannot be extended to the human organization, wherein there is a marked and radical difference in the construction, and, at all events, in the powers, of the right and left arms. Reflecting upon this latter fact, we naturally refer the incongruity noticeable in the Chess-Player to this peculiarity in the human organization. If so we must imagine some *reversion*—for the Chess-Player plays precisely as a man *would not*. These ideas, once entertained, are sufficient of themselves to suggest the notion of a man in the interior. A few more imperceptible steps lead us, finally, to the result. The Automaton plays with his left arm, because under no other circumstances could the man within play with his right—a *desideratum* of course. Let us, for example, imagine the Automaton to play with his right arm. To reach the machinery which moves the arm, and which we have before explained to lie just beneath the shoulder, it would be necessary for the man within either to use his right arm in an exceedingly painful and awkward position (viz., brought up close to his body and tightly compressed between his body and the side of the Automaton), or else to use his left arm brought across his breast. In neither case could he act with the requisite

ease of precision. On the contrary, the Automaton playing, as it actually does, with the left arm, all difficulties vanish. The right arm of the man within is brought across his breast, and his right fingers act, without any constraint, upon the machinery in the shoulder of the figure.

We do not believe that any reasonable objections can be urged against this solution of the Automaton Chess-Player.

Cryptography

(Poe's writings on Cryptography formed the basis for deciphering one of the most important secret code messages of the Germans during the World War. Also named Secret Writing.—Ed.)

As we can scarcely imagine a time when there did not exist a necessity, or at least a desire, of transmitting information from one individual to another in such manner as to elude general comprehension, so we may well suppose the practice of writing in cipher to be of great antiquity, De la Guilletiere, therefore, who, in his "Lacedæmon Ancient and Modern," maintains that the Spartans were the inventors of Cryptography, is obviously in error. He speaks of the *scytala* as being the origin of the art; but he should only have cited it as one of its earliest instances, so far as our records extend. The *scytala* were two wooden cylinders, precisely similar in all respects. The general of an army, in going upon any expedition, received from the *ephori* one of these cylinders, while the other remained in their possession. If either party had occasion to communicate with the other, a narrow strip of parchment was so wrapped around the *scytala* that the edges of the skin fitted accurately each to each. The writing was then inscribed longitudinally, and the epistle unrolled and despatched. If, by mischance, the messenger was intercepted, the letter proved unintelligible to his captors. If he reached his destination safely, however, the party addressed had only to involve the second cylinder in the strip to decipher the inscription. The transmission to our own times of this obvious mode of cryptography is due, probably, to the *historical* uses of the *scytala* rather than to anything else. Similar means of secret inter-communication must have existed almost contemporaneously with the invention of letters.

It may be as well to remark, in passing, that in none of the treatises on the subject of this paper which have fallen under our cognisance have we observed any suggestion of a method—other than those which apply alike to all ciphers—for the solution of the cipher by *scytala*. We read of instances, indeed, in which the intercepted parchments were deciphered; but we are not informed that this was ever done except accidentally. Yet a solution might be obtained with absolute certainty in this manner. The strip of skin being intercepted, let there

be prepared a cone of great length comparatively—say six feet long—and whose circumference at base shall at least equal the length of the strip. Let this latter be rolled upon the cone near the base, edge to edge, as above described; then, still keeping edge to edge, and maintaining the parchment close upon the cone, let it be gradually slipped towards the apex. In this process, some of those words, syllables, or letters, whose connection is intended, will be sure to come together at that point of the cone where its diameter equals that of the *scytala* upon which the cipher was written. And as in passing up the cone to its apex all possible diameters are passed over, there is no chance of a failure. The circumference of the *scytala* being thus ascertained, a similar one can be made, and the cipher applied to it.

Few persons can be made to believe that it is not quite an easy thing to invent a method of secret writing which shall baffle investigation. Yet it may be roundly asserted that human ingenuity cannot concoct a cipher which human ingenuity cannot resolve. In the facility with which such writing is deciphered, however, there exist very remarkable differences in different intellects. Often, in the case of two individuals of acknowledged equality as regards ordinary mental efforts, it will be found that, while one cannot unriddle the commonest cipher, the other will scarcely be puzzled by the most abstruse. It may be observed generally that in such investigations the analytic ability is very forcibly called into action; and, for this reason, cryptographical solutions might with great propriety be introduced into academies as the means of giving tone to the most important of the powers of mind.

Were two individuals, totally unpractised in cryptography, desirous of holding by letter a correspondence which should be unintelligible to all but themselves, it is most probable that they would at once think of a peculiar alphabet, to which each should have a key. At first it would, perhaps, be arranged that *a* should stand for *z*, *b* for *y*, *c* for *x*, *d* for *w*, etc., etc.; that is to say, the order of the letters would be reversed. Upon second thoughts, this arrangement appearing too obvious, a more complex mode would be adopted. The first thirteen letters might be written beneath the last thirteen, thus:

n o p q r s t u v w x y z
a b c d e f g h i j k l m,

and, so placed, *a* might stand for *n* and *n* for *a*, *o* for *b* and *b* for *o*, etc., etc. This, again, having an air of regularity which might be fathomed, the key alphabet might be constructed absolutely at random.

Thus, a might stand for p
b " " " x
c " " " n
d " " " o, etc.

The correspondents, unless convinced of their error by the solution of their cipher, would no doubt be willing to rest in this latter arrangement as affording full security. But if not, they would be likely to hit upon the plan of arbi-

trary marks used in place of the usual characters. For example,

(might be employed for a
. " " b
: " " c
; " " d
) " " e, etc.

A letter composed of such characters would have an intricate appearance unquestionably. If still, however, it did not give full satisfaction, the idea of a perpetually shifting alphabet might be conceived, and thus effected. Let two circular pieces of pasteboard be prepared, one about half-an-inch in diameter less than the other. Let the centre of the smaller be placed upon the centre of the larger, and secured for a moment from slipping; while *radii* are drawn from the common centre to the circumference of the smaller circle, and thus extended to the circumference of the greater. Let there be twenty-six of these *radii,* forming on each pasteboard twenty-six spaces. In each of these spaces on the under circle write one of the letters of the alphabet, so that the whole alphabet be written—if at random so much the better. Do the same with the upper circle. Now run a pin through the common centre, and let the upper circle revolve, while the under one is held fast. Now stop the revolution of the upper circle, and, while both lie still, write the epistle required; using for *a* that letter in the smaller circle which tallies with *a* in the larger, for *b* that letter in the smaller circle which tallies with *b* in the larger, etc., etc. In order that an epistle thus written may be read by the person for whom it is intended, it is only necessary that he should have in his possession circles constructed as those just described, and that he should know any two of the characters (one in the under and one in the upper circle) which were in juxtaposition when his correspondent wrote the cipher. Upon this latter point he is informed by looking at the two initial letters of the document which serve as a key. Thus, if he sees *a m* at the beginning, he concludes that, by turning his circles so as to put these characters in conjunction, he will arrive at the alphabet employed.

At a cursory glance, these various modes of constructing a cipher seem to have about them an air of inscrutable secrecy. It appears almost an impossibility to unriddle what has been put together by so complex a method. And to some persons the difficulty might be great; but to others—to those skilled in deciphering—such enigmas are very simple indeed. The reader should bear in mind that the basis of the whole art of solution, as far as regards these matters, is found in the general principles of the formation of language itself, and thus is altogether independent of the particular laws which govern any cipher, or the construction of its key. The difficulty of reading a cryptographical puzzle is by no means always in accordance with the labour or ingenuity with which it has been constructed. The sole use of the key, indeed, is for those *au fait* to the cipher; in its perusal by a third party, no reference is had to it at all. The lock of the secret is picked. In the different methods of cryptography specified above, it will be observed that there is a gradually increasing complexity. But this complexity is only in shadow. It has no sub-

stance whatever. It appertains merely to the formation, and has no bearing upon the solution of the cipher. The last mode mentioned is not in the least degree more difficult to be deciphered than the first—whatever may be the difficulty of either.

In the discussion of an analogous subject, in one of the weekly papers* of this city, about eighteen months ago, the writer of this article had occasion to speak of the application of a rigorous *method* in all forms of thought—of its advantages—of the extension of its use even to what is considered the operation of pure fancy—and thus, subsequently, of the solution of cipher. He even ventured to assert that no cipher, of the character above specified, could be sent to the address of the paper, which he would not be able to resolve. This challenge excited, most unexpectedly, a very lively interest among the numerous readers of the journal. Letters were poured in upon the editor from all parts of the country; and many of the writers of these epistles were so convinced of the impenetrability of their mysteries as to be at great pains to draw him into wagers on the subject. At the same time, they were not always scrupulous about sticking to the point. The cryptographs were, in numerous instances, altogether beyond the limits defined in the beginning. Foreign languages were employed. Words and sentences were run together without interval. Several alphabets were used in the same cipher. One gentleman, but moderately endowed with consciousness, inditing us a puzzle composed of pothooks and hangers to which the wildest typography of the office could afford nothing similar, went even so far as to jumble together no less than *seven distinct alphabets,* without intervals between the letters, *or between the lines.* Many of the cryptographs were dated in Philadelphia, and several of those which urged the subject of a bet were written by gentlemen of this city. Out of, perhaps, one hundred ciphers altogether received, there was only one which we did not immediately succeed in solving. This one we *demonstrated* to be an imposition—that is to say, we fully proved it a jargon of random characters, having no meaning whatever. In respect to the epistle of the seven alphabets, we had the pleasure of completely *nonplussing* its inditer by a prompt and satisfactory translation.

The weekly paper mentioned was, for a period of some months, greatly occupied with the hieroglyphic and cabalistic-looking solutions of the cryptographs sent us from all quarters. Yet with the exception of the writers of the ciphers, we do not believe that any individuals could have been found among the readers of the journal who regarded the matter in any other light than in that of a desperate humbug. We mean to say that no one really believed in the authenticity of the answers. One party averred that the mysterious figures were only inserted to give a *queer* air to the paper, for the purpose of attracting attention. Another thought it more probable that we not only solved the ciphers, but put them together ourselves for solution. This having been the state of affairs at the period when it was thought expe-

*Alexander's *Weekly (Express) Messenger,* Philadelphia.—Ed.)

dient to decline further dealings in necromancy, the writer of this article avails himself of the present opportunity to maintain the truth of the journal in question—to repel the charges of rigmarole by which it was assailed—and to declare in his own name, that the ciphers were all written in good faith, and solved in the same spirit.

A very common and somewhat too obvious mode of secret correspondence is the following. A card is interspersed, at irregular intervals with oblong spaces, about the length of ordinary words of three syllables in a bourgeois type. Another card is made exactly coinciding. One is in possession of each party. When a letter is to be written, the key-card is placed upon the paper and words conveying the true meaning inscribed in the spaces. The card is then removed and the blanks filled up, so as to make out a signification different from the real one. When the person addressed receives the cipher, he has merely to apply to it his own card, when the superfluous words are concealed, and the significant ones alone appear. The chief objection to this cryptography is the difficulty of so filling the blanks as not to give a forced appearance to the sentences. Differences also in the handwriting between the words written in the spaces, and those inscribed upon removal of the card, will always be detected by a close observer.

A pack of cards is sometimes made the vehicle of a cipher, in this manner. The parties determine, in the first place, upon certain arrangements of the pack. For example: it is agreed that, when a writing is to be commenced, a natural sequence of the spots shall be made; with spades at top, hearts next, diamonds next, and clubs last. This order being obtained, the writer proceeds to inscribe upon the top card the first letter of his epistle, upon the next the second, upon the next the third, and so on until the pack is exhausted, when, of course, he will have written fifty-two letters. He now shuffles the pack according to a preconcerted plan. For example: he takes three cards from the bottom and places them at top, then one from top, placing it at bottom, and so on, for a given number of times. This done, he again inscribes fifty-two characters as before, proceeding thus until his epistle is written. The pack being received by the correspondent, he has only to place the cards in the order agreed upon for commencement, to read letter by letter, the first fifty-two characters as intended. He has then only to shuffle in the manner prearranged for the second perusal, to decipher the series of the next fifty-two letters—and so on to the end. The objection to this cryptograph lies in the nature of the missive. *A pack* of *cards* sent from one party to another would scarcely fail to excite suspicion, and it cannot be doubted that it is far better to secure ciphers from being considered as such than to waste time in attempts at rendering them scrutiny-proof when intercepted. Experience shows that the most cunningly constructed cryptograph, if suspected, can and will be unriddled.

An unusually secure mode of secret intercommunication might be thus devised. Let the parties each furnish themselves with a copy of the same edition of a book—the rarer the edition the better—as also the rarer the book.

In the cryptograph, numbers are used altogether, and these numbers refer to the locality of letters in the volume. For example—a cipher is received commencing, 121-6-8. The party addressed refers to page 121, and looks at the sixth letter from the left of the page in the eighth line from the top. Whatever letter he there finds is the initial letter of the epistle—and so on. This method is very secure; yet it is *possible* to decipher any cryptograph written by its means—and it is greatly objectionable otherwise, on account of the time necessarily required for its solution, even with the key-volume.

It is not to be supposed that Cryptography, as a serious thing, as the means of imparting important information, has gone out of use at the present day. It is still commonly practised in diplomacy; and there are individuals, even now, holding office in the eye of various foreign governments, whose real business is that of deciphering. We have already said that a peculiar mental action is called into play in the solution of cryptographical problems, at least, in those of the higher order. Good cryptographists are rare indeed; and thus their services, although seldom required, are necessarily well requited.

An instance of the modern employment of writing in cipher is mentioned in a work lately published by Messieurs Lea and Blanchard of this city—"Sketches of Conspicuous Living Characters of France." In a notice of Berryer, it is said that a letter being addressed by the Duchess de Berri to the Legitimists of Paris, to inform them of her arrival, it was accompanied by a long note in cipher, the key of which she had forgotten to give. "The penetrating mind of Berryer," says the biographer, "soon discovered it. It was this phrase substituted for the twenty-four letters of the alphabet —*Le gouvernement provisoire.*"

The assertion that Berryer "soon discovered the key-phrase," merely proves that the writer of these memoirs is entirely innocent of cryptographical knowledge. Monsieur B. no doubt ascertained the key-phrase; but it was merely to satisfy his curiosity, *after the riddle had been read.* He made no use of the key in deciphering. The lock was picked.

In our notice of the book in question (published in the April number of this magazine), we alluded to this subject thus—

"The phrase *'Le gouvernement provisoire'* is French, and the note in cipher was addressed to Frenchmen. The difficulty of deciphering may well be supposed much greater, had the key been in a foreign tongue; yet any one who will take the trouble may address us a note, in the same manner as here proposed, and the key-phrase may be either in French, Italian, Spanish, German, Latin or Greek (or in any of the dialects of these languages), and we pledge ourselves for the solution of the riddle."

This challenge has elicited but a single response, which is embraced in the following letter. The only quarrel we have with the epistle, is that its writer has declined giving us his name in full. We beg that he will take an early opportunity of doing this, and thus relieve us of the chance of that suspicion which was attached to the cryptography of the weekly journal above mentioned—the suspicion of in-

diting ciphers to ourselves. The postmark of the letter is *Stonington, Conn.*

S———, Ct., April 21, 1841.

To the Editor of Graham's Magazine.

Sir,—In the April number of your magazine, while reviewing the translation by Mr. Walsh of "Sketches of Conspicuous Living Characters of France," you invite your readers to address you a note in cipher, "the key-phrase to which may be either in French, Italian, Spanish, German, Latin or Greek," and pledge yourself for its solution. My attention being called, by your remarks, to this species of cipher-writing, I composed for my own amusement the following exercises, in the first part of which the key-phrase is in English—in the second in Latin. As I did not see (by the number for May), that any of your correspondents had availed himself of your offer, I take the liberty to send the enclosed, on which, if you should think it worth your while, you can exercise your ingenuity.

I am, yours respectfully,

S. D. L.

In the solution of the first of these ciphers we had little more than ordinary trouble. The second proved to be exceedingly difficult, and it was only by calling every faculty into play that we could read it at all. The first runs thus:

"Various are the methods which have been devised for transmitting secret information, from one individual to another by means of writing, illegible to any except him for whom it was originally destined; and the art of thus secretly communicating intelligence has been generally termed *cryptography*. Many species of secret writing were known to the ancients. Sometimes a slave's head was shaved and the crown written upon; with some indelible colouring fluid; after which the hair being permitted to grow again, infor-

mation could be transmitted with little danger that discovery would ensue until the ambulatory epistle safely reached its destination. Cryptography, however pure, properly embraces those modes of writing which are rendered legible only by means of some explanatory key which makes known the real signification of the ciphers employed to its possessor."

The key-phrase of this cryptograph is—"A word to the wise is sufficient."

The second is thus translated—

"Nonsensical phrases and unmeaning combinations of words, as the learned lexicographer would have confessed himself, when hidden under cryptographic ciphers, serve to *perpdex* the curious enquirer, and baffle penetration more completely than would the most profound *apothegms* of learned philosophers. Abstruse disquisitions of the scholiasts were they but presented before him in the undisguised vocabulary of his mother tongue"——

The last sentence here (as will be seen) is broken off short. The spelling we have strictly adhered to. *D*, by mistake, has been put for *l* in *perplex.*

The key-phrase is—*"Suaviter in modo, fortiter in re."*

In the ordinary cryptograph, as will be seen in reference to most of those we have specified above, the artificial alphabet agreed upon by the correspondents is employed, letter for letter, in place of the usual or natural one. For example—two parties wish to communicate secretly. It is arranged before parting that

)	shall stand for		a
(	„	„	b
—	„	„	c
*	shall stand for		d
.	„	„	e
'	„	„	f
;	„	„	g
:	„	„	h
?	„	„	i or j
!	„	„	k
&	„	„	l
o	„	„	m
‘	„	„	n
†	„	„	0
‡	„	„	p
¶	„	„	q
☞	„	„	r
]	„	„	s
[	„	„	t
£	„	„	u or v
$	„	„	w
¿	„	„	x
¡	„	„	y
☜	„	„	z

Now the following note is to be communicated—

"We must see you immediately upon a matter of great importance. Plots have been discovered, and the conspirators are in our hands. Hasten!"

These words would be written thus—

$.o£][]..¡†£?oo.*?)[.&¡£‡†‘)o)[[.☞†’;☞.)[²o‡†☞()‘—.‡&†[]:)£.(..‘*.]—†£.☞.*)‘*[:.—†‘]‡?☞)[†☞])☞.?‘†£☞:)‘*]:)][.‘

This certainly has an intricate appearance, and would prove a most difficult cipher to any one not conversant with cryptography. But it will be observed that *a*, for example, is never

represented by any other character than), *b* never by any other character than (, and so on. Thus by the discovery, accidental or otherwise, of any one letter, the party intercepting the epistle would gain a permanent and decided advantage, and could apply his knowledge to all the instances in which the character in question was employed throughout the cipher.

In the cryptographs, on the other hand, which have been sent us by our correspondent at Stonington, and which are identical in conformation with the cipher resolved by Berryer, no such permanent advantage is to be obtained.

Let us refer to the second of these puzzles. Its key-phrase runs thus.—

Suaviter in modo, fortiter in re.

Let us now place the alphabet beneath this phrase, letter beneath letter—

S	u	a	v	i	t	e	r	i	n	m	o		d	o				
A	b	c	d	e	f	g	h	i	j	k	l	m	n					

f	o	r	t	i	t	e	r	i	n	r	e							
o	p	q	r	s	t	u	v	w	x	y	z							

We here see that

a	stands for	c
d	"	m
e	"	g, u, and z
f	"	o
i	"	e, i, s and w
m	"	k
n	"	j and x
o	"	l, n, and p
r	"	h, q, v, and y
s	"	a
t	"	f, r, and t
u	"	b
v	"	d

In this manner *n* stands for two letters, and *e*, *o* and *t* for three *each*, while *i* and *r* represent each as many as four. Thirteen characters are made to perform the operations of the whole alphabet. The result of such a key-phrase upon the cipher is to give it the appearance of a mere medley of the letters *e*, *o*, *t*, *r*, and *i*, the latter character greatly predominating through the accident of being employed for letters, which, themselves, are inordinately prevalent in most languages—we mean *e* and *i*.

A letter thus written being intercepted, and the key-phrase unknown, the individual who should attempt to decipher it may be imagined *guessing*, or otherwise attempting to convince himself, that a certain character (*i*, for example) represented the letter *e*. Looking throughout the cryptograph for confirmation of this idea he would meet with nothing but a negation of it. He would see the character in situations where it could not possibly represent *e*. He might, for instance, be puzzled by four *i*'s forming of themselves a single word, without the intervention of any other character, in which case, of course, they could not be *all e*'s. It will be seen that the word *wise* might be thus constructed. We say this may be seen *now*, by us, in possession of the key-phrase, but the question will no doubt occur, how, *without* the key-phrase and without cognisance of any single letter in the cipher, it would be possible for the interceptor of such a cryptograph to make anything of such a word as *iiii?*

But again. A key-phrase might easily be constructed in which one character would represent seven, eight,

or ten letters. Let us then imagine the word *iiiiiiiii* presenting itself in a cryptograph to an individual *without* the proper key-phrase, or, if this be a supposition somewhat too perplexing, let us suppose it occurring to the person for whom the cipher is designed, and who *has* the key-phrase. What is he to do with such a word as *iiiiiiiii*? In any of the ordinary books upon Algebra will be found a very concise *formula* (we have not the necessary type for its insertion here) for ascertaining the number of arrangements in which *m* letters may be placed, taken *n* at a time. But no doubt there are none of our readers ignorant of the innumerable combinations which may be made from these ten *i*'s. Yet, unless it occur otherwise by accident, the correspondent receiving the cipher would have to write down all these combinations before attaining the word intended, and even when he had written them he would be inexpressibly perplexed in selecting the word designed from the vast number of other words arising in the couse of the permutation.

To obviate, therefore, the exceeding difficulty of deciphering this species of cryptograph, on the part of the possessors of the key-phrase, and to confine the deep intricacy of the puzzle to those for whom the cipher was not designed, it becomes necessary that some *order* should be agreed upon by the parties corresponding—some order in reference to which those characters are to be read which represent more than one letter—and this *order* must be held in view by the writer of the cryptograph. It may be agreed, for example, that the *first* time an *i* occurs in the cipher it is to be understood as representing that character which stands against the *first i* in the key-phrase, that the *second* time an *i* occurs it must be supposed to represent that letter which stands opposed to the *second i* in the key-phrase, etc., etc. Thus the *location* of each cipherical letter must be considered in connection with the character itself in order to determine its exact signification.

We say that some preconcerted *order* of this kind is necessary lest the cipher prove too intricate a lock to yield even to its true key. But it will be evident, upon inspection, that our correspondent at Stonington has inflicted upon us a cryptograph in which *no* order has been preserved, in which many characters respectively stand, at absolute random, for many others. If, therefore, in regard to the gauntlet we threw down in April, he should be half inclined to accuse us of braggadocio, he will yet admit that we have *more* than acted up to our boast. If what we then said was not said *suaviter in modo*, what we now do is at least done *fortiter in re*.

In these cursory observations we have by no means attempted to exhaust the subject of Cryptography. With such object in view a folio might be required. We have indeed mentioned only a few of the ordinary modes of Cipher. Even two thousand years ago Æneas Tacticus detailed twenty distinct methods, and modern ingenuity has added much to the science. Our design has been chiefly suggestive, and perhaps we have already bored the readers of the Magazine. To those who desire further information upon this topic we may say that there are

extant treatises by Trithemius, Cap. Porta, Vignere, and P. Niceron. The works of the two latter may be found, we believe, in the library of the Harvard University. If, however, there should be sought in these disquisitions, or in any, *rules for the solution* of cipher, the seeker will be disappointed. Beyond some hints in regard to the general structure of language, and some minute exercises in their practical application, he will find nothing upon record which he does not in his own intellect possess.

Philosophy of Furniture

(First published in *Burton's Gentleman's Magazine*, May, 1840.—Ed.)

In the internal decoration, if not in the external architecture of their residences, the English are supreme. The Italians have but little sentiment beyond marbles and colours. In France, *meliora probant deteriora sequuntur*—the people are too much a race of gadabouts to maintain those household properties of which, indeed, they have a delicate appreciation, or at least the elements of a proper sense. The Chinese and most of the Eastern races have a warm but inappropriate fancy. The Scotch are *poor* decorists. The Dutch have perhaps an indeterminate idea that a curtain is not a cabbage. In Spain they are *all* curtains—a nation of hangmen. The Russians do not furnish. The Hottentots and Kickapoos are very well in their way. The Yankees alone are preposterous.

How this happens it is not difficult to see. We have no aristocracy of blood, and having therefore as a natural, and indeed as an inevitable thing, fashioned for ourselves an aristocracy of dollars, the *display of wealth* has here to take the place and perform the office of the heraldic display in monarchical countries. By a transition readily understood, and which might have been as readily foreseen, we have been brought to merge in simple *show* our notions of taste itself.

To speak less abstractly. In England, for example, no mere parade of costly appurtenances would be so likely as with us, to create an impression of the beautiful in respect to the appurtenances themselves—or of taste as regards the proprietor:—this for the reason, first, that wealth is not in England, the loftiest object of ambition as constituting a nobility; and secondly, that there, the true nobility of blood, confining itself within the strict limits of legitimate taste, rather avoids than affects that mere costliness in which a *parvenu* rivalry may at any time be successfully attempted. The people *will* imitate the nobles, and the result is a thorough diffusion of the proper feeling. But in America, the coins current being the sole arms of the aristocracy, their display, may be said, in general, to be the sole means of aristocratic distinction; and the populace, looking always upward for models, are insensibly led to confound the two entirely separate ideas of magnificence

and beauty. In short, the cost of an article of furniture has at length come to be with us nearly the sole test of its merit in a decorative point of view —and this test, once established, has led the way to many analogous errors, readily traceable to the one primitive folly.

There could be nothing more directly offensive to the eye of an artist than the interior of what is termed in the United States—that is to say, in Appalachia—a well-furnished apartment. Its most usual defect is a want of keeping. We speak of the keeping of a room as we would of the keeping of a picture—for both the picture and the room are amenable to those undeviating principles which regulate all varieties of art; and very nearly the same laws by which we decide on the higher merits of a painting, suffice for decision on the adjustment of a chamber.

A want of keeping is observable sometimes in the character of the several pieces of furniture, but generally in their colours or modes of adaptation to use. *Very* often the eye is offended by their inartistic arrangement. Straight lines are too prevalent —too uninterruptedly continued—or clumsily interrupted at right angles. If curved lines occur, they are repeated into unpleasant uniformity. By undue precision, the appearance of many a fine apartment is utterly spoiled.

Curtains are rarely well disposed, or well chosen in respect to other decorations. With formal furniture, curtains are out of place; and an extensive volume of drapery of any kind is, under any circumstances, irreconcilable with good taste—the proper quantum, as well as the proper adjustment, depending upon the character of the general effect.

Carpets are better understood of late than of ancient days, but we still very frequently err in their patterns and colours. The soul of the apartment is the carpet. From it are deduced not only the hues but the forms of all objects incumbent. A judge at common law may be an ordinary man; a good judge of a carpet *must be* a genius. Yet we have heard discoursing of carpets, with the air *"d'un mouton qui reve,"* fellows who should not and who could not be entrusted with the management of their own *moustaches*. Every one knows that a large floor *may* have a covering of large figures, and that a small one *must* have a covering of small—yet this is not all the knowledge in the world. As regards texture, the Saxony is alone admissible. Brussels is the preterpluperfect tense of fashion, and Turkey is taste in its dying agonies. Touching pattern—a carpet should *not* be bedizened out like a Riccaree Indian—all red chalk, yellow ochre, and cock's feathers. In brief—distinct grounds, and vivid circular or cycloid figures, *of no meaning*, are here Median laws. The abomination of flowers, or representations of well-known objects of any kind, should not be endured within the limits of Christendom. Indeed, whether on carpets, or curtains, or tapestry, or ottoman coverings, all upholstery of this nature should be rigidly Arabesque. As for those antique floor-cloths still occasionally seen in the dwellings of the rabble—cloths of huge, sprawling, and radiating devices, stripe-interspersed, and glorious with all hues, among which no ground is intelligible

—these are but the wicked invention of a race of time-servers and money-lovers—children of Baal and worshippers of Mammon—Benthams, who, to spare thought and economise fancy, first cruelly invented the Kaleidoscope, and then established joint-stock companies to twirl it by steam.

Glare is a leading error in the philosophy of American household decoration—an error easily recognised as deduced from the perversion of taste just specified. We are violently enamoured of gas and of glass. The former is totally inadmissible within doors. Its harsh and unsteady light offends. No one having both brains and eyes will use it. A mild, or what artists term a cool light, with its consequent warm shadows, will do wonders for even an ill-furnished apartment. Never was a more lovely thought than that of the astral lamp. We mean, of course, the astral lamp proper—the lamp of Argand, with its original plain ground glass shade, and its tempered and uniform moonlight rays. The cut-glass shade is a weak invention of the enemy. The eagerness with which we have adopted it, partly on account of its *flashiness*, but principally on account of its *greater cost*, is a good commentary on the proposition with which we began. It is not too much to say, that the deliberate employer of a cut-glass shade is either radically deficient in taste, or blindly subservient to the caprices of fashion. The light proceeding from one of these gaudy abominations is unequal, broken, and painful. It alone is sufficient to mar a world of good effect in the furniture subjected to its influence. Female loveliness, in especial, is more than one-half disenchanted beneath its evil eye.

In the matter of glass, generally, we proceed upon false principles. Its leading feature is *glitter*—and in that one word how much of all that is detestable do we express! Flickering, unquiet lights, are *sometimes* pleasing—to children, and idiots, always so—but in the embellishment of a room they should be scrupulously avoided. In truth, even strong, *steady* lights are inadmissible. The huge and unmeaning glass chandeliers, prism-cut, gas-lighted, and without shade, which dangle in our most fashionable drawing-rooms, may be cited as the quintessence of all that is false in taste or preposterous in folly.

The rage for *glitter*—because its idea has become, as we before observed, confounded with that of magnificence in the abstract—has led us also to the exaggerated employment of mirrors. We line our dwellings with great British plates, and then imagine we have done a fine thing. Now the slightest thought will be sufficient to convince any one who has an eye at all of the ill effect of numerous looking glasses, and especially of large ones. Regarded apart from its reflection, the mirror presents a continuous, flat, colourless, unrelieved surface—a thing always and obviously unpleasant. Considered as a reflector, it is potent in producing a monstrous and odious uniformity; and the evil is here aggravated, not in merely direct proportion with the augmentation of its sources, but in a ratio constantly increasing. In fact, a room with four or five mirrors arranged at random, is, for all purposes of artistic show, a room of no shape

at all. If we add to this evil, the attendant glitter upon glitter, we have a perfect farrago of discordant and displeasing effects. The veriest bumpkin, on entering an apartment so bedizened, would be instantly aware of something wrong, although he might be altogether unable to assign a cause for his dissatisfaction. But let the same person be led into a room tastefully furnished, and he would be startled into an exclamation of pleasure and surprise.

It is an evil growing out of our republican institutions that here a man of large purse has usually a very little soul which he keeps in it. The corruption of taste is a portion or a pendant of the dollar-manufacture. As we grow rich our ideas grow rusty. It is, therefore, not among *our* aristocracy that we must look (if at all, in Appalachia) for the spirituality of a British *boudoir*. But we have seem apartments in the tenure of Americans of moderate means, which, in negative merit at least, might vie with any of the *ormolu'd* cabinets of our friends across the water. Even *now*, there is present to our mind's eye a small and not ostentatious chamber with whose decorations no fault can be found. The proprietor lies asleep on a sofa—the weather is cool—the time is near midnight: we will make a sketch of the room during his slumber.

It is oblong—some thirty feet in length and twenty-five in breadth—a shape affording the best (ordinary) opportunities for the adjustment of furniture. It has but one door—by no means a wide one—which is at one end of the parallelogram, and but two windows, which are at the other. These latter are large, reaching down to the floor—have deep recesses—and open on an Italian veranda. Their panes are of a crimson-tinted glass, set in rosewood framings, more massive than usual. They are curtained within the recess by a thick silver tissue adapted to the shape of the windows, and hanging loosely in small volumes. Without the recess are curtains of an exceedingly rich crimson silk, fringed with a deep network of gold, and lined with the silver tissue, which is the material of the exterior blind. There are no cornices; but the folds of the whole fabric (which are sharp rather than massive, and have an airy appearance), issue from beneath a broad entablature of rich giltwork, which encircles the room at the junction of the ceiling and walls. The drapery is thrown open also, or closed, by means of a thick rope of gold loosely enveloping it, and resolving itself readily into a knot; no pins or other such devices are apparent. The colours of the curtains and their fringe —the tints of crimson and gold—appear everywhere in profusion, and determine the *character* of the room. The carpet —of Saxony material—is quite half-an-inch thick, and is of the same crimson ground, relieved simply by the appearance of a gold cord (like that festooning the curtains) slightly relieved above the surface of the *ground*, and thrown upon it in such a manner as to form a succession of short irregular curves—one occasionally overlaying the other. The walls are prepared with a glossy paper of a silver gray tint, spotted with small Arabesque devices of a fainter hue of the prevalent crimson. Many paintings relieve the expanse of the paper. These are chiefly landscapes of

an imaginative cast—such as the fairy grottoes of Stanfield, or the lake of the Dismal Swamp of Chapman. There are, nevertheless, three or four female heads of an ethereal beauty—portraits in the manner of Sully. The tone of each picture is warm, but dark. There are no "brilliant effects." *Repose* speaks in all. Not one is of small size. Diminutive paintings give that *spotty* look to a room, which is the blemish of so many a fine work of Art overtouched. The frames are broad but not deep, and richly carved without being *dulled* or filigreed. They have the whole lustre of burnished gold. They lie flat on the walls, and do not hang off with cords. The designs themselves are often seen to better advantage in this latter position, but the general appearance of the chamber is injured. But one mirror—and this not a very large one—is visible. In shape it is nearly circular—and it is hung so that a reflection of the person can be obtained from it in none of the ordinary sitting-places of the room. Two large low sofas of rosewood and crimson silk, gold-flowered, form the only seats, with the exception of two light conversation chairs, also of rosewood. There is a pianoforte (rosewood also), without cover, and thrown open. An octagonal table, formed altogether of the richest gold-threaded marble, is placed near one of the sofas. This is also without cover—the drapery of the curtains has been thought sufficient. Four large and gorgeous Sevres vases, in which bloom a profusion of sweet and vivid flowers, occupy the slightly rounded angles of the room. A tall candelabrum, bearing a small antique lamp with highly perfumed oil, is standing near the head of my sleeping friend. Some light and graceful hanging shelves, with golden edges and crimson silk cords with gold tassels, sustain two or three hundred magnificently bound books. Beyond these things, there is no furniture, if we except an Argand lamp, with a plain crimson-tinted ground-glass shade, which depends from the lofty vaulted ceiling by a single slender gold chain, and throws a tranquil but magical radiance over all.

Magazine Writing—Peter Snook

(First published in *Southern Literary Messenger*, October, 1836.—Ed.)

In a late number of the "Democratic Review" there appeared a very excellent paper (by Mr. Duyckinck) on the subject of Magazine Literature—a subject much less thoroughly comprehended here than either in France or in England. In America we compose now and then agreeable essays and other matters of that character, but we have not yet caught the true Magazine spirit—a thing neither to be defined nor described. Mr. Duyckinck's article, although piquant, is not altogether to our mind. We think he places too low an estimate on the capability of the Magazine paper. He is inclined to undervalue its power, to limit unnecessarily its province, which is illimitable. In fact, it is

in the extent of subject, and not less in the extent or variety of *tone*, that the French and English surpass us to so good a purpose. How very rarely are we struck with an American Magazine article as with an absolute novelty—how frequently the foreign articles so affect us! We are so circumstanced as to be unable to *pay* for elaborate compositions—and, after all, the true invention is elaborate. There is no greater mistake than the supposition that a true originality is a mere matter of impulse or inspiration. To originate, is carefully, patiently, and understandingly to combine. The few American Magazinists who ever think of this elaboration at all, cannot afford to carry it into practice for the paltry prices offered them by our periodical publishers. For this and other glaring reasons we are behind the age in a *very* important branch of literature, a branch which, moreover, is daily growing in importance, and which, in the end (not far distant) will be the *most* influential of all the departments of Letters.

We are lamentably deficient not only in invention proper, but in that which is more strictly *art*. What American, for instance, in penning a criticism ever supposes himself called upon to present his readers with more than the exact stipulation of his title—to present them with a criticism and *something beyond?* Who thinks of making his critique a work of art in itself, independently of its critical opinions? a work of art, such as are all the more elaborate and most effective reviews of Macaulay? Yet these reviews we have evinced no incapacity to appreciate when presented. The best American review ever penned is miserably ineffective when compared with the notice of Montagu's Bacon, and yet this latter is, in general, a piece of tawdry sophistry, owing everything to a consummate, to an exquisite arrangement—to a thorough and just sufficiently comprehensive diffuseness, to a masterly climaxing of points—to a style which dazzles the understanding with its brilliancy, but not more than it misleads it by its perspicuity, causing us so distinctly to comprehend that we fancy we coincide—in a word, to the perfection of art—of all the art which a Macaulay can wield, or which is applicable to any criticism that a Macaulay could write.

It is, however, in the composition of that class of Magazine papers which come properly under the head of Tales that we evince the most remarkable deficiency in skill. If we except, first, Mr. Hawthorne, secondly Mr. Simms, thirdly, Mr. Willis, and fourthly, one or two others whom we may as well put mentally together without naming them, there is not even a respectably skilful tale-writer on this side the Atlantic. We have seen, to be sure, many very well constructed stories—individual specimens—the work of American Magazinists, but these specimens have invariably appeared to be happy accidents of construction, their authors in subsequent tales having always evinced an incapacity to construct.

We have been led to a comparison of the American with the British ability in tale-writing by a perusal of some Magazine papers, the composition of the author of "Chartley" and "The Invisible Gentleman." He is one of the best of the English journalists, and has some of the happiest peculiarities of Dickens, whom he preceded in the popular fa-

vour. The longest and best of his tales, properly so-called, is "Peter Snook," and this presents so many striking points for the consideration of the Magazinist, that we feel disposed to give an account of it in full.

Peter Snook, the hero, and the *beau ideal* of a Cockney, is a retail linen-draper in Bishopsgate Street. He is of course a stupid and conceited, although at bottom a very good little fellow, and "always looks as if he was frightened." Matters go on very thrivingly with him until he becomes acquainted with Miss Clarinda Bodkin, "a young lady owning to almost thirty, and withal a great proficient in the mysteries of millinery and mantua-making." Love and ambition, however, set the little gentleman somewhat beside himself. "If Miss Clarinda would but have me," says he, "we might divide the shop, and have a linen-drapery side, and a haberdashery and millinery side, and one would help the other. There'd be only one rent to pay, and a double business—and it would be so comfortable, too!" Thinking thus, Peter commences a flirtation, to which Miss Clarinda but doubtfully responds. He escorts the lady to White Conduit House, Bagnigge Wells, and other genteel places of public resort—and finally, is so rash as to accede to the proposition, on her part, of a trip to Margate. At this epoch of the narrative, the writer observes that the subsequent proceedings of the hero are gathered from accounts rendered by himself, when called upon, after the trip, for explanation.

It is agreed that Miss Clarinda shall set out alone for Margate—Mr. Snook following her, after some indispensable arrangements. These occupy him until the middle of July, at which period, taking passage in the "Rose in June," he safely reaches his destination. But various misfortunes here await him—misfortunes admirably adapted to the meridian of Cockney feeling, and the capacity of Cockney endurance. His umbrella, for example, and a large brown paper parcel, containing a new pea-green coat and flower-patterned embroidered silk waistcoat, are tumbled into the water at the landing-place, and Miss Bodkin forbids him her presence in his old clothes. By a tumble of his own, too, the skin is rubbed from both his shins for several inches, and the surgeon, having no regard to the lover's cotillion engagements, enjoins on him a total abstinence from dancing. A cock-chafer, moreover, is at the trouble of flying into one of his eyes, and (worse than all) a tall military-looking shoemaker, Mr. Last, has taken advantage of the linen-draper's delay in reaching Margate, to ingratiate himself with his mistress. Finally, he is cut by Last, and rejected by the lady, and has nothing left for it but to secure a homeward passage in the "Rose in June."

In the evening of the second day after his departure, the vessel drops anchor off Greenwich. Most of the passengers go ashore, with the view of taking the stage to the city. Peter, however, who considers that he has already spent money enough to no purpose, prefers remaining on board. "We shall get to Billingsgate," says he, "while I am sleeping, and I shall have plenty of time to go home and dress, and go into the city and borrow the trifle I may want for Pester and Company's bill, that comes due the day after to-morrow." This determination

is a source of much trouble to our hero, as will be seen in the sequel. Some shopmen who remain with him in the packet, tempt him to unusual indulgences, in the way, first, of brown stout, and, secondly, of positive French brandy. The consequence is that Mr. Snook falls, thirdly, asleep, and, fourthly, overboard.

About dawn on the morning after this event, Ephraim Hobson, the confidential clerk and factotum of Mr. Peter Snook, is disturbed from a sound sleep by the sudden appearance of his master. That gentleman seems to be quite in a bustle, and delights Ephraim with an account of a whacking wholesale order for exportation just received. "Not a word to anybody about the matter!" exclaims Peter, with unusual emphasis. "It's such an opportunity as don't come often in a man's life-time. There's a captain of a ship—he's the owner of her, too; but never mind! there an't time to enter into particulars now, but you'll know all by-and-by—all you have to do, is to do as I tell you—so, come along!"

Setting Ephraim to work, with directions to pack up immediately all the goods in the shop, with the exception of a few trifling articles, the master avows his intention of going into the city, "to borrow enough money to make up Peter's bill, due to-morrow." "I don't think you'll want much, sir," replied Mr. Hobson with a self-complacent air. "I've been looking about long-winded 'uns, you see, since you've been gone, and I've got Shy's money and Slack's account, which we'd pretty well given up for a bad job, and one or two more. There—there's the list—and there's the key to the strong box, where you'll find the money, besides what I've took at the counter." Peter, at this, seems well pleased, and shortly afterwards goes out, saying, he cannot tell when he'll be back, and giving directions that whatever goods may be sent in during his absence shall be left untouched till his return.

It appears that, after leaving his shop, Mr. Snook proceeded to that of Jobb, Flashbill and Co. (one of whose clerks, on board the "Rose in June," had been very liberal in supplying our hero with brandy on the night of his ducking), looked over a large quantity of ducks and other goods, and finally made purchase of "a choice assortment," to be delivered the same day. His next visit was to Mr. Bluff, the managing partner in the banking-house where he usually kept his cash. His business now was to request permission to overdraw a hundred pounds for a few days.

"Humph," said Mr. Bluff, "money is very scarce; but—bless me!—yes—it's he! Excuse me a minute, Mr. Snook, there's a gentleman at the front counter whom I want particularly to speak to—I'll be back with you directly." As he uttered these words, he rushed out, and in passing one of the clerks on his way forward he whispered, "Tell Scribe to look at Snook's account, and let me know directly." He then went to the front counter, where several people were waiting to pay and receive money. "Fine weather this, Mr. Butt. What! you're not out of town like the rest of them?"

"No," replied Mr. Butt, who kept a thriving gin-shop, "no, I sticks to my business—make hay while the sun

shines—that's my maxim. Wife up at night—I up early in the morning."

The banker chatted and listened with great apparent interest, till the closing of a huge book on which he kept his eye, told him that his whispered order had been attended to. He then took a gracious leave of Mr. Butt, and returned back to the counting-house with a slip of paper, adroitly put in his hand while passing, on which was written, "Peter Snook, Linen-Draper, Bishopsgate Street—old account—increasing gradually—balance, £153:15:6:—*very* regular." "Sorry to keep you waiting, Mr. Snook," said he, "but we must catch people when we can. Well, what is it you were saying you wanted us to do!"

"I should like to be able to overdraw just for a few days," replied Peter.

"How much?"

"A hundred."

"Won't fifty do?"

"No, not quite, sir."

"Well, you're an honest fellow, and don't come bothering us often; so, I suppose we must not be too particular with you for this once."

Leaving Bluff, Mr. Snook hurries to overtake Mr. Butt, the dealer in spirits, who had just left the banking-house before himself, and to give that gentleman an order for a hogshead of the best gin. As he is personally unknown to Mr. Butt, he hands him a card, on which is written, "Peter Snook, linen and muslin warehouse, No. — Bishopsgate Street Within," etc. etc., and takes occasion to mention that he purchases at the recommendation of Mr. Bluff. The gin is to be at Queenhithe the same evening. The spirit-dealer, as soon as his new customer has taken leave, resolves in his mind the oddity of a linen-draper's buying a hogshead of gin, and determines to satisfy himself of Mr. Snook's responsibility by a personal application to Mr. Bluff. On reaching the bank, however, he is told by the clerks that Mr. Bluff, being in attendance upon a committee of the House of Commons, will not be home in any reasonable time—but also that Peter Snook is a perfectly safe man. The gin is accordingly sent; and several other large orders for different goods, upon other houses, are promptly fulfilled in the same manner. Meantime, Ephraim is busily engaged at home in receiving and inspecting the invoices of the various purchases as they arrive, at which employment he is occupied until dusk, when his master makes his appearance in unusually high spirits. We must here be pardoned for copying some passages:

"Well, Ephraim," he exclaimed, "this looks something like business! You haven't had such a job this many a day! Shop looks well now, eh?"

"You know best, sir," replied Hobson. "But hang me if I ain't frightened. When we shall sell all these goods, I'm sure I can't think. You talked of having a haberdashery side to the shop, but if we go on at this rate, we shall want another side for ourselves; I'm sure I don't know where Miss Bodkin is to be put."

"She go to Jericho!" said Peter contemptuously. "As for the goods, my boy, they'll be gone before tomorrow morning. All you and I have got to do is pack 'em up; so, let us turn to, and strap at it."

Packing was Ephraim's favourite em-

ployment, but, on the present occasion, he set to work with a heavy heart. His master, on the contrary, appeared full of life and spirits, and corded boxes, sewed up trusses, and packed huge paper parcels with a celerity and an adroitness, truly wonderful.

"Why, you don't get on, Hobson," he exclaimed; "see what I've done! Where's the ink-pot?—oh, here it is!" and he proceeded to mark his packages with his initials, and the letter G below. "There," he resumed, "P. S. G.; that's for me, at Gravesend. I'm to meet the Captain and owner there; show the goods—if there's any he don't like, shall bring 'em back with me; get bills—bankers' acceptances for the rest; see 'm safe on board; *then*—but—*not before*, mind that, Master Ephraim! No, no, keep my weather eye open, as the men say on board the 'Rose in June.' By-the-bye, I haven't told you yet about my falling overboard, whap into the river."

"Falling overboard!" exclaimed the astonished shopman, quitting his occupation to stand erect and listen.

"Ay, ay," continued Peter—"see it won't do to tell you long stories *now*. There—mark that truss, will you! Know all about it some day. Lucky job, though—tell you that; got this thundering order by it. Had one tumble, first, going off, at Margate. Spoilt my peagreen—never mind—that was a lucky tumble, too. Hadn't been for that, shouldn't so soon have found out the game a certain person was playing with me. She go to Jericho!"

But for the frequent repetition of this favourite expression, Ephraim Hobson has since declared he should have doubted his master's identity during the whole of that evening, as there was something very singular about him; and his strength and activity in moving the bales, boxes, and trusses, were such as he had never previously exhibited. The phrase condemning this, that, or the other thing or person to "go to Jericho," was the only expression that he uttered, as the shopman said, "naturally," and Peter repeated that whimsical anathema as often as usual.

The goods being all packed up, carts arrive to carry them away, and by half-past ten o'clock the shop is entirely cleared, with the exception of some trifling articles to make show on the shelves and counters. Two hackney coaches are called. Mr. Peter Snook gets into one with a variety of loose articles which would require too much time to pack, and his shopman into another with some more. Arriving at Queenhithe, they find all the goods previously sent already embarked in the hold of a long-decked barge, which lies near the shore. Mr. Snook now insists upon Ephraim's going on board and taking supper and some hot rum and water. This advice he follows to so good a purpose, that he is at length completely bewildered, when his master taking him up in his arms carries him on shore, and there setting him down, leaves him to make the best of his way home as he can.

About eight the next morning, Ephraim awaking of course in a sad condition both of body and mind, sets himself immediately about arranging the appearance of the shop, "so as to secure the credit of the concern." In spite of all his ingenuity, however, it maintains a poverty-striken appearance, which circumstance excites some most unreason-

able suspicions in the mind of Mr. Bluff's clerk, upon his calling at ten with Pester & Co.'s bill (three hundred and sixteen pounds seventeen shillings), and receiving by way of payment a cheque upon his own banking house for the amount—Mr. Snook having written this cheque before his departure with the goods, and left it with Ephraim. On reaching the bank, therefore, the clerk inquires if Peter Snook's cheque is good for three hundred and sixteen pounds odd, and is told that it is not worth a farthing, Mr. S. having overdrawn for a hundred. While Mr. Bluff and his assistants are conversing on this subject, Butt, the gin-dealer calls to thank the banker for having recommended him a customer, which the banker denies having done. An explanation ensues, and "stop thief!" is the cry. Ephraim is sent for, and reluctantly made to tell all he knows of his master's proceedings on the day before—by which means a knowledge is obtained of the other houses who (it is supposed) have been swindled. Getting a description of the barge which conveyed the goods from Queenhithe, the whole party of the creditors now set off in pursuit.

About dawn the next morning they overtake the barge a little below Gravesend—where four men are observed leaving her and rowing to the shore in a skiff. Peter Snook is found sitting quietly in the cabin, and, although apparently a little surprised at seeing Mr. Pester, betrays nothing like embarrassment or fear.

"Ah, Mr. Pester! is it you? Glad to see you, sir! So you've been taking a trip out o' town, and are going back with us! We shall get to Billingsgate between eight and nine, they say; and I hope it won't be later, as I've a bill of yours comes due to-day, and I want to be at home in time to write a check for it."

The goods are also found on board, together with three men in the hold, gagged and tied hand and foot. They give a strange account of themselves. Being in the employ of Mr. Heaviside, a lighterman, they were put in charge of "The Flitter," when she was hired by Peter Snook for a trip to Gravesend. According to their orders, they took the barge, in the first instance, to a wharf near Queenhithe, and helped to load her with some goods brought down in carts. Mr. Snook afterwards came on board, bringing with him two fierce-looking men, and "a little man with a hooked nose" (Ephraim). Mr. S. and the little man then "had a sort of jollification" in the cabin, till the latter got drunk and was carried ashore. They then proceeded down the river, nothing particular occurring till they had passed Greenwich Hospital, when Mr. S. ordered them to lay the barge alongside a large black-sided ship. No sooner was the order obeyed than they were boarded by a number of men from said ship, who seized them, bound them, gagged them, and put them in the hold.

The immediate consequence of this information is that Peter is bound, gagged, and put down into the hold in the same manner, by way of retaliation, and for safe keeping on his way back to the city. On the arrival of the party, a meeting of the creditors is called. Peter appears before them in a great rage and with the air of an injured man. Indeed, his behaviour is so *mal a propos*

to his situation as entirely to puzzle his interrogators. He accuses the whole party of a conspiracy.

"Peter Snook," said Mr. Pester solemnly from the chair, "that look does not become you after what has passed. Let me advise you to conduct yourself with propriety. You will find that the best policy, depends on't."

"A pretty thing for you for to come to talk of propriety!" exclaimed Peter; "you, that seed me laid hold on by a set of ruffians, and never said a word, nor give information a'terwards! And here have I been kept away from business I don't know how long, and shut up like a dog in a kennel; but I look upon't you were at the bottom of it all—you and that fellow with the plum-pudding face, as blowed me up about a cask of gin! What you both mean by it, I can't think; but if there's any law in the land, I'll make you remember it, both of you—that's what I will!"

Mr. Snook swears that he never saw Jobb in his life, except on the occasion of his capture in the "The Flitter," and positively denies having looked out any parcel of goods at the house of Jobb, Flashbill, and Co. With the banker, Mr. Bluff, he acknowledges an acquaintance—but not having drawn for the two hundred and seventy pounds odd, or having ever overdrawn for a shilling in his life. Moreover, he is clearly of opinion that the banker has still in his hands more than a hundred and fifty pounds of his (Mr. Snook's) money. He can designate several gentlemen as being no creditors of his, although they were of the number of those from whom his purchases had been made for the "whacking" shipping out, and although their goods were found in "The Flitter." Ephraim is summoned, and testifies to all the particulars of his master's return, and the subsequent packing, cart-loading, and embarkation as already told—accounting for the extravagances of Mr. Snook as being "all along of *that* Miss Bodkin."

"Lor', master, hi's glad to see you agin," exclaimed Ephraim. "Who'd ha' thought as 'twould come to this?"

"Come to what?" cried Peter. "I'll make 'em repent of it, every man Jack of 'em, before I've done, if there's law to be had for love or money!"

"Ah, sir," said Ephraim, "we'd better have stuck to the retail. I was afraid that shipping consarn wouldn't answer, and tell'd you so, if you recollect, but you wouldn't hearken to me."

"What shipping concern?" inquired Peter, with a look of amazement.

"La! master," exclaimed Ephraim, "it ain't of any use to pretend to keep it a secret now, when everybody knows it. I didn't tell Mr. Pester, though, till the last, when all the goods was gone out of the shop, and the sheriff's officers had come to take possession of the house."

"Sheriff's officers in possession of my house!" roared Peter. "All the goods gone out of the shop! What do you mean by that, you rascal! What have you been doing in my absence?" And he sprang forward furiously, and seized the trembling shopman by the collar with a degree of violence which rendered it difficult for the two officers in attendance to disengage him from his hold.

Hereupon, Mr. Snap, the attorney retained by the creditors, harangues the company at some length, and intimates that Mr. Snook is either mad or acting the madman for the purpose of evading punishment. A practitioner from Bedlam is sent for, and some artifices resorted to, but to no purpose. It is found impossible to decide upon the question of sanity. The medical gentleman, in his report to the creditors, confesses himself utterly perplexed, and, without giving a decision, details the particulars of a singular story told him by Mr. Snook himself, concerning the mode of his escape from drowning after he fell overboard from the "Rose in June." "It is a strange unlikely tale to be sure," says the physician, "and if his general conversation was of that wild, imaginative, flighty kind which I have so often witnessed, I should say it was purely ideal; but he appears such a plain-spoken, simple sort of a person, that it is difficult to conceive how he could invent such a fiction." Mr. Snook's narration is then told, not in his very words, but in the author's own way, with all the particulars obtained from Peter's various recitations. We give it only in brief.

Upon tumbling overboard, Mr. Snook (at least according to his own story) swam courageously as long as he could. He was upon the point of sinking, however, when an oar was thrust under his arm, and he found himself lifted in a boat by a "dozen dark-looking men." He is taken on board a large ship, and the captain, who is a droll genius, and talks in rhyme somewhat after the fashion of the wondrous Tale of Alroy, entertains him with great cordiality, dresses him in a suit of his own clothes, makes him drink in the first place a brimmer of "something hot," and afterwards plies him with wines and cordials of all kinds at a supper of the most magnificent description. Warmed in body and mind by this excellent cheer, Peter reveals his inmost secrets to his host, and talks freely and minutely of a thousand things; of his man Ephraim and his oddities; of his bank account; of his great credit; of his adventures with Miss Bodkin; of his prospects in trade; and especially of the names, residences, etc. etc., of the wholesale houses with whom he is in the habit of dealing. Presently, being somewhat overcome with wine he goes to bed at the suggestion of the captain, who promises to call him in season for a boat in the morning, which will convey him to Billingsgate in full time for Pester and Co.'s note. How long he slept is uncertain—but when he awoke a great change was observable in the captain's manner, who was somewhat brusque, and handed him over the ship's side into the barge where he was discovered by the creditors in pursuit, and which he was assured would convey him to Billingsgate.

This relation, thus succinctly given by us, implies little or nothing. The result, however, to which the reader is ingeniously led by the author is, that the real Peter Snook has been duped, and that the Peter Snook who made the various purchases about town, and who appeared to Ephraim only during the morning and evening twilights of the eventful day, was in fact, no other person than the captain of "the strange, black-sided ship." We are to believe that, taking advantage of Peter's communicativeness, and a certain degree

of personal resemblance to himself, he assumed our hero's clothes while he slept, and made a bold and nearly successful attempt at wholesale peculation.

The incidents of this story are forcibly conceived, and even in the hands of an ordinary writer would scarcely fail of effect. But, the present instance, so unusual a tact is developed in the narration that we are inclined to rank "Peter Snook" among the few tales which (each in its own way) are absolutely faultless. It is a Flemish homepiece of the highest order—its merits lying in its chiaroscuro—in that blending of light and shade and shadow where nothing is too distinct, yet where the idea is fully conveyed—in the absence of all rigid outlines and all miniature paintings—in the not undue warmth of the colouring—and in a well-subdued exaggeration at all points—an exaggeration never amounting to caricature.

Some Secrets of the Magazine Prison House

(First appeared in *Broadway Journal*, Vol. 1:7.—Ed.)

THE want of an International Copyright Law, by rendering it nearly impossible to obtain anything from the booksellers in the way of remuneration for literary labour, has had the effect of forcing many of our very best writers into the service of the Magazines and Reviews, which, with a pertinacity that does them credit, keep up in a certain or uncertain degree the good old saying that even in the thankless field of Letters the labourer is worthy of his hire. How—by dint of what dogged instinct of the honest and proper, these journals have contrived to persist in their paying practises, in the very teeth of the opposition got up by the Fosters and Leonard Scotts, who furnish for eight dollars any four of the British periodicals for a year, is a point we have had much difficulty in settling to our satisfaction, and we have been forced to settle it at last upon no more reasonable ground than that of a still lingering *esprit de patrie*. That Magazines can live, and not only live but thrive, and not only thrive but afford to disburse money for original contributions, are facts which can only be solved, under the circumstances, by the really fanciful but still agreeable supposition that there is somewhere still existing an ember not altogether quenched among the fires of good feeling for letters and literary men that once animated the American bosom.

It would *not do* (perhaps this is the idea) to let our poor-devil authors absolutely starve while we grow fat, in a literary sense, on the good things of which we unblushingly pick the pocket of all Europe: it would not be exactly the thing *comme il faut* to permit a positive atrocity of this kind; and hence we have Magazines, and hence we have a portion of the public who subscribe

to these Magazines (through sheer pity), and hence we have Magazine publishers (who sometimes take upon themselves the duplicate title of "editor *and* proprietor")—publishers, we say, who under certain conditions of good conduct, occasional puffs, and decent subserviency at all times, make it a point of conscience to encourage the poor-devil author with a dollar or two, more or less, as he behaves himself properly and abstains from the indecent habit of turning up his nose.

We hope, however, that we are not so prejudiced or so vindictive as to insinuate that what certainly does look like illiberality on the part of them (the Magazine publishers) is really an illiberality chargeable to *them*. In fact, it will be seen at once that what we have said has a tendency directly the reverse of any such accusation. These publishers pay *something*—other publishers nothing at all. Here certainly is a difference—although a mathematician might be infinitesimally small. Still, these Magazine editors and proprietors *pay* (that is the word), and with your true poor-devil author the smallest favours are sure to be thankfully received. No: the illiberality lies at the door of the demagogue ridden public, who suffer their anointed delegates (or perhaps arointed—which is it?) to insult the common sense of them (the public) by making orations in our national halls on beauty and conveniency of robbing the Literary Europe on the highways, and on the gross absurdity in especial of admitting so unprincipled a principle that a man has any right and title either to his own brains or to the flimsy material that he chooses to spin out of them, like a confounded caterpillar as he is. If anything of this gossamer character stands in need of protection, why we have our hands full at once with the silk worms and the *morus multicaulis*.

But if we cannot, under the circumstances, complain of the absolute illiberality of the Magazine publishers (since pay they do), there is at least one particular in which we have against them good grounds of accusation. Why (since pay they must) do they not pay with a good grace and *promptly?* Were we in an ill-humour at this moment we could a tale unfold which would erect the hair on the head of Shylock. A young author, struggling with Despair itself in the shape of a ghastly poverty, which has no alleviation—no sympathy from an every-day world, that cannot understand his necessities, and that would pretend not to understand them if it comprehended them ever so well—this young author is politely requested to compose an article, for which he will "be handsomely paid." Enraptured, he neglects perhaps for a month the sole employment which affords him the chance of a livelihood, and having starved through the month (he and his family) completes at length the month of starvation and the article, and despatches the latter (with a broad hint about the former) to the pursy "editor" and bottle-nosed "proprietor" who has condescended to honour him (the poor devil) with his patronage. A month (starving still), and no reply. Another month—still none. Two months more—still none. A second letter, modestly hinting that the article may not have reached its destination—still no reply. At the expiration of six additional months, personal application is made

at the "editor and proprietor's" office. Call again. The poor devil goes out, and does not fail to call again. Still call again;—and call again is the word for three or four months more. His patience exhausted, the article is demanded. No—he can't have it—(the truth is, it was too good to be given up so easily)—"it is in print," and "contributions of this character are never paid for (it is a *rule* we have) under six months after publication. Call in six months after the issue of your affair, and your money is ready for you—for we are business men ourselves—prompt." With this the poor devil is satisfied, and makes up his mind that the "editor and proprietor" is a gentleman, and that of course he (the poor devil) will wait as requested. And it is supposable that he would have waited if he could—but Death in the meantime would not. He dies, and by the good luck of his decease (which came by starvation) the fat "editor and proprietor" is fatter henceforward and for ever to the amount of five and twenty dollars, very cleverly saved, to be spent generously in canvas-backs and champagne.

There are two things which we hope the reader will not do as he runs over this article: first, we hope that he will not believe that we write from any personal experience of our own, for we have only the reports of actual sufferers to depend upon; and second, that he will not make any personal application of our remarks to any Magazine publisher now living, it being well known that they are all as remarkable for their generosity and urbanity, as for their intelligence and appreciation of Genius.

Marginalia

(These "Marginalia" contain many of the ideas found in the essays, criticisms and tales. The parts of the "Marginalia" which are verbally the same have been omitted from this edition. First published in *Democratic Review,* November, 1844.—Ed.)

In getting my books I have been always solicitous of an ample margin; this not so much through any love of the thing in itself, however agreeable, as for the facility it affords me of pencilling suggested thoughts, agreements, and differences of opinion, or brief critical comments in general. Where what I have to note is too much to be included within the narrow limits of a margin, I commit to a slip of paper, and deposit it between the leaves; taking care to secure it by an imperceptible portion of gum tragacanth paste.

All this may be whim; it may be not only a very hackneyed, but a very idle practice, yet I persist in it still; and it affords me pleasure—which is profit, in despite of Mr. Bentham with Mr. Mill on his back.

This making of notes, however, is by no means the making of mere *memoranda*—a custom which has its disadvantages, beyond doubt. "*Ce que je mets*

sur papier," says Bernardin de St. Pierre, *"je remets de ma memoire, et par consequence je l'oublie;"*—and, in fact, if you wish to forget anything on the spot, make a note that this thing is to be remembered.

But the purely marginal jottings, done with no eye to the Memorandum Book, have a distinct complexion, and not only a distinct purpose, but none at all; this it is which imparts to them a value. They have a rank somewhat above the chance and desultory comments of literary chit-chat—for these latter are not unfrequently "talk for talk's sake," hurried out of the mouth; while the *marginalia* are deliberately pencilled, because the mind of the reader wishes to unburthen itself of a *thought*—however flippant—however silly—however trivial—still a thought indeed, not merely a thing that might have been a thought in time, and under more favourable circumstances. In the *marginalia*, too, we talk only to ourselves; we therefore talk freshly—boldly—originally—with *abandonnement*—without conceit—much after the fashion of Jeremy Taylor, and Sir Thomas Browne, and Sir William Temple, and the anatomical Burton, and that most logical analogist Butler, and some other people of the old day, who were too full of their matter to have any room for their manner, which being thus left out of question was a capital manner indeed—a model of manners, with a richly marginallic air.

The circumscription of space too, in these pencillings, has in it something more of advantage than inconvenience. It compels us (whatever diffuseness of idea we may clandestinely entertain) into Montesquieu-ism, into Tacitus-ism (here I leave out of view the concluding portion of the "Annals")—or even into Carlyle-ism—a thing which, I have been told, is not to be confounded with your ordinary affectation and bad grammar. I say "bad grammar" through sheer obstinacy, because the grammarians (who should know better) insist upon it that I should not. But then grammar is not what these grammarians will have it; and, being merely the analysis of language, with the result of this analysis, must be good or bad just as the analyst is sage or silly—just as he is a Horne Tooke or a Cobbett.

But to our sheep. During a rainy afternoon, not long ago, being in a mood too listless for continuous study, I sought relief from *ennui* in dipping here and there at random among the volumes of my library—no very large one certainly, but sufficiently miscellaneous, and, I flatter myself, not a little *recherche*.

Perhaps it was what the Germans call the "brain-scattering" humour of the moment; but, while the picturesqueness of the numerous pencil-scratches arrested my attention, their helter-skelteriness of commentary amused me. I found myself at length forming a wish that it had been some other hand than my own which had so bedevilled the books, and fancying that, in such case, I might have derived no inconsiderable pleasure from turning them over. From this the transition-thought (as Mr. Lyell, or Mr. Murchison, or Mr. Featherstonhaugh would have it) was natural enough—there might be something even in *my* scribblings which, for the mere sake of scribbling, would have interest for others.

The main difficulty respected the

mode of transferring the notes from the volumes—the context from the text—without detriment to that exceedingly frail fabric of intelligibility in which the context was imbedded. With all appliances to boot, with the printed pages at their back, the commentaries were too often like Dodona's oracles—or those of Lycophron Tenebrosus—or the essays of the pedant's pupils in Quintilian, which were "necessarily excellent, since even he (the pedant) found it impossible to comprehend them:" what, then, would become of it — this context — if transferred—if translated? Would it not rather be *traduit* (traduced) which is the French synonym, or *overzezet* (turned topsy-turvy) which is the Dutch one!

I concluded at length to put extensive faith in the acumen and imagination of the reader—this as a general rule. But, in some instances, where even faith would not remove mountains, there seemed no safer plan than so to remodel the note as to convey at least the ghost of a conception as to what it was all about. Where, for such conception, the text itself was absolutely necessary, I could quote it; where the title of the book commented upon was indispensable, I could name it. In short, like a novel-hero dilemma'd, I made up my mind "to be guided by circumstances," in default of more satisfactory rules of conduct.

As for the multitudinous opinion expressed in the subjoined *farrago*—as for my present assent to all, or dissent from any portion of it—as to the possibility of my having in some instances altered my mind—or as to the impossibility of my not having altered it often—these are points upon which I say nothing, because upon these there can be nothing cleverly said. It may be as well to observe, however, that just as the goodness of your true pun is in the direct ratio of its intolerability, so is nonsense the essential sense of the Marginal Note.

One of the happiest examples, in a small way, of the carrying-one's-self-in-a-hand-basket logic is to be found in a London weekly paper, called "The Popular Record of Modern Science; a Journal of Philosophy and General Information." This work has a vast circulation, and is respected by eminent men. Sometime in November, 1845, it copied from the "Columbian Magazine" of New York, a rather adventurous article of mine called "Mesmeric Revelation." It had the impudence, also, to spoil the title by improving it to "The Last Conversation of a Somnambule"—a phrase that is nothing at all to the purpose, since the person who "converses" is not a Somnambule. He is a sleep-waker—*not* a sleep-walker; but I presume that "The Record" thought it was only the difference of an *l*. What I chiefly complain of, however, is that the London editor prefaced my paper with these words:—"The following is an article communicated to the 'Columbian Magazine,' a journal of respectability and influence in the United States, by Mr. Edgar A. Poe. *It bears internal evidence of authenticity!*" There is no subject under Heaven about which funnier ideas are, in general, entertained than about this subject of internal evidences. It is by "internal evidence," observe, that we decide upon the mind. But to "The Record:"—On the issue of my "Valdemar Case," this

journal copies it, as a matter of course, and (also as a matter of course) improves the title, as in the previous instance. But the editorial comments may as well be called profound: Here they are:

The following narrative appears in a recent number of "The American Magagine," a respectable periodical in the United States. It comes, it will be observed, from the narrator of the "Last Conversation of a Somnambule," published in "The Record" of the 29th of November. In extracting this case the "Morning Post," of Monday last, takes what it considers the safe side, by remarking—"For our own parts we do not believe it; and there are several statements made, more especially with regard to the disease of which the patient died, which at once prove the case to be either of fabrication, or the work of one little acquainted with consumption. The story, however, is wonderful, and we therefore give it." The editor, however, does not point out the especial statements which are inconsistent with what we know of the progress of consumption, and as few scientific persons would be willing to take their pathology any more than their logic from the "Morning Post," his caution, it is to be feared, will not have much weight. The reason assigned by "The Post" for publishing the account is quaint, and would apply equally to an adventure from Baron Munchausen—"it is wonderful and we therefore give it." . . . The above case is obviously one that cannot be received except on the strongest testimony, and it is equally clear that the testimony by which it is at present accompanied is not of that character. The most favourable circumstances in support of it consist in the fact that credence is understood to be given to it at New York, within a few miles of which city the affair took place, and where consequently the most ready means must be found for its authentication or disproval. The initials of the medical men and of the young medical student must be sufficient in the immediate locality to establish their identity, especially as M. Valdemar was well known, and had been so long ill as to render it out of the question that there should be any difficulty in ascertaining the names of the physicians by whom he had been attended. In the same way the nurses and servants under whose cognisance the case must have come during the seven months which it occupied are of course accessible to all sorts of inquiries. It will therefore appear that there must have been too many parties concerned to render prolonged deception practicable. The angry excitement and various rumours which have at length rendered a public statement necessary, are also sufficient to show that *something* extraordinary must have taken place. On the other hand there is no strong point for disbelief. The circumstances are, as "The Post" says, "wonderful;" but so are all circumstances that come to our knowledge for the first time—and in Mesmerism everything is new. An objection may be made that the article has rather a Magazinish air; Mr. Poe having evidently written with a view to effect, and so as to excite rather than to subdue the vague appetite for the mysterious and the horrible which such a case, under any circumstances, is sure to awaken—but apart from this there is

nothing to deter a philosophic mind from further inquiries regarding it. It is a matter entirely for testimony. [So it is.] Under this view we shall take steps to procure from some of the most intelligent and influential citizens of New York all the evidence that can be had upon the subject. No steamer will leave England for America till the 3d of February, but within a few weeks of that time we doubt not it will be possible to lay before the readers of "The Record" information which will enable them to come to a pretty accurate conclusion.

Yes; and no doubt they came to one accurate enough in the end. But all this rigmarole is what people call testing a thing by "internal evidence." "The Record" insists upon the truth of the story because of certain facts—because the "initials of the young men *must* be sufficient to establish their identity"—because "the nurses *must* be accessible to all sorts of inquiries"—and because the "angry excitement and various rumours which at length rendered a public statement necessary, are sufficient to show that something extraordinary *must* have taken place." To be sure. The story is proved by these facts—the facts about the students, the nurses, the excitement, the credence given the tale at New York. And now all we have to do is to prove these facts. Ah! *they* are proved *by the story*. As for the "Morning Post," it evinces more weakness in its disbelief than "The Record" in its credulity. What the former says about doubting on account of inaccuracy in the detail of the phthisical symptoms, is a mere *fetch*, as the Cockneys have it, in order to make a very few little children believe that it, "The Post," is not quite so stupid as a post proverbially is. It knows nearly as much about pathology as it does about English grammar—and I really hope it will not feel called upon to blush at the compliment. I represented the symptoms of M. Valdemar as "severe," to be sure. I put an extreme case; for it was necessary that I should leave on the reader's mind no doubt as to the certainty of death without the aid of the Mesmerist—but such symptoms *might* have appeared—the identical symptoms *have appeared* and will be presented again and again. Had "The Post" been only half as honest as ignorant, it would have owned that it disbelieved for no reason more profound than that which influences all dunces in disbelieving—it would have owned that it doubted the thing merely because the thing was a "wonderful" thing, and had never yet been printed in a book.

We mere men of the world, with no principle—a very old-fashioned and cumbersome thing—should be on our guard lest, fancying him on his last legs we insult or otherwise maltreat some poor devil of a genius at the very instant of his putting his foot on the top round of his ladder of triumph. It is a common trick with these fellows, when on the point of attaining some long-cherished end, to sink themselves into the deepest possible abyss of seeming despair for no other purpose than that of increasing the space of success through which they have made up their minds immediately to soar.

Mr. Hudson, among innumerable

blunders, attributes to Sir Thomas Browne the paradox of Tertullian in his *De Carne Christi*—"*Mortuus est Dei filius, credible est quia ineptum est; et sepultus resurrexit, certum est quia impossible est.*"

After reading all that has been written, and after thinking all that can be thought on the topics of God and the soul, the man who has a right to say that he thinks at all, will find himself face to face with the conclusion that, on these topics, the most profound thought is that which can be the least easily distinguished from the most superficial sentiment.

That punctuation is important all agree, but how few comprehend the extent of its importance! The writer who neglects punctuation or mispunctuates is liable to be misunderstood,—this, according to the popular idea, is the sum of the evils arising from heedlessness or ignorance. It does not seem to be known that even where the sense is perfectly clear, a sentence may be deprived of half its force, its spirit, its point, by improper punctuation. For the want of merely a comma—it often occurs that an axiom appears a paradox, or that a sarcasm is converted into a sermonoid. There is *no* treatise on the topic—and there is no topic on which a treatise is more needed. There seems to exist a vulgar notion that the subject is one of pure conventionality, and cannot be brought within the limits of intelligible and consistent *rule*. And yet, if fairly looked in the face, the whole matter is so plain that its *rationale* may be read as we run. If not anticipated I shall hereafter make an attempt at a magazine paper on "The Philosophy of Point." In the meantime let me say a word or two of *the dash*. Every writer for the press who has any sense of the accurate, must have been frequently mortified and vexed at the distortion of his sentences by the printer's now general substitution of a semicolon or a comma for the dash of the MS. The total or nearly total disuse of the latter point has been brought about by the revulsion consequent upon its excessive employment about twenty years ago. The Byronic poets were *all* dash. John Neal in his earlier novels exaggerated its use into the grossest abuse—although his very error arose from the philosophical and self-dependent spirit which has always distinguished him, and which will even yet lead him, if I am not greatly mistaken in the man, to do something for the literature of the country which the country "will not willingly," and cannot possibly, "let die." Without entering now into the *why*, let me observe that the printer may always ascertain when the dash of the MS. is properly and when improperly employed, by bearing in mind that this point represents a *second thought—an emendation*. In using it just above I have exemplified its use. The words "an emendation" are, speaking with reference to grammatical construction, put in *apposition* with the words "a second thought." Having written these latter words, I reflected whether it would not be possible to render their meaning more distinct by certain other words. Now, instead of erasing the phrase "a second thought," which is of *some* use—which *partially* conveys the idea intended—which advances me *a step toward* my

full purpose, I suffer it to remain, and merely put a dash between it and the phrase "an emendation." The dash gives the reader a choice between two, or among three or more expressions, one of which may be more forcible than another, but all of which help out the idea. It stands in general for these words—*"or, to make my meaning more distinct."* This force *it has*—and this force no other point can have, since all other points have well-understood uses quite different from this. Therefore the dash *cannot* be dispensed with. It has its phases—its variation of the force described, but the one principle, that of second thought or emendation, will be found at the bottom of all.

Diana's Temple at Ephesus having been burnt on the night in which Alexander was born, some person observed that "it was no wonder, since at the period of the conflagration she was gossiping at Pella." Cicero commends this as a witty conceit, Plutarch condemns it as senseless, and this is the one point in which I agree with the biographer.

Until we analyse a religion or a philosophy in respect of its inducements, independently of its rationality, we shall never be in a condition to estimate that religion or that philosophy by the mere *number* of its adherents:—unluckily.

"If in any point," says Lord Bacon, "I have receded from what is commonly received, it hath been for the purpose of proceeding *melius* and not *in aliud*"—but the character assumed, in general, by modern "Reform" is simply that of Opposition.

A strong argument for the religion of Christ is this—that offences against *Charity* are about the only ones which men on their death-beds can be made, not to understand, but to *feel, as crime.*

The effect derivable from well-managed rhyme is very imperfectly understood. Conventionally, "rhyme" implies merely close similarity of sound at the ends of verse, and it is really curious to observe how long mankind have been content with their limitation of the idea. What, in rhyme, first and principally pleases, may be referred to the human sense or appreciation of *equality*—the common element, as might be easily shown, of all the gratification we derive from music in its most extended sense—very especially in its modifications of metre and rhythm. We see, for example, a crystal, and are immediately interested by the equality between the sides and angles of one of its faces—but, on bringing to view a second face, in all respects similar to the first, our pleasure seems to be *squared*—on bringing to view a third, it appears to be *cubed*, and so on: I have no doubt, indeed, that the delight experienced, if measurable, would be found to have exact mathematical relations, such, or nearly such, as I suggest—that is to say, as far as a certain point, beyond which there would be a decrease in similar relations. Now here, as the ultimate result of analysis, we reach the sense of mere *equality*, or rather the human delight in this sense; and it was an instinct, rather than a clear comprehension, of this delight as a principle

which, in the first instance, lead the poet to attempt an increase of the effect arising from the mere similarity (that is to say equality) between two sounds—led him, I say, to attempt increasing this effect by making a secondary equalisation, in placing the rhymes at equal distances—that is, at the ends of lines of equal length. In this manner, rhyme and the termination of the line grew connected in men's thoughts—grew into a conventionalism—the principle being lost sight of altogether. And it was simply because Pindaric verses had before this epoch existed—*i.e.* verses of unequal length—that rhymes were subsequently found at unequal distances. It was for this reason solely, I say—for none more profound. Rhyme had come to be regarded as of right appertaining to the *end* of verse—and here we complain that the matter has finally rested. But it is clear that there was much more to be considered. So far, the sense of *equality* alone entered the effect; or if this equality was slightly varied, it was varied only through an accident—the accident of the existence of Pindaric metres. It will be seen that the rhymes were always *anticipated*. The eye, catching the end of a verse, whether long or short, expected for the ear, a rhyme. The great element of unexpectedness was not dreamed of—that is to say, of novelty—of originality. "But," says Lord Bacon (how justly!) "there is no exquisite beauty without some *strangeness* in the proportions." Take away this element of strangeness—of unexpectedness—of novelty—of originality—call it what we will—and all that is *ethereal* in loveliness is lost at once. We lose—we miss the *unknown*—the vague—the uncomprehended because offered before we have time to examine and comprehend. We lose, in short, all that assimilates the beauty of earth with what we dream of the beauty of Heaven. Perfection of rhyme is attainable only in the combination of the two elements, Equality and Unexpectedness. But as evil cannot exist without good, so unexpectedness must arise from expectedness. We do not contend for mere *arbitrariness* of rhyme. In the first place, we must have equi-distant or regularly recurring rhymes to form the basis, expectedness, out of which arises the element unexpectedness, by the introduction of rhymes, not arbitrarily, but with an eye to the greatest amount of unexpectedness. We should not introduce them, for example, at such points that the entire line is a multiple of the syllables preceding the points. When, for instance, I write—

> And the silken, sad, uncertain rustling
> of each purple curtain,

I produce more, to be sure, but not remarkably more than the ordinary effect of rhymes regularly recurring at the ends of lines; for the number of syllables in the whole verse is merely a multiple of the number of syllables preceding the rhyme introduced at the middle, and there is still left therefore a certain degree of expectedness. What there is of the element unexpectedness, is addressed, in fact, to the eye only—for the ear divides the verse into two ordinary lines, thus:

> And the silken, sad, uncertain
> Rustling of each purple curtain.

I obtain, however, the whole effect of unexpectedness when I write—

Thrilled me, *filled* me with fantastic terrors never felt before.

N. B.—It is very commonly supposed that rhyme, as it now ordinarily exists, is of modern invention—but see the "Clouds of Aristophanes." Hebrew verse, however, did *not* include it—the terminations of the lines, where most distinct, never showing any thing of the kind.

Paulus Jovius, living in those benighted times when diamond-pointed styluses were as yet unknown, thought proper, nevertheless, to speak of his goosequill as *"aliquando ferreus aureus aliquando"*—intending, of course, a mere figure of speech; and from the class of modern authors who use really nothing to write with but steel and gold, some, no doubt, will let their pens, *vice versa*, descend to posterity under the designation of "anserine"—of course intending always a mere figure of speech.

The Carlyle-ists should adopt as a motto the inscription on the old bell from whose metal was cast the great Tom of Oxford:—"In *Thomæ* laude resono 'Bim! Bom!' sine fraude:"—and "Bim! Bom," in such case, would be a marvellous echo of sound to sense.

An infinity of error makes its way into our Philosophy through Man's habit of considering himself a citizen of a world solely—of an individual planet—instead of at least occasionally contemplating his position as cosmopolite proper—as a denizen of the universe.

Talking of puns:—"Why do they not give us quail for dinner, as usual!" demanded Count Fessis, the other day, of H——, the classicist and sportsman.

"Because at this season," replied H——, who was dozing,—*"qualis sopor fessis."* (Quail is so poor, Fessis.)

The German *"Schwarmerei"* not exactly "humbug," but "sky-rocketing"—seems to be the only term by which we can conveniently designate that peculiar style of criticism which has lately come into fashion, through the influence of certain members of the *Fabian* family—people who live (upon beans) about Boston.

Some Frenchman — possibly Montaigne—says: "People talk about thinking, but for my part I never think except when I sit down to write." It is this never thinking, unless when we sit down to write, which is the cause of so much indifferent composition. But perhaps there is something more involved in the Frenchman's observation than meets the eye. It is certain that the mere act of inditing tends, in a great degree, to the logicalisation of thought. Whenever, on account of its vagueness, I am dissatisfied with a conception of the brain, I resort forthwith to the pen, for the purpose of obtaining, through its aid, the necessary form, consequence, and precision.

How very commonly we hear it remarked that such and such thoughts are beyond the compass of words! I do not believe that any thought, prop-

erly so called, is out of the reach of language. I fancy, rather, that where difficulty in expression is experienced, there is, in the intellect which experiences it, a want either of deliberateness or of method. For my own part, I have never had a thought which I could not set down in words, with even more distinctness than that with which I conceived it; as I have before observed, the thought is logicalised by the effort at (written) expression. There is, however, a class of fancies, of exquisite delicacy, which are *not* thoughts, and to which, *as yet,* I have found it absolutely impossible to adapt language. I use the word *fancies* at random, and merely because I must use *some* word; but the idea commonly attached to the term is not even remotely applicable to the shadows of shadows in question. They seem to me rather psychal than intellectual. They arise in the soul (alas, how rarely!) only at its epochs of most intense tranquillity—when the bodily and mental health are in perfection—and at those mere points of time where the confines of the waking world blend with those of the world of dreams. I am aware of these "fancies" only when I am upon the very brink of sleep, with the consciousness that I am so. I have satisfied myself that this condition exists but for an inappreciable *point* of time—yet it is crowded with these "shadows of shadows"; and for absolute *thought* there is demanded time's *endurance.* These "fancies" have in them a pleasurable ecstasy, as far beyond the most pleasurable of the world of wakefulness, or of dreams, as the heaven of the Northman theology is beyond its hell. I regard the visions, even as they arise, with an awe which, in some measure, moderates or tranquillises the ecstasy—I so regard them, through a conviction (which seems a portion of the ecstasy itself) that this ecstasy, in itself, is of a character supernal to the human nature—is a glimpse of the spirit's outer world; and I arrive at this conclusion—if this term is at all applicable to instantaneous intuition by a perception that the delight experienced has, as its element, but *the absoluteness of novelty.* I say the absoluteness—for in these fancies—let me now term them psychal impressions—there is really nothing even approximate in character to impressions ordinarily received. It is as if the five senses were supplanted by five myriad others alien to mortality.

Now, so entire is my faith in the *power of words,** that at times I have believed it possible to embody even the evanescence of fancies such as I have attempted to describe. In experiments with this end in view, I have proceeded so far as, first, to control (when the bodily and mental health are good), the existence of the condition—that is to say, I can now (unless when ill), be sure that the condition will supervene, if I so wish it, at the point of time already described—of its supervention until lately I could never be certain even under the most favourable circumstances. I mean to say, merely, that now I can be sure, when all circumstances are favourable, of the supervention of the condition, and feel even the capacity of inducing or compelling it—the favourable circumstances, however, are not the less rare,

* See, *Contents,* "The Power of Words."—Ed.

else had I compelled already the heaven into the earth.

I have proceeded so far, secondly, as to prevent the lapse from *the point* of which I speak—the point of blending between wakefulness and sleep—as to prevent at will, I say, the lapse from this border-ground into the dominion of sleep. Not that I can *continue* the condition—not that I can render the point more than a point—but that I can startle myself from the point into wakefulness; *and thus transfer the point itself into the realm of Memory;* convey its impressions, or more properly their recollections, to a situation where (although still for a very brief period) I can survey them with the eye of analysis. For these reasons—that is to say, because I have been enabled to accomplish thus much—I do not altogether despair of embodying in words at least enough of the fancies in question to convey to certain classes of intellect, a shadowy conception of their character. In saying this I am not to be understood as supposing that the fancies or psychal impressions to which I allude are confined to my individual self—are not, in a word, common to all mankind—for on this point it is quite impossible that I should form an opinion—but nothing can be more certain than that even a partial record of the impressions would startle the universal intellect of mankind, by the *supremeness of the novelty* of the material employed, and of its consequent suggestions. In a word—should I ever write a paper on this topic, the world will be compelled to acknowledge that, at last, I have done an original thing.

In the way of original, striking, and well-sustained metaphor, we can call to mind few finer things than this—to be found in James Puckle's "Grey Cap for a Green Head": "In speaking of the dead, so fold up your discourse that their virtues may be outwardly shown while their vices are wrapped up in silence."

Talking of inscriptions—how admirable was the one circulated at Paris, for the equestrian statue of Louis XV, done by Pigal and Bouchardon—*"Statua Statuæ!"*

"This is right," says Epicurus, "precisely because the people are displeased with it."

"Il y a a parier," says Chamfort—one of the *Kamkars* of Mirabeau—*"que toute idee publique—toute convention recue—est une sottise car elle a convenue au plus grand nombre."*

"Si proficere cupis," says the great African bishop, *"primo id verum puta quod sana mens omnium hominum attestatur."* Now,

Who shall decide where Doctors disagree?

To me it appears that, in all ages, the *most* preposterous falsities have been received as truths by at least the *"mens* omnium hominum." As for the *"sana mens"*—how are we ever to determine what that is?

This book* could never have been popular out of Germany. It is too simple—too direct—too obvious—too

---

* "Thiodolf, the Icelander, and Aslauga's Knight."

bold—not sufficiently complex—to be relished by any people who have *thoroughly* passed the first (or impulsive) epoch of literary civilisation. The Germans have not yet passed this first epoch. It must be remembered that *during the whole of the Middle Ages they lived in utter ignorance of the art of writing.* From so total a darkness, of so late a date, they could not, *as a nation,* have as yet fully emerged into the second or critical epoch. Individual Germans have been critical in the best sense—but the masses are unleavened. Literary Germany thus presents the singular spectacle of the impulsive spirit surrounded by the critical, and, of course, in some measure influenced thereby. England, for example, has advanced far, and France much farther, into the critical epoch; and their effect on the German mind is seen in the wildly anomalous condition of the German literature at large. That this latter will be improved by age, however, should never be maintained. As the impulsive spirit subsides, and the critical uprises, there will appear the polished insipidity of the later England, or that ultimate *throe* of taste which has found its best exemplification in Sue. At present the German literature resembles no other on the face of the earth—for it is the result of certain conditions which, before this individual instance of their fulfilment, have never been fulfilled. And this anomalous state to which I refer is the source of our anomalous criticism upon what that state produces—is the source of the grossly conflicting opinions about German letters. For my own part, I admit the German vigour, the German directness, boldness, imagination, and some other qualities of impulse, just as I am willing to admit and admire these qualities in the first (or impulsive) epochs of British and French letters. At the German criticism, however, I cannot refrain from laughing all the more heartily the more seriously I hear it praised. Not that, in detail, it affects me as an absurdity—but in the adaptation of its details. It abounds in brilliant bubbles of *suggestion,* but these rise and sink and jostle each other until the whole vortex of thought in which they originate is one distinguishing chaos of froth. The German criticism is *unsettled,* and can only be settled by time. At present it suggests without demonstrating, or convincing, or effecting any definite purpose under the sun. We read it, rub our foreheads, and ask "What then?" I am not ashamed to say that I prefer even Voltaire to Goethe, and hold Macaulay to possess more of the true critical spirit than Augustus William and Frederick Schlegel combined. "Thiodolf" is called by Fouque his "most *successful* work." He would not have spoken thus had he considered it his *best.* It is admirable of its kind—but its kind can *never* be appreciated by Americans. It will affect them much as would a grasp of the hand from a man of ice. Even the exquisite "Undine" is too chilly for our people, and, generally, for our epoch. We have less imagination and warmer sympathies than the age which preceded us. It would have done Fouque more ready and fuller justice than ours. Has one remarked the striking similarity in tone between "Undine" and the "Libussa" of Musæus?

What can be more soothing, at once to a man's Pride, and to his Conscience, than the conviction that, in taking vengeance on his enemies for *in*justice done him, he has simply to do them *justice* in return?

Bielfeld, the author of "Les Premiers Traits de L'Erudition Universelle," defines poetry as *"l'art d'exprimer les pensees par la fiction."* The Germans have two words in full accordance with this definition, absurd as it is—the terms *Dichtkunst*, the art of fiction, and *Dichten*, to feign—which are generally used for poetry and to make verses.

Brown, in his "Amusements," speaks of having transfused the blood of an ass into the veins of an astrological quack—and there can be no doubt that one of Hague's progenitors was the man.

The chief portion of Professor Espy's theory* has been anticipated by Roger Bacon.

Whatever may be the merits or demerits, generally, of the Magazine Literature of America, there can be no question as to its extent or influence. The Topic—Magazine Literature—is therefore an important one. In a few years its importance will be found to have increased in geometrical ratio. The whole tendency of the age is Magazine-ward. The Quarterly Reviews have *never* been popular. Not only are they stilted (by way of keeping up a due dignity), but they make a point, with the same end in view, of discussing only topics which are *caviare* to the many, and which, for the most part, have only a conventional interest even with the few. Their issues, also, are at too long intervals; their subjects get cold before being served up. In a word, their ponderosity is quite out of keeping with the *rush* of the age. We now demand the light artillery of the intellect; we need the curt, the condensed, the pointed, the readily diffused—in place of the verbose, the detailed, the voluminous, the inaccessible. On the other hand, the lightness of the artillery should not degenerate into popgunnery—by which term we may designate the character of the greater portion of the newspaper press—their sole legitimate object being the discussion of ephemeral matters in an ephemeral manner. Whatever talent may be brought to bear upon our daily journals and in many cases this talent is very great, still the imperative necessity of catching, *currente calamo*, each topic as it flits before the eye of the public must, of course, materially narrow the limits of their power. The bulk and the period of issue of the monthly magazines seem to be precisely adapted, if not to all the literary wants of the day, at least to the largest and most imperative, as well as the most consequential portion of them.

My friend —— can never commence what he fancies a poem (he *is* a fanciful man, after all) without first elaborately "invoking the Muses." Like so many she-dogs of John of Nivelles, however, the more he invokes them, the more they decline obeying the invocation.

---

*The Philosophy of Storms, J. P. Espy.

The nose of a mob is its imagination. By this at any time, it can be quietly led.

There lies a deep and sealed well
Within yon leafy forest hid,
Whose pent and lonely waters swell
Its confines chill and drear amid.

This putting the adjective after the noun is merely an inexcusable Gallicism; but the putting the preposition after the noun is alien to all language, and in opposition to all its principles. Such things, in general, serve only to betray the versifyer's poverty of resource; and when an inversion of this kind occurs, we say to ourselves, "Here the poet lacked the skill to make out his line without distorting the natural or colloquial order of the words." Now and then, however, we must refer the error not to deficiency of skill, but to something far less defensible—to an idea that such things belong to the essence of poetry—that it needs them to distinguish it from prose—that we are poetical, in a word, very much in the ratio of our unprosaicalness at these points. Even when employing the phrase "poetic license"—a phrase which has to answer for an infinity of sins—people who think in this way seem to have an indistinct conviction that the license in question *involves a necessity of being adopted.* The true artist will avail himself of no "license" whatever. The very word will disgust him; for it says—"Since you seem unable to manage without these peccadillo advantages, you must have them, I suppose; and the world, half shutting its eyes, will do its best not to see the awkwardness which they stamp upon your poem."

Few things have greater tendency than inversion to render verse feeble and ineffective. In most cases where a line is spoken of as "forcible," the force may be referred to directness of expression. A vast majority of the passages which have become household through frequent quotation owe their popularity either to this directness, or, in general, to the scorn of "poetic license." In short, as regards verbal construction, *the more prosaic* a poetical style is the better. Through this species of prosaicism, Cowper, with scarcely one of the higher poetical elements, came very near making his age fancy him the equal of Pope; and to the same cause are attributable three-fourths of that unusual point and force for which Moore is distinguished. It is the *prosaicism* of these two writers to which is owing their especial *quotability.*

The Rev. Arthur Coxe's "Saul, a Mystery," having been condemned in no measured terms by Poe of "The Broadway Journal," and Green of "The Emporium," a writer in the "Hartford Columbian," retorts as follows:

An entertaining history,
Entitled "Saul, a Mystery,"
Has recently been published by the
Reverend Arthur Coxe.
The poem is dramatic,
And the wit of it is Attic,
And its teachings are emphatic of the
doctrines orthodox.
But Mr. Poe, the poet,
Declares he cannot go it—

That the book is very stupid, or something of that sort:
And Green, of "The Emporium," tells a kindred story
And swears like any tory, that it isn't worth a groat.
But maugre all the croaking
Of the Raven, and the joking,
Of the verdant little fellow of the used-to-be Review,
The People, in derision
Of their impudent decision,
Have declared, without division, that the Mystery will do.

The *truth,* of course, rather injures an epigram than otherwise; and nobody will think the worse of the one above when I say that, at the date of its first appearance, I had expressed *no opinion whatever* of the poem to which it refers. "Give a dog a bad name," etc. Whenever a book is abused, people take it for granted that it is *I* who have been abusing it.

Lately, I *have* read "Saul," and agree with the epigrammatist that it "will do" —whoever attempts to wade through it. It will do, also, for trunk-paper. The author is right in calling it "A Mystery"—for a most unfathomable mystery it is. When I got to the end of it, I found it more mysterious than ever —and it was really a mystery how I ever did get to the end—which I half-fancied that somebody had cut off, in a fit of ill-will to the critics. I have heard not a syllable about the "Mystery" of late days. "The People" seem to have forgotten it; and Mr. Coxe's friends should advertise it under the head of "Mysterious Disappearance"—that is to say, the disappearance of a Mystery.

The *vox populi,* so much talked about to so little purpose, is possibly, that very *vox et preterea nihil* which the countryman in "Catullus," mistook for a nightingale.

The *pure Imagination* chooses, from *either Beauty or Deformity,* only the most combinable things hitherto uncombined; the compound, as a general rule, partaking in character of beauty or sublimity in the ratio of the respective beauty or sublimity of the things combined—which are themselves still to be considered as atomic—that is to say, as previous combinations. But, as often analogously happens in physical chemistry, so not unfrequently does it occur in this chemistry of the intellect, that the admixture of two elements results in something that has nothing of the qualities of one of them, or even nothing of the qualities of either. . . . Thus, the range of Imagination is unlimited. Its materials extend throughout the universe. Even out of deformities it fabricates that *Beauty* which is at once its sole object and its inevitable test. But, in general, the richness or force of the matters combined; the facility of discovering combinable novelties worth combining; and especially, the absolute "chemical combination" of the completed mass—are the particulars to be regarded in our estimate of Imagination. It is this thorough harmony of an imaginative work which so often causes it to be undervalued by the thoughtless, through the character of *obviousness* which is superinduced. We are apt to find ourselves asking *why* it is that these combinations have never been imagined before.

In examining trivial details we are apt to overlook essential generalities. Thus M——, in making a to-do about the "typographical mistakes" in his book, has permitted the printer to escape a scolding which he *did* richly deserve—a scolding for a "typographical mistake" of really vital importance—the mistake of having printed the book at all.

It has been well said of the French orator Dupin that "he spoke, as nobody else, the language of everybody;" and thus his manner seems to be exactly conversed in that of the Frogpondian Euphuists, who, on account of the familiar tone in which they lisp their *outre* phrases, may be said to speak as everybody, the language of nobody—that is to say, a language emphatically their own.

"He (Bulwer) is the most accomplished writer of the most accomplished era of English Letters; practising all styles and classes of composition, and eminent in all—novelist, dramatist, poet, historian, moral philosopher, essayist, critic, political pamphleteer;—*in each superior to all others*, and only rivalled in each by himself.—*Ward—author of "Tremaine."*

The "only rivalled in each by himself," here puts me in mind of

None but himself can be his parallel.

But surely Mr. Ward (who, although he did write "De Vere," is by no means a fool) could never have put to paper in his sober senses anything so absurd as the paragraph quoted above without stopping at every third word to hold his sides or thrust his pocket-handkerchief into his mouth. If the serious intention be insisted upon, however, I have to remark that the opinion is the *mere* opinion of a writer remarkable for no other good trait than his facility at putting his readers to sleep according to rules Addisonian, and with the least possible loss of labour and time. But as the *mere* opinion of even a Jeffrey or a Macaulay, I have an inalienable right to meet it with another.

As a novelist, then, Bulwer is far more than respectable, although *generally* inferior to Scott, Godwin, D'Israeli, Miss Burney, Sue, Dumas, Dickens, the author of "Ellen Wareham," the author of "Jane Eyre," and several others. From the list of foreign novels I could select a hundred which he could neither have written nor conceived. As a dramatist, he deserves more credit although he receives less. His "Richelieu," "Money," and "Lady of Lyons" have done much in the way of opening the public eyes to the true value of what is superciliously termed "stage effect" in the hands of one able to manage it. But if commendable at this point, his dramas fail egregiously in points more important; so that upon the whole, he can be said to have written a good play, only when we think of him in connection with the still more contemptible "old dramatist" imitators who are still contemporaries and friends. As historian, he is sufficiently dignified, sufficiently ornate, and more than sufficiently self-sufficient. His "Athens" would have received an Etonian prize, and has all the happy air of an Etonian prize-essay re-vamped. His political pamphlets are very good as

political pamphlets and very disreputable as anything else. His essays leave no doubt upon any body's mind that, with the writer, they have been essays indeed. His criticism is really beneath contempt. His moral philosophy is the most ridiculous of all the moral philosophies that ever have been imagined upon earth.

"The men of sense," says Helvetius, "those idols of the unthinking, are very far inferior to the men of passions. It is the strong passions which, rescuing us from sloth, can alone impart to us that continuous and earnest attention necessary to great intellectual efforts."

When the Swiss philosopher here speaks of "inferiority" he refers to inferiority in worldly success; by "men of sense" he intends indolent men of genius. And Bulwer is, emphatically, one of the "men of passions" contemplated in the apothegm. His passions, with opportunities, have made him what he is. Urged by a rapid ambition to do much, in doing nothing he would merely have proved himself an idiot. Something he has done. In aiming at Crichton, he has hit the target an inch or two above Harrison Ainsworth. Not to such intellects belongs the honours of universality. His works bear about them the unmistakable indications of mere talent—talent, I grant of an unusual order, and nurtured to its extreme of development with a very tender and elaborate care. Nevertheless, it is talent still. Genius it is not.

And the proof is, that while we often fancy ourselves about to be enkindled beneath its influence, fairly enkindled we never are. That Bulwer is no *poet* follows as a corollary from what has been already said:—for to speak of a poet without genius, is merely to put forth a flat contradiction in terms.

In the tale proper—where there is no space for development of character or for great profusion and variety of incident—mere *construction* is, of course far more imperatively demanded than in the novel. Defective plot, in this latter may escape observation, but in the tale, never. Most of our tale-writers, however, neglect the distinction. They seem to begin their stories without knowing how they are to end, and their ends, generally,—like so many governments of Trinculo—appear to have forgotten their beginnings.

Mozart declared on his death-bed that he "began to see what *may* be done in Music;" and it is to be hoped that De Meyer and the rest of the spasmodists will eventually begin to understand what may *not* be done in this particular branch of the Fine Arts.

For my part I agree with Joshua Barnes: nobody but Solomon could have written the Iliad. The catalogue of ships was the work of Robins.

In Colton's "American Review" for October, 1845, a gentleman, well known for his scholarship, has a forcible paper on "The Scotch School of Philosophy and Criticism." But although the paper is "forcible," it presents the most singular admixture of error and truth—the one dovetailed into the other, after a fashion which is novel, to say the least of it. Were I to designate in a few words what the whole article demonstrated, I should say "the folly of not beginning at the beginning—of neg-

lecting the giant Moulineau's advice to his friend Ram." Here is a passage from the essay in question:

The Doctors [Campbell and Johnson] both charge Pope with error and inconsistency—error in supposing that *in English*, of metrical lines unequal in the number of syllables and pronounced in equal times, the longer suggests celerity (this being the principle of the Alexandrine:)—inconsistency, in that Pope himself uses the same contrivance to convey the contrary ideas of slowness. But why in English? It is not and cannot be disputed that, in the hexameter verse of the Greeks and Latins—which is the model in this matter—what is distinguished as the "dactylic line" was uniformly applied to express velocity. How was it to do so? Simply from the fact of being pronounced in an equal time with, while containing a greater number of syllables or "bars" than the ordinary or average measure; as, on the other hand, the spondaic line, composed of the minimum number, was, upon the same principle, used to indicate slowness. So, too, of the Alexandrine in English versification. "No," says Campbell, "there is a difference; the Alexandrine is not in fact, like the dactylic line, pronounced in the common time." But does this alter the principle? What is the rationale of Metre, whether the classical hexameter or the English heroic?

I have written an essay on the "Rationale of Verse," in which the whole topic is surveyed *ab initio*, and with reference to general and immutable principles. To this essay I refer Mr. Bristed. In the meantime, without troubling myself to ascertain whether Doctors Johnson and Campbell are wrong, or whether Pope is wrong, or whether the reviewer is right or *wrong*, at this point or at that, let me succinctly state what is *the truth* on the topics at issue. And *first*, the same principles, in *all* cases, govern *all* verse. What is true in English is true in Greek. *Secondly*, in a series of lines, if one line contains more syllables than the law of the verse demands, and if nevertheless this line is pronounced in the same time, upon the whole, as the rest of the lines, then this line suggests celerity—on account of the increased rapidity of enunciation required. Thus in the Greek hexameter the dactylic lines—those most abounding in dactyls—serve best to convey the idea of rapid motion. The spondaic lines convey that of slowness. *Thirdly*, it is a gross mistake to suppose that the Greek dactylic line is "the model in this matter"—the matter of the English Alexandrine. The Greek dactylic line is of the same number of feet—bars—beats—pulsations—as the ordinary dactylic spondaic lines among which it occurs. But the Alexandrine is longer by one foot—by one pulsation—than the pentameters among which it arises. For its pronunciation it demands *more time*, and therefore *ceteris paribus*, it would well serve to convey the impression of length or duration, and thus indirectly of slowness, I say *ceteris paribus*. But by varying conditions we can effect a total change in the impression conveyed. When the idea of slowness is conveyed by the Alexandrine, it is not conveyed by any slower enunciation of syllables—that is to say, it is not *directly* conveyed—but

indirectly, through the idea of *length* in the whole line. Now if we wish to convey, by means of an Alexandrine, the impression of velocity, we readily do so by giving rapidity to our enunciation of the syllables composing the several feet. To effect this, however, we must have *more* syllables, or we shall get through the whole line too quickly for the intended time. To get more syllables, all we have to do is to use in place of iambuses what our prosodies call anapæsts.* Thus in the line,

Flies o'er the unbending corn and skims
along the main,

the syllables *"the unbend"* form an anapæst, and demanding unusual rapidity of enunciation, in order that we may get them in the ordinary time of an iambus, serve to suggest celerity. By the elision of *e* in *the*, as is customary, the whole of the intended effect is lost; for *th'unbend* is nothing more than the usual iambus. In a word, whenever an Alexandrine expresses celerity, we shall find it to contain one or more anapæsts —the more anapæsts, the more decided the impression. But the tendency of the Alexandrine, consisting merely of the usual iambuses, is to convey slowness—although it conveys this idea feebly, on account of conveying it indirectly. It follows, from what I have said, that the common pentameter, interspersed with anapæsts, would better convey celerity than the Alexandrine interspersed with them in a similar degree—and it unquestionably does.

This "species of nothingness" is quite as reasonable at all events as any "kind of somethingness." See Cowley's "Creation," where

An unshaped kind of something first
appeared.

If any ambitious man have a fancy to revolutionise at one effort the universal world of human thought, human opinion, and human sentiment, the opportunity is his own—the road to immortal renown lies straight, open, and unencumbered before him. All that he has to do is to write and publish a very little book. Its title should be simple—a few plain words—"My Heart Laid Bare." But—this little book must be *true to its title*.

Now, is it not very singular that, with the rabid thirst for notoriety which distinguishes so many of mankind—so many, too, who care not a fig what is thought of them after death, there should not be found one man having sufficient hardihood to write this little book? To *write*, I say. There are ten thousand men who, if the book were once written, would laugh at the notion of being disturbed by its publication during their life, and who could not

---

* I use the prosodial word "anapæst" merely because here I have no space to show what the reviewer will admit I have distinctly shown in the essay referred to—viz.: that the additional syllable introduced, does *not* make the foot an anapæst, or the equivalent of an anapæst, and that if it did it would spoil the line. On this topic, and on all topics connected with verse, there is not a prosody in existence which is not a mere jumble of the grossest error.—E. A. P.

even conceive *why* they should object to its being published after their death. But to write it—*there* is the rub. No man dare write it. No man ever will dare write it. No man *could* write it, even if he dared. The paper would shrivel and blaze at every touch of the fiery pen.

All that man of genius demands for his exaltation is moral matter in motion. It makes no difference *whither* tends the motion—whether for him or against him—and it is absolutely of *no* consequence "*what* is the matter."

To converse well, we need the cool tact of talent—to talk well, the glowing *abandon* of genius. Men of *very* high genius, however, talk at one time *very* well, at another *very* ill:—well, when they have full time, full scope, and a sympathetic listener:—ill, when they fear interruption and are annoyed by the impossibility of exhausting the topic during that particular talk. The partial genius is flashy—scrappy. The true genius shudders at incompleteness—imperfection—and usually prefers silence to saying the something which is not everything that should be said. He is so filled with his theme that he is dumb, first from not knowing how to begin, where there seems eternally beginning behind beginning, and secondly from perceiving his true end at so infinite a distance. Sometimes dashing into a subject, he blunders, hesitates, stops short, sticks fast, and because he has been overwhelmed by the rush and multiplicity of his thoughts, his hearers sneer at his inability to think. Such a man finds his proper element in those "great occasions" which confound and prostrate the general intellect.

Nevertheless, by his conversation, the influence of the conversationist upon mankind in general is more decided than that of the talker by his talk—the latter invariably talks to best purpose with his pen. And good conversationists are more rare than respectable talkers. I know many of the latter; and of the former only five or six. Most people, in conversing, force us to curse our stars that our lot was not cast among the African nation mentioned by Eudoxus—the savages who having no mouth, never opened it, as a matter of course. And yet, if denied mouth, some persons whom I have in my eye would contrive to chatter on still—as they do now—through the nose.

I cannot tell how it happens, but, unless now and then, in a case of portrait-painting, very few of our artists can justly be held guilty of the crime imputed by Apelles to Protogenes—that of "being too natural."

It was a pile of the oyster which yielded the precious pearls of the South, and the artist had judiciously painted some with their lips parted, and showing within the large precious fruit in the attainment of which Spanish cupidity had already proved itself capable of every peril, as well as every crime. At once true and poetical, no comment could have been more severe, etc.—Simms' *Damsel of Darien.*

Body of Bacchus!—only think of poetical beauty in the countenance of a gaping oyster.

And how natural, in an age so fanciful, to believe that the stars and starry groups beheld in the new world for the first time by the native of the old were especially assigned for its government and protection.

Now, if by the old world be meant the east, and by the new world the west, I am at a loss to know what *are* the stars seen in the one which cannot be equally seen in the other. Mr. Simms has abundant faults—or had;—among which inaccurate English, a proneness to revolting images, and pet phrases, are the most noticeable. Nevertheless, leaving out of the question Brockden Brown and Hawthorne (who are each a *genus*), he is immeasurably the best writer of fiction in America. He has more vigour, more imagination, more movement, and more general capacity than all our novelists (save Cooper) combined.

All in a hot and copper sky
The bloody sun at noon
Just up above the mast did stand,
No bigger than the moon.

Is it possible that the poet did not know the apparent diameter of the moon to be greater than that of the sun?

Here is an edition,* which, so far as microscopical excellence and absolute accuracy of typography are concerned, might well be prefaced with the phrase of the Koran—"There is *no* error in this book." We cannot call a single inverted *o* an error—*can* we? But I am really as glad of having found that inverted *o* as ever was a Columbus or an Archimedes. What, after all, are continents discovered, or silversmiths exposed? Give us a good *o* turned upside-down, and a whole herd of bibliomaniac Arguses overlooking it for years.

That sweet smile and serene—that smile never seen but upon the face of the dying and the dead.—*Ernest Maltravers.*

Bulwer is not the man to look a stern fact in the face. He would rather sentimentalise upon a vulgar although picturesque error. Who ever *really* saw anything but horror in the smile of the dead? We so *desire* to fancy it "sweet" —that is the source of the mistake, if, indeed, there ever was a mistake in the question.

The misapplication of quotations is clever, and has a capital effect when well done; but Lord Brougham has not exactly that kind of capacity which the thing requires. One of the best hits in this way is made by Tieck, and I have lately seen it appropriated with interesting complacency in an English magazine. The author of the "Journey into the Blue Distance," is giving an account of some young ladies, not very beautiful, whom he caught *in mediis rebus*, at their toilet. "They were curling their monstrous heads," says he, *"as Shakespeare says of the waves in a storm."*

Here are both Dickens and Bulwer perpetually using the adverb "directly" in the sense of "as soon as." "Directly

---

* "Camoens"—Genoa, 1798.

he came I did so and so."—"Directly I knew it I said this and that." But observe!—"Grammar is hardly taught," [in the United States] "being thought an unnecessary basis for other learning." I quote "America and her Resources" by the British Counsellor-at-Law, John Bristed.

At Ermenonville, too, there is a striking instance of the Gallic rhythm with which a Frenchman regards the English verse. There Gerardin has the following inscription to the memory of Shenstone:

> This plain stone
> To William Shenstone.
> In his writing he displayed
> A mind natural;
> At Leasowes he laid
> Arcadian greens rural.

There are few Parisians, speaking English, who would find anything *particularly* the matter with this epitaph.

Upon her was lavished the enthusiastic applause of the most correct taste and of the deepest sensibility. Human triumph, in all that is most exciting, and delicious, never went beyond that which she experienced—or never but in the case of Taglioni. For what are the extorted adulations that fall to the lot of the conqueror?—what even are the extensive honours of the popular author—his far-reaching fame—his high influence—or the most devout public appreciation of his works—to that rapturous approbation of the personal woman—that spontaneous, instant, present, and palpable applause—those irrepressible acclamations—those eloquent sighs and tears which the idolised Malibran at once heard, and saw, and deeply felt that she deserved? Her brief career was one gorgeous dream—for even the many sad intervals of her grief were but dust in the balance of her glory. In this book* I read much about the causes which curtailed her existence; and there seems to hang around them, as here given, an indistinctness which the fair memorialist tries in vain to illumine. She seems never to approach the full truth. She seems never to reflect that the speedy decease was but a condition of the rapturous life. No thinking person, hearing Malibran sing, could have doubted that she would die in the spring of her days. She crowded ages into hours. She left the world at twenty-five, having existed her thousands of years.

"Accursed be the heart that does not wildly throb, and palsied be the eye that will not weep over the woes of 'The Wanderer of Switzerland.'"—Monthly Register, 1807.

This is "dealing damnation round the land" to some purpose;—upon the reader, and not upon the author, as usual. For my part I shall be one of the damned; for I have in vain endeavoured to see even a shadow of merit in anything ever written by either of the Montgomeries.

Strange—that I should here† find

†Forelaeseninger over det Danske Sprog, eller resonneret Dansk Grammatik ved Jacob Buden.

the only non execrable *barbarian* attempts at imitation of the Greek and Roman measures!

In my reply to the letter signed "Outis," and defending Mr. Longfellow from certain charges supposed to have been made against him by myself, I took occasion to assert that "of the class of wilful plagiarists nine out of ten are authors of established reputations who plunder recondite, neglected, or forgotten books." I came to this conclusion *a priori;* but experience has confirmed me in it. Here is a plagiarism from Channing; and as it is perpetrated by an anonymous writer in a monthly maazine, the theft seems at war with my assertion—until it is seen that the magazine in question is Campbell's "New Monthly" for August, 1828. Channing at that time, was comparatively unknown; and, besides, the plagiarism appeared in a foreign country, where there was little probability of detection. Channing, in his essay on Buonaparte, says:—

We would observe that military talent, even of the highest order, is far from holding the first place among intellectual endowments. It is one of the lower forms of genius, for it is not conversant with the highest and richest objects of thought. . . . Still the chief work of a general is to apply physical force—to remove physical obstructions—to avail himself of physical aids and advantages—to act on matter—to overcome rivers, ramparts, mountains, and human muscles; and these are not the highest objects of mind, nor do they demand intelligence of the highest order:—and accordingly nothing is more common than to find men, eminent in this department, who are almost wholly wanting in the noblest energies of the soul—in imagination and taste—in the capacity of enjoying works of genius—in large views of human nature—in the moral sciences—in the application of analysis and generalisation to the human mind and to society, and in original conceptions on the great subjects which have absorbed the most glorious understandings.

The thief in "The New Monthly," says:—

Military talent, even of the highest *grade,* is *very* far from holding the first place among intellectual endowments. It is one of the lower forms of genius, for it is *never made* conversant with the *more delicate and abstruse of mental operations.* It is used to apply physical force; to remove physical force; to remove physical obstructions; to avail itself of physical aids and advantages; and all these are not the highest objects of mind, nor do they demand intelligence of the highest *and rarest* order. Nothing is more common than to find men eminent in the science and practice of war, *wholly* wanting in the nobler energies of the soul; in imagination, in taste, in *enlarged* views of human nature, in the moral sciences, in the application of analysis and generalisation to the human mind and to society; or in original conceptions on the great subjects which have *occupied and* absorbed the most glorious *of human* understandings.

The article in "The New Monthly" is on "The State of Parties." The italics are mine.

Apparent plagiarisms frequently arise from an author's self-repetition. He finds that something he has already published has fallen dead—been overlooked—or that it is peculiarly *apropos* to another subject now under discussion. He therefore introduces the passage; often without allusion to his having printed it before; and sometimes he introduces it into an anonymous article. An anonymous writer is thus, now and then, unjustly accused of plagiarism—when the sin is merely that of self-repetition. In the present case, however, there has been a deliberate plagiarism of the silliest as well as meanest species. Trusting to the obscurity of his original the plagiarist has fallen upon the idea of killing two birds with one stone—of dispensing with all disguise but that of *decoration*. Channing says "order"—the writer in "The New Monthly" says "grade." The former says that this order is "far from holding," etc.—the latter says it is "*very* far from holding." The one says that military talent is "*not* conversant," and so on—the other says "it is *never made* conversant." The one speaks of "the highest and richest object"—the other of "the more delicate and abstruse." Channing speaks of "thought"—the thief of "mental operations." Channing mentions "intelligence of the *highest* order"—the thief will have it of "the highest *and rarest*." Channing observes that military talent is often "*almost* wholly wanting, etc."—the thief maintains it to be "*wholly* wanting." Channing alludes to "*large* views of human nature"—the thief can be content with nothing less than "enlarged" ones. Finally, the American having been satisfied with a reference to "subjects which have absorbed the most glorious understandings," the Cockney puts him to shame at once by discoursing about "subjects which have *occupied and* absorbed the most glorious *of human* understandings"—as if one could be absorbed without being occupied by a subject—as if "*of*" were here anything more than two superfluous letters—and as if there were any chance of the reader's supposing that the understandings in question were the understandings of frogs, or jackasses, or Johnny Bulls.

By the way, in a case of this kind, whenever there is a question as to who is the original and who the plagiarist, the point may be determined, almost invariably, by observing which passage is amplified or exaggerated in tone. To disguise his stolen horse, the uneducated thief cuts off the tail; but the educated thief prefers tying on a new tail at the end of the old one, and painting them both sky blue.

When I consider the true talent—the real force of Mr. Emerson, I am lost in amazement at finding in him little more than a respectful imitation of Carlyle. Is it possible that Mr. E. has ever seen a copy of Seneca? Scarcely—or he would long ago have abandoned his model in utter confusion at the parallel between his own worship of the author of "Sartor Resartus" and the aping of Sallust by Aruntius, as described in the 114th Epistle. In the writer of the "History of the Punic Wars" Emerson is portrayed to the life. The parallel is close; for not only is the imitation of the same character, but the things imitated are identical. Undoubtedly it is to be said of Sallust,

far more plausibly than of Carlyle, that his obscurity, his unusuality of expression, and his Laconism (which had the effect of diffuseness, since the time gained in the mere perusal of his pithinesses is trebly lost in the necessity of cogitating them out)—it may be said of Sallust, more truly than of Carlyle, that these qualities bore the impress of his genius, and were but a portion of his unaffected thought. If there is any difference between Aruntius and Emerson, this difference is clearly in favour of the former, who was in some measure excusable on the ground that he was as great a fool as the latter is *not*.

I believe that odours have an altogether peculiar force in affecting us through association; a force differing *essentially* from that of objects addressing the touch, the taste, the sight, or the hearing.

It would have been becoming, I think, in Bulwer to have made at least a running acknowledgement of that extensive indebtedness to Arnay's "Private Life of the Romans," which he had so little scruple about incurring during the composition of "The Last Days of Pompeii." He acknowledges, I believe, what he owes to Sir William Gell's "Pompeiana." Why this? why not that?

One of our truest poets is Thomas Buchanan Read. His most distinctive features are, first, "tenderness," or subdued passion, and secondly, fancy. His sin is imitativeness. *At present*, although evincing high capacity, he is but a copyist of Longfellow—that is to say, but the echo of an echo. Here is a beautiful thought which is *not* the property of Mr. Read:

And where the spring-time sun had
longer shone,
*A violet looked up and found itself
alone.*

Here again: a spirit

Slowly through the lake descended,
Till from her hidden form below
The waters took a golden glow,
*As if the star which made her forehead
bright*
*Had burst and filled the lake with
light.*

Lowell has some lines very similar, ending with

As if a star had burst within his brain.

I cannot say that I ever fairly comprehended the force of the term "*insult*" until I was given to understand, one day, by a member of the "North American Review" clique that this journal was "not only willing but anxious to render me that justice which had been already rendered me by the 'Revue Francaise' and the 'Revue des Deux Mondes'"—but was "restrained from so doing" by my "invincible spirit of antagonism." I wish the "North American Review" to express *no* opinion of me whatever—for I have none of it. In the meantime, as I see no motto on its title-page, let me recommend it one from Sterne's "Letter from France." Here it is:—"As we rode along the valley we saw a herd of asses on the top of one of the mountains—how they viewed and *reviewed* us!"

Von Raumer says that Enslen, a German optician, conceived the idea of throwing a shadowy figure, by optical means, into the chair of Banquo; and that the thing was readily done. Intense effect was produced; and I do not doubt that an American audience might be electrified by the feat. But our managers not only have no invention of their own, but no energy to avail themselves of that of others.

A capital book, generally speaking,* but Mr. Grattan has a bad habit—that of loitering in the road—of dallying and toying with his subjects, as a kitten with a mouse—instead of grasping it firmly at once and eating it up without more ado. He takes up too much time in the ante-room. He has never done with his introductions. Occasionally, one introduction is but the vestibule to another; so that by the time he arrives at his main incidents there is nothing more to tell. He seems afflicted with that curious yet common perversity observed in garrulous old women—the desire of tantalising by circumlocution. Mr. G.'s circumlocution, however, is by no means like that which Albany Fonblanque describes as "a style of about and about and all the way round to nothing and nonsense." . . . If the greasy-looking lithograph here given as a frontispiece be meant for Mr. Grattan, then is Mr. Grattan like nobody else—for the fact is, I never yet knew an individual with a wire wig, or the countenance of an under-done apple dumpling. . . . As a general rule, no man should put his own face in his own book. In looking at the author's countenance the reader is seldom in condition to keep his own.

Here is a good idea for a Magazine Paper—let somebody "work it up:"—A flippant pretender to universal acquirement—a would-be Crichton—engrosses for an hour or two, perhaps, the attention of a large company—most of whom are profoundly impressed by his knowledge. He is very witty, in especial, at the expense of a modest young gentleman, who ventures to make no reply, and who finally leaves the room as if overwhelmed with confusion—the Crichton greeting his exit with a laugh. Presently he returns, followed by a footman carrying an armful of books. These are deposited on the table. The young gentleman now referring to some pencilled notes, which he had been secretly taking during the Crichton's display of erudition, pins the latter to his statements, each by each, and refutes them all in turn, by reference to the very authorities cited by the egotist himself—whose ignorance at all points is thus made apparent.

A long time ago—twenty-three or four years at least—Edward C. Pinckney, of Baltimore, published an exquisite poem entitled "A Health." It was profoundly admired by the critical few, but had little circulation—this for no better reason than that the author was born *too far South*. I quote a few lines:

Affections are as *thoughts* to her,
The measures of her hours—
Her feelings have the fragrancy,
The freshness of young *flowers*.

---

* Highways and Byeways.

To her the better elements
And kindlier stars have given
A form, so fair, that, like the air,
'Tis less of Earth than Heaven.

Now in 1842, Mr. George Hill published "The Ruins of Athens and Other Poems,"—and from one of the "Other Poems" I quote what follows:

And thoughts go sporting through her mind
Like children among *flowers,*
And deeds of gentle goodness are
The measures of her hours,
In soul or face she bears no trace
Of one from Eden driven,
But like the rainbow seems, though born
Of Earth a part of Heaven.

Is this plagiarism or is it *not?*—I merely ask for information.

Had the "George Balcombe" of Professor Beverley Tucker been the work of any one born North of Mason and Dixon's line, it would have been long ago recognised as one of the very noblest fictions ever written by an American. It is almost as good as "Caleb Williams." The manner in which the cabal of the "North American Review" first write all our books and then review them, puts me in mind of the fable about the Lion and the Painter. It is high time that the literary South took its own interests into its own charge.

Here is a plot which, with all its complexity, has no adaption—no dependency:—it is involute and nothing more—having all the air of G——'s wig, or the cycles and epicycles in Ptolemy's "Almagest."

We might give two plausible derivations of the epithet "weeping" as applied to the willow. We might say that the word has its origin in the pendulous character of the long branches, which suggest the idea of water dripping; or we might assert that the term comes from a fact in the natural history of the tree. It has a vast insensible perspiration, which, upon sudden cold, condenses, and sometimes is precipitated in a shower. Now, one might very accurately determine the bias and value of a man's powers of causality by observing which of these two derivations he would adopt. The former is, beyond question, the true; and for this reason—that common or vulgar epithets are universally suggested by common or immediately obvious things, without strict regard of any exactitude in application:—but the latter would be greedily seized by nine philologists out of ten, for no better cause than its *epigrammatism*—than the pointedness with which the singular fact seems to touch the occasion. Here, then, is a subtle source of error which Lord Bacon has neglected. It is an Idol *of the Wit.*

In a "Hymn for Christmas," by Mrs. Hemans, we find the following stanza:

Oh, lovely voices of the sky
Which hymned the Saviour's birth,
Are ye not singing still on high.
Ye that sang "Peace on Earth?"
To us yet speak the strains
Wherewith, in times gone by,
Ye blessed the Syrian swains,
Oh, voices of the sky!

And at page 305 of "The Christian Keepsake and Missionary Annual for 1840"—a Philadelphia Annual—we find "A Christmas Carol," by Richard W. Dodson:—the first stanza running thus:

Angel voices of the sky!
Ye that hymned Messiah's birth,
Sweetly singing from on high
"Peace, Goodwill to all on earth!"
Oh, to us impart those strains!
Bid our doubts and fears to cease!
Ye that cheered the Syrian swains,
Cheer us with that song of peace!

The more there are great excellences in a work, the less am I surprised at finding great demerits. When a Book is said to have many faults, nothing is decided, and I cannot tell by this whether it is excellent or execrable. It is said of another that it is without fault; if the account be just, the work cannot be excellent.—*Trublet.*

The *"cannot"* here is much too positive. The opinions of Trublet are wonderfully prevalent, but they are none the less demonstrably false. It is merely the *indolence* of genius which has given them currency. The truth seems to be that genius of the highest order lives in a state of perpetual vacillation between ambition and *the scorn of it.* The ambition of a great intellect is at best negative. It struggles—it labours—it creates—not because excellence is desirable, but because to be excelled where there exists a sense of the power to excel is unendurable. Indeed I cannot help thinking that the *greatest* intellects (since these most clearly perceive the laughable absurdity of human ambition) remain contentedly "mute and inglorious." At all events, the *vacillation* of which I speak is the prominent feature of genius. Alternately inspired and depressed, its inequalities of mood are stamped upon its labours. This is the truth, generally—but it is a truth very different from the assertion involved in the "cannot" of Trublet. Give to genius a sufficiently enduring *motive,* and the result will be harmony, proportion, beauty, perfection—all, in this case, synonymous terms. Its supposed "inevitable" irregularities shall not be found—for it is clear that the susceptibility to impressions of beauty—that susceptibility which is the most important element of genius—implies an equally exquisite sensitiveness and aversion to deformity. The motive—the *enduring* motive—has indeed, hitherto, fallen *rarely* to the lot of genius; but I could point to several compositions which, "without any fault," are yet "excellent"—extremely so. The world, too, is on the threshold of an epoch, wherein, with the aid of a calm philosophy, such compositions shall be ordinarily the work of that genius which is *true.* One of the first and most essential steps, in overpassing this threshold, will serve to kick out of the world's way this very idea of Trublet—this untenable and paradoxical idea of the incompatibility of genius with *art.*

A man of genius, if not permitted to choose his own subject, will do worse in letters than if he had talents none at all. And *here* how imperatively is he controlled! To be sure, he can write to suit himself—but in the same manner his publishers print. From the nature of our copyright laws, he has no

individual powers. As for his free agency, it is about equal to that of the dean and chapter of the see-cathedral in a British election of Bishops—an election held by virtue of the king's writ of *conge d'elire*—specifying the person to be elected.

To see distinctly the machinery—the wheels and pinions—of any work of Art is, unquestionably, of itself, a pleasure, but one which we are able to enjoy, only just in proportion as we do *not* enjoy the legitimate effect designed by the artist; and, in fact, it too often happens that to reflect analytically upon Art is to reflect after the fashion of the mirrors in the Temple of Smyrna, which represent the fairest images as deformed.

With the aid of a lantern, I have been looking again at "Niagara and Other Poems" (Lord only knows if that be the true title)—but "there's nothing in it"—at least nothing of Mr. Lord's own—nothing which is not stolen—or (more delicately) transfused—transmitted. By the way, Newton says a great deal about "fits of easy transmission and reflection," and I have no doubt that "Niagara" was put together in one of these identical fits.

A remarkable work, and one which I find much difficulty in admitting to be the composition of a woman. Not that many good and glorious things have not been the composition of women—but, because, here, the severe precision of style, the *thoroughness*, and the luminousness are points never observable in even the most admirable of their writings. Who is Lady Georgiana Fullerton? Who is that Countess of Dacre, who edited "Ellen Wareham,"—the most passionate of fictions—approached only in some particulars of passion by this? The great defect of "Ellen Middleton" lies in the disgusting sternness, captiousness, and bullet-headedness of her husband. We cannot sympathise with her love for him. And the intense selfishness of the rejected lover precludes that compassion which is designed. Alice is a *creation* of true genius. The imagination throughout is of a lofty order, and the snatches of original verse would do honour to any poet living. But the chief merit, after all, is that of the *style*—about which it is difficult to say too much in the way of praise, although it has now and then an odd Gallicism—such as "she lost her head," meaning she grew crazy. There is much in the whole manner of this book which puts me in mind of "Caleb Williams."

The God-abstractions of the modern polytheism are nearly in as sad a state of perplexity and promiscuity as were the more substantial deities of the Greeks. Not a quality named that does not impinge upon some one other; and Porphyry admits that Vesta, Rhea, Ceres, Themis, Proserpina, Bacchus, Attis, Adonis, Silenus, Priapus, and the Satyrs, were merely different terms for the same thing. Even gender was never precisely settled. Servius on Virgil mentions a Venus with a beard. In Macrobius, too, Calvus talks of her as if she were a man; while Valerius Soranus expressly calls Jupiter "The mother of the Gods."

The next work of Carlyle will be

entitled "Bow-Wow," and the title-page will have a motto from the opening chapter of the Koran: "There is *no* error in this Book."

Surely M—— cannot complain of the manner in which his book has been received; for the public, in regard to it, has given him just such an assurance as Polyphemus pacified Ulysses with, while his companions were being eaten up before his eyes. "Your book, Mr. M——," says the public, "shall be—I pledge you my word—the very last that I devour."

The modern reformist Philosophy, which annihilates the individual by way of aiding the mass, and the late reformist Legislation, which prohibits pleasure with the view of advancing happiness, seem to be chips of that old block of a French feudal law which, to prevent young partridges from being disturbed, imposed penalties upon hoeing and weeding.

That Demosthenes "turned out very badly" appears beyond dispute from a passage, in *Meker De vet. et rect. Pron. Ling. Græcæ*, where we read *"Nec illi (Demostheni) turpe videbatur, optimis relictis magistris, ad canes se conferre, etc., etc."*—that is to say, Demosthenes was not ashamed to quit good society and *"go to the dogs."*

I cannot help thinking that romance-writers in general might now and then find their account in taking a hint from the Chinese, who, in spite of building their houses downwards, have still sense enough *to begin their books at the end.*

La Harpe, who was no critic, has, nevertheless, done little more than strict justice to the fine taste and precise finish of Racine in all that regards the minor morals of Literature. In these he as far excels Pope, as Pope the veriest dolt in his own "Dunciad."

I have sometimes amused myself by endeavouring to fancy what would be the fate of an individual gifted, or rather accursed, with an intellect *very* far superior to that of his race. Of course he would be conscious of his superiority; nor could he (if otherwise constituted as man is) help manifesting his consciousness. Thus he would make himself enemies at all points. And since his opinions and speculations would widely differ from those of *all* mankind—that he would be considered a madman is evident. How horribly painful such a condition! Hell could invent no greater torture than that of being charged with abnormal weakness on account of being abnormally strong.

In like manner, nothing can be clearer than that a *very* generous spirit—*truly* feeling what all merely profess—must inevitably find itself misconceived in every direction—its motives misinterpreted. Just as extremeness of intelligence would be thought fatuity, so excess of chivalry could not fail of being looked upon as meanness in its last degree—and so on with other virtues. This subject is a painful one indeed. That individuals *have* so soared above the plane of their race is scarcely to be questioned; but, in looking back through history for traces of their existence, we should pass over all biographies of "the good and the great," while we search carefully the slight

records of wretches who died in prison, in Bedlam, or upon the gallows.

Samuel Butler, of Hudibrastic memory, must have had a prophetic eye to the American Congress when he defined a *rabble* as—"A congregation or assembly of the States-General—every one being of a several judgment concerning whatever business be under consideration. . . . . They meet only to quarrel," he adds, "and then return home full of satisfaction *and narrative*."

I have now before me a book in which the most noticeable thing is the pertinacity with which "Monarch" and "King" are printed with a capital M and a capital K. The author, it seems, has been lately presented at Court. He will employ a small *g* in future, I presume, whenever he is so unlucky as to speak of his God.

Were I called on to define, *very* briefly, the term "Art," I should call it "the reproduction of what the Senses perceive in Nature through the veil of the soul." The mere imitation, however accurate, of what *is* in Nature entitles no man to the sacred name of "Artist." Denner was no artist. The grapes of Zeuxis were *in*artistic—unless in a bird's-eye view; and not even the curtain of Parrhasius could conceal his deficiency in point of genius. I have mentioned "the *veil* of the soul." Something of the kind appears indispensable in Art. We can, at any time, double the true beauty of an actual landscape by half-closing our eyes as we look at it. The naked Senses sometimes see too little—but then *always* they see too much.

With how unaccountable an obstinacy even our best writers persist in talking about "moral courage," as if there could be any courage that was *not* moral. The adjective is improperly applied to the subject instead of the object. The energy which overcomes fear, whether fear of evil threatening the person or threatening the impersonal circumstances amid which we exist, is of course simply a mental energy—is of course simply "moral." But in speaking of "*moral* courage" we *imply* the existence of physical. Quite as reasonable an expression would be that of "bodily thought," or of "muscular imagination."

I have great faith in fools—self-confidence my friends will call it:

Si demain, oubliant d'eclore,
Le jour manquait, eh bien! demain
Quelque fou trouverait encore
Un flambeau pour le genre humain.

By the way, what with the new electric light and other matters, De Beranger's idea is not so *very* extravagant.

"He that is born to be a man," says Wieland in his "Peregrinus Proteus," "neither should nor can be anything nobler, greater, or better than a man." The fact is, that in efforts to soar above our nature we invariably fall below it. Your reformist demigods are merely devils turned inside out.

Not long ago, to call a man "a great wizard" was to invoke for him fire and fagot; but now, when we wish to run our *protege* for President, we just dub him "a *little* magician." The fact is,

that, on account of the curious modern *bouleversement* of old opinion, one cannot be too cautious of *the grounds* on which he lauds a friend or vituperates a foe.

"Philosophy," says Hegel, "is utterly useless and fruitless, and *for this very reason* is the sublimest of all pursuits, the most deserving attention, and the most worthy of our zeal." This jargon was suggested, no doubt, by Tertullian's *"Mortuus est Dei filius; credible est quia ineptum—et sepultus resurrexit; certum est quia impossibile."*

A clever French writer of "Memoirs" is quite right in saying that "if the *Universities* had been willing to permit it the disgusting old *debauche* of Teos, with his eternal Bathyllus, would long ago have been buried in the darkness of oblivion."

It is by no means an irrational fancy that in a future existence we shall look upon what we think our present existence as a dream.

"The artist belongs to his work, not the work to the artist."—*Novalis.*

In nine cases out of ten it is pure waste of time to attempt extorting sense from a German apothegm; or, rather, any sense and every sense may be extorted from all of them. If, in the sentence above quoted, the intention is to assert that the artist is the slave of his theme, and must conform his thoughts to it, I have no faith in the idea, which appears to me that of an essentially prosaic intellect. In the hands of the true artist the theme, or "work," is but a mass of clay, of which anything (within the compass of the mass and quality of the clay) may be fashioned at will, or according to the skill of the workman. The clay is, in fact, the slave of the artist. It belongs to him. His genius, to be sure, is manifested, very distinctly, in *the choice* of the clay. It should be neither fine nor coarse, abstractly—but just so fine or so coarse—just so plastic or so rigid—as may best serve the purposes of the thing to be wrought—of the idea to be made out, or, more exactly, of the impression to be conveyed. There *are* artists, however, who fancy only the *finest* material, and who, consequently, produce only the *finest* ware. It is generally very transparent and excessively brittle.

Tell a scoundrel three or four times a day that he is the pink of probity and you make him at least "the perfection of respectability" in good earnest. On the other hand, accuse an honourable man too pertinaciously of being a villian and you fill him with a perverse ambition to show you that you are not altogether in the wrong.

The Romans worshipped their standards; and the Roman standard happened to be an eagle. Our standard is only one-tenth of an Eagle—a Dollar—but we make all even by adoring it with tenfold devotion.

A pumpkin has more angles than I——, and is altogether a clever thing. He is remarkable at one point only—at that of being remarkable for nothing.

"That evil predominates over good becomes evident when we consider that

there can be found no aged person who would be willing to re-live the life he has already lived."—*Volney.*

The idea here is not distinctly made out, for, unless through the context, we cannot be sure whether the author means merely this—that every aged person fancies he might, in a different course of life, have been happier than in the one actually lived, and for this reason would not be willing to live *his* life over again, *but some other life;* or whether the sentiment intended is this—that if, upon the grave's brink, the choice between the expected death and the re-living the old life were offered any aged person that person would prefer to die. The first proposition is perhaps true, but the last (which is the one designed) is not only doubtful in point of mere fact, but is of no effect, even if granted to be true, in sustaining the original proposition that evil predominates over good. It is assumed that the aged person will not re-live his life, because he *knows* that its evil predominated over its good. The source of error lies in the word "knows"—in the assumption that we can ever be really in possession of the whole knowledge to which allusion is cloudily made. But there is a *seeming,* a fictitious knowledge, and this very seeming knowledge it is, of what the life has been, which incapacitates the aged person from deciding the question on its merits. He blindly deduces a notion of the happiness of the original real life, a notion of its preponderating evil or good, from a consideration of the secondary or supposititious one. In his estimate he merely strikes a balance between *events,* and leaves quite out of the account that elastic *Hope* which is the Eos of all. Man's real life is happy, chiefly because he is ever expecting that it soon will be so. In regarding the supposititious life, however, we paint to ourselves chill certainties for warm expectations, and grievances quadrupled in being foreseen. But because we cannot avoid doing this, strain our imaginative faculties as we will, because it is so very difficult, so nearly impossible a task, to fancy the known unknown, the done unaccomplished, and because (through our inability to fancy all this) we prefer death to a secondary life, does it, in any manner, follow that the evil of the properly-considered real existence *does* predominate over the good?

In order that a just estimate be made by Mr. Volney's "aged person," and from this estimate a judicious choice;—in order, again, that from this estimate and choice we deduce any clear comparison of good with evil in human existence, it will be necessary that we obtain the opinion or "choice," upon this point from an aged person, who shall be in condition to appreciate with precision the hopes he is naturally led to leave out of question, but which reason tells us he would as strongly experience as ever in the absolute re-living of the life. On the other hand, too, he must be in condition to dismiss from the estimate the fears which he actually feels, and which show him bodily the ills that are to happen, but which fears, again, reason assures us he would *not* in the absolute secondary life encounter. Now what mortal was ever in condition to make these allowances?—to perform impossibilities in giving these considerations their due

weight? What mortal, then, was ever in condition to make a well-grounded choice? How, from an ill-grounded one, are we to make deductions which shall guide us aright? How out of error shall we fabricate truth?

This reasoning is about as convincing as would be that of a traveller who, going from Maryland to New York without entering Pennsylvania, should advance this feat as an argument against Leibnitz's *Law of Continuity*, according to which nothing passes from one *state* to another without passing through all the intermediate states.

Macaulay, in his just admiration of Addison, overrates Tickell, and does not seem to be aware how much the author of the "Elegy" is indebted to French models. Boileau, especially, he robbed without mercy and without measure. A flagrant example is here. Boileau has the lines:

En vain contre "Le Cid" un ministre
se ligue;
Tout Paris pour Chimene a les yeux de
Rodrigue.

Tickell thus appropriates them:

While the charm'd reader with thy
thought complies,
And views thy Rosamond with Henry's
eyes.

Stolen, body and soul (and spoilt in the stealing) from a paper *of the same title* in the "European Magazine" for December, 1817. Blunderingly done throughout, and must have cost more trouble than an original thing. This makes paragraph 33 of my *"Chapter on American Cribbage."* The beauty of these *exposes* must lie in the precision and unanswerability with which they are given—in day and date—in chapter and verse—and, above all, in an unveiling of the minute trickeries by which the thieves hope to disguise their stolen wares. I must soon a tale unfold, and an astonishing tale it will be. The C—— bears away the bell. The ladies, however, should positively not be guilty of these tricks—for one has never the heart to unmask or deplume them. After all, there is this advantage in purloining one's magazine papers—we are never forced to dispose of them under prime cost.

Amare et sapere vix Deo conceditur, as the acute Seneca well observes.

However acute might be Seneca, still he was not sufficiently acute to say this. The sentence is often attributed to him, but is not to be found in his works. *"Semel insanavimus omnes,"* a phrase often quoted, is invariably placed to the account of Horace, and with equal error. It is from the *"De Honesto Amore"* of the Italian Mantuanus, who has

Id commune malum; semel insanavimus
omnes.

In the title *"De Honesto Amore,"* by the way, Mantuanus misconceives the force of *honestus*—just as Dryden does in his translation of Virgil's

Et quocunque Deus circum caput egit
honestum;

which he renders,

On whate'er side he turns his *honest* face.

No;—he fell by his own fame. Like Richmann, he was blasted by the fires himself had sought, and obtained, from the heavens.

How overpowering a style is that of Curran! I use "overpowering" in the sense of the English exquisite. I can imagine nothing more distressing than the extent of his eloquence.

How radically has "Undine" been misunderstood! Beneath its obvious meaning there runs an undercurrent, simple, quite intelligible, artistically managed, and richly philosophical.

From internal evidence afforded by the book itself, I gather that the author suffered from the ills of a mal-arranged marriage—the bitter reflections thus engendered inducing the fable.

In the contrast between the artless, thoughtless, and careless character of Undine before possessing a soul, and her serious, enwrapt, and anxious yet happy condition after possessing it, a condition which, with all its multiform disquietudes, she still feels to be preferable to her original state, Fouque has beautifully painted the difference between the heart unused to *love*, and the heart which has received its inspiration.

The jealousies which follow the marriage, arising from the conduct of Bertalda, are but the natural troubles of love, but the persecutions of Kuhleborn and the other water spirits who take umbrage at Huldbrand's treatment of his wife, are meant to picture certain difficulties from the interference of relations in conjugal matters—difficulties which the author has himself experienced. The warning of Undine to Huldbrand, "Reproach me not upon the waters, or we part for ever," is intended to embody the truth that quarrels between man and wife are seldom or never irremediable unless when taking place in the presence of third parties. The second wedding of the knight, with his gradual forgetfulness of Undine, and Undine's intense grief beneath the waters, are dwelt upon so pathetically, so passionately, that there can be no doubt of the author's personal opinions on the subject of second marriages—no doubt of his deep personal interest in the question. How thrillingly are these few and simple words made to convey his belief that the mere death of a beloved wife does not imply a separation so final or so complete as to justify a union with another!

The fisherman had loved Undine with exceeding tenderness, and it was a doubtful conclusion to his mind that the mere disappearance of his beloved child could be properly viewed as her death.

This is where the old man is endeavouring to dissuade the knight from wedding Bertalda.

I cannot say whether the novelty of the conception of "Undine," or the loftiness and purity of its ideality, or the intensity of its pathos, or the rigour of its simplicity, or the high artistical ability with which all are combined into a well-kept, a well-*motivirt* whole of

absolute unity of effect, is the particular chiefly to be admired.

How delicate and graceful are the transitions from subject to subject!—a point severely testing the autorial power—as, when, for the purposes of the story, it becomes necessary that the knight, with Undine and Bertalda, shall proceed down the Danube. An ordinary novelist would have here tormented both himself and his readers in his search for a sufficient motive for the voyage. But in a fable such as "Undine," how all-sufficient, how well in keeping, appears the simple motive assigned!

In this grateful union of friendship and affection, winter came and passed away; and spring, with its foliage of tender green and its heaven of softest blue, succeeded to gladden the hearts of the three inmates of the castle. *What wonder, then, that its storks and swallows inspired them also with a disposition to travel?*

I have at length attained the last page, which is a thing to thank God for, and all this may be logic, but I am sure it is nothing more. Until I get the means of refutation, however, I must be content to say, with the Jesuits Le Sueur and Jacquier, that "I acknowledged myself obedient to the decrees of the Pope against the motion of the earth."

Not so:—The first number of the "Gentleman's Magazine" was published on the first of January, 1731; but long before this—in 1681—there appeared the "Monthly Recorder," with all the magazine features. I have a number of the "London Magazine," dated 1760 —commenced 1732, at least, but I have reason to think much earlier.

"Rhododaphne" (who wrote it?) is brimful of music:—e.g.

By living streams, in sylvan shades,
  Where wind and wave symphonious make
Rich melody, the youths and maids
  No more with choral music wake
  Lone Echo from her tangled brake.

I have just finished the "Mysteries of Paris"—a work of unquestionable power—a museum of novel and ingenious incident—a paradox of childish folly and consummate skill. It has this point in common with all the "convulsive" fictions—that the incidents are *consequential* from the premises, while the premises themselves are laughably incredible. Admitting, for instance, the possibility of such a man as Rodolphe, and of such a state of society as would tolerate his perpetual interference, we have no difficulty in agreeing to admit the possibility of his accomplishing all that is accomplished. Another point which distinguishes the Sue school is the total want of the *ars celare artem.* In effect the writer is always saying to the reader, "Now—in one moment—you shall see what you shall see. I am about to produce on you a remarkable impression. Prepare to have your imagination, or your pity, greatly excited." The wires are not only not concealed, but displayed as things to be admired, equally with the puppets they set in motion. The result is, that in perusing, for example, a pathetic chapter in the "Mysteries of

Paris" we say to ourselves, without shedding a tear—"Now, here is something which will be sure to move every reader to tears." The philosophical motives attributed to Sue are absurd in the extreme. His first, and in fact his sole object, is to make an exciting, and therefore saleable book. The cant (implied or direct), about the amelioration of society, etc., is but a very usual trick among authors, whereby they hope to add such a tone of dignity or utilitarianism to their pages as shall gild the pill of their licentiousness. The *ruse* is even more generally employed by way of engrafting a meaning upon the otherwise unintelligible. In the latter case, however, this *ruse* is an afterthought, manifested in the shape of a moral, either appended (as in Æsop) or dovetailed into the body of the work, piece by piece, with great care, but never without leaving evidence of its after-insertion.

The translation (by C. H. Town) is very imperfect, and, by a too literal rendering of idioms, contrives to destroy the whole *tone* of the original. Or perhaps, I should say a too literal rendering of *local peculiarities of phrase.* There is one point (never yet, I believe, noticed) which, obviously, should be considered in translation. We should so render the original that *the version should impress the people for whom it is intended, just as the original impresses the people for whom it (the original) is intended.* Now, if we rigorously translate mere local idiosyncrasies of phrase (to say nothing of idioms) we inevitably distort the author's designed impression. We are sure to produce a whimsical, at least, if not always a ludicrous effect—for novelties, in a case of this kind, are incongruities—oddities. A distinction of course should be observed between those peculiarities of phrase which appertain to the nation and those which belong to the author himself—for these latter will have a similar effect upon *all* nations, and should be literally translated. It is merely the general inattention to the principle here proposed which has given rise to so much international depreciation, if not positive contempt, as regards literature. The English reviews, for example, have abundant allusions to what they call the "frivolousness" of French letters—an idea chiefly derived from the impression made by the French manner merely—this manner, again, having in it nothing *essentially* frivolous, but affecting all foreigners as such (the English especially) through that oddity of which I have already assigned the origin. The French return the compliment, complaining of the British *gaucherie* in style. The phraseology of every nation has a taint of *drollery* about it in the ears of every other nation speaking a different tongue. Now, to convey the true spirit of an author, this taint should be corrected in translation. We should pride ourselves less upon literality and more upon dexterity at paraphrase. Is it not clear that, by such dexterity, *a translation may be made to convey to a foreigner a juster conception of an original than could the original itself?*

The distinction I have made between mere idioms (which, *of course,* should never be literally rendered) and "local idiosyncrasies of *phrase,*" may be exemplified by a passage at page 291 of Mr. Town's translation.

"Never mind! Go in there! You will take the cloak of Calebasse. You will wrap yourself in it, etc., etc."

These are the words of a lover to his mistress, and are meant kindly, although imperatively. They embody a local peculiarity—a *French* peculiarity of phrase, and (to French ears) convey nothing dictatorial. To our own, nevertheless, they sound like the command of a military officer to his subordinate, and thus produce an effect quite different from that intended. The translation, in such case, should be a bold paraphrase. For example:—"I must insist upon your wrapping yourself in the cloak of Calebasse."

Mr. Town's version of "The Mysteries of Paris," however, is not objectionable on the score of excessive literality alone, but abounds in misapprehensions of the author's meaning. One of the strangest errors occurs at page 368, where we read:

"From a wicked, brutal savage, and riotous rascal, he has made me a kind of honest man by saying only two words to me; but these words, 'voyez vous,' were like magic."

Here "voyez vous" are made to be the two magical words spoken; but the translation should run—"these words, do you see? were like magic." The actual words described as producing the magical effect are "heart" and "honour."

Of similar character is a curious mistake at page 245.

"He is a *gueux fini*, and an attack will not save him," added Nicholas. "A—yes," said the widow.

Many readers of Mr. Town's translation have no doubt been puzzled to perceive the force of relevancy of the widow's "A—yes" in this case. I have not the original before me, but take it for granted that it runs thus, or nearly so:—*"il est un gueux fini et un assaut ne l'intimidera pas. Un—oui! dit la veuve."*

It must be observed that, in vivacious French colloquy, the *oui* seldom implies assent to the letter, but generally, to the spirit, of a proposition. Thus a Frenchman usually says "yes" where an Englishman would say "no." The latter's reply for example, to the sentence "An attack will not intimidate him," would be "No"—that is to say, "I grant you that it would not." The Frenchman, however, answers "Yes"—meaning, "I agree with what you say—it would not." Both replies, of course, reaching the same point, although by opposite routes. With this understanding it will be seen that the true version of the widow's *"Un—oui!"* should be, *"One* attack, I grant you, might not," and that this *is* the version becomes apparent when we read the words immediately following—"but *every* day—*every* day it is hell!"

An instance of another class of even more reprehensible blunders, is to be found on page 297, where Bras-Rouge is made to say to a police officer—"No matter; it is not of that I complain; every trade has its *disagreements*." Here no doubt the French is *desagremens*—inconveniences—disadvantages—unpleasantness. *Desagremens* conveys disagreements not even so nearly as, in Latin, *religio* implies religion.

I was not a little surprised, in turning over these pages, to come upon the

admirable, thrice admirable story, called "Gringalet et Coupe en Deux," which is related by *Pique-Vinaigre* to his companions in *La Force*. Rarely have I read anything of which the exquisite *skill* so delighted me. For my soul I could not suggest a fault in it—except, perhaps, that the intention of telling a *very* pathetic story is a little too transparent.

But I say that I was *surprised* in coming upon this story—and I *was* so, because one of its points has been suggested to M. Sue by a tale of my own. *Coupe en Deux* has an ape remarkable for its size, strength, ferocity, and propensity to imitation. Wishing to commit a murder so cunningly that discovery would be impossible, the master of this animal teaches it to imitate the functions of a barber, and incites it to cut the throat of a child, under the idea that, when the murder is discovered, it will be considered the uninstigated deed of the ape.

On first seeing this, I felt apprehensive that some of my friends would accuse me of plagiarising from it my "Murders in the Rue Morgue." But I soon called to mind that this latter was first published in "Graham's Magazine" for April, 1841. Some years ago "The Paris Charivari" copied my story with complimentary comments; objecting, however, to the *Rue Morgue* on the ground that no such street (to the Charivari's knowledge) existed in Paris. I do not wish of course to look upon M. Sue's adaptation of my property in any other light than that of a compliment. The similarity *may* have been entirely accidental.

Has any one observed the excessively close resemblance in subject, thought, general manner, and particular point which this clever composition (the *"Satyre Menipee"*) bears to the "Hudibras" of Butler?

The *a priori* reasoners upon government are, of all plausible people, the most preposterous. They only argue too cleverly to permit my thinking them silly enough to be themselves deceived by their own arguments. Yet even this is possible; for there is something in the vanity of logic which addles a man's brains. Your true logician gets in time to be logicalised, and then, so far as regards himself, the universe is one *word*. A thing for him no longer exists. He deposits upon a sheet of paper a certain assemblage of syllables, and fancies that their meaning is riveted by the act of deposition. I am serious in the opinion that some such process of thought passes through the mind of the "practised" logician as he makes note of the thesis proposed. He is not aware that he thinks in this way—but, unwittingly, he so thinks. The syllables deposited acquire in his view a new character. While afloat in his brain, he might have been brought to admit the possibility that these syllables were variable exponents of various phases of thought; but he will not admit this if he once gets them upon the paper.

In a single page of "Mill" I find the word "force" employed four times; and each employment varies the idea. The fact is that *a priori* argument is much worse than useless except in the mathematical sciences, where it is possible to obtain *precise* meanings. If there is any one subject in the world to which

it is utterly and radically inapplicable, that subject is Government. The *identical* arguments used to sustain Mr. Bentham's positions might, with little exercise of ingenuity, be made to overthrow them; and, by ringing small changes on the words "leg-of-mutton" and "turnip" (changes so *gradual* as to escape detection), I could *"demonstrate"* that a turnip was, is, and of right ought to be a leg-of-mutton.

The concord of sound-and-sense principle was never better exemplified than in these lines:—

Ast amans charæ thalamum puellæ
Deserit flens, et tibi verba dicit
Aspera, amplexu teneræ cupito a—
—vulsus amicæ.

Miss Gould has much in common with Mary Howitt—the characteristic trait of each being a sportive, quaint, epigrammatic grace that keeps clear of the absurd by never employing itself upon very exalted topics. The verbal style of the two ladies is identical. Miss Gould has the more talent of the two, but is somewhat the less original. She has occasional flashes of a far higher order of merit than appertains to her ordinary manner. Her "Dying Storm" might have been written by Campbell.

Cornelius Webbe is one of the best of that numerous school of extravaganzists who sprang from the ruins of Lamb. We must be in perfect good-humour, however, with ourselves and all the world, to be much pleased with such works as "The Man about Town," in which the harumscarum, hyper-excursive mannerism is carried to an excess which is frequently fatiguing.

Nearly, if not quite the best "Essays on a Future State." The arguments called "Deductions *from* our Reason" are rightly enough addressed more to the *feelings* (a vulgar term not to be done without) than *to* our reason. The arguments deduced from Revelation are (also rightly enough) brief. The pamphlet proves nothing of course; its theorem is not to be proved.

The style is so involute that one cannot help fancying it must be falsely constructed. If the use of language is to convey ideas, then it is nearly as much a demerit that our words seem to be, as that they are, indefensible. A man's grammar, like Cæsar's wife, must not only be pure, but above suspicion of impurity.

It is the curse of a certain order of mind that it can never rest satisfied with the consciousness of its ability to do a thing. Not even is it content with doing it. It must both know and show it was done.

Not so:—a gentleman with a pug nose is a contradiction in terms—"Who can live idly and without manual labour, and will bear the port, charge, and *countenance* of a gentleman, he alone should be called master and be taken for a gentleman."—Sir Thomas Smith's "Commonwealth of England."

Here is something at which I find it impossible not to laugh;* and yet, I

---

* Translation of the Book of Jonah into German Hexameters.

laugh without knowing why. That incongruity is the principle of all non-convulsive laughter, is to my mind as clearly demonstrated as any problem in the "Principia Mathematica;" but here I cannot trace the incongruous. It is there, I know. Still I do not see it. In the meantime let me laugh.

"So violent was the state of parties in England, that I was assured by several that the Duke of Marlborough was a coward and Pope a fool."—*Voltaire.*

Both propositions have since been very seriously entertained, quite independently of all party-feeling. That Pope was a fool, indeed, seems to be an established point at present with the Crazyites—what else shall I call them?

Imitators are not, necessarily, unoriginal—except at the exact points of the imitation. Mr. Longfellow, decidedly the most audacious imitator in America, is markedly original, or, in other words, imaginative upon the whole; and many persons have, from the latter branch of the fact, been at a loss to comprehend and therefore to believe, the former. Keen sensibility of appreciation—that is to say, the poetic *sentiment* (in distinction from the poetic *power*) leads almost inevitably to imitation. Thus all great poets have been gross imitators. It is, however, a mere *non distributio medii* hence to infer that all great imitators are poets.

With all his faults, however, this author is a man of respectable powers.

Thus discourses, of *William Godwin,* the "London Monthly Magazine," May, 1818.

As a descriptive poet, Mr. Street is to be highly commended. He not only describes with force and fidelity—giving us a clear conception of the thing described—but never describes what to the poet should be nondescript. He appears, however, not at any time to have been aware that *mere* description is not poetry at all. We demand creation—poiaesis. (Gr.) About Mr. Street there seems to be no spirit. He is all matter—substance—what the chemists would call "simple substance"—and exceedingly simple it is.

I never read a personally abusive paragraph in the newspapers without calling to mind the pertinent query propounded by Johnson to Goldsmith: —"My dear Doctor, what harm does it do a man to call him Holofernes?"

Were I to consign these volumes (Voltaire's works), altogether, to the hands of any very young friend of mine, I could not, in conscience, describe them otherwise, than as *"tam multi, tam grandes, tam pretiosi codices";* and it would grieve me much to add the *"incendite omnes illas membranas."*

In reading some books we occupy ourselves chiefly with the thoughts of the author; in perusing others, exclusively with our own. And this is one of the "others"*—a suggestive book. But there are two classes of suggestive books—the positively and the nega-

---

* St. Austin *de libris Manichaeis.*

tively suggestive. The former suggest by what they say; the latter by what they might and should have said. It makes little difference, after all. In either case the true book-purpose is answered.

It is observable that, in his brief account of the Creation, Moses employs the words *Bara Elohim* (the Gods created) no less than thirty times; using the noun in the plural with the verb in the singular. Elsewhere, however—in Deuteronomy, for example—he employs the singular.—*Eloah.*

It is a thousand pities that the puny witticisms of a few professional objectors should have power to prevent, even for a year, the adoption of a name for our country. At present we have clearly none. There should be no hesitation about "Appalachia." In the first place, it is distinctive. "America"* is not and can never be made so.

We may legislate as much as we please, and assume for our country whatever name we think right—but to us it will be no name, to any purpose for which a name is needed, unless we can take it away from the regions which employ it at present. South America is "America," and will insist upon remaining so. In the second place, "Appalachia" is indigenous, springing from one of the most magnificent and distinctive features of the country itself. Thirdly, in employing this word we do honour to the Aborigines, whom, hitherto, we have at all points unmercifully despoiled, assassinated, and dishonoured. Fourthly, the name is the suggestion of, perhaps, the most deservedly eminent among all the pioneers of American literature. It is but just that Mr. Irving should name the land for which, in letters, he first established a name. The last, and by far the most truly important consideration of all, however, is the music of "Appalachia" itself; nothing could be more sonorous, more liquid, or of fuller volume, while its length is just sufficient for dignity. How the gutteral "Alleghania" could ever have been preferred for a moment is difficult to conceive. I yet hope to find "Appalachia" assumed.

M——, as a matter of course, would rather be abused by the critics than not be noticed by them at all, but he is hardly to be blamed for growling a little now and then over their criticisms, just as a dog might do if pelted with bones.

About the "Antigone," as about all the ancient plays, there seems to me a certain *baldness*, the result of inexperience in art, but which pendantry would force us to believe the result of a studied and supremely artistic simplicity. Simplicity, indeed, is a very important feature in all true art—but *not* the simplicity which we see in the Greek drama. That of the Greek sculpture is everything that can be desired, because here the art itself is simplicity in itself and in its elements. The Greek sculptor chiselled his forms from what he saw before him every

---

*Mr. Field, in a meeting of "The New York Historical Society," proposed that we take the name of "America," and bestow "Columbia" upon the Continent.

day, in a beauty nearer to perfection than any work of any Cleomenes in the world. But in the drama, the direct, straight-forward, *un-German* Greek had no Nature so immediately presented from which to make copy. He did what he could—but I do not hesitate to say that that was exceedingly little worth. The profound sense of one or two tragic, or rather melodramatic elements (such as the idea of inexorable Destiny)—this sense gleaming at intervals from out the darkness of the ancient stage, serves, in the very imperfection of its development, to show, not the dramatic ability, but the dramatic *in*ability of the ancients. In a word, the simple arts spring into perfection at their origin: the complex as inevitably demand the long and painfully progressive experience of ages. To the Greeks, beyond doubt, their drama *seemed* perfection—it fully answered, to them, the dramatic end, excitement, and this fact is urged as proof of their drama's perfection in itself. It need only be said, in reply, that their art and their sense of art were necessarily on a level.

That man is not truly brave who is afraid either to seem or to be, when it suits him, a coward.

A corrupt and impious heart*—a merely prurient fancy—a Saturnian brain in which invention has only the phosphorescent glimmer of rottenness. Worthless, body and soul—a foul reproach to the nation that engendered and endures him—a fetid battener upon the garbage of thought—no man—a beast—a pig—less scrupulous than a carrion-crow, and not very much less filthy than a Wilmer.

* Michael Masson.

It is not *proper* (to use a gentle word), nor does it seem courageous, to attack our foe by name in spirit and in effect, so that all the world shall know whom we mean, while we say to ourselves, "I have not attacked this man by name in the eye, and according to the *letter*, of the law"—yet how often are men who call themselves gentlemen guilty of this meanness! We need reform at this point of our Literary Morality, very sorely too at another—the system of anonymous reviewing. Not one respectable word can be said in defence of this most unfair—this most despicable and cowardly practice.

To vilify a great man is the readiest way in which a little man can himself obtain greatness. The Crab might never have become a Constellation but for the courage it evinced in nibbling Hercules on the heel.

I hardly know how to account for the repeated failures of John Neal as regards the *construction* of his works. His art is great and of a high character—but it is massive and undetailed. He seems to be either deficient in a sense of completeness, or unstable in temperament; so that he becomes wearied with his work before getting it done. He always begins well—vigorously—startlingly—proceeds by fits—much at random—now prosing, now gossiping, now running away with his subject, now exciting vivid interest; but his conclusions are sure to be hurried

and indistinct; so that the reader, perceiving a falling-off where he expects a climax, is pained, and, closing the book with dissatisfaction, is in no mood to give the author credit for the vivid sensations which have been aroused *during the progress* of perusal. Of all literary foibles the most fatal, perhaps, is that of defective climax. Nevertheless, I should be inclined to rank John Neal first, or at all events second, among our men of indisputable *genius*. Is it, or is it not a fact, that the air of a Democracy agrees better with mere Talent than with Genius?

Among the moralists who keep themselves erect by the perpetual swallowing of pokers, it is the fashion to decry the "fashionable" novels. These works have their demerits; but a vast influence which they exert for an undeniable good has never yet been duly considered. "Ingenu*os* didicisse fideliter *libros,* emollit mores nec sinit esse feros." Now, the fashionable novels are just the books which most do circulate among the class *un*fashionable; and their effect in softening the worst callosities—in smoothing the most disgusting asperities of vulgarism, is prodigious. With the herd, to admire and to attempt imitation are the same thing. What if, in this case, the manners imitated are frippery; better frippery than brutality—and, after all, there is little danger that the intrinsic value of the sturdiest iron will be impaired by a coating of even the most diaphanous gilt.

The ancients had at least half an idea that we travelled on horseback to heaven. See a passage of Passeri, *"de animæ transvectione"*—quoted by Caylus. See, also, many old tombs.

The author of "Cromwell,"* does better as a writer of ballads than of prose. He has fancy, and a fine conception of rhythm. But his romantico-histories have all the effervescence of his verse, without its flavour. Nothing worse than his *tone* can be invented:—turgid sententiousness, involute, spasmodically straining after effect. And to render matters worse, he is as thorough an unistylist as Cardinal Chigi, who boasted that he wrote with the same pen for half a century.

Our "blues" are increasing in number at a great rate, and should be decimated at the very least. Have we no critic with nerve enough to hang a dozen or two of them, *in terrorem?* He must use a silk-cord of course—as they do in Spain with all grandees of the *blue* blood—of the *"sangre azula."*

For all the rhetorician's rules
Teach nothing but to name the tools.
—*Hudibras.*

What these oft-quoted lines go to show is that a falsity in verse will travel faster and endure longer than a falsity in prose. The man who would sneer or stare at a silly proposition nakedly put, will admit that "there is a good deal in that," when *"that"* is the point of an epigram shot into the ear. The rhetorician's rules—if they *are* rules—teach him not only to name his tools, but to use his tools—the capacity of

---

* Henry Wm. Herbert.

his tools—their extent—their limit; and from an examination of the nature of the tools—(an examination forced on him by their constant presence)—force him also into scrutiny and comprehension of the material on which the tools are employed, and thus, finally, suggest and give birth to new material for new tools.

Among his *eidola* of the den, the tribe, the forum, the theatre, etc., Bacon might well have placed the great *eidolon* of the parlour (or of the wit, as I have termed it in one of these Marginalia), the idol whose worship blinds man to truth by dazzling him with the *apposite*. But what title could have been invented for that idol which has propagated, perhaps, more of gross error than all combined?—the one, I mean, which demands from its votaries that they reciprocate cause and effect—reason in a circle—lift themselves from the ground by pulling up their pantaloons—and carry themselves on their own heads, in hand-baskets, from Beersheba to Dan.

All—absolutely all the argúmentation which I have seen on the nature of the soul, or of the Deity, seems to me nothing but worship of this unamiable idol. *Pour savior ce qu'est Dieu,* says Bielfeld, although nobody listens to the solemn truth, *il faut etre Dieu meme*—and to reason about the reason is of all things the most unreasonable. At least, he alone is fit to discuss the topic who perceives at a glance the insanity of its discussion.

I believe it is Montaigne who says—"People talk about thinking, but for my part I never begin to think until I sit down to write." A better plan for him would have been never to sit down to write until he had made an end of thinking.

No doubt the association of idea is somewhat singular, but I never can hear a crowd of people singing and gesticulating altogether at an Italian opera without fancying myself at Athens, listening to that particular tragedy by Sophocles in which he introduces a full chorus of turkeys who set about bewailing the death of Meleager. It is noticeable in this connection, by the way, that there is not a goose in the world who, in point of sagacity, would not feel itself insulted in being compared with a turkey. The French seem to feel this. In Paris, I am sure, no one would think of saying to Mr. F——, "What a goose you are!" —"Quel *dindon* tu es!" would be the phrase employed as equivalent.

Alas! how many American critics neglect the happy suggestion of M. Timon—*"que le ministre de L'Instruction Publique doit lui-meime savior parler Francais."*

It is folly to assert, as some at present are fond of asserting, that the Literature of any nation or age was ever injured by plain speaking on the part of the Critics. As for American Letters, plain speaking about *them* is simply the one thing needed. They are in a condition of absolute quagmire—a quagmire, to use the words of Victor Hugo, *d'ou on ne peut se tirer pas des periphrases—pas des quemadmodums et des verumenimveros.*

It is certainly very remarkable that although destiny is the ruling idea of the Greek drama, the word Tuchae (Fortune) does not appear once in the whole Iliad.

Had John Bernouilli lived to have the experience of Fuller's occiput and sinciput, he would have abandoned in dismay his theory of the non-existence of hard bodies.

They have ascertained in China that the abdomen is the seat of the soul; and the acute Greeks considered it a waste of words to employ more than a single term, phrenes, for the expression both of the mind and of the diaphragm.

"What does a man learn by travelling?" demanded Doctor Johnson one day in a great rage—"What did Lord Charlemont learn in his travels, except that there was a snake in one of the pyramids of Egypt?"—but had Doctor Johnson lived in the days of the Silk Buckinghams, he would have seen that, so far from thinking anything of finding a snake in a pyramid, your traveller would take his oath at a moment's notice of having found a pyramid in a snake.

The author of "Miserrimus" *might have been* W. G. Simms (whose "Martin Faber" is just such a work)—but *is* G. W. M. Reynolds, an Englishman, who wrote also, "Albert de Rosanne," and "Pickwick Abroad"—both excellent things in their way.

L—— is busy in attempting to prove that his play was not fairly d——d; that it is only "scotched, not killed;" but if the poor play could speak from the tomb, I fancy it would sing with the opera heroine:

> The flattering error cease to prove.
> Oh *let* me be deceased!

We may safely grant that the *effects* of the oratory of Demosthenes were vaster than those wrought by the eloquence of any modern, and yet controvert the idea that the modern eloquence itself is superior to that of the Greek. The Greeks were an excitable, *unread* race, for they had no printed books. *Viva voce* exhortations carried with them, to their quick apprehensions, all the gigantic force of *the new*. They had much of that vivid interest which the first fable has upon the dawning intellect of the child—an interest which is worn away by the frequent perusal of similar things—by the frequent inception of similar fancies. The suggestions, the arguments, the incitements of the ancient rhetorician were, when compared with those of the modern, absolutely novel; possessing thus an immense adventitious force—a force which has been, oddly enough, left out of sight in all estimates of the eloquence of the two eras.

The finest philippic of the Greeks would have been hooted at in the British House of Peers, while an impromptu of Sheridan, or of Brougham, would have carried by storm all the hearts and all the intellects of Athens.

Much has been said of late about the necessity of maintaining a proper *nationality* in American Letters, but what this nationality *is*, or what is to be gained by it, has never been dis-

tinctly understood. That an American should confine himself to American themes, or even prefer them, is rather a political than a literary idea—and at best is a questionable point. We could do well to bear in mind that "distance lends enchantment to the view." *Ceteris paribus*, a foreign theme is, in a strictly literary sense, to be preferred. After all, the world at large is the only legitimate stage for the autorial *histrio*.

But of the need of *that* nationality which defends our own literature, sustains our own men of letters, upholds our own dignity, and depends upon our own resources, there cannot be the shadow of a doubt. Yet here is the very point at which we are most supine. We complain of our want of an International Copyright on the ground that this want justifies our publishers in inundating us with British opinion in British books; and yet when these very publishers, at their own obvious risk, and even obvious loss, do publish an American book, we turn up our noses at it with supreme contempt (this as a general thing) until it (the American book) has been dubbed "readable" by some illiterate Cockney critic. Is it too much to say that, with us, the opinion of Washington Irving—of Prescott—of Bryant—is a mere nullity in comparison with that of any anonymous sub-sub-editor of the "Spectator," the "Athenæum," or the London "Punch?" It is *not* saying too much to say this. It is a solemn—an absolutely awful fact. Every publisher in the country will admit it to be a fact. There is not a more disgusting spectacle under the sun that our subserviency to British criticism. It is disgusting, first, because it is truckling, servile, pusillanimous; secondly, because of its gross irrationality. We *know* the British to bear us little but ill-will; we know that, in no case, do they utter unbiassed opinions of American books; we know that in the few instances in which our writers have been treated with common decency in England, these writers have either openly paid homage to English institutions, or have had lurking at the bottom of their hearts a secret principle at war with Democracy—we *know* all this, and yet, day after day, submit our necks to the degrading yoke of the crudest opinion that emanates from the fatherland. Now if we *must* have nationality, let it be a nationality that will throw off this yoke.

The chief of the rhapsodists who have ridden us to death like the Old Man of the Mountain is the ignorant and egotistical Wilson. We use the term rhapsodists with perfect deliberation; for Macaulay and Dilke and one or two others excepted, there is not in Great Britain a critic who can be fairly considered worthy the name. The Germans, and even the French, are infinitely superior. As regards Wilson, no man ever penned worse criticism or better rhodomontade. That he is "egotistical" his works show to all men, running as they read. That he is "ignorant" let his absurd and continuous school-boy blunders about Homer bear witness. Not long ago we ourselves pointed out a series of similar inanities in his review of Miss Barrett's poems—a series we say, of gross blunders, arising from sheer ignorance—and we defy him or any one to answer a single syllable of what we then advanced.

And yet this is the man whose simple *dictum* (to our shame be it spoken)

has the power to make or to mar any American reputation! In the last number of "Blackwood," he has a continuation of the dull "Specimens of the British Critics," and makes occasion wantonly to insult one of the noblest of our poets, Mr. Lowell. The point of the whole attack consists in the use of slang epithets and phrases of the most ineffably vulgar description. "Squabashes" is the pet term. "Faugh!" is another. "We are Scotsmen to *the spine!*" says Sawney—as if the thing were not more than self-evident. Mr. Lowell is called a "magpie," and "ape," a "Yankee cockney," and his name is intentionally miswritten *John* Russell Lowell. Now were these indecencies perpetrated by an American critic, that critic would be sent to Coventry by the whole press of the country, but since it is Wilson who insults, we, as in duty bound, not only submit to the insult, but echo it, as an excellent jest, throughout the length and breadth of the land. *Quamdiu Catilina?* We do indeed demand the nationality of self-respect. In Letters as in Government we require a Declaration of Independence. A better thing still would be a declaration of War—and that war should be carried forthwith "into Africa."

The "Doctor" has excited great attention in America as well as in England, and has given rise to every variety of conjecture and opinion, not only concerning the author's individuality, but in relation to the meaning, purpose, and character of the book itself. It is now said to be the work of one author—now of two, three, four, five—as far even as nine or ten. These writers are sometimes thought to have composed the "Doctor" conjointly—sometimes to have written each a portion. These individual portions have even been pointed out by the supremely acute, and the names of their respective fathers assigned. Supposed discrepancies of taste and manner, together with the prodigal introduction of mottoes, and other scraps of erudition (apparently beyond the compass of a single individual's reading) have given rise to this idea of a multiplicity of writers—among whom are mentioned in turn all the most witty, all the most eccentric, and especially all the most learned of Great Britain. Again—in regard to the nature of the book. It has been called an imitation of Sterne—an august and most profound exemplification, under the garb of eccentricity, of some all-important moral law—a true, under guise of a fictitious, biography—a simple *jeu d'esprit*—a mad farrago by a Bedlamite, and a great multiplicity of other equally fine names and hard. Undoubtedly, the best method of arriving at a decision in relation to a work of this nature, is to read it through with attention, and thus see what can be made of it. We have done so, and can make nothing of it, and are therefore clearly of opinion that the "Doctor" is precisely—nothing. We mean to say that it is nothing better than *a hoax*.

That any serious truth is meant to be inculcated by a tissue of bizarre and disjointed rhapsodies, whose *general* meaning no person can fathom, is a notion altogether untenable, unless we suppose the author a madman. But there are none of the proper evidences of madness in the book—while of mere *banter* there are instances innumerable.

One-half, at least, of the entire publication is taken up with palpable quizzes, reasonings in a circle sentences, like the nonsense verses of Du Bartas, evidently framed to mean nothing, while wearing an air of profound thought, and grotesque speculations in regard to the probable excitement to be created by the book.

It appears to have been written with a sole view (or nearly with the sole view) of exciting inquiry and comment. That this object should be fully accomplished cannot be thought very wonderful when we consider the excessive trouble taken to accomplish it by vivid and powerful intellect. That the "Doctor" is the offspring of such intellect is proved sufficiently by many passages of the book, where the writer appears to have been led off from his main design. That it is written by more than one man should not be deduced either from the apparent immensity of its erudition, or from discrepancies of style. That man is a desperate mannerist who cannot vary his style *ad infinitum;* and although the book *may* have been written by a number of learned *bibliophagi*, still there is, we think, nothing to be found in the book itself at variance with the possibility of its being written by any one individual of even mediocre reading. Erudition is only certainly known in its *total* results. The mere grouping together of mottoes from the greatest multiplicity of the rarest works, or even the apparently natural inweaving into any composition, of the sentiments and manner of these works, are attainments within the reach of any well-informed, ingenious, and industrious man having access to the great libraries of London. Moreover, while a single individual possessing these requisites and opportunities might, through a rabid desire of *creating a sensation,* have written, with some trouble, the "Doctor," it is by no means easy to imagine that a plurality of sensible persons could be found willing to embark in such absurdity from a similar, or indeed from any imaginable inducement.

The present edition of the Harpers consists of two volumes in one. Volume one commences with a *Prelude of Mottoes* occupying two pages. Then follows a *Postscript*—then a *Table of Contents to the first volume,* occupying eighteen pages. Volume two has a similar *Prelude of Mottoes* and *Table of Contents.* The whole is subdivided into Chapters. Ante-Initial, Initial, and Post Initial, with Inter-Chapters. The pages have now and then a typographical *queerity*—a monogram, a scrap of grotesque music, old English, etc. Some characters of this latter kind are printed with coloured ink in the British edition, which is gotten up with great care. All these oddities are in the manner of Sterne, and some of them are exceedingly well conceived. The work professes to be a Life of one Doctor Daniel Dove and his horse Nobs—but we should put no very great faith in this biography. On the back of the book is a monogram—which appears again once or twice in the text, and whose solution is a fertile source of trouble with all readers. This monogram is a triangular pyramid; and as, in geometry, the solidity of every polyhedral body may be computed by dividing the body into pyramids, the pyramid is thus considered as the base or essence of every polyhedron. The author, then, after

his own fashion, may mean to imply that his book is the basis of all solidity or wisdom—or perhaps, since the polyhedron is not only a solid, but a solid terminated by *plane faces,* that the "Doctor" is the very essence of all that spurious wisdom which will terminate in just nothing at all—in a hoax, and a consequent multiplicity of *blank visages.* The wit and humour of the "Doctor" have seldom been equalled. We cannot think Southey wrote it, but have no idea who did.

These twelve Letters are occupied, in part, with minute details of such atrocities on the part of the British, during their sojourn in Charleston, as the quizzing of Mrs. Wilkinson and the pilfering of her shoe-buckles—the remainder being made up of the indignant comments of Mrs. Wilkinson herself.

It is very true, as the Preface assures us, that "few records exist of American women either before or during the war of the Revolution, and that those perpetuated by History want the charm of personal narration"—but then we are well delivered from such charms of personal narration as we find here. The only supposable merit in the compilation is that dogged air of truth with which the fair authoress relates the lamentable story of her misadventures. I look in vain for that "useful information" about which I have heard—unless, indeed, it is in the passage where we are told that the letter-writer "was a young and beautiful widow; that her handwriting is clear and feminine; and that the letters were copied by herself into a blank quarto book, on which the extravagant sale-price marks one of the features of the times"—there are other extravagant sale-prices, however, besides that—it was seventy-five cents that I paid for these "Letters." Besides, they are silly, and I cannot conceive why Mrs. Gilman thought the public wished to read them. It is really too bad for her to talk at a body, in this style, about "gathering relics of past history," and "floating down streams of time."

As for Mrs. Wilkinson, I am rejoiced that she lost her shoe-buckles.

Advancing briskly with a rapier, he *did the business* for him at a blow.—*Smollett.*

This vulgar colloquialism had its type among the Romans, *Et ferro subitus grassatus, agit rem.—Juvenal.*

As to this last term ("high-binder") which is so confidently quoted as modern ("not in use, *certainly,* before 1819"), I can refute all that is said by referring to a journal in my own possession—"The Weekly Inspector," for December 27, 1806—published in New York:

On Christmas Eve a party of banditti, amounting, it is stated, to forty or fifty members of an association calling themselves *"High-Binders,"* assembled in front of St. Peter's Church, in Barclay Street, expecting that the Catholic ritual would be performed with a degree of pomp and splendour which has usually been omitted in this city. These ceremonies, however, not taking place, the High-Binders manifested great displeasure.

In a subsequent number, the association are called "Hide-Binders." They were Irish.

Perhaps Mr. Barrow* is right after all, and the dearth of genius in America *is* owing to the continual teasing of the mosquitoes.

The title of this book deceives us.† It is by no means "talk," as men understand it—not that true talk of which Boswell has been the best historiographer. In a word, it is not *gossip,* which has been never better defined than by Basil, who calls it "talk for talk's sake," nor more thoroughly comprehended than by Horace Walpole and Mary Wortley Montague, who made it a profession and a purpose. Embracing all things, it has neither beginning, middle, nor end. Thus of the gossipper it was not properly said that "he commences his discourse by jumping *in medias res.*" For, clearly, your gossipper commences not at all. He is begun. He is already begun. He is always begun. In the matter of end he is indeterminate. And by these extremes shall ye know him to be of the Cæsars—*porphyrogenitus*—of the right vein—of the true blood—of the blue blood—of the *sangre azula.* As for laws, he is cognizant of but one, the invariable absence of all. And for his road, were it as straight as the Appia and as broad as that "which leadeth to destruction," nevertheless would he be malcontent without a frequent hop-skip-and-jump, over the hedges, into the tempting pastures of digression beyond. Such is the gossipper, and of such alone is the true *talk.* But when Coleridge asked Lamb if he had ever heard him *preach,* the answer was quite happy—"I have never heard you do anything else." The truth is that "Table Discourse" *might* have answered as a title to this book; but its character can be fully conveyed only in "Post-Prandian Sub-Sermons," or "Three Bottle Sermonoids."

A rather bold and quite unnecessary plagiarism—from a book too well known to promise impunity:

It is now full time to begin to brush away the insects of literature, whether creeping or fluttering, which have too long crawled over and soiled the intellectual ground of this country. It is high time to shake the little sickly stems of many a puny plant, and make its fading flowerets fall.—"Monthly Register," p. 243, vol. 2, New York, 1807.

On the other hand—

I have brushed away the insects of literature, whether fluttering or creeping; I have shaken the little stems of many a puny plant, and the flowerets have fallen.—Preface to D'Israeli's "Pursuits of Literature."

Men of genius are far more abundant than is supposed. In fact, to appreciate thoroughly the work of what we call genius is to possess all the genius by which the work was produced. But the person appreciating may be utterly incompetent to reproduce the work, or anything similar, and this solely through lack of what may be termed the constructive ability—a matter quite independent of what we agree to understand in the term "genius" itself. This ability is based, to be sure, in great part

---

* "Voyage to Cochin-China."

† Coleridge's "Table-Talk."

upon the faculty of analysis, enabling the artist to get full view of the machinery of his proposed effect, and thus work it and regulate it at will, but a great deal depends also upon properties strictly moral—for example, upon patience, upon concentrativeness, or the power of holding the attention steadily to the one purpose, upon self-dependence and contempt for all opinion which is opinion and no more—in especial, upon energy or industry. So vitally important is this last that it may well be doubted if anything to which we have been accustomed to give the title of a "work of genius" was ever accomplished without it; and it is chiefly because this quality and genius are nearly incompatible that "works of genius" are few, while mere men of genius are, as I say, abundant. The Romans, who excelled us in acuteness of *observation*, while falling below us in induction from facts observed, seem to have been so fully aware of the inseparable connection between industry and a "work of genius" as to have adopted the error that industry, in great measure, was genius itself. The highest compliment is intended by a Roman when of an epic, or anything similar, he says that it is written *industria mirabili* or *incredibili industria*.

The merely mechanical style of "Athens" is far better than that of any of Bulwer's previous books. In general he is atrociously involute; this is his main defect. He wraps one sentence in another *ad infinitum*, very much in the fashion of those "nests of boxes" sold in our wooden-ware shops, or like the islands within lakes, within islands within lakes, within islands within lakes, of which we read so much in the "Periplus" of Hanno.

All true men must rejoice to perceive the decline of the miserable rant and cant against originality, which was so much in vogue a few years ago among a class of microscopical critics, and which at one period threatened to degrade all American literature to the level of Flemish art.

Of puns it has been said that those most dislike who are least able to utter them; but with far more of truth may it be asserted that invectives against originality proceed only from persons at once hypocritical and commonplace. I say hypocritical—for the love of novelty is an indisputable element of the moral nature of man; and since to be original is merely to be novel, the dolt who professes a distaste for originality, in letters or elsewhere, proves in no degree his aversion for the thing in itself, but merely that uncomfortable hatred which ever arises in the heart of an envious man for an excellence he cannot hope to attain.

When I call to mind the preposterous "asides" and soliloquies of the drama among civilized nations, the shifts employed by the Chinese playwrights appear altogether respectable. If a general on a Pekin or Canton stage is ordered on an expedition "he brandishes a whip," says Davis, "or takes in his hands the reins of a bridle, and striding three or four times around a platform, in the midst of a tremendous crash of gongs, drums, and trumpets, finally stops short and tells the audience where he has arrived." It would sometimes puzzle a European stage hero in

no little degree to "tell an audience where he has arrived." Most of them seem to have a very imperfect conception of their whereabouts. In the "Mort De Cesar," for example, Voltaire makes his populace rush to and fro exclaiming, *"Courons au Capitole!"* Poor fellows—they are in the capitol all the time; in his scruples about unity of place the author has never once let them out of it.

Sallust, too. He had much the same free-and-easy idea, and Metternich himself could not have quarrelled with his *"Impune quæ libet facere id est esse regem."*

A ballad entitled *"Indian Serenade,"* and put into the mouth of the hero, Vesco Nunez, is perhaps the most really meritorious portion of Mr. Simms' "Damsel of Darien." This stanza is full of music:

And their wild and mellow voices
Still to hear along the deep,
Every brooding star rejoices,
While the billow, on its pillow,
Lulled to silence seems to sleep.

And also this:

'Tis the wail for life they waken
By Samana's yielding shore—
With the tempest it is shaken;
The wild ocean is in motion,
And the song is heard no more.

Here is a man who is a scholar and an artist, who knows precisely how every effect has been produced by every great writer, and who is resolved to reproduce them. But the heart passes by his pitfalls and traps, and carefully-planned springs, to be taken captive by some simple fellow who expected the event as little as did his prisoner.—*Lowell's "Conversations."*

Perhaps I err in quoting these words as the author's own—they are in the mouth of one of his interlocutors—but whoever claims them, they are poetical and no more. The error is exactly that common one of separating practice from the theory which includes it. In all cases, if the practice fail, it is because the theory is imperfect. If Mr. Lowell's heart be not caught in the pitfall or trap, then the pitfall is ill-concealed and the trap is not properly baited or set. One who has *some artistical ability* may know how to do a thing, and even show how to do it, and yet fail in doing it after all; but the artist and the man of some artistic ability must not be confounded. He only is the former who can carry his most shadowy precepts into successful application. To say that a critic could not have written the work which he criticises is to put forth a contradiction in terms.

Talking of conundrums—Why will a geologist put no faith in the fable of the fox that lost his tail? Because he knows that no animal remains have ever been found in a trap.

We have long learned to reverence the fine intellect of Bulwer. We take up any production of his pen with a positive certainty that, in reading it, the wildest passions of our nature, the most profound of our thoughts, the brightest visions of our fancy, and the

most ennobling and lofty of our aspirations will, in due turn, be enkindled within us. We feel sure of rising from the perusal a wiser if not a better man. In no instance are we deceived. From the brief tale—from the "Monos and Daimonos" of the author—to his most ponderous and laboured novels—all is richly and glowingly intellectual—all is energetic, or astute, or brilliant, or profound. There *may* be men now living who possess the power of Bulwer—but it is quite evident that very few have made that power so palpably manifest. Indeed we know of *none*. Viewing him as a novelist—a point of view exceedingly unfavourable (if we hold to the common acceptation of "the novel") for a proper contemplation of his genius—he is unsurpassed by any writer living or dead. Why should we hesitate to say this, feeling, as we do, thoroughly persuaded of its truth. Scott has excelled him in *many* points, and "The Bride of Lammermoor" is a better book than any individual work by the author of Pelham—"Ivanhoe" is, perhaps, equal to any. Descending to particulars, D'Israeli has a more brilliant, a more lofty, and a more delicate (we do not say a *wilder*) imagination. Lady Dacre has written "Ellen Wareham," a more forcible tale of passion. In some species of wit Theodore Hook rivals, and in broad humour our own Paulding surpasses him. The writer of "Godolphin" equals him in energy. Banim is a better sketcher of character. Hope is a richer colourist. Captain Trelawney is as original, Moore is as fanciful, and Horace Smith is as learned. But who is there uniting in one person the imagination, the passion, the humour, the energy, the knowledge of the heart, the artist-like eye, the originality, the fancy, and the learning of Edward Lytton Bulwer? In a vivid wit—in profundity and a Gothic massiveness of thought—in style—in a calm certainty and definitiveness of purpose—in industry—and above all, in the power of controlling and regulating by volition his illimitable faculties of mind, he is unequalled—he is unapproached.

The author of "Richelieu" and "Darnley" is lauded, by a great majority of those who laud him, from mere motives of duty, not of inclination—a duty erroneously conceived. He is looked upon as the head and representative of those novelists who, in historical romance, attempt to blend interest with instruction. His sentiments are found to be pure—his *morals* unquestionable, and pointedly shown forth—his language indisputably correct. And for all this, praise assuredly, but then only a certain degree of praise, should be awarded him. To be pure in his expressed opinions is a duty; and were his language as correct as any spoken, he would speak only as every gentleman should speak. In regard to his historical information, were it much more accurate, and twice as extensive as, from any visible indications, we have reason to believe it, it should still be remembered that similar attainments are possessed by many thousands of well-educated men of all countries, who look upon their knowledge with no more than ordinary complacency; and that a far higher reach of erudition is within the grasp of any general reader having access to the great libraries of Paris or the Vatican. Something more than we have mentioned is

necessary to place our author upon a level with the best of the English novelists—for here his admirers would desire us to place him. Had Sir Walter Scott never existed, and Waverly never been written, we would not, of course, award Mr. J. the merit of being the first to blend history, even successfully, with fiction. But as an indifferent imitator of the Scotch novelist in this respect, it is unnecessary to speak of the author of "Richelieu" any farther. To genius of any kind, it seems to us, that he has little pretension. In the solemn tranquillity of his pages we seldom stumble across a novel emotion, and if any matter of deep interest arises in the path, we are pretty sure to find it an interest appertaining to some historical fact equally vivid or more so in the original chronicles.

Jack Birkenhead, *apud* Bishop Sprat, says that "a great wit's great work is to refuse." The apophthegm must be swallowed *cum grano salis*. His greatest work is to originate no matter that shall require refusal.

There is an old German chronicle about Reynard the Fox when crossed in love, about how he desired to turn hermit, but could find no spot in which he could be "thoroughly alone," until he came upon the desolate fortress of Malspart. He should have taken to reading the "American Drama" of "Witchcraft." I fancy he would have found himself "thoroughly alone" in that.

Since it has become fashionable to trundle houses about the streets, should there not be some remodelling of the legal definition of reality, as "that which is permanent, fixed, and immovable, that cannot be carried out of its place?" According to this, a house is by no means real estate.

The enormous multiplication of books in every branch of knowledge is one of the greatest evils of this age; since it presents one of the most serious obstacles to the acquisition of correct information, by throwing in the reader's way piles of lumber, in which he must painfully grope for the scraps of useful matter peradventure interspersed.

That Professor Wilson is one of the most gifted and altogether one of the most remarkable men of his day, few persons will be weak enough to deny. His ideality—his enthusiastic appreciation of the beautiful conjoined with a temperament compelling him into action and expression, has been the root of his pre-eminent success. Much of it, undoubtedly, must be referred to that so-called moral courage which is but the consequence of the temperament in its physical elements. In a word, Professor Wilson is what he is, because he possesses ideality, energy, and audacity, each in a very unusual degree. The first, almost unaided by the two latter, has enabled him to produce much impression as a poet upon the secondary or tertiary grades of the poetic comprehension. His "Isle of Palms" appeals effectively to all those poetic intellects in which the poetic predominates greatly over the intellectual element. It is a composition which delights through the glow of its imagination, but which repels

(comparatively, of course) through the *niaiseries* of its general conduct and construction. As a critic Professor Wilson has derived, as might easily be supposed, the greatest aid from the qualities for which we have given him credit—and it is in criticism especially, that it becomes very difficult to say which of these qualities has assisted him the most. It is sheer audacity, however, to which, perhaps, after all, he is the most particularly indebted. How little he owes to intellectual pre-eminence, and how much to the mere overbearing impetuosity of his opinions, would be a singular subject for speculation. Nevertheless it is true, that this rash spirit of domination would have served, without his rich ideality, but to hurry him into contempt. Be this as it may, in the first requisite of a critic the Scotch Aristarchus is grossly deficient. Of one who instructs we demand, in the first instance, a certain knowledge of the principles which regulate the instruction. Professor Wilson's capability is limited to a keen appreciation of the beautiful, and a fastidious sense of the deformed. Why or how either is either, he never dreams of pretending to inquire, because he sees clearly his own inability to comprehend. He is no analyst. He is ignorant of the machinery of his own thoughts and the thoughts of other men. His criticism is emphatically on the surface—superficial. His opinions are mere *dicta*—unsupported *verba magistri*—and are just or unjust at the variable taste of the individual who reads them. He persuades—he bewilders—he overwhelms—at times he even argues—but there has been no period at which he ever *demonstrated* anything beyond his own utter incapacity for demonstration.

One of the most singular styles in the world, certainly one of the most loose, is that of the elder D'Israeli. For example, he thus begins his Chapter on Bibliomania: "The preceding article [that on Libraries] is honourable to litterature." Here no self-praise is intended. The writer means to say merely that the facts narrated in the preceding article are honourable, etc. Three-fourths of his sentences are constructed in a similar manner. The blunders evidently arise, however, from the author's pre-occupation with his subject. His thought, or rather, matter, outruns his pen, and drives him upon condensation at the expense of luminousness. The manner of D'Israeli has many of the traits of Gibbon, although little of the latter's precision.

Words—printed ones especially—are murderous things. Keats did (or did not) die of a criticism, Cromwell of Titus's pamphlet "Killing no Murder," and Montfleury perished of the "Andromache." The author of the "Parnasse Reforme" makes him thus speak in Hades—"*L'homme donc qui voudrait savoir ce dont ie suis mort qu'il ne demande pas s'il fut de fievre ou de podagre ou d'autre chose, mais qu'il entende que se fut de L'Andromache.*" As for myself, I am fast dying of the "*Sartor Resartus.*"

Captain Hall is one of the most agreeable of writers. We like him for the same reason that we like a good drawing-room conversationist—there is such a pleasure in listening to his ele-

gant nothings. Not that the captain is unable to be profound. He has, on the contrary, some reputation for science. But in his hands even the most trifling personal adventures become interesting from the very piquancy with which they are told.

We are not among those who regard the genius of Petrarch as a subject for enthusiastic admiration. The characteristics of his poetry are not traits of the highest, or even of a high order, and in accounting for his fame the discriminating critic will look rather to the circumstances which surround the man than to the literary merits of the pertinacious sonneteer. Grace and tenderness we grant him, but these qualities are surely insufficient to establish his poetical apotheosis.

In other respects he is entitled to high consideration. As a patriot, notwithstanding some accusations which have been rather urged than established, we can only regard him with approval. In his republican principles, in his support of Rienzi at the risk of the displeasure of the Colonna family, in his whole political conduct, in short, he seems to have been nobly and disinterestedly zealous for the welfare of his country. But Petrarch is most important when we look upon him as the bridge by which over the dark gulf of the Middle Ages, the knowledge of the old world made its passage into the new. His influence on what is termed the revival of letters was perhaps greater than that of any man who ever lived—certainly far greater than that of any of his immediate contemporaries. His ardent zeal in recovering and transcribing the lost treasures of antique lore cannot be too highly appreciated. But for him many of our most valued classics might have been numbered with Pindar's hymns and dithyrambics. He devoted days and nights to this labour of love, snatching numerous precious books from the very brink of oblivion. His judgment in these things was strikingly correct, while his erudition, for the age in which he lived, and for the opportunities he enjoyed, has always been a subject of surprise.

One of the most singular pieces of literary Mosaic is Mr. Longfellow's "Midnight Mass for the Dying Year." The general idea and manner are from Tennyson's "Death of the Old Year," several of the most prominent points are from the death scene of Cordelia in "Lear," and the line about the "hooded friars" is from the "Comus" of Milton. Some approach to this patchwork may be found in these lines from Tasso.

Giace l'alta Cartago; a pena i segni
De le'alte sui ruine il lido serba:
Muoino le citta, muoino i regni;
Copre i fasti e le pompe arena et herba:
E l'huom d'esser mortal per che si sdegni.

This is entirely made up from Lucan and Sulpicius. The former says of Troy:

Iam tota teguntur
Pergama dumetis: etiam periere ruinæ.

Sulpicius, in a letter to Cicero, says of Megara, Ægina, and Corinth—*"Hem! nos homunculi indignamur si quis nostrum interiit, quorum vita brevior esse*

debet, cum uno loco tot oppidorum cadavera projecta jaceant."

The ordinary pickpocket filches a purse, and the matter is at an end. He neither takes honour to himself, openly, on the score of the purloined purse, nor does he subject the individual robbed to the charge of pick-pocketism in his own person—by so much the less odious is he, then, than the filcher of literary property. It is impossible, we should think, to imagine a more sickening spectacle than that of the plagiarist, who walks among mankind with an erecter step, and who feels his heart beat with a prouder impulse on account of plaudits which he is conscious are the due of another. It is the purity, the nobility, the ethereality of just fame, it is the contrast between this ethereality and the grossness of the crime of theft which places the sin of plagiarism in so detestable a light. We are horror-stricken to find existing in the same bosom the soul-uplifting thirst for fame and the debasing propensity to pilfer. It is the anomaly, the discord, which so grossly offends.

"Les anges," says Madame Dudevant, a woman who intersperses many an admirable sentiment amid a chaos of the most shameless and altogether objectionable fiction—*"Les anges ne sont plus purs que le cœur d'un jeune homme qui aime en verite."* The angels are not more pure than the heart of a young man who loves with fervour. The hyperbole is scarcely less than true. It would be truth itself were it averred of the love of him who is at the same time young and a poet. The boyish poet-love is indisputably that one of the human sentiments which most nearly realizes our dreams of the chastened voluptuousness of heaven.

In every allusion made by the author of "Childe Harold" to his passion for Mary Chaworth there runs a vein of almost spiritual tenderness and purity, strongly in contrast with the gross earthliness pervading and disfiguring his ordinary love-poems. "The Dream," in which the incidents of his parting with her when about to travel are said to be delineated, or at least paralleled, has never been excelled (certainly never excelled by him) in the blended fervour, delicacy, truthfulness, and ethereality which sublimate and adorn it. For this reason it may well be doubted if he has written anything so universally popular. That his attachment for this "Mary" (in whose very name there indeed seemed to exist for him an "enchantment") was earnest and long-abiding, we have every reason to believe There are a hundred evidences of this fact scattered not only through his own poems and letters, but in the memoirs of his relatives and contemporaries in general. But that it *was* thus earnest and enduring does not controvert, in any degree, the opinion that it was a passion (if passion it can properly be termed) of the most thoroughly romantic, shadowy, and imaginative character. It was born of the hour, and of the youthful necessity to love, while it was nurtured by the waters, and the hills, and the flowers, and the stars. It had no peculiar regard to the person, or to the character, or to the reciprocating affection of Mary Chaworth. Any maiden, not immediately and positively repulsive, he would have loved, under the same circumstances of hourly and unrestricted communion, such as

the engravings of the subject shadow forth. They met without restraint and without reserve. As mere children they sported together; in boyhood and girlhood they read from the same books, sang the same songs, or roamed hand in hand through the grounds of the conjoining estates. The result was not merely natural or merely probable, it was as inevitable as destiny itself.

In view of a passion thus engendered, Miss Chaworth (who is represented as possessed of no little personal beauty and some accomplishments), could not have failed to serve sufficiently well as the incarnation of the ideal that haunted the fancy of the poet. It is perhaps better, nevertheless, for the mere romance of the love-passages between the two that their intercourse was broken up in early life and never uninterruptedly resumed in after years. Whatever of warmth, whatever of soul-passion, whatever of the truer share and essentiality of romance was elicited during the youthful association is to be attributed altogether to the poet. If *she* felt at all, it was only while the magnetism of *his* actual presence compelled her to feel. If *she* responded at all, it was merely because the necromancy of *his* words of fire could not do otherwise than extort a response. In absence the bard bore easily with him all the fancies which were the basis of his flame—a flame which absence itself but served to keep in vigour—while the less ideal but at the same time the less really substantial affection of his lady-love, perished utterly and forthwith, through simple lack of the element which had fanned it into being. He to her, in brief, was a not unhandsome, and not ignoble, but somewhat portionless, somewhat eccentric, and rather lame young man. She to him was the Egeria of his dreams—the Venus Aphrodite that sprang, in full and supernal loveliness, from the bright foam upon the storm-tormented ocean of his thoughts.

Mill says that he has "demonstrated" his propositions. Just in the same way Anaxagoras demonstrated snow to be black (which perhaps it is if we could see the thing in the proper light), and just in the same way the French advocate Linguet, with Hippocrates in his hand, demonstrated bread to be a slow poison. The worst of the matter is that propositions such as these seldom *stay* demonstrated long enough to be thoroughly understood.

We have read Mr. Paulding's "Life of Washington" with a degree of interest seldom excited in us by the perusal of any book whatever. We are convinced by a deliberate examination of the design, manner, and rich material of the work, that as it grows in age, it will grow in the estimation of our countrymen, and, finally, will not fail to take a deeper hold upon the public mind, and upon the public affections, than any work upon the same subject, or of a similar nature, which has been yet written—or, possibly, which may be written hereafter. Indeed, we cannot perceive the necessity of anything farther upon the great theme of Washington. Mr. Paulding has completely and most beautifully filled the *vacuum* which the works of Marshall and Sparks have left open. He has painted the boy, the man, the husband, and the Christian. He has

introduced us to the private affections, aspirations, and charities of that hero whose affections of all affections were the most serene, whose aspirations the most God-like, and whose charities the most gentle and pure. He has taken us abroad with the patriot-farmer in his rambles about his homestead. He has seated us in in his study and shown us the warrior-christian in unobtrusive communion with his God. He has done all this too, and more, in a simple and quiet manner, in a manner peculiarly his own, and which, mainly because it is his own, cannot fail to be exceedingly effective. Yet it is very possible that the public may, for many years to come, overlook the rare merits of a work whose want of arrogant assumption is so little in keeping with the usage of the day, and whose striking simplicity and *naivete* of manner give, to a cursory examination, so little evidence of the labour of composition. We have no fears, however, for the future. Such books as these before us, go down to posterity like rich wines, with a certainty of being more valued as they go. They force themselves with the gradual but rapidly accumulating power of strong wedges into the hearts and understandings of a community.

In regard to the style of Mr. Paulding's "Washington," it would scarcely be doing justice to speak of it merely as well adapted to its subject and to its immediate design. Perhaps a rigorous examination would detect an occasional want of euphony, and some inaccuracies of syntactical arrangement. But nothing could be more out of place than any such examination in respect to a book whose forcible, rich, vivid, and comprehensive English might advantageously be held up as a model for the young writers of the land. There is no better literary *manner* than the manner of Mr. Paulding. Certainly no American, and possibly no living writer of England, has more of those numerous peculiarities which go to the formation of a happy style. It is questionable, we think, whether any writer of any country combines as many of these peculiarities with as much of that essential negative virtue, the absence of affectation. We repeat, as our confident opinion, that it would be difficult, even with great care and labour, to improve upon the general manner of the volumes now before us, and that they contain many long individual passages of a force and beauty not to be surpassed by the finest passages of the finest writers in any time or country. It is this striking character in the "Washington" of Mr. Paulding—striking and peculiar indeed at a season when we are so culpably inattentive to all matters of this nature, as to mistake for style the fine airs at second hand of the silliest romances—it is this character, we say, which should insure the fulfilment of the writer's principal design, in the immediate introduction of his book into every respectable academy in the land.

Scott, in his "Presbyterian Eloquence," speaks of "that ancient fable, not much known," in which a trial of skill in singing being agreed upon between the cuckoo and the nightingale, the ass was chosen umpire. When each bird had done his best the umpire declared that the nightingale sang extremely well, but that "for a good plain

song give him the cuckoo." The judge with the long ears, in this case, is a fine type of the tribe of critics who insist upon what they call "quietude" as the supreme literary excellence—gentlemen who rail at Tennyson and elevate Addison into apotheosis.

A hundred criticisms to the contrary notwithstanding, I must regard "The Lady of Lyons" as one of the most successful dramatic efforts of modern times. It is popular, and justly so. It could not fail to be popular so long as the people have a heart. It abounds in sentiments which stir the soul as the sound of a trumpet. It proceeds rapidly and consequently, the interest not for one moment being permitted to flag. Its incidents are admirably conceived and skilfully wrought into execution. Its *dramatis personæ*, throughout, have the high merit of being natural, although, except in the case of Pauline, there is no marked individuality. She is a creation which would have done no dishonour to Shakespeare. She excites profound emotion. It has been sillily objected to her that she is weak, mercenary, and at points ignoble. She is, and what then? We are not dealing with Clarissa Harlowe. Bulwer has painted a woman. The chief defect of the play lies in the heroine's consenting to wed Beauseant while aware of the existence and even the continued love of Claud. As the plot runs there is a question in Pauline's soul between a comparatively trivial (because merely worldly) injury to her husband. Here there should not have been an instant's hesitation. The audience have no sympathy with any. Nothing on earth should have induced the wife to give up the living Melnotte. Only the assurance of his death could have justified her in sacrificing herself to Beauseant. As it is, we hate her for the sacrifice. The effect is repulsive, but I must be understood as calling this effect objectionable solely on the ground of its being at war with the whole genius of the play.

"Contempt," says an eastern proverb, "pierces even through the shell of the tortoise;" but the skull of a Fuller would feel itself insulted by a comparison, in point of impermeability, with the shell of a Gallipago turtle.

How thoroughly comprehensive is the account of Adam as given at the bottom of the old picture in the Vatican!—*"Adam, divinitus edoctus, primus scientiarum et literarum inventor."*

If need were, I should have little difficulty perhaps in defending a certain apparent dogmatism to which I am prone on the topic of versification.

"What is Poetry?" notwithstanding Leigh Hunt's rigmarolic attempt at answering it, is a query that, with great care and deliberate agreement beforehand on the exact value of certain leading words, *may* possibly be settled to the partial satisfaction of a few analytical intellects, but which, in the existing condition of metaphysics, never *can* be settled to the satisfaction of the majority; for the question is purely metaphysical, and the whole science of metaphysics is at present a chaos, through the impossibility of fixing the meanings of the words which its very nature compels it to employ. But as regards versification, this difficulty is

only partial; for although one-third of the topic may be considered metaphysical, and thus may be mooted at the fancy of this individual or of that, still the remaining two-thirds belong, undeniably, to the mathematics. The questions ordinarily discussed with so much gravity in regard to rhythm, metre, etc., are susceptible of positive adjustment by demonstration. Their laws are merely a portion of the Median laws of form and quantity—of relation. In respect then to any of these ordinary questions—these sillily moot points which so often arise in common criticism—the prosodist would speak as weakly in saying "this or that proposition is *probably* so and so, or *possibly* so and so," as would the mathematician in admitting that, in his humble opinion, or if he were not greatly mistaken, any two sides of a triangle were, together, greater than the third side. I must add, however, as some palliation of the discussions referred to, and of the objections so often urged with a sneer to "particular theories of versification binding no one but their inventor"—that there is really extant no such work as a Prosody *Raisonnee*. The Prosodies of the schools are merely collections of vague *laws*, with their more vague exceptions, based upon no principles whatever, but extorted in the most speculative manner from the usages of the ancients, who had *no* laws beyond those of their ears and fingers. "And these were sufficient," it will be said, "since 'The Iliad' is melodious and harmonious beyond anything of modern times." Admit this—but neither do we write in Greek, nor has the invention of modern times been as yet exhausted. An analysis based on the natural laws of which the bard of Scio was ignorant, would suggest multitudinous improvements to the best passages of even "The Iliad"—nor does it in any manner follow from the supposititious fact that Homer found in his ears and fingers a satisfactory system of rules (the point which I have just denied)—nor does it follow, I say, from this that the rules which *we* deduce from the Homeric *effects* are to supersede those immutable principles of time, quantity, etc.—the mathematics, in short of music—which must have stood to these Homeric effects in the relation of *causes*—the *mediate* causes of which these "ears and fingers" are simply the *intermedia*.

Of Berryer, somebody says "he is the man in whose description is the greatest possible consumption of antithesis." For "description" read "lectures," and the sentence would apply well to Hudson, the lecturer on Shakespeare. Antithesis in his end—he has no other. He does not employ it to enforce thought, but he gathers thought from all quarters with the sole view to its capacity for antithetical expression. His essays have thus only paragraphical effect; as wholes, they produce not the slightest impression. No man living could say what it is Mr. Hudson proposes to demonstrate; and if the question were propounded to Mr. H. himself we can fancy how particularly embarrassed he would be for a reply. In the end, were he to answer honestly, he would say—*"antithesis."*

As for his reading, Julius Cæsar would have said of him that he sang ill, and undoubtedly he must have "gone to the dogs" for his experience in pro-

nouncing the *r* as if his throat were bored like a rifle-barrel.

It is James Montgomery who thinks proper to style M'Pherson's "Ossian" a collection of halting, dancing, lumbering, grating, nondescript paragraphs.

A book* which puzzles me beyond measure, since, while agreeing with its general conclusions (except where it discusses *prevision*), I invariably find fault with the reasoning through which the conclusions are attained. I think the treatise grossly illogical throughout. For example—the origin of the work is thus stated in an introductory chapter:

About twelve months since I was asked by some friends to write a paper against Mesmerism—and I was furnished with materials by a highly esteemed quondam pupil, which proved incontestably that under some circumstances the operator might be duped—that hundreds of enlightened persons might equally be deceived—and certainly went far to show that the pretended science was wholly a delusion—a system of fraud and jugglery by which the imaginations of the credulous were held in thraldom through the arts of the designing. Perhaps in an evil hour I assented to the proposition thus made—but on reflection, I found that the facts before me only led to the *direct proof* that certain phenomena might be counterfeited; and the existence of counterfeit coin is rather a proof that there is somewhere the genuine standard gold to be imitated.

The fallacy here lies in a mere variation of what is called "begging the question." Counterfeit coin is said to prove the existence of genuine—this, of course, is no more than the truism that there can be no counterfeit where there is no genuine—just as there can be no badness where there is no goodness—the terms being purely relative. But *because* there can be no counterfeit where there is no original, does it in any manner follow that any undemonstrated original exists? In seeing a spurious coin we know it to be such by comparison with coins *admitted* to be genuine; but where *no* coin admitted to be genuine, how should we establish the counterfeit, and what right should we have to talk of counterfeits at all? Now, in the case of Mesmerism, our author is merely *begging the admission.* In saying that the existence of counterfeit proves the existence of real Mesmerism, he demands that the real *be admitted.* Either he demands this, or there is no shadow of force in his proposition—for it is clear that we can *pretend to be* that which is not. A man, for instance, may feign himself a sphynx or a griffin, but it would never do to regard as thus demonstrated the actual existence of either griffins or sphynxes. A word alone—the word "counterfeit"—has been sufficient to lead Mr. Newnham astray. People cannot be properly said to "counterfeit" *prevision,* etc., but to *feign* these phenomena. Dr. Newnham's argument of course is by no means original with *him,* although he seems to pride himself on it as if it were. Dr. More says:

---

* Human Magnetism, by W. Newnham.

"That there should be so universal a fame and fear of that which never was, nor is, nor can be ever in the world, is to me the greatest miracle of all. If there had not been at some time or other true miracles, it had not been so easy to impose on the people by false. The alchemist would never go about to sophisticate metals, to pass them off for true gold and silver, unless that such a thing was acknowledged as true gold and silver in the world." This is precisely the same idea as that of Dr. Newnham, and belongs to that extensive class of argumentation which is *all point*—deriving its whole effect from epigrammatism. That the belief in ghosts, or in a Deity, or in a future state, or in anythng else credible or incredible—that any such belief is universal, demonstrates nothing more than that which needs no demonstration—the human unanimity—the identity of construction in the human brain—an identity of which the inevitable result must be, upon the whole, similar deductions from similar *data*. Most especially do we disagree with the author of this book in his (implied) disparagement of the work of Chauncey Hare Townshend—a work to be valued properly only in a day to come.

The day is done, and the darkness
Falls from the wings of night,
As a feather is wafted downward
From an eagle in its flight.
Proem to Longfellow's "Waif."

The single feather here is imperfectly illustrative of the omniprevalent darkness, but a more especial objection is the likening of one feather to the falling of another. Night is personified as a bird, and darkness, the feather of this bird, falls from it, how? as another feather falls from another bird. Why, it does this, of *course*. The illustration is identical—that is to say, null. It has no more force than an identical proposition in logic.

The question of international copyright has been overloaded with words. The right of property in a literary work is disputed merely for the sake of disputation, and no man should be at the trouble of arguing the point. Those who deny it have made up their minds to deny everything tending to further the law in contemplation. Nor is the question of expediency in any respect relevant. Expediency is only to be discussed where no *rights* interfere. It would no doubt be very expedient in any poor man to pick the pocket of his wealthy neighbour (as the poor are the majority the case is precisely parallel to the copyright case), but what would the rich think if expediency were permitted to overrule their right. But even the expediency is untenable, grossly so. The immediate advantage arising to the pockets of our people, in the existing condition of things, is no doubt sufficiently plain. We get more reading for less money than if the international law existed, but the remoter disadvantages are of infinitely greater weight. In brief, they are these: First, we have injury to our national literature by repressing the efforts of our men of genius, for genius as a general rule is poor in worldly goods and cannot write for nothing. Our genius being thus repressed, we are written *at* only by our "gentlemen of elegant leisure," and mere gentlemen

of elegant leisure have been noted, time out of mind, for the insipidity of their productions. In general, too, they are obstinately conservative, and this feeling leads them into imitation of foreign, more especially of British models. This is the one main source of the imitativeness with which, as a people, we have been justly charged, although the first cause is to be found in our position as a colony. Colonies have always naturally aped the mother land. In the second place, irreparable ill is wrought by the almost exclusive dissemination among us of foreign—that is to say, of monarchical or aristocratical sentiment in foreign books, nor is this sentiment less fatal to democracy because it reaches the people themselves directly in the gilded pill of the poem or the novel. We have next to consider the impolicy of our committing in the national character, an open and continuous wrong on the frivolous pretext of its benefiting ourselves. The last and by far the most important consideration of all, however, is that sense of insult and injury aroused in the whole active intellect of the world, the bitter and fatal resentment excited in the universal heart of literature—a resentment which will not and which cannot make nice distinctions between the temporary perpetrators of the wrong and that democracy in general which permits its perpetration. The autorial body is the most autocratic on the face of the earth. How, then, can those institutions even hope to be safe which systematically persist in trampling it under foot?

The drama, as the chief of the imitative arts, has a tendency to beget and keep alive in its votaries the imitative propensity. This might be supposed *a priori,* and experience confirms the supposition. Of all imitators, dramatists are the most perverse, the most unconscionable, or the most unconscious, and have been so time out of mind. Euripides and Sophocles were merely echoes of Æschylus, and not only was Terrence Menander and nothing beyond, but of the sole Roman tragedies extant (the ten attributed to Seneca), nine are on Greek subjects. Here, then, is cause enough for the "decline of the drama," if we are to believe that the drama has declined. But it has not; on the contrary, during the last fifty years it has materially advanced. All other arts, however, have in the same interval advanced at a far greater rate—each very nearly in the direct ratio of its non-imitativeness—painting, for example, least of all—and the effect on the drama is, of course, that of apparent retrogradation.

The Swedenborgians inform me that they have discovered all that I said in a magazine article entitled "Mesmeric Revelation" to be absolutely true, although at first they were very strongly inclined to doubt my veracity, a thing which, in that particular instance, I never dreamed of not doubting myself. The story is a pure fiction from beginning to end.

Here is a book of "amusing travels," which is full enough of statistics to have been the joint composition of Messieurs Busching, Hassel, Cannabitch, Gaspari, Gutsmuth, and company.

I have never yet seen an English

heroic verse on the proper model of the Greek, although there have been innumerable attempts, among which those of Coleridge are perhaps the most absurd, next to those of Sir Philip Sidney and Longfellow. The author of "The Vision of Rubeta" has done better, and Percival better yet, but no one has seemed to suspect that the natural preponderance of spondaic words in the Latin and Greek must in the English be supplied by art—that is to say, by a careful culling of the few spondaic words which the language affords, as, for example, here:

Man is a | complex, | compound, | compost, | yet is he | God-born.

This, to all intents, is a Greek hexameter, but then its spondees are spondees, and not mere trochees. The verses of Coleridge and others are dissonant, for the simple reason that there is no equality in time between a trochee and a dactyl. When Sir Philip Sidney writes

So to the | woods Love | runnes as | well as | rides to the | palace,

he makes an heroic verse only to the eye, for "woods Love" is the only true spondee, "runs as," "well as," and "palace," have each the first syllable long and the second short—that is to say, they are all trochees, and occupy less time than the dactyls or spondee—hence the halting. Now all this seems to be the simplest thing in the world, and the only wonder is how men professing to be scholars should attempt to engraft a verse, of which the spondee is an element, upon a stock which repels the spondee as antagonistical.

In the sweet "Lily of Nithsdale" we read—

She's gane to dwell in heaven, my lassie—
She's gane to dwell in heaven;
Ye're ow'er pure, quo' the voice of God,
For dwelling out o' heaven.

The *ow'er* and the *o'* of the two last verses should be Anglicised. The Deity at least should be supposed to speak so as to be understood, although I am aware that a folio has been written to demonstrate broad Scotch as the language of Adam and Eve in Paradise.

We might contrive a very poetical and very suggestive, although, perhaps no very tenable philosophy, by supposing that the virtuous live while the wicked suffer annihilation hereafter; and the danger of the annihilation (which danger would be in the ratio of the sin) might be indicated nightly by slumber, and occasionally, with more distinctness, by a swoon. In proportion to the dreamlessness of the sleep, for example, would be the degree of the soul's liability to annihilation. In the same way, to swoon and awake in utter unconsciousness of any lapse of time during the syncope would demonstrate the soul to have been then in such condition that, had death occurred, annihilation would have followed. On the other hand, when the revival is attended with remembrance of visions (as is now and then the case, in fact), then the soul would be considered in such condition as would insure its existence after the bodily death—the bliss or wretched-

ness of the existence to be indicated by the character of the visions.

When we attend less to "authority" and more to principles, when we look *less* at merit and *more* at demerit (instead of the converse, as some persons suggest), we shall then be better critics than we are. We must neglect our models and study our capabilities. The mad eulogies on what occasionally has in letters been well done spring from our imperfect comprehension of what it is possible for us to do better. "A man who has never seen the sun," says Calderon, "cannot be blamed for thinking that no glory can exceed that of the moon; a man who has seen neither moon nor sun cannot be blamed for expatiating on the incomparable effulgence of the morning star." Now, it is the business of the critic so to soar that he shall *see the sun*, even although its orb be far below the ordinary horizon.

The United States' motto, *E pluribus unum*, may possibly have a sly allusion to Pythagoras' definition of beauty—the reduction of many into one.

The great feature of the "Curiosity Shop" is its chaste, vigorous, and glorious *imagination*. This is the one charm, all potent, which alone would suffice to compensate for a world more of error than Mr. Dickens ever committed. It is not only seen in the conception and general handling of the story or in the invention of character, but it pervades every sentence of the book. We recognise its prodigious influence in every inspired word. It is this which induces the reader who is at all ideal to pause frequently, to re-read the occasionally quaint phrases, to muse in uncontrollable delight over thoughts which, while he wonders he has never hit upon them before, he yet admits that he never has encountered. In fact it is the wand of the enchanter.

Had we room to particularise, we would mention as points evincing most distinctly the ideality of the "Curiosity Shop"—the picture of the shop itself—the newly born desire of the worldly old man for the peace of green fields—his whole character and conduct, in short—the school-master with his desolate fortunes, seeking affection in little children—the haunts of Quilp among the wharf-rats—the tinkering of the Punch-men among the tombs—the glorious scene where the man of the forge sits poring, at deep midnight, into that dread fire—again the whole conception of this character; and, last and greatest, the stealthy approach of Nell to her death—her gradual sinking away on the journey to the village, so skilfully indicated rather than described—her pensive and prescient meditation—the fit of strange musing which came over her when the house *in which she was to die* first broke upon her sight—the description of this house, of the old church, and of the churchyard—everything in rigid consonance with the one impression to be conveyed—that deep meaningless well—the comments of the Sexton upon death, and upon his own secure life—this whole world of mournful yet peaceful idea merging at length into the decease of the child Nelly, and the uncomprehending despair of the grandfather. These concluding scenes are so drawn that human language, urged by human thought, could go no further in the excitement of human

feelings. And the pathos is of that best order which is relieved, in great measure, by ideality. Here the book has never been equalled—never approached except in one instance, and that is in the case of the "Undine" of De La Motte Fouque. The imagination is perhaps as great in the latter work, but the pathos, although truly beautiful and deep, fails of much of its effect through the material from which it is wrought. The chief character being endowed with purely fanciful attributes cannot demand our full sympathies, as can a simple denizen of earth. In saying that the death of the child left too painful an impression, and should therefore have been avoided, we must of course be understood as referring to the work as a whole, and in respect to its general appreciation and popularity. The death, as recorded, is, we repeat, of the highest order of literary excellence—yet, while none can deny this fact, there are few who will be willing to read the concluding passages a second time.

Upon the whole we think the "Curiosity Shop" very much the best of the works of Mr. Dickens. It is scarcely possible to speak of it too well. It is in all respects a tale which will secure for its author the enthusiastic admiration of every man of genius.

It is not every one who can put "a good thing" properly together, although, perhaps when thus properly put together, every tenth person you meet with may be capable of both conceiving and appreciating it. We cannot bring ourselves to believe that less actual ability is required in the composition of a really good "brief article," than in a fashionable novel of the usual dimensions. The novel certainly requires what is denominated a sustained effort—but this is a matter of mere perseverance, and has but a collateral relation to talent. On the other hand—unity of effect, a quality not easily appreciated or indeed comprehended by an ordinary mind, and a *desideratum* difficult of attainment, even by those who can conceive it—is indispensable in the "brief article," and not so in the common novel. The latter if admired by all, is admired for its detached passages, without reference to the work as a whole—or without reference to any general design—which, if it even exist in some measure, will be found to have occupied but little of the writer's attention, and cannot, from the length of the narrative, be taken in at one view by the reader.

I am not sure that Tennyson is not the greatest of poets. The uncertainty attending the public conception of the term "poet" alone prevents me from demonstrating that he *is*. Other bards produce effects which are, now and then, otherwise produced than by what we call poems; but Tennyson an effect which only a poem does. His alone are idiosyncratic poems. By the enjoyment or non-enjoyment of the "Morte D'Arthur" or of the "Oenone," I would test any one's ideal sense. There are passages in his works which rivet a conviction I had long entertained, that the *indefinite* is an element in the true poiaesis (Gr.) Why do some persons fatigue themselves in attempts to unravel such fantasy-pieces as the "Lady of Shalott?" As well unweave the *"ventus textilis."* If the author did not deliberately propose to himself a suggestive indefinitive-

ness of meaning with the view of bringing about a definitiveness of vague and therefore of spiritual *effect*—this at least arose from the silent analytical promptings of that poetic genius which, in its supreme development, embodies all orders of intellectual capacity. I *know* that indefinitiveness is an element of the true music—I mean of the true musical expression. Give to it any undue decision—imbue it with any very determinate tone—and you deprive it at once of its ethereal, its ideal, its intrinsic and essential character. You dispel its luxury of dream. You dissolve the atmosphere of the mystic upon which it floats. You exhaust it of its breath of faery. It now becomes a tangible and easily appreciable idea—a thing of the earth, earthly. It has not, indeed, lost its power to please, but all which I consider the distinctiveness of that power. And to the uncultivated talent, or to the unimaginative apprehension, this deprivation of its most delicate air will be, not unfrequently, a recommendation. A determinateness of expression is sought—and often by composers who should know better—is sought as a beauty rather than rejected as a blemish. Thus we have, even from high authorities, attempts at absolute *imitation* in music. Who can forget the silliness of the "Battle of Prague?" What man of taste but must laugh at the interminable drums, trumpets, blunderbusses, and thunder? "*Vocal* music," says L'Abbate Gravina, who would have said the same thing of instrumental, "ought to imitate the natural language of the human feelings and passions, rather than the warblings of canary birds, which our singers, now-a-days, affect so vastly to mimic with their quaverings and boasted cadences." This is true only so far as the "rather" is concerned. If any music must imitate anything, it were assuredly better to limit the imitation as Gravina suggests. Tennyson's shorter pieces abound in minute rhythmical lapses sufficient to assure me that—in common with all poets living or dead—he has neglected to make precise investigation of the principles of metre; but, on the other hand, so perfect is his rhythmical instinct in general that, like the present Viscount Canterbury, he seems *to see with his ear*.

There are some facts in the physical world which have a really wonderful analogy with others in the world of thought, and seem thus to give some colour of truth to the (false) rhetorical dogma, that metaphor or simile may be made to strengthen an argument, as well as to embellish a description. The principle of the *vis inertiæ*, for example, with the amount of *momentum* proportionate with it and consequent upon it, seems to be identical in physics and metaphysics. It is not more true, in the former, that a large body is with more difficulty set in motion than a smaller one, and that its subsequent impetus is commensurate with this difficulty, than it is, in the latter, that intellects of the vaster capacity, while more forcible, more constant, and more extensive in their movements than those of inferior grade, are yet the less readily moved, and are more embarrassed and more full of hesitation in the first few steps of their progress.

Thomas Moore—the most skilfull literary artist of his day—perhaps of any

day—a man who stands in the singular and really wonderful predicament of being undervalued on account of the profusion with which he has scattered about him his good things. The brilliancy on any one page of Lalla Rookh would have sufficed to establish that very reputation which has been in a great measure self-dimmed by the galaxied lustre of the entire book. It seems that the horrid laws of political economy cannot be evaded even by the inspired, and that a perfect versification, a vigorous style, and a never-tiring fancy, may, like the water we drink and die without, yet despise, be so plentifully set forth as to be absolutely of no value at all.

This is a queer little book,* which its author regards as "not only necessary, but urgently called for," because not only "the mass of the people are ignorant of English Grammar, but because those who profess great knowledge of it, and even those who make the teaching of it their business, will be found, upon examination, to be very far from understanding its principles."

Whether Mr. P. proceeds upon the safe old plan of *Probo meliora, deteriora sequor*—whether he is one of "the mass," and means to include himself among the ignoramuses, or whether he is only a desperate quiz—we shall not take it upon ourselves to say; but the fact is clear that, in a Preface of less than two small duodecimo pages (the leading object of which seems to be an eulogy upon one William Cobbett), he has given us some half dozen distinct instances of bad grammar.

"For these purposes," says he—that is to say—the purposes of instructing mankind and enlightening "every American youth" without exception—"for these purposes, I have written my lessons in a series of letters. A mode that affords more opportunity for plainness familiarity, instruction, and entertainment, than any other. A mode that was adopted by Chesterfield in his celebrated instructions on politeness. A mode that was adopted by Smollet in many of his novels, which, even at this day, hold a distinguished place in the world of fiction. A mode that was adopted by William Cobbett, not only in his admirable treatise on English Grammar, but in nearly every work that he wrote." "To Mr. Cobbett," adds the instructor of every American youth—"to Mr. Cobbett I acknowledge myself *indebted* for the greater part of the grammatical knowledge which I possess."

Of the fact stated there can be no question. Nobody but Cobbett could have been the grammatical Mentor of Mr. Pue, whose book (which is *all* Cobbett), speaks plainly upon the point—nothing but the ghost of William Cobbett, looking over the shoulder of Hugh A. Pue, could have inspired the latter gentleman with the bright idea of stringing together four consecutive sentences, in each of which the leading nominative noun is destitute of a verb.

Mr. Pue may attempt to justify his phraseology here by saying that the several sentences quoted above, commencing with the words "A mode," are merely continuations of the one beginning "For these purposes;" but this is no justification at all. By the use of the period, he has rendered each sentence distinct, and each must be exam

*A Grammar of the English Language.

ined as such in respect to its grammar. We are only taking the liberty of condemning Mr. P. by the words of his own mouth. Turning to the page where he treats of punctuation, we read as follows:—"The full point is used at the end of every complete sentence; and a complete sentence is a collection of words making a complete sense, without being dependent upon another collection of words to convey the full meaning intended." Now, what kind of a meaning can we give to such a sentence as "A mode that was adopted by Chesterfield in his celebrated instructions on politeness," if we are to have "no dependence upon" the sentences that precede it? But, even in the supposition that these five sentences had been run into one, as they should have been, they would still be ungrammatical. For example—"For these purposes I have written my lessons in a series of letters—a mode that affords more opportunity for plainness, familiarity, instruction, and entertainment than any other—a mode, etc." This would have been the proper method of punctuation. "A mode" is placed in apposition with "a series of letters." But it is evident that it is *not* the "series of letters" which is the "mode." It is *the writing the lessons* in a series which is so. Yet, in order that the noun "mode" can be properly placed in apposition with what precedes it, this latter must be either a noun, or a sentence, which, taken collectively, can serve as one. Thus, in any shape, all that we have quoted is bad grammar.

We say *"bad grammar,"* and say it through sheer obstinacy, because Mr. Pue says he should not. "Why, what is grammar?" asks he indignantly. "Nearly all grammarians tell us that grammar is the writing and speaking of the English language correctly. What then is bad grammar? Why bad grammar must be the bad writing and speaking of the English language correctly! !" We give the two admiration notes and all.

In the first place, if grammar be only the writing and speaking the *English* language correctly, then the French, or the Dutch, or the Kickapoos are miserable, ungrammatical races of people, and have no hopes of being anything else, unless Mr. Pue proceeds to their assistance—but let us say nothing of this for the present. What we wish to assert is that the usual definition of grammar, as "the writing and speaking *correctly*," is an error which should have been long ago exploded. Grammar is an analysis of language, and this analysis will be *good* or *bad*, just as the capacity employed upon it be weak or strong—just as the grammarian be a Horne Tooke or a Hugh A. Pue. But perhaps, after all, we are treating this gentleman discourteously. His book may be merely intended as a good joke. By-the-bye, he says in his preface, that, "while he informs the student, he shall take particular care to *entertain* him." Now, the truth is, we have been exceedingly entertained. In such passages as the following, however, which we find upon the second page of the Introduction, we are really at a loss to determine whether it is the *utile* or the *dulce* which prevails. We give the italics of Mr. Pue; without which indeed, the singular force and beauty of the paragraph cannot be duly appreciated:—

"The *proper* study of English grammar, so far from being *dry*, is one of

the most rational enjoyments known to us; one that is highly calculated to rouse the dormant energies of the student; it requiring continual mental effort; unceasing exercise of mind. It is, in fact, the *spreading of a thought-producing plaster of Paris upon the extensive grounds of intellect!* It is the parent of idea, and great causation of reflection; the mighty *instigator of insurrection in the interior;* and, above all, the unflinching *champion of internal improvement!"*

We know nothing about plaster of Paris; but the analogy which subsists between ipecac and grammar—at least between ipecac and the grammar of Mr. Pue—never, certainly, struck us in so clear a point of view as it does now.

But, after all, whether Mr. P.'s queer little book shall or shall not meet the views of "Every American Youth" will depend pretty much upon another question of high moment—whether "Every American Youth" be or be not as great a nincompoop as Mr. Pue.

That Lord Brougham *was* an extraordinary man no one in his senses will deny. An intellect of unusual capacity, goaded into diseased action by passions nearly ferocious, enabled him to astonish the world, and especially the "hero-worshippers," as the author of Sartor Resartus has it, by the combined extent and variety of his mental triumphs. Attempting many things, it may at least be said that he egregiously failed in none. But that he pre-eminently excelled in any cannot be affirmed with truth, and might well be denied *a priori.* We have no faith in admirable Crichtons, and this merely because we *have* implicit faith in Nature and her laws. "He that is born to be a man," says Wieland, in his Peregrinus Proteus, "neither should nor can be anything nobler, greater, nor better than a man." The Broughams of the human intellect are never its Newtons or its Bayles. Yet the contemporaneous reputation to be acquired by the former is naturally greater than any which the latter may attain. The versatility of one whom we see and hear is a more dazzling and more readily appreciable merit than his profundity; which latter is best estimated in the silence of the closet, and after the quiet lapse of years. What impression Lord Brougham has stamped upon his age cannot be accurately determined until Time has fixed and rendered definite the lines of the medal; and fifty years hence it will be difficult perhaps to make out the deepest indentation of the *exergue.* Like Coleridge he should be regarded as one who might have done much, had he been satisfied with attempting but little.

The Art of Mr. Dickens, although elaborate and great, seems only a happy modification of Nature. In this respect he differs remarkably from the author of "Night and Morning." The latter by excessive care and by patient reflection, aided by much rhetorical knowledge and general information, has arrived at the capability of producing books which might be mistaken by ninety-nine readers out of a hundred for the genuine inspirations of genius. The former, by the promptings of the truest genius itself, has been brought to compose, and evidently without effort, works which have effected a long-sought consummation, which have rendered him

he idol of the people, while defying and nchanting the critics. Mr. Bulwer, hrough art, has almost created a ge- ius. Mr. Dickens, through genius, has erfected a standard from which art tself will derive its essence in rules.

While Defoe would have been fairly ntitled to immortality had he never written Robinson Crusoe, yet his many other very excellent writings have near- y faded from our attention in the su- perior lustre of the Adventures of the Mariner of York. What better pos- sible species of reputation could the author have desired for that book than the species which it has so long en- joyed? It has become a household thing in nearly every family in Chris- tendom. Yet never was admiration of any work—universal admiration—more indiscriminately or more inappropriate- ly bestowed. Not one person in ten—nay, not one person in five hundred, has, during the perusal of Robinson Crusoe, the most remote conception that any particle of genius, or even of com- mon talent, has been employed in its creation! Men do not look upon it in the light of a literary performance. Defoe has none of their thoughts—Rob- inson all. The powers which have wrought the wonder have been thrown into obscurity by the very stupendous- ness of the wonder they have wrought? We read, and become perfect abstrac- tions in the intensity of our interest—we close the book, and are quite satis- fied that we could have written as well ourselves. All this is effected by the potent magic of verisimilitude. Indeed the author of Crusoe must have pos- sessed, above all other faculties, what has been termed the faculty of *identi- fication*—that dominion exercised by volition over imagination which enables the mind to lose its own, in a fictitious individuality. This includes, in a very great degree, the power of abstraction; and with these keys we may partially unlock the mystery of that spell which has so long invested the volume before us. But a complete analysis of our in- terest in it cannot be thus afforded. De- foe is largely indebted to his subject. The idea of man in a state of perfect isolation, although often entertained, was never before so comprehensively carried out. Indeed the frequency of its occurrence to the thoughts of man- kind argued the extent of its influence on their sympathies, while the fact of no attempt having been made to give an embodied form to the conception, went to prove the difficulty of the un- dertaking. But the true narrative of Selkirk in 1711, with the powerful im- pression it then made upon the public mind, sufficed to inspire Defoe with both the necessary courage for his work, and entire confidence in its success. How wonderful has been the result!

The increase within a few years of the magazine literature is by no means to be regarded as indicating what some critics would suppose it to indicate—a downward tendency in American taste or in American letters. It is but a sign of the times—an indication of an era in which men are forced upon the curt, the condensed, the well-digested—in place of the voluminous—in a word, upon journalism in lieu of dissertation. We need now the light artillery rather than the Peace-makers of the intellect. I will not be sure that men at present think more profoundly than half a cen- tury ago, but beyond question they

think with more rapidity, with more skill, with more tact, with more of method and less of excrescence in the thought. Besides all this, they have a vast increase in the thinking material; they have more facts, more to think about. For this reason, they are disposed to put the greatest amount of thought in the smallest compass and disperse it with the utmost attainable rapidity. Hence the journalism of the age; hence, in especial magazines. Too many we cannot have, as a general proposition; but we demand that they have sufficient merit to render them noticeable in the beginning, and that they continue in existence sufficiently long to permit us a fair estimation of their value.

One-half the pleasure experienced at a theatre arises from the spectator's sympathy with the rest of the audience, and especially from his belief in their sympathy with him. The eccentric gentleman who not long ago, at the Park, found himself the solitary occupant of box, pit, and gallery, would have derived but little enjoyment from his visit had he been suffered to remain. It was an act of mercy to turn him out. The present absurd rage for lecturing is founded in the feeling in question. Essays which we would not be hired to read, so trite is their subject, so feeble is their execution, so much easier is it to get better information on similar themes out of any encyclopædia in Christendom, we are brought to tolerate, and also, even to applaud in their tenth and twentieth repetition, through the sole force of our sympathy with the throng. In the same way we listen to a story with greater zest when there are others present at its narration beside ourselves. Aware of this, authors without due reflection have repeatedly attempted, by supposing a circle of listeners, to imbue their narratives with the interest of sympathy. At a cursory glance the idea seems plausible enough. But in the one case there is an actual, personal, and palpable sympathy conveyed in looks, gestures, and brief comments— a sympathy of real individuals, all with the matters discussed to be sure, but then especially *each with each*. In the other instance, we, alone in our closet, are required to sympathise *with* the sympathy of fictitious listeners, who, so far from being present in body, are often studiously kept out of sight and out of mind for two or three hundred pages at a time. This is sympathy double-diluted—the shadow of a shade. It is unnecessary to say that the design invariably fails of its effect.

The qualities of Heber are well understood. His poetry is of a high order. He is imaginative, glowing, and vigorous, with a skill in the management of his means unsurpassed by that of any writer of his time, but without any high degree of originality. Can there be anything in the nature of a "classical" life at war with novelty *per se?* At all events few fine scholars, such as Heber truly was, *are* original.

Original characters, so called, can be critically praised as such either when presenting qualities known in real life but never before depicted (a combination nearly impossible), or when presenting qualities (moral, or physical, or both), which, although unknown, or even known to be hypothetical, are so skillfully adapted to the circumstances

which surround them that our sense of fitness is not offended, and we find ourselves seeking a reason why those things *might not have been,* which we are still satisfied *are not.* The latter species of originality appertains to the loftier regions of the *Ideal.*

"George Balcombe" we are induced to regard, upon the whole, as *the best* American novel. There have been few books of its peculiar kind, we think, written in *any* country much its superior. Its interest is intense from beginning to end. Talent of a lofty order is evinced in every page of it. Its most distinguishing features are invention, vigour, almost audacity, of thought—great variety of what the German critics term *intrigue,* and exceeding ingenuity and finish in the adaptation of its component parts. Nothing is wanting to a complete whole, and nothing is out of place or out of time. Without being chargeable in the least degree with imitation, the novel bears a strong family resemblance to the Caleb Williams of Godwin. Thinking thus highly of "George Balcombe," we still do not wish to be understood as ranking it with the more brilliant fictions of some of the living novelists of Great Britain. In regard to the authorship of the book, some little conversation has occurred, and the matter is still considered a secret. But why so?—or rather *how so?* The mind of the chief personage of the story is the transcript of a mind familiar to us—an unintentional transcript, let us grant—but still one not to be mistaken. "George Balcombe" thinks, speaks, and acts, as no person, we are convinced, but Judge Beverley Tucker ever precisely thought, spoke, or acted before.

Fifty Suggestions[*]

(First published in *Graham's Magazine,* May, 1845.—Ed.)

I.

It is observable that, while among all nations the omnicolour, white, has been received as an emblem of the pure, the no-colour, black, has by no means been generally admitted as *sufficiently* typical of impurity. There are blue devils as well as black; and when we think *very* ill of a woman, and wish to *blacken* her character, we merely call her "a *blue*-stocking," and advise her to read, in Rabelais' *"Gargantua,"* the chapter *"de ce qui est signifie par les couleurs blanc et bleu."* There is far more difference between these *"couleurs,"* in fact, than that which exists between simple *black* and white. Your "blue," when we come to talk of stockings, is black in *issimo—"nigrum nigrius nigro"*—like the matter from which Raymond Lully first manufactured his alcohol.

II.

Mr.——, I perceive, has been ap-

[*] The end of Suggestion IX is in Marginalia. XIX is the preface to the tale, Never Bet the Devil Your Head. XXXV is in the criticism Elizabeth Barrett Barrett. The first part of XLI is in the criticism Thomas Moore.—Ed.

pointed Librarian to the new —— Athenæum. To him the appointment is advantageous in many respects. Especially:—"*Mon cousin, voici une belle occasion pour apprende a lire!*"

III.

As far as I can understand the "loving our enemies," it implies the hating our friends.

IV.

. In commencing our dinners with gravy soup, no doubt we have taken a hint from Horace. "Da," he says,

——Si *grave* non est

Quæ prima iratum ventrem placaverit esca."

V.

Of much of our cottage architecture we may safely say, I think (admitting the good intention), that it *would* have been Gothic if it had not felt it its duty to be Dutch.

VI.

James's multitudinous novels seem to be written upon the plan of "the songs of the Bard of Schiraz," in which, we are assured by Fadladeen, "the same beautiful thought occurs again and again in every possible variety of phrase."

VII.

Some of our foreign lions resemble the human brain in one very striking particular. They are without any sense themselves, and yet are the centres of sensation.

VIII.

Mirabeau, I fancy, acquired his wonderful tact at foreseeing and meeting *contingencies*, during his residence in the stronghold of *If*.

IX.

Cottle's "Reminiscences of Coleridge" is just such a book as damns its perpetrator for ever in the opinion of every gentleman who reads it. More and more every day do we moderns *pavoneggiarsi* about our Christianity; yet, so far as the *spirit* of Christianity is concerned, we are immeasurably behind the ancients. Mottoes and proverbs are the indices of national character; and the Anglo-Saxons are disgraced in having no proverbial equivalent to the "*De mortuis nil nisi bonum.*" Moreover—where, in all statutory Christendom, shall we find a *law* so Christian as the "*Defuncti injuria ne afficiantur*" of the Twelve Tables? The simple negative injunction of the Latin law and proverb—the injunction *not to do ill* to the dead—seems, at a first glance, scarcely susceptible of improvement in the delicate respect of its terms.

X.

I have no doubt that the Fourierites honestly fancy "a nasty poet fit for nothing" to be the true translation of "*poeta nascitur non fit.*"

XI.

There surely can*not* be "more things in Heaven and Earth than are dreamt

of" (oh, Andrew Jackson Davis!) "in *your* philosophy."

XII.

"It is only as the Bird of Paradise quits us in taking wing," observes, or should observe, some poet, "that we obtain a full view of the beauty of its plumage;" and it is only as the politician is about being "turned out" that, like the snake of the Irish Chronicle when touched by St. Patrick, he "awakens to a sense of his *situation*."

XIII.

Newspaper editors seem to have constitutions closely similar to those of the Deities in "Walhalla," who cut each other to pieces every day, and yet get up perfectly sound and fresh every morning.

XIV.

As far as I can comprehend the modern cant in favour of "unadulterated Saxon," it is fast leading us to the language of that region where, as Addison has it, "they sell the best fish and speak the plainest English."

XV.

The frightfully long money-pouches, like "the Cucumber called the Gigantic," which have come in vogue among our belles, are *not* of Parisian origin, as many suppose, but are strictly indigenous here. The fact is, such a fashion would be quite out of place in Paris, where it is money *only* that women keep in a purse. The purse of an American lady, however, must be large enough to carry both the money and the soul of its owner.

XVI.

I can see no objection to gentlemen "standing for Congress" provided they stand on one side, nor to their "running for Congress" if they are in a very great hurry to get there, but it would be a blessing if some of them could be persuaded into sitting still for Congress after they arrive.

XVII.

If *Envy*, as Cyprian has it, be "the moth of the soul," whether shall we regard *Content* as its Scotch snuff or its camphor?

XVIII.

M——, having been "used up" in the "—— Review," goes about town lauding his critic, as an epicure lauds the best London mustard, with the tears in his eyes.

XX.

Children are never too tender to be whipped; like tough beef-steaks, the more you beat them the more tender they become.

XXI.

Lucian, in describing the statue "with its surface of Parian marble, and its interior filled with rags," must have been looking with a prophetic eye at some of our great "moneyed institutions."

XXII.

That poets (using the word compre-

hensively, as including artists in general) are a *genus irritabile* is well understood, but the *why* seems not to be commonly seen. An artist *is* an artist only by dint of his exquisite sense of Beauty, a sense affording him rapturous enjoyment, but at the same time implying or involving an equally exquisite sense of Deformity—of disproportion. Thus a wrong—an injustice—done a poet who is really a poet, excites him to a degree which to ordinary apprehension appears disproportionate with the wrong. Poets *see* injustice, *never* where it does not exist, but very often where the unpoetical see no injustice whatever. Thus the poetical irritability has no reference to "temper" in the vulgar sense, but merely to a more than usual clear-sightedness in respect to wrong, this clear-sightedness being nothing more than a corollary from the vivid perception of right—of justice—of proportion—in a word, of *to kalon* (Gr.) But one thing is clear, that the man who is *not* "irritable" (to the ordinary apprehension) is *no poet*.

XXIII.

Let a man succeed ever so evidently—ever so demonstrably—in many different displays of *genius* the envy of criticism will agree with the popular voice in denying him more than *talent* in any. Thus a poet who has achieved a great (by which I mean an effective) poem, should be cautious not to distinguish himself in other walks of Letters. In especial—let him make no effort in Science—unless anonymously, or with the view of waiting patiently the judgment of posterity. Because universal or even versatile geniuses have rarely or never been known, *therefore*, thinks the world, none such can ever be. A "therefore" of this kind is, with the world conclusive. But what is the *fact* as taught us by analysis of mental power? Simply that the *highest* genius—that the genius which all men instantaneously acknowledge as such—which acts upon individuals, as well as upon the mass, by a species of magnetism incomprehensible but irresistible and *never resisted*—that this genius which demonstrates itself in the simplest gesture—or even by the absence of all—this genius which speaks without a voice and flashes from the unopened eye—is but the result of generally large mental power existing in a state of *absolute proportion*—so that no one faculty has undue predominance. *That* factitious "genius"—that "genius" in the popular sense—which is but the manifestation of the abnormal predominance of some one faculty over all the others—and, of course, at the expense and to the detriment of all the others—is a result of mental disease, or rather of organic malformation of mind:—it is this and nothing more. Not only will such "genius" fail, if turned aside from the path indicated by its predominant faculty; but, even when pursuing this path—when producing those works in which, certainly it is *best* calculated to succeed—will give unmistakable indications of *unsoundness*, in respect to general intellect. Hence, indeed, arises the just idea that

"Great wit to madness nearly is allied."

I say, "*just* idea;" for by "great wit," in this case, the poet intends precisely the pseudo-genius to which I refer. The true genius, on the other hand, is necessarily, if not universal in its manifes-

tations, at least capable of universality; and if, attempting all things, it succeeds in one rather better than in another, this is merely on account of a certain bias by which *Taste* leads it with more earnestness in the one direction than in the other. With equal zeal, it would succeed equally in all.

To sum up our results in respect to this very simple, but much *vexata quæsto*:—

What the world calls "genius" is the state of mental disease arising from the undue predominance of some one of the faculties. The works of such genius are never sound in themselves, and, in especial, always betray the general mental insanity.

The *proportion* of the mental faculties, in a case where the general mental power is *not* inordinate, gives that result which we distinguish as *talent*:—and the talent is greater or less, first, as the general mental power is greater or less; and, secondly, as the proportion of the faculties is more or less absolute.

The proportion of the faculties, in a case where the mental power is inordinately great, gives that result which *is* the true *genius* (but which on account of the proportion and seeming simplicity of its works, is seldom acknowledged to *be* so); and, the genius is greater or less, first as the general mental power is more or less inordinately great; and, secondly, as the proportion of the faculties is more or less absolute.

An objection will be made—that the greatest excess of mental power, however proportionate, does not seem to satisfy our idea of genius, unless we have in addition, sensibility, passion, energy. The reply is, that the "absolute proportion" spoken of when applied to inordinate mental power gives, as a result, the appreciation of Beauty and horror of Deformity which we call sensibility, together with that intense vitality, which is implied when we speak of "energy" or "Passion."

XXIV.

"And Beauty draws us by a single hair."—Capillary attraction, of course.

XXV

It is by no means clear as regards the present revolutionary spirit of Europe that it is a spirit which "moveth altogether if it move at all." In Great Britain it may be kept quiet for half a century yet, by placing at the head of affairs an experienced medical man. He should keep his forefinger constantly on the pulse of the patient, and prescribe *panem* in gentle doses, with as much *circenses* as the stomach can be made to retain.

XXVI.

The taste manifested by our Transcendental poets *is* to be treated "reverentially," beyond doubt, as one of Mr. Emerson's friends suggests—for the fact is it is Taste on her death-bed—Taste kicking *in articulo mortis*.

XXVII.

I should not say, of Taglioni, exactly that she dances, but that she laughs with her arms and legs, and that if she takes vengeance on her present

oppressors she will be amply justified by the *lex Talionis*.

XXVIII.

The world is infested just now by a new sect of philosophers, who have not yet suspected themselves of forming a sect, and who consequently, have adopted no name. They are the *Believers in Everything Old*. Their High Priest in the East is Charles Fourier, in the West Horace Greeley, and high priests they are to some purpose. The only common bond among the sect is Credulity—let us call it Insanity at once, and be done with it. Ask any one of them *why* he believes this or that, and, if he be conscientious (ignorant people generally are), he will make you very much such a reply as Talleyrand made when asked why he believed in the Bible. "I believe in it first," said he, "because I am Bishop of Autun, and secondly, *because I know nothing about it at all*." What these philosophers call 'argument' is a way they have "*de nier ce qui est, et d'expliquer ce qui n'est pas*."

XXIX.

K——, the publisher, trying to be critical, talks about books pretty much as a washerwoman would about Niagara Falls, or a poulterer about a phœnix.

XXX.

The ingenuity of critical malice would often be laughable but for the disgust which, even in the most perverted spirits, injustice never fails to excite. A common *trick* is that of decrying impliedly the higher by insisting upon the lower merits of an author. Macaulay, for example, deeply feeling how much critical acumen is enforced by cautious attention to the mere "rhetoric" which is its vehicle, has at length become the best of modern rhetoricians. His *brother* reviewers, anonymous of course and likely to remain so for ever, extol "the acumen of Carlyle, the analysis of Schlegel, *and* the style of Macaulay." Bancroft is a philosophical historian but no amount of philosophy has yet taught him to despise a minute accuracy in point of fact. His *brother* historians talk of "the grace of Prescott, the erudition of Gibbon, *and* the painstaking precision of Bancroft." Tennyson, perceiving how vividly an imaginative effect is aided, now and then, by a certain quaintness judiciously introduced brings this latter at times in support of his most glorious and most delicate imagination, where-upon his *brother* poets hasten to laud the imagination of Mr. Somebody, whom nobody imagined to have any, "*and* the somewhat affected quaintness of Tennyson." Let the noblest poet add to his other excellences, if he dares, that of faultless versification and scrupulous attention to grammar. He is damned at once. His rivals have it in their power to discourse of "A, the true poet, *and* B, the versifier and disciple of Lindley Murray."

XXXI.

The goddess Laverna, who is a head without a body, could not do better, perhaps, than make advances to "La Jeune France," which for some years to come, at least, must otherwise remain a body without a head.

XXXII.

H—— calls his verse a "poem" very much as Francis the First bestowed the title *mes deserts* upon his snug little deer-park at Fontainebleau.

XXXIII.

Mr. A——is frequently spoken of as 'one of our most industrious writers;' and in fact when we consider how much he has written, we perceive at once that he *must* have been industrious, or he could never (like an honest woman as he is) have so thoroughly succeeded in keeping himself from being 'talked about.'

XXXIV.

That a cause leads to an effect is scarcely more certain than that, so far as Morals are concerned, a repetition of effect tends to the generation of cause. Herein lies the principle of what we so vaguely term "Habit."

XXXVI.

What has become of the inferior planet which Decuppis about nine years ago declared he saw traversing the disc of the sun?

XXXVII.

"Ignorance *is* bliss"—but, that the bliss be real, the ignorance must be so profound as not to suspect itself ignorant. With this understanding, Boileau's line may be read thus:

Le plus fou *toujours* est le plus satisfait,
—"*toujours*" in place of "*souvent.*"

XXXVIII.

Bryant and Street are both essentially descriptive poets; and descriptive poetry even in its happiest manifestation is *not* of the highest order. But the distinction between Bryant and Street is very broad. While the former, in reproducing the sensible images of Nature, reproduces the sentiments with which he regards them, the latter gives us the images and nothing beyond. He never forces us to feel what we feel he must have felt.

XXXIX.

In lauding Beauty, Genius merely evinces a filial affection. To Genius Beauty gives life—reaping often a reward in Immortality.

XL.

And this is the "American Drama" of ——! Well!——that "Conscience which makes cowards of us all" will permit me to say in praise of the performance, only that it is not quite so bad as I expected it to be. But then I always expect too much.

XLI.

When Moore is termed "a fanciful poet," the epithet is applied with precision. He *is*. He is fanciful in "Lalla Rookh," and had he written the "Inferno" in the "Inferno" he would have contrived to be still fanciful and nothing beyond.

XLII.

When we speak of "a suspicious man," we may mean either one who suspects, or one to be suspected. Our language

needs either the adjective "suspectful," or the adjective "suspectable."

XLIII.

"To love," says Spenser, "is
To fawn, to crouch, to wait, to ride, to run,
To speed, to give, to want, to be undone."

The philosophy here might be rendered more profound, by the mere omission of a comma. We all know the *willing* blindness—the *voluntary* madness of Love. We express this in thus punctuating the last line:

To speed, to give—*to want to be undone.*

It is a case, in short, where we gain a point by omitting it.

XLIV.

Miss Edgeworth seems to have had only an approximate comprehension of "Fashion," for she says, "If it was the fashion to burn me, and I at the stake, I hardly know ten persons of my acquaintance who would refuse to throw on a fagot." There are *many* who, in such a case, would "refuse to throw on a fagot"—for fear of smothering out the fire.

XLV.

I am beginning to think with Horsley—that "the People have nothing to do with the laws but to obey them."

XLVI.

"It is not fair to review my book without reading it," says Mr. Mathews, talking at the critics, and as usual, expecting impossibilities. The man who is clever enough to *write* such a work, is clever enough to read it, no doubt; but we should not look for so much talent in the world at large. Mr. Mathews will not imagine that I mean to blame *him.* The book alone is in fault, after all. The fact is that, *"es lasst sich nicht lesen"*—it will not *permit* itself to be read. Being a hobby of Mr. Mathews' and brimful of spirit, it will let nobody mount it but Mr. Mathews.

XLVII.

It is only to teach his children Geography, that G—— wears a boot, like the picture of Italy upon the map.

XLVIII.

In his great Dictionary, Webster seems to have had an idea of being more English than the English—*"plus Arabe qu'en Arabie."*

XLIX.

That there were once "seven wise men" is by no means, strictly speaking, an historical *fact;* and I am rather inclined to rank the idea among the Kabbala.

L.

Painting their faces to look like Macaulay, some of our critics manage to resemble him, at length, as a Masaccian does a Rafaellian Virgin; and, except that the former is feebler and thinner than the other—suggesting the idea of its being the ghost of the other—not one connoisseur in ten can perceive any difference. But then, unhappily even the street lazzaroni can feel the distinction.

Pinakidia

(First published in *Southern Literary Messenger,* August, 1836.—Ed.)

Under the head of "Random Thoughts," "Odds and Ends," "Stray Leaves," "Scraps," "Brevities," and a variety of similar titles, we occasionally meet, in periodicals and elsewhere, with papers of rich interest and value, the result in some cases of much thought and more research, expended, however, at a manifest disadvantage, if we regard merely the estimate which the public are willing to set upon such articles. It sometimes occurs that in papers of this nature may be found a collective mass of general but more usually of classical erudition, which, if dexterously besprinkled over a proper surface of narrative, would be sufficient to make the fortunes of one or two hundred ordinary novelists in these our good days, when all heroes and heroines are necessarily men and women of "extensive acquirements." But for the most part these "Brevities," etc., are either piecemeal cullings at second-hand from a variety of sources hidden or supposed to be hidden, or more audacious pilferings from those vast storehouses of brief facts, memoranda, and opinions in general literature, which are so abundant in all the principal libraries of Germany and France. Of the former species the *Koran* of Laurence Sterne is, at the same time, one of the most consummately impudent and silly, and it may well be doubted whether a single paragraph of any merit in the whole of it may not be found, *nearly verbatim,* in the works of some of his immediate contemporaries. If the *Lacon* of Mr. Colton is any better, its superiority consists altogether in a deeper ingenuity in disguising his stolen wares, and in that perscriptive right of the strongest, which, time out of mind, has decided upon calling every Napoleon a conqueror, and every Dick Turpin a thief. Seneca, Machiavelli,* Balzac, the author of "La Maniere de Bien Penser," Bielfeld the German, who wrote in French "Les Premiers Traits de l'Erudition Universelle," Rochefoucault, Bacon, Bolingbroke, and especially Burdon, of "Materials for Thinking" memory, possesses among them indisputable claims to the ownership of nearly everything worth owning in the book.

Of the latter species of theft we see frequent specimens in the continental magazines of Europe, and occasionally meet with them even in the lower class of periodicals in Great Britain. These specimens are usually extracts, by wholesale, from such works as the "Bibliotheque des Memorabilia Literaria," the "Recueil des Bonnes Pensees," the "Lettres Edifiantes et Curieuses," the "Literary Memoirs" of Sallengre, the "Melanges Litteraires" of Suard and

*It is remarkable that much of what Colton has stolen from Machiavelli was previously stolen by Machiavelli from Plutarch. A MS. book of the *Apophthegms of the Ancients,* by this latter writer, having fallen into Machiavelli's hands, he put them nearly all into the mouth of his hero, Castrucio Castracani.

Andre, or the "Pieces Interessantes et Peu Connues" of Laplace. D'Israeli's "Curiosities of Literature," "Literary Character," and "Calamities of Authors," have of late years proved exceedingly convenient to some little American pilferers in this line, but are now becoming too generally known to allow much hope of their good things being any longer appropriated with impunity.

Such collections as those of which we have been speaking are usually entertaining in themselves, and for the most part we relish everything about them save their pretensions to originality. In offering ourselves something of the kind to our readers, we wish to be understood as disclaiming in a great degree every such pretension. Most of the following article is original, and will be readily recognized as such by the classical and general reader; some portions of it may have been written down in the words, or nearly in the words, of the primitive authorities. The whole is taken from a confused mass of marginal notes and entries in a commonplace book. No certain arrangement has been considered necessary, and indeed so heterogeneous a farrago it would have been an endless task to methodise. We have chosen the heading *Pinakidia* or Tablets, as one sufficiently comprehensive. It was used for a somewhat similar purpose by Dionysius of Halicarnassus.

The whole of Bulwer's elaborate argument on the immortality of the soul, which he has put into the mouth of: "The Ambitious Student," may be confuted through the author's omission of one particular point in his summary of the attributes of Deity—a point which we cannot believe omitted altogether through accident. A single link is deficient in the chain, but the chain is worthless without it. No man doubts the immortality of the soul, yet of all truths, this truth of immortality is the most difficult to prove by any mere series of syllogisms. We would refer our readers to the argument here mentioned.

The rude, rough, wild waste has its power to please.

a line in one, Mr. Odiorne's poems, "The Progress of Refinement," is pronounced by the American author of a book entitled "Antediluvian Antiquities" "the very best alliteration in all poetry."

Lipsius, in his treatise, "De Supplicio Crucis," says that the upright beam of the cross was a *fixture* at the place of execution, whither the criminal was made to bear only the transverse arm. Consequently the painters are in error who depict our Saviour bearing the entire cross.

The tale in Plato's "Convivium," that man at first was male and female, and that, though Jupiter cleft them asunder, there was a natural love towards one another, seems to be only a corruption of the account in Genesis of Eve's being made from Adam's rib.

Corneille has these lines in one of his tragedies:

Pleurez, pleurez, mes yeux, et fondez vous en eau,
La Moitie de ma vie a mis l'autre au tombeau.

which may be thus translated,

Weep, weep, my eyes! It is no time to laugh,
For half myself has buried the other half.

Over the iron gate of a prison at Ferrara is this inscription—"Ingresso alla prigione di Torquato Tasso."

The Rabbi Manasseh published a book at Amsterdam entitled "The Hopes of Israel." It was founded upon the supposed number and power of the Jews in America. This supposition was derived from a fabulous account by Montesini of his having found a vast concourse of Jews among the Cordilleras.

The word "assassin" is derived, according to Hyle, from *Hassa,* to kill. Some bring it from Hassan, the first chief of the association; some from the Jewish Essene; Lemoine from a word meaning "herbage;" De Sacy and Von Hammer from "hashish" the opiate of hemp leaves, of which the assassins made a singular use.

The origin of the phrase "corporal oath" is to be found in the ancient usage of touching, upon occasion of attestation, the *corporale* or cloth which covered the consecrated articles.

Montgomery, in his lectures on *Literature* (!), has the following—"Who does not turn with absolute contempt from the signs, and gems, and filters, and caves, and genii of Eastern Tales as from the trinkets of a toy shop, and the trumpery of a raree show?" What man of genius but must answer "Not I?"

There is no particular air known throughout Switzerland by the name of the *Ranz des Vaches.* Every canton has its own song, varying in words, notes, and even language. Mr. Cooper, the novelist, is our authority.

The Abbe de St. Pierre* has fixed in his language two significant words—viz. *bienfaisance,* and the diminutive *la gloriole.*

"Incidis in Scyllam cupiens vitare Charybdim" is neither in Virgil nor Ovid, as often supposed, but in the "Alexandrics" of Philip Gualtier, a French poet of the thirteenth century.

The psalter of Solomon, which contains eighteen psalms, is a work which was found in Greek in the library of Augsburg, and has been translated into Latin by John Lewis de la Cerda. It is supposed not to be Solomon's but the work of some Hellenistic Jew, and composed in imitation of David's psalms. The psalter was known to the ancients, and was formerly in the famous Alexandrian MS.

It is probable that the Queen of Sheba was Balkis, that Sheba was a kingdom in the southern part of Arabia Felix, and that the people were called Sabæans. These lines of Claudian relate to the people and queen:—

Medis, levibusque Sabæis

---

*This author is very frequently quoted by Poe with esteem.—Ed.

Imperat hic sexus; reginarumque sub armis
Barbariæ pars magna jacet.

Sheridan declared he would rather be the author of the ballad called "Hosier's Ghost," by Glover, than of the Annals of Tacitus.

The word Jehovah is not Hebrew. The Hebrews had no such letters as J or V. The word is properly Yah, Wah, compounded of *Yah,* essence, and *Wah,* existing. Its full meaning is the self-existing essence of all things.

The "Song of Solomon," throwing aside the heading of the chapters, which is the work of the English translators, contains nothing which relates to the Saviour or the Church. It does not, like every other sacred book, contain even the name of the Deity.

The word translated "slanderers" in I Timothy iii, 2, and that translated "false accusers" in Titus ii, 3, are *"female devils"* in the original Greek of the New Testament.

The Hebrew language contains no word (except perhaps Jehovah) which conveys to the mind the idea of eternity. The translators of the Old Testament have used the word "eternity" but once (Isa. lvii, 15).

A version of the Psalms was published in 1642 by William Slatyer, of which this is a specimen:—

The righteous shall his sorrows scan,
And laugh at him, and say, "Behold!
What hath become of this here man,
That on his riches was so bold.

Milton, in "Paradise Lost," has this passage:—

When the *scourge*
Inexorably, and the *torturing hour*
Call us to penance;

Gray, in his "Ode to Adversity," has:—

Thou tamer of the human breast,
Whose iron *scourge* and *torturing hour*
The bad affright.

Gray tells us that the image of his bard, where

Loose his beard, and hoary hair
Streamed like a meteor to the troubled air,

was taken from a picture by Raphael: yet the beard of Hudibras is also likened to a meteor:—

This hairy meteor did denounce
The fall of sceptres and of crowns.

Dryden, in his "Absalom and Architopel," has these lines:—

David for him his tuneful harp has strung,
And heaven had wanted one immortal song,

Pope, in his "Epistle to Arbuthnot," has:—

Friend of my life, which did not you prolong,

The world had wanted many an idle song.

In Suidas is a letter from Dionysius the Areopagite, dated Heliopolis in the fourth year of the 202d Olympiad (the year of Christ's crucifixion), to his friend Apollophanes, in which is mentioned a total eclipse of the sun at noon. "Either," says Dionysius, "the author of nature suffers, or he sympathises with some who do."

A curious passage in a letter from Cicero to his literary friend Papirius Pætus, shows that our custom of annexing a farce or pantomime to a tragic drama existed among the Romans.

In Hudibras are these lines:—

Each window, like the pillory, appears
With heads thrust through, nailed by the ears,

Young, in his "Love of Fame," has the following:—

An opera, like a pillory, may be said
To nail our ears down and expose our head.

Goldsmith's celebrated lines,

Man wants but little here below
Nor wants that little long,

are stolen from Young, who has

Man wants but little, nor that little long.

Archbishop Usher, in a manuscript of St. Patrick's Life, said to have been found at Louvain as an original of a very remote date, detected several entire passages purloined from his own writings.

"The Slipper of Cinderella," says the editor of the new edition of Wharton, "finds a parallel in the history of Rhodope." Cinderella is a tale of universal currency. An ancient Danish ballad has some of the incidents. It is popular amongst the Welsh—also among the Poles—in Hesse, and in Servia. Schottky found it among the Servian fables. Rollenbagen, in his *Froschmauseler,* speaks of it as the tale of the despised *Aschenpossel.* Luther mentions it. It is in the Italian Pentamerone under the title of Cenerentola.

Boileau is mistaken in saying that Petrarch, *"qui est regarde comme le pere du sonnet,"* borrowed it from the French or Provencal writers. The Italian sonnet can be traced back as far as the year 1200. Petrarch was not born until 1304.

Dante gives the name of *sonnet* to his little canzone or ode beginning

O voi che per la via d'Amor passate.

The lines

For he that fights and runs away
May live to fight another day,
But he that is in battle slain
Will never rise to fight again.

are not to be found, as is thought, in Hudibras. Butler's verses ran thus:—

For he that flies may fight again,
Which he can never do that's slain.

The former are in a volume of "Poems," by Sir John Mennes, reign of Charles the Second. The original idea is in Demosthenes.

The noble simile of Milton, of Satan with the rising sun, in the first book of the "Paradise Lost," had nearly occasioned the suppression of that epic; it was supposed to contain a treasonable allusion.

Campbell's line

Like angels visits, few and far between,

is a palpable plagiarism. Blair has

Its visits,
Like angel visits, short and far between.

The character of the ancient Bacchus, that graceful divinity, seems to have been little understood by Dryden. The line in Virgil

Et quocunque deus circum caput egit *honestum*.

is thus grossly mistranslated,

On whate'er side he turns his *honest* face.

Macrobius gives the form of an imprecation by which the Romans believed whole towns could be demolished and armies defeated. It commences "Dis Pater sive Jovis mavis sive quo alio nomine fas est nominare," and ends, "Si hæc ita faxitis ut ego sciam, sentiam, intelligamque, tum quisquis votum hoc faxit recte factum esto, ovibus, atris tribus, Tellus mater, teque, Jupiter, obtestor."

The *Courtier* of Baldazzai Castiglione, 1528, is the first attempt at periodical moral essay with which we are acquainted. The *Noctes Atticæ* of Aulus Gellius cannot be allowed to rank as such.

These lines were written over the closet-door of M. Menard:—

Las d'esperer, et de me laindre
De l'amour, des grands, et du sort,
C'est ici que j'attends la mort
Sans la desirer ou la craindre.

Martin Luther, in his reply to Henry the Eighth's book, by which the latter acquired the title of "Defender of the Faith," calls the monarch very unceremoniously "a pig, an ass, a dunghill, the spawn of an adder, a basilisk, a lying buffoon dressed in a king's robes, a mad fool with a frothy mouth and a whorish face."

An unshaped kind of something first appeared,

is a line in Cowley's famous description of the Creation.

The "Turkish Spy" is the original of many similar works, among the best of which are Montesquieu's "Persian Letters," and the "British Spy" of our own Wirt. It was written undoubtedly by John Paul Marana, an Italian, *in* Italian, but probably was first published in French. Dr. Johnson, who only saw an English translation, supposed it an English work. Marana died in 1693.

Corneille's celebrated "Moi" of Medea is borrowed from Seneca. Racine, in "Phædra," has stolen nearly the whole scene of the declaration of love from the same puerile writer.

The peculiar zodiac of the comets is comprised in these verses of Cassini:—

Antinous, Pegasusque, Andromeda, Taurus, Orion,
Procyon, atque Hydrus, Centaurus, Scorpius, Arcus.

A religious hubbub, such as the world has seldom seen, was excited, during the reign of Frederick II, by the *imagined* virulence of a book entitled "The Three Impostors." It was attributed to Pierre des Vignes, chancellor of the king, who was accused by the Pope of having treated the religions of Moses, Jesus, and Mahomet as political fables. The work in question, however, which was squabbled about, abused, defended, and familiarly *quoted* by all parties, is well proved never to have existed.

Theophrastus, in his botanical works, anticipated the sexual system of Linnæus. Philolaus of Crotona maintained that commets appeared after a certain revolution—and Æcetes contended for the existence of what is now called the new world. Pulci, "The Sire of the Half Serious Rhyme," has a passage expressly alluding to a western continent. Dante, two centuries before, has the same allusion:—

De vostri sensi ch'e del rimanente
Non vogliate negar l'esperenza,
Diretro al sol, del mondo sensa gente.

The "Lamentations" of Jeremiah are written, with the exception of the last chapter, in acrostic verse; that is to say, every line or couplet begins in alphabetical order, with some letter in the Hebrew alphabet. In the third chapter each letter is repeated three times successively.

The fullest account of the Amazons is to be found in Diodorus Siculus.

Cicero makes *finis* masculine, Virgil feminine. *Usque ad eum finem*—Cicero. *Quæ finis standi? Hæc finis Priami fatorum*—Virgil.

Dante left a poem in three languages—Latin, Provencal and Italian. Rambaud de Vachieras left one in five.

Marcus Antoninus wrote a book entitled Toen Eis Eauton (Gr.)—"Of the things which concern himself." It would be a good title for a diary.

The stream flowing through the middle of the valley of Jehoshaphat is called in the Gospel of St. John "the brook of cedars." In the Septuagint the word is kedron, darkness, from the Hebrew *kiddar*, black, and not kedroen, of cedars.

Seneca says that Appion, a grammarian of the age of Caligula, maintained that Homer himself made the division of the Iliad and Odyssey into books, and evidences the first word of the Iliad Maenin, the Mae of which signifies 48, the number of books in both poems. Seneca, however, adds *Talia sciat oportet qui multa vult scire.*

Hedelin, a Frenchman, in the begin-

ning of the eighteenth century, denied that any such person as Homer ever existed, and supposed the Iliad to be made up *ex tragediis, et variis canticis de trivio mendicatorum et circulatorum—a la maniere des chansons du Portneuf.*

There are about one thousand lines identical in the Iliad and Odyssey.

The shield of Achilles, in Homer, seems to have been copied from some *pharos* which the poet had seen in Egypt. What he describes on the central part of the shield is a map of the earth and of the celestial appearances.

Under a portrait of Tiberio Fiurelli who invented the character of Scaramouch, are these verses—

Cet illustre Comedien
De son art traca la carriere;
Il fut le maitre de Moliere,
Et la Nature fut le sien.

In Cary's "Dante," the following passage:—

And pilgrim newly on his road with love,
Thrills if he hears the vesper bell from far,
That seems to mourn for the expiring day.

Gray has also

The curfew tolls the knell of parting day.

Marmontel, in the "Encyclopedie" declares that the Italians did not possess a single comedy worth reading—therein displaying his ignorance. Some of the greatest names in Italian literature were writers of comedy. Baretti mentions a collection of four thousand dramas made by Apostolo Leno, of which the greater part were comedies, many of a high order.

A comedy or opera by Andreini was the origin of "Paradise Lost." Andreini's "Adamo" was the model of Milton's Adam.

Milton has the expression "Forget thyself to marble." Pope has the line "I have not yet forgot myself to stone."

The most particular history of the Deluge, and the nearest of any to the account given by Moses is to be found in Lucian (De Dea Syria).

The Greeks had no historian prior to Cadmus Milesius, nor any public inscription of which we can be certified before the laws of Draco.

So great is the uncertainty of ancient history that the epoch of Semiramis cannot be ascertained within 1535 years; for according to

Syncellus,	she lived	before	Christ	2177
Patavius	"	"	"	2060
Helvicus	"	"	"	2248
Eusebius	"	"	"	1984
Mr. Jackson	"	"	"	1964
Archbishop Usher	"	"	"	1215
Philo Byblius, from Sanchoniathon				1200
Herodotus about				713

An extract from "The Mystery of St. Dennis" is in the "Bibliotheque due Theatre Francais, depuis son origine," Dresden, 1768. In this serious drama, St. Dennis, having been tortured and at length decapitated, rises very quietly, takes his head under his arm, and walks

off the stage in all the dignity of martyrdom.

The idea of "No light but rather darkness visible" was perhaps suggested to Milton by Spencer's

A little glooming light much like a shade.

Francis le Brossano engraved these verses upon a marble tomb which he erected to Petrarch at Argua.

Frigida Francisci tegit hic lapis ossa Petrarcæ.
Suscipe, virgo parens, animam; state virginie, parce,
Fessaque iam terris, cœli requiescat in arce.

Bochart derives *Elysium* from the Phœnician Elysoth, joy, through the Greek Aelusion; *Circe* from the Phœnician Kirkar, to corrupt; *Siren* from the Phœnician Sir, to sing; *Scylla* from the Phœnician Scol, destruction; *Charybdis* from the Phœnician Chor-obdam, chasm of ruin.

Of the ten tragedies which are attributed to Seneca (the only Roman tragedies extant), nine are on Greek subjects.

Voltaire's ignorance of antiquity is laughable. In his Essay on Tragedy, prefixed to "Brutus," he actually boasts of having introduced the Roman senate on the stage in red mantles. "The Greeks," as he asserts, "*font paraitre ses acteurs* (tragic) *sur des especes d'echasses, le visage couvert d'un masque qui exprime la douleur d'un cote et la joie de l'autre.*" The only circumstance upon which he could possibly have founded such an accusation is that in the *new comedy* masks were worn with one eyebrow drawn up and the other down, to denote a busybody or inquisitive meddler.

There is a book by a Jesuit, Pere Labbe, entitled *La Bibliotheque des Bibliotheques;* it is a catalogue of all authors in all nations who have written catalogues of books.

Lucretius, lib. v. 93, 96, has the words,

——terras——
Una dies dabit exitio.

Ovid the lines,

Carmine sublimis tunc sunt peritura Lucreti,
Exitio terras cum dabit una dies.

It is a remarkable fact that during the whole period of the Middle Ages, the Germans lived in utter ignorance of the art of writing.

A version of the Psalms in 1564, by Archbishop Parker, has the following—

Who sticketh to God in stable trust,
As Sion's mount he stands full just,
Which moveth no whit, nor yet can reel,
But standeth for ever as stiff as steel.

A part of the 137th Psalm runs thus:—"If I forget thee, O Jerusalem,

may my right hand forget her cunning, and may my tongue cleave to the roof of my mouth," which has been thus paraphrased in a version of the Psalms—

If I forget thee ever,
Then let me prosper never,
But let it cause
My tongue and jaws
To cling and cleave together.

At the bottom of an obelisk which Pius VI was erecting at great expense near the entrance of the Quirinal Palace in 1783, while the people were starving for bread, were found written these words,

Signore dia questa pietra chi divenga pane.
Lord, command that these stones be made bread.

Anastatic Printing

(In this essay as in Poe's other writings, the student of literature would do well to compare the articles of his contemporaries upon the same subject. The hand of the master is always plainly seen. Published in *Broadway Journal*, Vol. 1:15.—Ed.)

It is admitted by every one that of late there has been a rather singular invention, called Anastatic Printing, and that this invention may possibly lead, in the course of time, to some rather remarkable results—among which the one chiefly insisted upon is the abolition of the ordinary stereotyping process—but this seems to be the amount, in America at least, of distinct understanding on this subject.

"There is no exquisite beauty," says Bacon, "without some strangeness in the proportions." The philosopher had reference, here, to beauty, in its common acceptation—but the remark is equally applicable to all the forms of beauty—that is to say, to everything which arouses profound interest in the heart or intellect of man. In every such thing, strangeness—in other words *novelty*—will be found a principal element: and so universal is this law that it has no exception even in the case of this principal element itself. Nothing unless it be novel—*not even novelty itself*—will be the source of very intense excitement among men. Thus the *ennuye* who travels in the hope of dissipating his *ennui* by the perpetual succession of novelties, will invariably be disappointed in the end. He receives the impression of novelty so continuously that it is at length no novelty to receive it. And the man, in general of the nineteenth century—more especially of our own particular epoch of it—is very much in the predicament of the traveller in question. We are so habituated to new inventions that we no longer get from newness the vivid interest which should appertain to the new—and no example could be adduced more distinctly showing that the *mere* importance of a novelty will not suffice to gain for it universal attention than we find in the invention of *Anastatic Printing*. It excites not one fiftieth

part of the comment which was excited by the comparatively frivolous invention of Sennefelder:—but he lived in the good old days when a novelty was novel. Nevertheless, while Lithography opened the way for a very agreeable pastime, it is the province of Anastatic Printing to revolutionise the world.

By means of this discovery anything written, drawn, or printed, can be made to stereotype itself, with absolute accuracy, in five minutes.

Let us take, for example, a page of this Journal; supposing only one side of the leaf to have printing on it. We damp the leaf with a certain acid diluted, and then place it between two leaves of blotting-paper to absorb superfluous moisture. We then place the printed side in contact with a zinc plate that lies on the table. The acid in the interspaces between the letters immediately corrodes the zinc, but the acid on the letters themselves has no such effect, having been neutralised by the ink. Removing the leaf at the end of five minutes, we find a reversed copy, in slight relief, of the printing on the page—in other words, we have a stereotype plate, from which we can print a vast number of absolute facsimiles of the original printed page—which latter has not been at all injured in the process—that is to say, we can still produce from it (or from any impression of the stereotype plate) new stereotype plates *ad libitum*. Any engraving, or any pen-and-ink drawing, or any MS. can be stereotyped in precisely the same manner.

The *facts* of this invention are established. The process is in successful operation both in London and Paris. We have seen several specimens of printing done from the plates described, and have now lying before us a leaf (from the London Art-Union) covered with drawing, MS., letterpress, and impressions from woodcuts—the whole printed from the Anastatic stereotypes, and warranted by the Art-Union to be absolute *facsimiles* of the originals.

The process can scarcely be regarded as a *new* invention—and appears to be rather the modification and successful application of two or three previously ascertained principles—those of etching, electrography, lithography, etc. It follows from this that there will be much difficulty in establishing or maintaining a right of patent, and the probability is that the benefits of the process will soon be thrown open to the world. As to the secret—it can only be a secret in name.

That the discovery (if we may so call it) has been made, can excite no surprise in any thinking person—the only matter for surprise is that it has not been made many years ago. The obviousness of the process, however, in no degree lessens its importance. Indeed its inevitable results enkindle the imagination, and embarrass the understanding.

Every one will perceive at once that the ordinary process of stereotyping will be abolished. Through this ordinary process a publisher, to be sure, is enabled to keep on hand the means of producing edition after edition of any work the certainty of whose sale will justify the cost of stereotyping—which is trifling *in comparison* with that of re-setting the matter. But still, *positively* this cost (of stereotyping) is great. Moreover, there cannot always be certainty about sales. Publishers

frequently are forced to re-set works which they have neglected to stereotype, thinking them unworthy the expense; and many excellent works are not published at all, because small editions do not pay, and the anticipated sales will not warrant the cost of stereotype. *Some* of these difficulties will be at once remedied by the Anastatic Printing, and *all* will be remedied in a brief time. A publisher has only to print as many copies as are immediately demanded. He need print no more than a dozen, indeed, unless he feels perfectly confident of success. Preserving *one* copy, he can from this, at no other cost than that of the zinc, produce with any desirable rapidity, as many impressions as he may think proper. Some idea of the advantages thus accruing may be gleaned from the fact that in several of the London publishing warehouses there is deposited in stereotype plates alone property to the amount of a million sterling.

The next view of the case, in point of obviousness is, that if necessary, a hundred thousand impressions per hour, or even infinitely more, can be taken of any newspaper, or similar publication. As many presses can be put in operation as the occasion may require—indeed there can be no limit to the number of copies producible, provided we have no limit to the number of presses.

The tendency of all this is to cheapen information, to diffuse knowledge and amusement, and to bring before the public the very class of works which are most valuable, but least in circulation on account of unsaleability—is what need scarcely be suggested to any one. But benefits such as these are merely the immediate and most obvious —by no means the most important.

For some years, perhaps, the strong spirit of conventionality—of conservation—will induce authors in general to have recourse, as usual, to the setting of type. A printed book *now* is more sightly, and more legible than any MS., and for some years the idea will not be overthrown that this state of things is one of necessity. But by degrees it will be remembered that, while MS. was a *necessity*, men wrote after such fashion that no books printed in modern times have surpassed their MSS. either in accuracy or in beauty. This consideration will lead to the cultivation of a neat and distinct style of handwriting—for authors will perceive the immense advantage of giving their own MSS. directly to the public without the expensive interference of the type-setter, and the often ruinous intervention of the publisher. All that a man of letters need do, will be to pay some attention to legibility of MS., arrange his pages to suit himself, and stereotype them instantaneously, as arranged. He may intersperse them with his own drawings, or with anything to please his own fancy, in the certainty of being fairly brought before his readers with all the freshness of his original conception about him.

And at this point we are arrested by a consideration of infinite moment, although of a seemingly shadowy character. The cultivation of accuracy in MS. thus enforced will tend, with an inevitable impetus, to every species of improvement in style, more especially in the points of concision and distinctness; and this again, in a degree even more noticeable, to precision of thought and

luminous arrangement of matter. There is a very peculiar and easily intelligible reciprocal influence between the thing written and the manner of writing, but the latter has the predominant influence of the two. The more remote effect on philosophy at large, which will inevitably result from improvement of style and thought in the points of concision, distinctness, and accuracy, need only be suggested to be conceived.

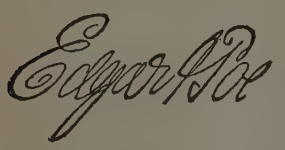
As a consequence of attention being directed to neatness and beauty of MS., the antique profession of the scribe will be revived, affording abundant employment to women, their delicacy of organisation fitting them peculiarly for such tasks. The female amanuensis indeed will occupy very nearly the position of the present male type-setter, whose industry will be diverted perforce into other channels.

These considerations are of vital importance, but there is yet one beyond them all. The value of every book is a compound of its literary value and its physical or mechanical value, as the product of physical labour applied to the physical material. But at present the latter value immensely predominates even in the works of the most esteemed authors. It will be seen, however, that the new condition of things will at once give the ascendency to the literary values, and thus, by their literary values, will books come to be estimated among men. The wealthy gentleman of "elegant leisure" will lose the vantage-ground now afforded him, and will be forced to tilt on terms of equality with the poor-devil author. At present the literary world is a species of anomalous congress, in which the majority of the members are constrained to listen in silence while all the eloquence proceeds from a privileged few. In the new *regime* the humblest will speak as often and as freely as the most exalted, and will be sure of receiving just that amount of attention which the intrinsic merit of their speeches may deserve.

From what we have said it will be evident that the discovery of Anastatic Printing will not only not obviate the necessity of copyright laws, and of an international law in especial, but will render this necessity more imperative and more apparent. It has been shown that in depressing the value of the *physique* of a book the invention will proportionally elevate the value of its *morale*, and since it is the latter value alone which the copyright laws are needed to protect, the necessity of the protection will be only the more urgent and more obvious than ever.

Autography

(It is an interesting fact that a long article on Autography appeared in the *Southern Literary Journal* (not the Messenger) signed W., and referring to Sullivan's Island (the island of the Gold Bug). This article of Poe originated in Southern Literary Messenger, February, 1836.—Ed.)



UNDER this head, some years ago, there appeared in the "Southern Literary Messenger" an article which attracted very general attention, not less from the nature of its subject than from the peculiar manner in which it was handled. The editor introduces his readers to a certain Mr. Joseph Miller, who, it is hinted, is not merely a descendant of the illustrious Joe of jest-book notoriety, but is that identical individual in proper person. Upon this point, however, an air of uncertainty is thrown by means of an equivoque, maintained throughout the paper, in respect to Mr. Miller's middle name. This equivoque is put into the mouth of Mr. M. himself. He gives his name, in the first instance, as Joseph A. Miller, but in the course of conversation shifts it to Joseph B., then to Joseph C., and so on through the whole alphabet, until he concludes by desiring a copy of the Magazine to be sent to his address as Joseph Z. Miller, Esquire.

The object of his visit to the editor is to place in his hands the autographs of certain distinguished American *literati*. To these persons he had written rigmarole letters on various topics, and in all cases had been successful in eliciting a reply. The replies only (which it is scarcely necessary to say are all fictitious) are given in the Magazine with a genuine autograph facsimile appended, and are either burlesques of the supposed writer's usual style, or rendered otherwise absurd by reference to the nonsensical questions imagined to have been propounded by Mr. Miller. The autographs thus given are twenty-six in all—corresponding to the twenty-six variations in the initial letter of the hoaxer's middle name.

With the public this article took amazingly well, and many of our principal papers were at the expense of reprinting it with the woodcut autographs. Even those whose names had been introduced, and whose style had been burlesqued, took the joke, generally speaking, in good part. Some of them were at a loss what to make of the matter. Dr. W. E. Channing of Boston was at some trouble, it is said, in calling to mind whether he had or had not actually written to some Mr. Joseph Miller the letter attributed to him in the article. This letter was nothing more than what follows:—

BOSTON, ———.

Dear Sir—No such person as Philip Philpot has ever been in my employ as a coachman, or otherwise. The name is an odd one, and not likely to be

forgotten. The man must have reference to some other Doctor Channing. It would be as well to question him closely.

Respectfully yours,
W. E. CHANNING.

To Joseph X. Miller, Esq.

The precise and brief sententiousness of the divine is here, it will be seen, very truly adopted or "hit-off."

In one instance only was the *jeu-d'-esprit* taken in serious dudgeon. Colonel Stone and the "Messenger" had not been upon the best of terms. Some one of the Colonel's little brochures had been severely treated by that journal, which declared that the work would have been far more properly published among the quack advertisements in a spare corner of the "Commercial." The Colonel had retaliated by wholesale vituperation of the "Messenger." This being the state of affairs, it was not to be wondered at that the following epistle was not quietly received on the part of him to whom it was attributed:—

NEW YORK, ———.

Dear Sir—I am exceedingly and excessively sorry that it is out of my power to comply with your rational and reasonable request. The subject you mention is one with which I am utterly unacquainted. Moreover, it is one about which I know very little.

Respectfully,
W. L. STONE.

Joseph V. Miller, Esq.

These tautologies and anti-climaxes were too much for the Colonel, and we are shamed to say that he committed himself by publishing in the "Commercial" an indignant denial of ever having indited such an epistle.

The principal feature of this autograph article, although perhaps the least interesting, was that of the editorial comment upon the supposed MSS., regarding them as indicative of character. In these comments the design was never more than semi-serious. At times, too, the writer was evidently led into error or injustice through the desire of being pungent—not unfrequently sacrificing truth for the sake of a *bon-mot*. In this manner qualities were often attributed to individuals, which were not so much indicated by their handwriting, as suggested by the spleen of the commentator. But that a strong analogy *does* generally and naturally exist between every man's chirography and character, will be denied by none but the unreflecting. It is not our purpose, however, to enter into the *philosophy* of this subject, either in this portion of the present paper, or in the abstract. What we may have to say will be introduced elsewhere, and in connection with particular MSS. The practical application of the theory will thus go hand in hand with the theory itself.

Our design is threefold:—In the first place, seriously to illustrate our position that the mental features are indicated (with certain exceptions) by the handwriting; secondly, to indulge in a little literary gossip; and, thirdly, to furnish our readers with a more accurate and at the same time a more general collection of the autographs of our *literati* than is to be found elsewhere. Of the first portion of this design we have already spoken. The second speaks for itself. Of the third it is only necessary

to say that we are confident of its interest for all lovers of literature. Next to the person of a distinguished man-of-letters, we desire to see his portrait —next to his portrait his autograph. In the latter, especially, there is something which seems to bring him before us in his true idiosyncrasy—in his character of *scribe*. The feeling which prompts to the collection of autographs is a natural and rational one. But complete, or even extensive collections, are beyond the reach of those who themselves do not dabble in the waters of literature. The writer of this article has had opportunities in this way enjoyed by few. The MSS. now lying before him are a motley mass indeed. Here are letters, or other compositions, from every individual in America who has the slightest pretension to literary celebrity. From these we propose to select the most eminent names—as to give *all* would be a work of supererogation. Unquestionably, among those whose claims we are forced to postpone, are several whose high *merit* might justly demand a different treatment; but the rule applicable in a case like this seems to be that of celebrity rather than that of true worth. It will be understood that, in the necessity of selection which circumstances impose upon us, we confine ourselves to the *most noted among the living literati of the country*. The article above alluded to embraced, as we have already stated, only twenty-six names, and was not occupied *exclusively* either with living persons, or properly speaking, with literary ones. In fact the whole paper seemed to acknowledge no law beyond that of whim. Our present essay will be found to include *one hundred autographs*. We have thought it unnecessary to preserve any particular order in their arrangement.

The chirography of Professor ANTHON is the most regularly beautiful of any in our collection. We see the most scrupulous precision, finish, and neatness about every portion of it—in the formation of individual letters, as well as in the *tout-ensemble*. The perfect symmetry of the MS. gives it, to a casual glance, the appearance of Italic print. The lines are quite straight, and at exactly equal distances, yet are written without black rules, or other artificial aid. There is not the slightest superfluity in the way of flourish or otherwise, with the exception of the twirl in the C of the signature. Yet the whole is rather neat and graceful than forcible. Of four letters now lying before us, one is written on pink, one on a faint blue, one on green, and one on yellow paper—all of the finest quality. The seal is of green wax, with an impression of the head of Cæsar.

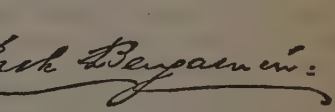
It is in the chirography of such men as Professor Anthon that we look with certainty for indication of character. The life of a scholar is mostly undisturbed by those adventitious events which distort the natural disposition of the man of the world, preventing his real nature from manifesting itself in his MS. The lawyer, who, pressed for

---

*The first part of this criticism will be found under the same name in Literati of New York.—Ed.

time, is often forced to embody a world of heterogeneous memoranda on scraps of paper, with the stamps of all varieties of pen, will soon find the fair characters of his boyhood degenerate into hieroglyphics which would puzzle Doctor Wallis or Champollion; and from chirography so disturbed it is nearly impossible to decide anything. In a similar manner, men who pass through many striking vicissitudes of life, acquire in each change of circumstance a temporary inflection of the handwriting; the whole resulting, after many years, in an unformed or variable MS., scarcely to be recognised by themselves from one day to the other. In the case of literary men generally, we may expect some decisive token of the mental influence on the MS., and in the instance of the classical devotee we may look with *especial* certainty for such token. We see, accordingly, in Professor Anthon's autography each and all of the known idiosyncrasies of his taste and intellect. We recognise at once the scrupulous precision and finish of his scholarship and of his style—the love of elegance which prompts him to surround himself in his private study with gems of sculptural art and beautifully bound volumes, all arranged with elaborate attention to form, and in the very pedantry of neatness. We perceive, too, the disdain of superfluous embellishment which distinguishes his compilations, and which gives to their exterior appearance so marked an air of Quakerism. We must not forget to observe that the "want of force" is a want as perceptible in the whole character of the man as in that of the MS.

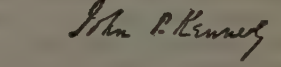
The MS. of Mr. IRVING has little about it indicative of his genius. Certainly, no one could suspect from it any nice *finish* in the writer's compositions; nor is this nice finish to be found. The letters now before us vary remarkably in appearance; and those of late date are not nearly so well written as the more antique. Mr. Irving has travelled much, has seen many vicissitudes, and has been so thoroughly satiated with fame as to grow slovenly in the performance of his literary tasks. This slovenliness has affected his handwriting. But even from his earlier MSS. there is little to be gleaned, except the ideas of simplicity and precision. It must be admitted, however, that this fact, in itself, is characteristic of the literary manner, which, however excellent, has no prominent or very remarkable features.



For the last six or seven years few men have occupied a more desirable position among us than Mr. BENJAMIN. As the editor of the "American Monthly Magazine," of the "New Yorker," and more lately of the "Signal," and "New World," he has exerted an influence scarcely second to that of any editor in the country. This influence Mr. B. owes to no single cause, but to his combined ability, activity, causticity, fearlessness, and independence. We use the latter term, however, with some

mental reservation. The editor of the "World" is independent so far as the word implies unshaken resolution to follow the bent of one's own will, let the consequences be what they may. He is no respecter of persons, and his vituperation as often assails the powerful as the powerless—indeed the latter fall rarely under his censure. But we cannot call his independence at all times that of principle. We can never be sure that he will defend a cause merely because it is the cause of truth—or even because he regards it as such. He is too frequently biassed by personal feelings—feelings now of friendship, and again of vindictiveness. He is a warm friend, and a bitter, but not implacable enemy. His judgment in literary matters should not be questioned, but there is some difficulty in getting at his real opinion. As a prose writer, his style is lucid, terse, and pungent. He is often witty, often cuttingly sarcastic, but seldom humorous. He frequently injures the force of his fiercest attacks by an indulgence in merely vituperative epithets. As a poet, he is entitled to far higher consideration than that in which he is ordinarily held. He is skilful and passionate, as well as imaginative. His sonnets have not been surpassed. In short, it is as a poet that his better genius is evinced—it is in poetry that his noble spirit breaks forth, showing what the man is, and what, but for unhappy circumstances, he would invariably appear.

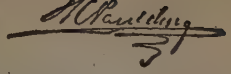
Mr. Benjamin's MS. is not very dissimilar to Mr. Irving's, and, like his, it has no doubt been greatly modified by the excitements of life, and by the necessity of writing much and hastily, so that we can predicate but little respecting it. It speaks of his exquisite sensibility and passion. These betray themselves in the nervous variation of the MS. as the subject is diversified. When the theme is an ordinary one, the writing is legible and has force, but when it verges upon anything which may be supposed to excite, we see the characters falter as they proceed. In the MSS. of some of his best poems this peculiarity is very remarkable. The signature conveys the idea of his *usual* chirography.



Mr. KENNEDY is well known as the author of "Swallow Barn," "Horse-Shoe Robinson," and "Rob of the Bowl," three works whose features are strongly and decidedly marked. These features are boldness and force of thought (disdaining ordinary embellishment, and depending for its effect upon masses rather than upon details), with a predominant *sense of the picturesque* pervading and giving colour to the whole. His "Swallow Barn" in especial (and it is by the first effort of an author that we form the truest idea of his mental bias) is but a rich succession of picturesque still-life pieces. Mr. Kennedy is well-to-do in the world, and has always taken the world easily. We may therefore expect to find in his chirography, if ever in any, a full indication of the chief feature of his literary style, especially as this chief feature is so remarkably prominent. A glance at his signature will convince any one that the indication *is* to be found. A painter called upon to designate the main pecu-

iarity of this MS., would speak at once of the *picturesque*. This character is given it by the absence of hair-strokes, and by the abrupt termination of every letter without tapering; also in great measure by varying the size and slope of the letters. Great uniformity is preserved in the whole air of the MS., with great variety in the constituent parts. Every character has the clearness, boldness, and precision of a woodcut. The long letters do not rise or fall in an undue degree above the others. Upon the whole, this is a hand which pleases us much, although its *bizarrerie* is rather too piquant for the general taste. Should its writer devote himself more exclusively to light letters we predict his future eminence. The paper on which our epistles are written is very fine, clear, and *white*, with gilt edges. The seal is neat, and just sufficient wax has been used for the impression. All this betokens a love of the elegant without effeminacy.

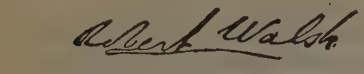
The handwriting of GRENVILLE MELLEN is somewhat peculiar, and partakes largely of the character of his signature as seen above. The whole is highly indicative of the poet's flighty, hyperfanciful character, with his unsettled and often erroneous ideas of the beautiful. His straining after effect is well paralleled in the formation of the preposterous G in the signature, with the two dots by its side. Mr. Mellen has genius unquestionably, but there is something in his temperament which obscures it.



No correct notion of Mr. PAULDING's literary peculiarities can be obtained from an inspection of his MS., which no doubt has been strongly modified by adventitious circumstances. His small *a*'s, *t*'s, and *c*'s are all alike, and the style of the characters generally is French, although the entire MS. has much the appearance of Greek text. The paper which he ordinarily uses is of a very fine glossy texture, and of a blue tint, with gilt edges. His signature is a good specimen of his general hand.

Mrs. SIGOURNEY seems to take much pains with her MSS. Apparently she employs *black lines*. Every *t* is crossed, and every *i* dotted, with precision, while the punctuation is faultless. Yet the whole has nothing of effeminacy or formality. The individual characters are large, well and freely formed, and preserve a perfect uniformity throughout. Something in her handwriting puts us in mind of Mr. Paulding's. In both MSS. perfect regularity exists, and in both the style is *formed* or *decided*. Both are beautiful, yet Mrs. Sigourney's is the most legible, and Mr. Paulding's nearly the most illegible in the world. From that of Mrs. S. we might easily form a true estimate of her compositions. Freedom, dignity, precision, and grace, without originality, may be properly attributed to her. She has fine taste, without genius. Her paper is

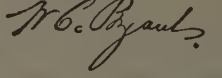
usually good, the seal small, of green and gold wax, and without impression.



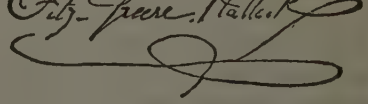
Mr. WALSH'S MS. is peculiar, from its large, sprawling, and irregular appearance—rather rotund than angular. It always seems to have been hurriedly written. The *t*'s are crossed with a sweeping scratch of the pen, which gives to his epistles a somewhat droll appearance. A *dictatorial* air pervades the whole. His paper is of ordinary quality. His seal is commonly of brown wax mingled with gold, and bears a Latin motto, of which only the words *trans* and *mortuus* are legible.

Mr. Walsh cannot be denied talent, but his reputation, which has been bolstered into being by a *clique,* is not a thing to live. A blustering self-conceit betrays itself in his chirography, which upon the whole is not very dissimilar to that of Mr. E. Everett, of whom we shall speak hereafter.

Mr. INGRAHAM, or Ingrahame (for he writes his name sometimes with, and sometimes without the *e*), is one of our most *popular* novelists, if not one of our best. He appeals always to the taste of the ultra-romanticists (as a matter, we believe, rather of pecuniary policy than of choice) and thus is obnoxious to the charge of a certain cut-and-thrust, blue-fire, melodramaticism. Still, he is capable of better things. His chirography is very unequal, at times sufficiently clear and flowing, at others shockingly scratchy and uncouth. From it nothing whatever can be predicated except an uneasy vacillation of temper and of purpose.



Mr. BRYANT'S MS. puts us entirely at fault. It is one of the most commonplace clerk's hands which we ever encountered, and has no character about it beyond that of the day-book and ledger. He writes, in short, what mercantile men and professional penmen call a fair hand, but what artists would term an abominable one. Among its regular up and down strokes, wavings, lines and hair-lines, systematic taperings and flourishes, we look in vain for the force, polish, and decision of the poet. The *picturesque,* to be sure, is equally deficient in his chirography and in his poetical productions.



Mr. HALLECK'S hand is strikingly indicative of his genius. We see in it some force, more grace, and little of the picturesque. There is a great deal of freedom about it, and his MSS. seem to be written *currente calamo,* but without hurry. His flourishes, which are not many, look as if thoughtfully planned, and deliberately, yet firmly executed. His paper is very good, and of a bluish tint, his seal of red wax.

Mr. Willis when writing carefully would write a hand nearly resembling that of Mr. Halleck, although no similarity is perceptible in the signatures. His usual chirography is dashing, free, and not ungraceful, but is sadly deficient in force and picturesqueness. It has been the fate of this gentleman to be alternately condemned *ad infinitum*, and lauded *ad nauseam*, a fact which speaks much in his praise. We know of no American writer who has evinced greater versatility of talent, that is to say, of high talent, often amounting to genius, and we know of none who has more narrowly missed placing himself at the head of our letters.

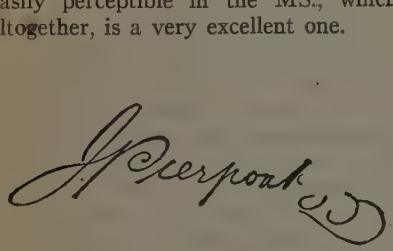
The paper of Mr. Willis's epistles is always fine and glossy. At present he employs a somewhat large seal, with a dove or carrier-pigeon at the top, the word "Glenmary" at bottom, and the initials "N. P. W." in the middle.

Mr. Dawes has been long known as a poet, but his claims are scarcely yet settled, his friends giving him rank with Brant and Halleck, while his opponents treat his pretensions with contempt. The truth is that the author of "Geraldine" and "Athenia of Damascus" has written occasional verses very well—so well that some of his minor pieces may be considered equal to any of the minor pieces of either of the two gentlemen above mentioned. His longer poems, however, will not bear examination. "Athenia of Damascus" is pompous nonsense, and "Geraldine" a most ridiculous imitation of Don Juan, in which the beauties of the original have been as sedulously avoided as the blemishes have been blunderingly culled. In style he is perhaps the most inflated, involved, and false-figurative of any of our more noted poets. This defect of course is only fully appreciable in what are termed his "sustained efforts," and thus his shorter pieces are often exceedingly good. His apparent erudition is mere verbiage, and were it real would be lamentably out of place where we see it. He seems to have been infected with a blind admiration of Coleridge, especially of his mysticism and cant.

H. W. Longfellow (Professor of Moral Philosophy at Harvard), is entitled to the first place among the poets of America—certainly to the first place among those who have put themselves prominently forth as poets. His good qualities are all of the highest order, while his sins are chiefly those of affectation and imitation—an imitation sometimes verging upon downright theft.

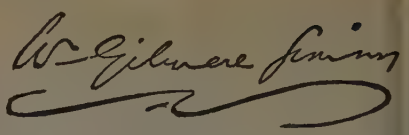
His MS. is remarkably good, and is fairly exemplified in the signature. We see here plain indications of the force, vigour, and glowing richness of his literary style; the deliberate and steady *finish* of his compositions. The man who writes thus may not accomplish much, but what he does, will always be thoroughly done. The main beauty, or at least one great beauty, of his poetry,

is that of *proportion;* another is a freedom from extraneous embellishment. He oftener runs into affectation through his endeavours at simplicity than through any other cause. Now this rigid simplicity and proportion are easily perceptible in the MS., which, altogether, is a very excellent one.



The Rev. J. PIERPONT, who, of late, has attracted so much of the public attention, is one of the most accomplished poets in America. His "Air of Palestine" is distinguished by the sweetness and vigour of its versification, and by the grace of its sentiments. Some of his shorter pieces are exceedingly terse and forcible, and none of our readers can have forgotten his "Lines on Napoleon." His rhythm is at least equal in strength and modulation to that of any poet in America. Here he resembles Milman and Croly.

His chirography, nevertheless, indicates nothing beyond the commonplace. It is an ordinary clerk's hand—one which is met with more frequently than any other. It is decidedly *formed;* and we have no doubt that he *never* writes otherwise than thus. The MS. of his school-days has probably been persisted in to the last. If so, the fact is in full consonance with the steady precision of his style. The flourish at the end of the signature is but a part of the writer's general enthusiasm.



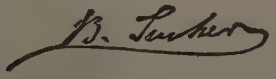
Mr. SIMMS is the author of "Martin Faber," "Atalantis," "Guy Rivers," "The Partisans," "Mellichampe," "The Yemassee," "The Damsel of Darien," "The Black Riders of the Congaree," and one or two other productionss among which we must not forget to mention several fine poems. As a poet indeed, we like him far better than as a novelist. His qualities in this latter respect *resemble* those of Mr. Kennedy although he equals him in no particular except in his appreciation of the graceful. In his sense of beauty he is Mr K.'s superior, but falls behind him in force, and the other attributes of the author of "Swallow Barn." These differences and resemblances are well shown in the MSS. That of Mr. S. has more slope, and more uniformity in detail, with less in the mass—while it has also less of the picturesque, although still much. The middle name is Gilmore; in the cut it looks like Gilmere.

The Rev. ORESTES A. BROWNSON is chiefly known to the literary world as the editor of the "Boston Quarterly Review," a work to which he contributes each quarter, at least two-thirds of the matter. He has published little in book-form—his principal works being "Charles Elwood" and "New Views." Of these, the former production is, in many respects, one of the highest merit

n logical accuracy, in comprehensive-ess of thought, and in the evident rankness and desire for truth in which t is composed, we know of few theo-ogical treatises which can be compared vith it. Its conclusion, however, bears bout it a species of hesitation and in-onsequence which betray the fact that he writer has not altogether succeeded n convincing himself of those impor-ant truths which he is so anxious to mpress upon his readers. We must ear in mind, however, that this is the ault of Mr. Brownson's subject, and ot of Mr. Brownson. However well man may reason on the great topics f God and immortality, he will be orced to admit tacitly in the end, that God and immortality are things to be elt, rather than demonstrated.

On subjects less indefinite, Mr. B. easons with the calm and convincing orce of a Combe. He is, in every re-pect an extraordinary man, and with he more extensive resources which would have been afforded him by early ducation, could not have failed to bring about important results.

His MS. indicates, in the most strik-ng manner, the unpretending simplicity, directness, and especially the *indefatiga-bility* of his mental character. His signature is more *petite* than his general chirography.



Judge BEVERLY TUCKER, of the Col-lege of William and Mary, Virginia, is the author of one of the best novels ever published in America—"George Balcombe"—although for some reason the book was never a popular favourite. It was, perhaps, somewhat too didactic for the general taste.

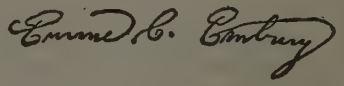
He has written a great deal also for the "Southern Literary Messenger" at different times; and at one period acted in part, if not altogether, as editor of that Magazine, which is indebted to him for some very racy articles, in the way of criticism especially. He is apt, how-ever, to be led away for personal feel-ings, and is more given to vituperation for the mere sake of *point* or pungency than is altogether consonant with his character as judge. Some five years ago there appeared in the "Messenger," under the editorial head, an article on the subject of the "Pickwick Papers" and some other productions of Mr. Dickens. This article, which abounded in well-written but extravagant denun-ciation of everything composed by the author of "The Curiosity Shop," and which prophesied his immediate down-fall, we have reason to believe was from the pen of Judge Beverly Tucker. We take this opportunity of mentioning the subject, because the odium of the paper in question fell altogether upon our shoulders, and it is a burden we are not disposed and never intended to bear. The review appeared in March, we think, and we had retired from the "Messenger" in the January preceding. About eighteen months previously and when Mr. Dickens was scarcely known to the public at all, except as the au-thor of some brief tales and essays, the writer of this article took occasion to predict in the "Messenger," and in the most emphatic manner, that high and just distinction which the author in question has attained. Judge Tucker's MS. is diminutive, but neat and legible, and has much force and precision, with

little of the picturesque. The care which he bestows upon his literary compositions makes itself manifest also in his chirography. The signature is more florid than the general hand.

Mr. SANDERSON, Professor of the Greek and Latin languages in the High School of Philadelphia, is well known as the author of a series of letters entitled "The American in Paris." These are distinguished by ease and vivacity of style, with occasional profundity of observation, and, above all, by the frequency of their illustrative anecdotes and figures. In all these particulars Professor Sanderson is the precise counterpart of Judge Beverly Tucker, author of "George Balcombe." The MSS. of the two gentlemen are nearly identical. Both are neat, clear, and legible. Mr. Sanderson's is somewhat the more crowded.

About Miss GOULD'S MS. there is great neatness, picturesqueness, and finish, without over-effeminacy. The literary style of one who writes thus will always be remarkable for sententiousness and epigrammatism; and these are the leading features of Miss Gould's poetry.

Prof. HENRY, of Bristol College, is chiefly known by his contributions to our Quarterlies, and as one of the originators of the "New York Review," in conjunction with Dr. Hawks and Professor Anthon. His chirography is now neat and picturesque (much resembling that of Judge Tucker), and now excessively scratchy, *clerky*, and slovenly—so that it is nearly impossible to say anything respecting it, except that it indicates a vacillating disposition, with unsettled ideas of the beautiful. None of his epistles, in regard to their chirography, end as well as they begin. This trait denotes *fatigability*. His signature, which is bold and decided, conveys not the faintest idea of the general MS.

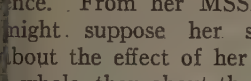


Mrs. EMBURY is chiefly known by her contributions to the Periodicals of the country. She is one of the most nervous of our female writers, and is not destitute of originality—that rarest of all qualities in a woman, and especially in an American woman.

Her MS. evinces a strong disposition to fly off at a tangent from the old formulæ of the Boarding Academies. Both in it, and in her literary style, it would be well that she should no longer hesitate to discard the absurdities of mere fashion.

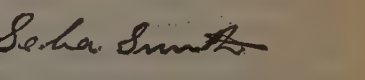
Miss LESLIE is celebrated for the homely naturalness of her stories and for the broad satire of her comic style. She has written much for the Magazines. Her chirography is distinguished for neatness and finish, without over-effeminacy. It is rotund, and somewhat

diminutive; the letters being separate, and the words always finished with an inward twirl. She is never particular about the quality of her paper or the other externals of epistolary correspondence. From her MSS. in general, we might suppose her solicitous rather about the effect of her compositions as a whole, than about the polishing of the constituent parts. There is much of the picturesque both in her chirography and in her literary style.



Mr. NEAL has acquired a very extensive reputation through his "Charcoal Sketches," a series of papers originally written for the "Saturday News" of this city, and afterwards published in book form, with illustrations by Johnston. The whole design of the "Charcoal Sketches" may be stated as the depicting of the wharf and street *loafer;* but this design has been executed altogether in caricature. The extreme of burlesque runs throughout the work, which is also chargeable with a tedious repetition of slang and incident. The loafer always declaims the same nonsense, in the same style, gets drunk in the same way, and is taken to the watch-house after the same fashion. Reading one chapter of the book we read all. Any single description would have been an original idea well executed, but the dose is repeated *ad nauseam,* and betrays a woful poverty of invention. The manner in which Mr. Neal's book was belauded by his personal friends of the Philadelphia press speaks little for their independence, or less for their taste. To dub the author of these "Charcoal Sketches" (which are really very excellent police-reports) with the title of "the American Boz," is either outrageous nonsense or malevolent irony.

In other respects Mr. N. has evinced talents which cannot be questioned. He has conducted the "Pennsylvanian" with credit, and, as a political writer, he stands deservedly high. His MS. is simple and legible, with much space between the words. It has force, but little grace. Altogether, his chirography is good; but as he belongs to the editorial corps, it would not be just to suppose that any deductions in respect to character could be gleaned from it. His signature conveys the general MS. with accuracy.



Mr. SEBA SMITH has become somewhat widely celebrated as the author, in part, of the "Letters of Major Jack Downing." These were very clever productions; coarse, but full of fun, wit, sarcasm, and sense. Their manner rendered them exceedingly popular, until their success tempted into the field a host of brainless imitators. Mr. S. is also the author of several poems; among others, of "Powhatan, a Metrical Romance," which we do not very particularly admire. His MS. is legible, and has much simplicity about it. At times it vacillates, and appears unformed. Upon the whole, it is much such a MS. as David Crockett wrote, and precisely such a one as we might imagine would be written by a *veritable* Jack Downing—by Jack Downing himself, had this creature of Mr. Smith's fancy been endowed with a real entity.

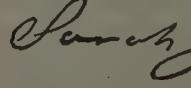
The fact is that "The Major" is not *all* a creation; at least one half of his character actually exists in the bosom of his originator. It was the Jack Downing half that composed "Powhatan."

Lieutenant SLIDELL some years ago took the additional name of Mackenzie. His reputation at one period was extravagantly high—a circumstance owing, in some measure, to the *esprit de corps* of the navy of which he is a member, and to his private influence, through his family, with the Review-cliques. Yet his fame was not altogether undeserved; although it cannot be denied that his first book, "A Year in Spain," was in some danger of being overlooked by his countrymen, until a benignant star directed the attention of the London Bookseller, Murray, to its merits. Cockney octavos prevailed; and the clever young writer, who was cut dead in his Yankee habiliments, met with bows innumerable in the gala dress of an English *imprimatur*. The work now ran through several editions, and prepared the public for the kind reception of "The American in England," which exalted his reputation to its highest pinnacle. Both these books abound in racy description, but are chiefly remarkable for their gross deficiencies in grammatical construction.

Lieut. Slidell's MS. is peculiarly neat and even—quite legible, but altogether too *petite* and effeminate. Few tokens of his literary character are to be found beyond the *petiteness*, which is exactly analogous with the minute detail of his descriptions.

FRANCIS LIEBER is Professor of History and Political Economy in the College of South Carolina, and has published many works distinguished by acumen and erudition. Among these we may notice a "Journal of a Residence in Greece," written at the instigation of the historian Niebuhr; "The Stranger in America," a piquant book abounding in various information relative to the United States; a treatise on "Education"; "Reminiscences of an Intercourse with Niebuhr," and an "Essay on International Copyright"—this last a valuable work.

Professor Lieber's personal character is that of the frankest and most unpretending *bonhomie*, while his erudition is rather massive than minute. We may therefore expect his MS. to differ widely from that of his brother scholar Professor Anthon; and so in truth it does. His chirography is careless, heavy, black, and forcible, without the slightest attempt at ornament—very similar, upon the whole, to the well-known chirography of Chief-Justice Marshall. His letters have the peculiarity of a wide margin left at the top of each page.



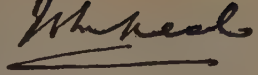
Mrs. HALE is well known for her masculine style of thought. This is clearly expressed in her chirography, which is far larger, heavier, and altogether bolder than that of her sex gen-

erally. It resembles in a great degree that of Professor Lieber, and is not easily deciphered.

Mr. EVERETT'S MS. is a noble one. It has about it an air of deliberate precision emblematic of the statesman, and a mingled grace and solidity betokening the scholar. Nothing can be more legible, and nothing need be more uniform. The man who writes thus will never grossly err in judgment or otherwise; but we may also venture to say that he will never attain the loftiest pinnacles of renown. The letters before us have a seal of red wax, with an oval device bearing the initials E.E. and surrounded with a scroll, inscribed with some Latin words which are illegible.

Dr. BIRD is well known as the author of "The Gladiator," "Calavar," "The Infidel," "Nick of the Woods," and some other works—"Calavar" being, we think, by far the best of them, and beyond doubt one of the best of American novels.

His chirography resembles that of Mr. Benjamin very closely; the chief difference being in a curl of the final letters in Dr. B's. The characters, too, have the air of not being able to keep pace with the thought, and an uneasy want of finish seems to have been the consequence. A vivid imagination might easily be deduced from such a MS.



Mr. JOHN NEAL'S MS. is exceedingly illegible and careless. Many of his epistles are perfect enigmas, and we doubt whether he could read them himself in half-an-hour after they are penned. Sometimes four or five words are run together. Any one, from Mr. Neal's penmanship, might suppose his mind to be what it really is—excessively flighty and irregular, but active and energetic.

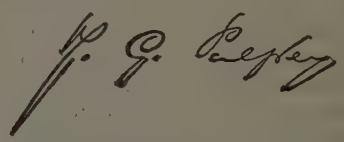
The penmanship of Miss SEDGWICK is excellent. The characters are well-sized, distinct, elegantly but not ostentatiously formed, and, with perfect freedom of manner, are still sufficiently feminine. The hair-strokes differ little from the downward ones, and the MSS. have thus a uniformity they might not otherwise have. The paper she generally uses is good, blue, and machine-ruled. Miss Sedgwick's handwriting points unequivocally to the traits of her literary style—which are strong common sense, and a masculine disdain of mere ornament. The signature conveys the general chirography.

Mr. COOPER'S MS. is very bad—*unformed,* with little of distinctive character about it, and varying greatly in different epistles. In most of those before us a steel pen has been em-

ployed, the lines are crooked, and the whole chirography has a constrained and school-boyish air. The paper is fine, and of a bluish tint. A wafer is always used. Without appearing ill-natured, we could scarcely draw any inferences from such a MS. Mr. Cooper has seen many vicissitudes, and it is probable that he has not always written thus. Whatever are his faults, his genius cannot be doubted.

Dr. HAWKS is one of the originators of the "New York Review," to which journal he has furnished many articles. He is also known as the author of the "History of the Episcopal Church of Virginia," and one or two minor works. He now edits the "Church Record." His style, both as a writer and as a preacher, is characterized rather by a perfect *fluency* than by any more lofty quality, and this trait is strikingly indicated in his chirography, of which the signature is a fair specimen.

This gentleman is the author of "Cromwell," "The Brothers," "Ringwood, the Rover," and some other minor productions. He at one time edited the "American Monthly Magazine" in connection with Mr. Hoffman. In his compositions for the Magazines, Mr. HERBERT is in the habit of doing both them and himself gross injustice by neglect and hurry. His longer works evince much ability, although he is rarely entitled to be called original. His MS. is exceedingly neat, clear, and forcible; the signature affording a just idea of it. It resembles that of Mr. Kennedy very nearly; but has more slope and uniformity, with, of course, less spirit, and less of the picturesque. He who writes as Mr. Herbert will be found always to depend chiefly upon his merits of *style* for a literary reputation, and will not be unapt to fall into a pompous grandiloquence. The author of "Cromwell" is sometimes wofully turgid.

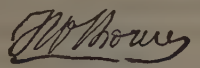


Professor PALFREY* is known to the public principally through his editorship of the "North American Review." He has a reputation for scholarship; and many of the articles which are attributed to his pen evince that this reputation is well based, so far as the common notion of scholarship extends. For the rest, he seems to dwell altogether within the narrow world of his *own* conceptions; imprisoning them by the very barrier which he has erected against the conceptions of others.

His MS. shows a total deficiency in the sense of the beautiful. It has great pretension—great straining after effect, but is altogether one of the most miserable MSS. in the world—forceless, graceless, tawdry, vacillating, and un-

*Palfrey, Pierrepont, Paulding and Percival, as well as Poe, are among the names to be considered in attributing articles signed P—— to the proper author.—Ed.

picturesque. The signature conveys but a faint idea of its extravagance. However much we may admire the mere *knowledge* of the man who writes thus, it will not do to place any dependence upon his wisdom or upon his taste.

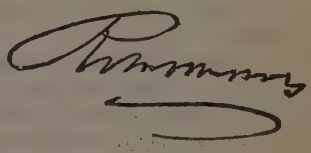


F. W. Thomas, who began his literary career at the early age of seventeen, by a poetical lampoon upon certain Baltimore fops, has since more particularly distinguished himself as a novelist. His "Clinton Bradshawe" is perhaps better known than any of his later fictions. It is remarkable for a frank, unscrupulous portraiture of men and things, in high life and low, and by unusual discrimination and observation in respect to character. Since its publication he has produced "East and West" and "Howard Pinckney," neither of which seems to have been so popular as his first essay, although both have merit.

"East and West," published in 1836, was an attempt to portray the every-day events occurring to a fallen family emigrating from the East to the West. In it, as in "Clinton Bradshawe," most of the characters are drawn from life. "Howard Pinckney" was published in 1840.

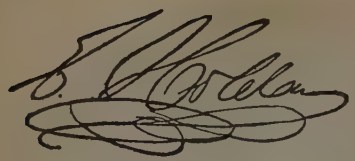
Mr. Thomas was at one period the editor of the Cincinnati "Commercial Advertiser." He is also well known as a public lecturer on a variety of topics. His conversational powers are very great. As a poet, he has also distinguished himself. His "Emigrant" will be read with pleasure by every person of taste.

His MS. is more like that of Mr. Benjamin than that of any other literary person of our acquaintance. It has even more than the occasional nervousness of Mr. B.'s, and, as in the case of the editor of the "New World," indicates the passionate sensibility of the man.



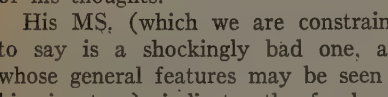
Mr. Morris ranks, we believe, as the first of our Philadelphia poets since the death of Willis Gaylord Clark. His compositions, like those of his late lamented friend, are characterised by sweetness rather than by strength of versification, and by tenderness and delicacy rather than by vigour or originality of thought. A late notice of him in the "Boston Notion" from the pen of Rufus W. Griswold, did his high qualities no more than justice. As a prose writer, he is chiefly known by his editorial contributions to the Philadelphia "Inquirer," and by occasional essays for the Magazines.

His chirography is usually very illegible, although at times sufficiently distinct. It has no marked characteristics, and like that of almost every editor in the country, has been so modified by the circumstances of his position as to afford no certain indication of the mental features.



Ezra Holden has written much, not only for his paper, "The Saturday Courier," but for our periodicals generally, and stands high in the public estimation, as a sound thinker, and still more particularly as a fearless expresser of his thoughts.

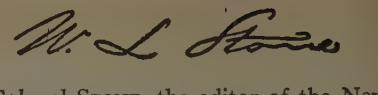
His MS. (which we are constrained to say is a shockingly bad one, and whose general features may be seen in his signature), indicates the frank and *naive* manner of his literary style—a style which not unfrequently flies off into whimsicalities.



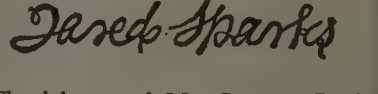
Mr. Graham is known to the literary world as the editor and proprietor of "Graham's Magazine," the most popular periodical in America, and also of the "Saturday Evening Post," of Philadelphia. For both of these journals he has written much and well.*

His MS. generally is very bad, or at least very illegible. At times it is sufficiently distinct, and has force and picturesqueness, speaking plainly of the *energy* which particularly distinguishes him as a man. The signature above is more scratchy than usual.

*This remark should be noted by those who are too fond of attributing to Poe unsigned articles appearing in magazines.—Ed.

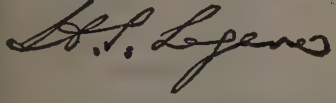


Colonel Stone, the editor of the New York "Commercial Advertiser," is remarkable for the great difference which exists between the apparent public opinion respecting his abilities and the real estimation in which he is privately held. Through his paper, and a bustling activity always prone to thrust itself forward, he has attained an unusual degree of influence in New York, and not only this, but what appears to be a reputation for talent. But this talent we do not remember ever to have heard assigned him by any honest man's private opinion. We place him among our *literati* because he has published certain books. Perhaps the best of these are his "Life of Brandt," and "Life and Times of Red Jacket." Of the rest, his story called "Ups and Downs," his defence of Animal Magnetism, and his pamphlets concerning Maria Monk, are scarcely the most absurd. His MS. is heavy and sprawling, resembling his mental character in a species of utter unmeaningness, which lies like the nightmare, upon his autograph.

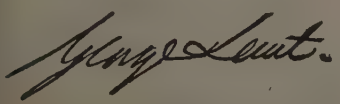


The labours of Mr. Sparks, Professor of History at Harvard, are well known and justly appreciated. His MS. has an unusually odd appearance. The characters are large, round, black, irregular, and perpendicular—the signature, as above, being an excellent specimen of his chirography in general. In all his letters now before us, the

hes are as close together as possible, ving the idea of irretrievable con- sion; still none of them are illegible pon close inspection. We can form o guess in regard to any mental pe- uliarities from Mr. Sparks' MSS. which as been no doubt modified by the hur- ying and intricate nature of his re- earches. We might imagine such pistles as these to have been written extreme haste, by a man exceedingly usy, among great piles of books and apers huddled up around him, like he chaotic tomes of Magliabecchi. The aper used in all our epistles is uncom- only fine.



The name of H. S. LEGARE is written ithout an accent on the final *e*, yet is ronounced as if this letter were ac- ented—Legray. He contributed many rticles of high merit to the "Southern eview," and has a wide reputation for cholarship and talent. His MS. re- embles that of Mr. Palfrey of the North American Review," and their ental features appear to us nearly dentical. What we have said in regard o the chirography of Mr. Palfrey will pply with equal force to that of the resent Secretary.



Mr. GEORGE LUNT of Newburyport, Massachusetts, is known as a poet of much vigour of style and massiveness of thought. He delights in the grand, rather than in the beautiful, and is not unfrequently turgid, but never feeble.* The traits here described impress themselves with remarkable distinctness upon his chirography, of which the signature gives a perfect idea.

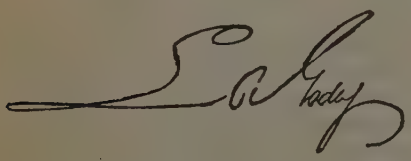
Mr. CHANDLER'S reputation as the editor of one of the best daily papers in the country, and as one of our finest *belles lettres* scholars, is deservedly high. He is well known through his numerous addresses, essays, miscellaneous sketches, and prose tales. Some of these latter evince imaginative powers of a superior order.

His MS. is not fairly shown in his signature, the latter being much more open and bold than his general chirograph. His handwriting must be included in the editorial category—it seems to have been ruined by habitual hurry.

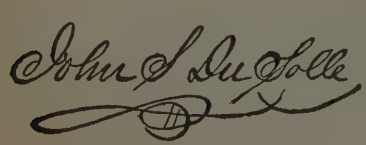
H. T. TUCKERMAN has written one or two books consisting of "Sketches of Travel." His "Isabel" is, perhaps, better known than any of his other productions, but was never a popular work. He is a *correct* writer so far as mere

*If the student of literature will read a few of these poems, he will note the marvelous accurate review work of Poe as summed up in this brief criticism.—Ed.

English is concerned, but an insufferably tedious and dull one. He has contributed much of late days to the "Southern Literary Messenger," with which journal, perhaps, the legibility of his MS. has been an important, if not the principal recommendation. His chirography is neat and distinct, and has some grace, but no force—evincing, in a remarkable degree, the idiosyncrasies of the writer.

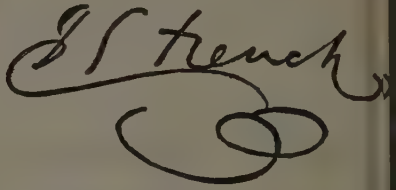


Mr. GODEY is only known to the literary world as editor and publisher of "The Lady's Book," but his celebrity in this regard entitles him to a place in this collection. His MS. is remarkably distinct and graceful—the signature affording an excellent idea of it. The man who invariably writes so well as Mr. G. invariably does, gives evidence of a fine taste, combined with an indefatigability which will ensure his permanent success in the world's affairs. No man has warmer friends or fewer enemies.

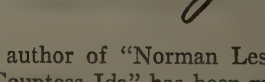


Mr. DU SOLLE is well known through his connection with the "Spirit of the Times." His prose is forcible, and often excellent in other respects. As a poet, he is entitled to higher consid eration. Some of his Pindaric pieces a unusually good, and it may be doubte if we have a better *versifier* in Americ

Accustomed to the daily toil of a editor, he has contracted a habit writing hurriedly, and his MS. vari with the occasion. It is impossible deduce any inferences from it as regar the mental character. The signatu shows rather how he can write than ho he does.

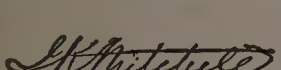


Mr. FRENCH is the author of a "Li of David Crockett" and also of a nov called "Elkswatawa," a denunciato review of which, in the "Southern Me senger," some years ago, deterred hi from further literary attempts. Shou he write again, he will probably di tinguish himself, for he is unquestio ably a man of talent. We need no be ter evidence of this than his MS. whi speaks of force, boldness, and ori inality. The flourish, however, betra a certain *floridity* of taste.

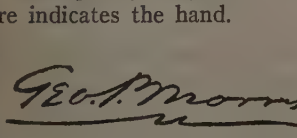


The author of "Norman Leslie" a "The Countess Ida" has been more su cessful as an essayist about small ma ters than as a novelist. "Norma

Leslie" is more familiarly remembered as "The Great Used Up," while "The Countess" made no definite impression whatever. Of course we are not to expect remarkable features in Mr. Fay's MS. It has a wavering, finicky, and over-delicate air, without pretension to either grace or force; and the description of the chirography would answer, without alteration, for that of the literary character. Mr. F. frequently employs an amanuensis, who writes a very beautiful French hand. The one must not be confounded with the other.

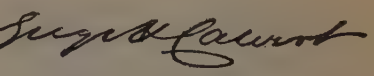


Dr. Mitchell has published several pretty songs which have been set to music and become popular. He has also given to the world a volume of poems, of which the longest was remarkable for an old-fashioned polish and vigour of versification. His MS. is rather graceful than picturesque or forcible—and these words apply equally well to his poetry in general. The signature indicates the hand.

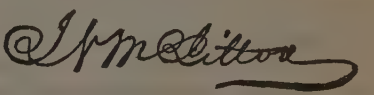


General Morris has composed many songs which have taken fast hold upon the popular taste, and which are deservedly celebrated. He has caught the true *tone* for these things, and hence his popularity—a popularity which his enemies would fain make us believe is altogether attributable to his editorial influence. The charge is true only in a measure. The tone of which we speak is that kind of frank, free, hearty *sentiment* (rather than philosophy) which distinguishes Beranger, and which the critics, for want of a better term, call *nationality*.

His MS. is a simple, unornamented hand, rather rotund than angular, very legible, forcible, and altogether in keeping with his style.

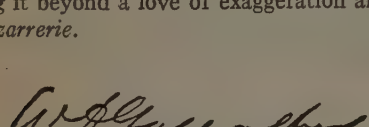


Mr. Calvert was at one time principal editor of the "Baltimore American," and wrote for that journal some good paragraphs on the common topics of the day. He has also published many translations from the German, and one or two original poems—among others an imitation of Don Juan called "Pelayo," which did him no credit. He is essentially a feeble and commonplace writer of poetry, altogether his prose compositions have a certain degree of merit. His chirography indicates the "commonplace" upon which we have commented. It is a very unusual, scratchy, and tapering clerk's hand—a hand which no man of talent ever did or could indite, unless compelled by circumstances of more than ordinary force. The signature is far better than the general manuscript of his epistles.



Mr. McJilton is better known from his contributions to the journals of the day than from any book-publications. He has much talent, and it is not improbable that he will hereafter dis-

tinguish himself, although as yet he has not composed anything of length which, as a whole, can be styled good. His MS. is not unlike that of Dr. Snodgrass, but it is somewhat clearer and better. We can predicate little respecting it beyond a love of exaggeration and *bizarrerie*.



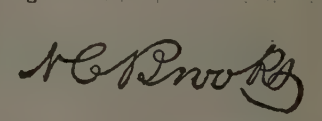
Mr. GALLAGHER is chiefly known as a poet. He is the author of some of our most popular songs, and has written many long pieces of high but unequal merit. He has the true spirit, and will rise into a just distinction hereafter. His manuscript tallies well with our opinion. It is a very fine one—clear, bold, decided and picturesque. The signature above does not convey, in full force, the general character of his chirography, which is more rotund, and more decidedly placed upon the paper.

Mr. DANA ranks among our most eminent poets, and he has been the frequent subject of comment in our Reviews. He has high qualities, undoubtedly, but his defects are many and great.

His MS. resembles that of Mr. Gallagher very nearly, but is somewhat more rolling, and has less boldness and decision. The literary traits of the two gentlemen are very similar, although Mr. Dana is by far the more polished writer, and has a scholarship which Mr. Gallagher wants.

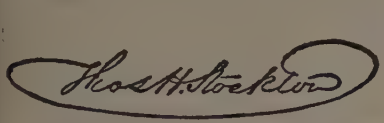
Mr. MCMICHAEL is well known to the Philadelphia public by the number and force of his prose compositions, but he has seldom been tempted into book-publication. As a poet, he has produced some remarkably vigorous things. We have seldom seen a finer composition than a certain celebrated "Monody" of his.

His MS., when not hurried, is graceful and flowing, without picturesqueness. At times it is totally illegible. His chirography is one of those which have been so strongly modified by circumstances that it is nearly impossible to predicate anything with certainty respecting them.



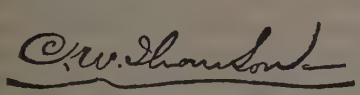
Mr. N. C. BROOKS has acquired some reputation as a Magazine writer. His serious prose is often very good—is always well-worded—but in his comic attempts he fails, without appearing to be aware of his failure. As a poet he has succeeded far better. In a work which he entitled "Scriptural Anthology" among many inferior compositions of length, there were several shorter pieces of great merit:—for example "Shelley's Obsequies" and "The Niobethanthes." Of late days we have seen little from his pen.

His MS. has much resemblance to that of Mr. Bryant, although altogether it is a better hand, with much more freedom and grace. With care Mr. Brooks can write a fine MS. just as with care he can compose a fine poem.

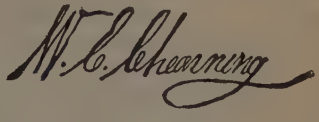


The Rev. THOMAS STOCKTON has written many pieces of fine poetry, and has lately distinguished himself as the editor of the "Christian World."

His MS. is fairly represented by his signature, and bears much resemblance to that of Mr. N. C. Brooks of Baltimore. Between these two gentlemen there exists also a remarkable similarity, not only of thought, but of personal bearing and character. We have already spoken of the peculiarities of Mr. B.'s chirography.



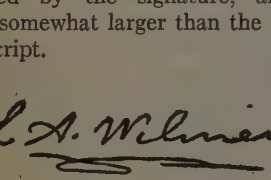
Mr. THOMSON has written many short poems, and some of them possess merit. They are characterised by tenderness and grace. His MS. has some resemblance to that of Professor Longfellow, and by many persons would be thought a finer hand. It is clear, legible, and open—what is called a rolling hand. It has too much tapering, and too much variation between the weight of the hair strokes and the downward ones, to be forcible or picturesque. In all those qualities which we have pointed out as especially distinctive of Professor Longfellow's MS. it is remarkably deficient; and, in fact, the literary character of no two individuals could be more radically different.



The Rev. W. E. CHANNING is at the head of our moral and didactic writers. His reputation both at home and abroad is deservedly high, and in regard to the matters of purity, polish, and modulation of style, he may be said to have attained the dignity of a standard and a classic. He has, it is true, been severely criticised, even in respect to these very points, by the "Edinburgh Review." The critic, however, made out his case but lamely, and proved nothing beyond his own incompetence. To detect occasional or even frequent inadvertences in the way of bad grammar, faulty construction, or misusage of language, is not to prove impurity of *style*—a word which happily has a bolder signification than any dreamed of by the Zoilus of the Review in question. Style regards, more than anything else, the *tone* of a composition. All the rest is not unimportant, to be sure, but appertains to the minor morals of literature, and can be learned by rote by the meanest simpletons in letters—can be carried to its highest excellence by dolts, who, upon the whole, are despicable as stylists. Irving's style is inimitable in its grace and delicacy, yet few of our practised writers are guilty of more frequent inadvertences of language. In what may be termed his mere English, he is surpassed by fifty

whom we could name. Mr. Tuckerman's English, on the contrary, is sufficiently pure, but a more lamentable style than that of his "Sicily" it would be difficult to point out.

Besides those peculiarities which we have already mentioned as belonging to Dr. Channing's style, we must not fail to mention a certain calm, broad deliberateness, which constitutes *force* in its highest character, and approaches to majesty. All these traits will be found to exist plainly in his chirography, the character of which is exemplified by the signature, although this is somewhat larger than the general manuscript.

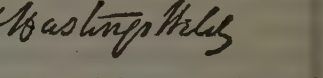


Mr. WILMER has written and published much; but he has reaped the usual fruits of a spirit of independence, and has thus failed to make that impression on the *popular* mind which his talents, under other circumstances, would have effected. But better days are in store for him, and for all who "hold to the right of way," despising the yelpings of the small dogs of our literature. His prose writings have all merit—always the merit of a chastened style. But he is more favourably known by his poetry, in which the student of the British classics will find much for warm admiration. We have few better versifiers than Mr. Wilmer.

His chirography plainly indicates the cautious polish and terseness of his style, but the signature does not convey the print-like appearance of the MS.

Mr. Dow is distinguished as the author of many fine sea-pieces, among which will be remembered a series of papers called "The Log of Old Ironsides." His land sketches are not generally so good. He has a fine imagination, which as yet is undisciplined, and leads him into occasional bombast. As a poet he has done better things than as a writer of prose.

His MS., which has been strongly modified by circumstances, gives no indication of his true character, literary or moral.



Mr. WELD is well known as the present working editor of the New York "Tattler" and "Brother Jonathan." His attention was accidentally directed to literature about ten years ago, after a minority, to use his own words, "spent at sea, in a store, in a machine-shop, and in a printing-office." He is now, we believe, about thirty-one years of age. His deficiency of what is termed regular education would scarcely be gleaned from his editorials, which, in general, are unusually well written. His "Corrected Proofs" is a work which does him high credit, and which has been extensively circulated, although "printed at odd times by himself, when he had nothing else to do."

His MS. resembles that of Mr. Joseph C. Neal in many respects, but is less open and less legible. His signature is altogether much better than his general chirography.

Mrs. M. St. Leon Loud is one of the finest poets of this country; possessing, we think, more of the true divine *afflatus* than any of her female contemporaries. She has, in especial, *imagination* of no common order, and unlike many of her sex whom we could mention, is not

Content to dwell in decencies forever.

While she *can*, upon occasion, compose the ordinary metrical sing-song with all the decorous proprieties which are in fashion, she yet ventures very frequently into a more ethereal region. We refer our readers to a truly beautiful little poem entitled the "Dream of the Lonely Isle," lately published in this Magazine.

Mrs. Loud's MS. is exceedingly clear, neat, and forcible, with just sufficient effeminacy and no more.

Dr. Pliny Earle, of Frankford, Pa., has not only distinguished himself by several works of medical and general science, but has become well known to the literary world, of late, by a volume of very fine poems, the longest, but by no means the best of which was entitled "Marathon." This latter is not greatly inferior to the "Marco Bozzaris" of Halleck, while some of the minor pieces equal any American poems. His chirography is peculiarly neat and beautiful, giving indication of the elaborate finish which characterises his compositions. The signature conveys the general hand.

David Hoffman of Baltimore, has not only contributed much and well to monthly Magazines and Reviews, but has given to the world several valuable publications in book form. His style is terse, pungent, and otherwise excellent, although disfigured by a half-comic half-serious pedantry.

His MS. has about it nothing strongly indicative of character.

S. D. Langtree has been long and favourably known to the public as editor of the "Georgetown Metropolitan," and more lately of the "Democratic Review," both of which journals he has conducted with distinguished success. As a critic, he has proved himself just, bold, and acute, while his prose compositions generally evince the man of talent and taste.

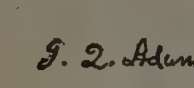
His MS. is not remarkably good, being somewhat too scratchy and tapering. We include him, of course, in the editorial category.

Judge Conrad occupies, perhaps, the first place among our Philadelphia *literati*. He has distinguished himself both as a prose writer and a poet—not to speak of his high legal reputation. He has been a frequent contributor to the periodicals of this city, and we believe to one at least of the Eastern Reviews. His first production which

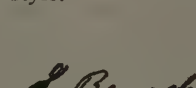
attracted general notice was a tragedy entitled "Conrad, King of Naples." It was performed at the Arch Street Theatre, and elicited applause from the more judicious. This play was succeeded by "Jack Cade," performed at the Walnut Street Theatre, and lately modified and reproduced under the title of "Aylmere." In its new dress this drama has been one of the most successful ever written by an American, not only attracting crowded houses, but extorting the good word of our best critics. In occasional poetry Judge Conrad has also done well. His lines "On a Blind Boy Soliciting Charity" have been greatly admired, and many of his other pieces evince ability of a high order. His political fame is scarcely a topic for these pages, and is, moreover too much a matter of common observation to need comment from us.

His MS. is neat, legible, and forcible, evincing combined caution and spirit in a very remarkable degree.

P. P. Cooke of Winchester, Virginia, is well known, especially in the South, as the author of numerous excellent contributions to the "Southern Literary Messenger." He has written some of the finest poetry of which America can boast. A little piece of his entitled "Florence Vane," and contributed to the "Gentleman's Magazine" of this city, during our editorship of that journal, was remarkable for the high ideality it evinced, and for the great delicacy and melody of its rhythm. It was universally admired and copied, as well here as in England. We saw it not long ago, *as original* in "Bentley's Miscellany." Mr. Cooke has, we believe, nearly ready for press a novel called "Maurice Werterbern," whose success we predict with confidence. His MS. is clear, forcible and legible, but disfigured by some little of that affectation which is scarcely a blemish in his literary style.



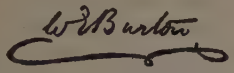
The chirography of Ex-President Adams (whose poem, "The Wants of a Man," has of late attracted so much attention), is remarkable for a certain steadiness of purpose pervading the whole, and overcoming even the constitutional tremulousness of the writer's hand. Wavering in every letter, the entire MS. has yet a firm, regular, and decisive appearance. It is also very legible.



Mr. J. Beauchamp Jones has been, we believe, connected for many years past with the lighter literature of Baltimore, and at present edits the "Baltimore Saturday Visiter," with much judgment and general ability. He is the author of a series of papers of high merit now in course of publication in the "Visiter," and entitled "Wild Western Scenes."

His MS. is distinct, and might be

termed a fine one; but is somewhat too much in consonance with the ordinary clerk style to be either graceful or forcible.

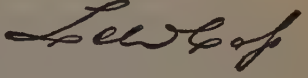


Mr. BURTON is better known as a comedian than as a literary man, but he has written many short prose articles of merit, and his quondam editorship of the "Gentleman's Magazine" would, at all events, entitle him to a place in this collection. He has, moreover, published one or two books. An annual issued by Carey and Hart in 1840 consisted entirely of prose contributions from himself, with poetical ones from Charles West Thompson, Esq. In this work many of the tales were good.

Mr. Burton's MS. is scratchy and *petite*, betokening indecision and care or caution.

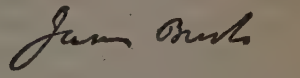
RICHARD HENRY WILDE of Georgia, has acquired much reputation as a poet, and especially as the author of a little piece entitled "My life is like the Summer Rose," whose claim to originality has been made the subject of repeated and reiterated attack and defence. Upon the whole it is hardly worth quarreling about. Far better verses are to be found in every second newspaper we take up. Mr. Wilde has also lately published, or is about to publish a "Life of Tasso," for which he has been long collecting material.

His MS. has all the peculiar sprawling and elaborate tastelessness of Mr. Palfrey's, to which altogether it bears a marked resemblance. The love of effect, however, is more perceptible in Mr. Wilde's then even in Mr. Palfrey's.



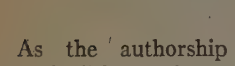
LEWIS CASS, the Ex-Secretary of War, has distinguished himself as one of the finest *belles lettres* scholars of America. At one period he was a very regular contributor to the "Southern Literary Messenger," and even lately he has furnished that journal with one or two very excellent papers.

His MS. is clear, deliberate, and statesmanlike; resembling that of Edward Everett very closely. It is not often that we see a letter written altogether by himself. He generally employs an amanuensis, whose chirography does not differ materially from his own, but is somewhat more regular.



Mr. JAMES BROOKS enjoys rather a private than a public literary reputation; but his talents are unquestionably great, and his productions have been numerous and excellent. As the author of many of the celebrated "Jack Downing" letters, and as the reputed author of the whole of them, he would at all events be entitled to a place among our *literati*.

His chirography is simple, clear, and legible, with little grace and less boldness. These traits are precisely those of his literary style.



As the authorship of the "Jack Downing" letters is even still considered by many a moot point (although in fact there should be no question about it), and as we have given the signature of Mr. Seba Smith, and (just above) of Mr. Brooks, we now present our readers with the facsimile signature of the "*veritable Jack*" himself, written by him individually in our own bodily presence. Here, then, is an opportunity of comparison.

The chirography of "the veritable Jack" is a very good, honest, sensible hand, and not very dissimilar to that of Ex-President Adams.

Mr. J. R. Lowell, of Massachusetts, is entitled, in our opinion, to at least the second or third place among the poets of America. We say this on account of the vigour of his *imagination* —a faculty to be first considered in all criticism upon poetry. In this respect he surpasses, we think, any of our writers (at least any of those who have put themselves prominently forth as poets) with the exception of Longfellow, and perhaps one other. His ear for rhythm, nevertheless, is imperfect, and he is very far from possessing the artistic ability of either Longfellow, Bryant, Halleck, Sprague, or Pierpont. The reader, desirious of properly estimating the powers of Mr. Lowell, will find a very beautiful little poem from his pen in the October number of this Magazine. There is one also (not quite so fine) in the number for last month. He will contribute regularly.

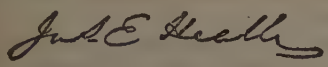
His MS. is strongly indicative of the vigour and precision of his poetical thought. The man who writes thus, for example, will never be guilty of metaphorical extravagance, and there will be found *terseness* as well as strength in all he does.

Mr. L. J. Cist, of Cincinnati, has not written much prose, and is known especially by his poetical compositions, many of which have been very popular, although they are at times disfigured by false metaphor, and by a meretricious straining after effect. This latter foible makes itself clearly apparent in his chirography, which abounds in ornamental flourishes, not ill executed, to be sure, but in very bad taste.

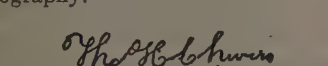
Mr. Arthur is not without a rich talent for description of scenes in low life, but is uneducated, and too fond of mere vulgarities to please a refined taste. He has published "The Subordinate," and "Insubordination," two tales distinguished by the peculiarities above mentioned. He has also written much

for our weekly papers and the "Lady's Book."

His hand is a commonplace clerk's hand, such as we might expect him to write. The signature is much better than the general MS.

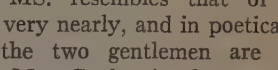


Mr. HEATH is almost the only person of any literary distinction residing in the chief city of the Old Dominion. He edited the "Southern Literary Messenger" in the five or six first months of its existence: and, since the secession of the writer of this article, has frequently aided in its editorial conduct. He is the author of "Edge-Hill," a well-written novel, which, owing to the circumstances of its publication, did not meet with the reception it deserved. His writings are rather polished and graceful than forcible or original, and these peculiarities can be traced in his chirography.



Dr. THOMAS HOLLY CHIVERS,* of New York, is at the same time one of the best and one of the worst poets in America. His productions affect one as a wild dream—strange, incongruous, full of images of more than arabesque monstrosity, and snatches of sweet unsustained song. Even his worst nonsense (and some of it is horrible) has an indefinite charm of sentiment and melody. We can never be sure that there is *any* meaning in his words—neither is there any meaning in many of our finest musical airs—but the effect is very similar in both. His figures of speech are metaphor run mad, and his grammar is often none at all. Yet there are as fine individual passages to be found in the poems of Dr. Chivers as in those of any poet whatsoever.

His MS. resembles that of P. P. Cooke very nearly, and in poetical character the two gentlemen are closely akin. Mr. Cooke is, by much, the more *correct*, while Dr. Chivers is sometimes the more poetic. Mr. C. always sustains himself; Dr. C. never.



Judge STORY, and his various literary and political labours, are too well known to require comment.

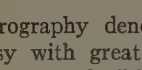
His chirography is a noble one—bold, clear, massive, and deliberate, betokening in the most unequivocal manner all the characteristics of his intellect. The plain unornamented style of his compositions is impressed with accuracy upon his handwriting, the whole air of which is well conveyed in the signature.

Mr. JOHN FROST, Professor of Belles Lettres in the High School of Philadelphia, and at present editor of "The Young People's Book," has distinguished himself by numerous literary compositions for the periodicals of the

* Chivers was a wonderful imitator of Poe's poetic style. His failure is a proof that thought alone can sustain genius.—Ed.

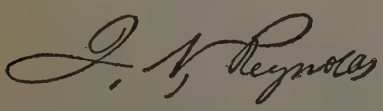
day, and by a great number of published works which come under the head of the *utile* rather than of the *dulce*—at least in the estimation of the young. He is a gentleman of fine taste, sound scholarship, and great general ability.

His chirography denotes his mental idiosyncrasy with great precision. Its careful neatness, legibility, and finish are but a part of that turn of mind which leads him so frequently into compilation. The signature here given is more diminutive than usual.



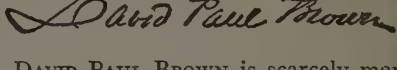
Mr. J. F. Otis is well known as a writer for the Magazines; and has, at various times, been connected with many of the leading newspapers of the day—especially with those in New York and Washington. His prose and poetry are equally good; but he writes too much and too hurriedly to write invariably well. His taste is fine, and his judgment in literary matters is to be depended upon at all times when not interfered with by his personal antipathies or predilections.

His chirography is exceedingly illegible, and, like his style, has every possible fault except that of the commonplace.



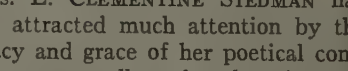
Mr. Reynolds occupied at one time a distinguished position in the eye of the public on account of his great and laudable exertions to get up the American South Polar expedition, from a personal participation in which he was most shamefully excluded. He has written much and well. Among other works, the public are indebted to him for a graphic account of the noted voyage of the frigate Potomac to Madagascar.

His MS. is an ordinary clerk's hand, giving no indication of character.



David Paul Brown is scarcely more distinguished in his legal capacity than by his literary compositions. As a dramatic writer he has met with much success. His "Sertorius" has been particularly well received both upon the stage and in the closet. His fugitive productions, both in prose and verse, have also been numerous, diversified, and excellent.

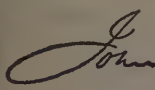
His chirography has no doubt been strongly modified by the circumstances of his position. No one can expect a lawyer in full practice to give in his MS. any true indication of his intellect or character.



Mrs. E. Clementine Stedman has lately attracted much attention by the delicacy and grace of her poetical compositions, as well as by the piquancy and spirit of her prose. For some months past we have been proud to rank her among the best of the contributors to "Graham's Magazine."

Her chirography differs as materially from that of her sex in general as does

her literary manner from the usual namby-pamby of our blue-stockings. It is indeed a beautiful MS. very closely resembling that of Professor Longfellow, but somewhat more diminutive, and far more full of grace.

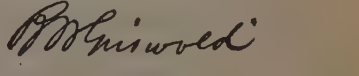


J. Greenleaf Whittier is placed by his particular admirers in the very front rank of American poets. We are not disposed, however, to agree with their decision in every respect. Mr. Whittier is a fine versifier, so far as strength is regarded independently of modulation. His subjects, too, are usually chosen with the view of affording scope to a certain *vivida vis* of expression which seems to be his forte; but in taste, and especially in *imagination* which Coleridge has justly styled the *soul* of all poetry, he is ever remarkably deficient. His themes are *never* to our liking.

His chirography is an ordinary clerk's hand, affording little indication of character.

Mrs. Ann S. Stephens was at one period the editor of the "Portland Magazine," a periodical of which we have not heard for some time, and which we presume, has been discontinued. More lately her name has been placed upon the title-page of "The Lady's Companion" of New York, as one of the conductors of that journal—to which she has contributed many articles of merit and popularity. She has also written much and well for various other periodicals—and will hereafter enrich this magazine with her compositions, and act as one of its editors.

Her MS. is a very excellent one, and differs from that of her sex in general by an air of more than usual force and freedom.



Mr. Griswold has written much, but chiefly in the editorial way, whether for the papers, or in books. He is a gentleman of fine taste and sound judgment. His knowledge of American literature, in all its details, is not exceeded by that of any man among us. He is not only a polished prose-writer, but a poet of no ordinary power; although, as yet, he has not put himself much in the way of the public admiration.

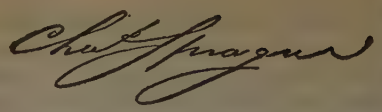
His MS. is by no means a good one. It appears unformed, and vacillates in a singular manner; so that nothing can be predicated from it, except a certain unsteadiness of purpose.

APPENDIX

In the foregoing facsimile signatures of the most distinguished American *literati* our design was to furnish a *complete* series of Autographs, embracing a specimen of the MS. of *each of the most noted among our living male and female writers.* For obvious reasons, we made no attempt at classifi-

cation or arrangement—either in reference to reputation or our own private opinion of merit. Our second article will be found to contain as many of the *Dii majorum gentium* as our first; and this, our third and last, as many as either—although fewer names, upon the whole, than the preceding papers. The impossibility of procuring the signatures now given, at a period sufficiently early for the immense edition of December, has obliged us to introduce this Appendix.

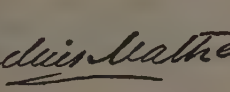
It is with great pleasure that we have found our anticipations fulfilled in respect to the *popularity* of these chapters—our individual claim to merit is so trivial that we may be permitted to say so much—but we confess it was with no less surprise than pleasure that we observed so little discrepancy of opinion manifested in relation to the hasty critical, or rather gossiping, observations which accompanied the signatures. Where the subject was so wide and so necessarily *personal*—where the claims of more than one hundred *literati*, summarily disposed of, were turned over for re-adjudication to a press so intricately bound up in their interest as is ours—it is really surprising how little of dissent was mingled with so much of general comment. The fact, however, speaks loudly to one point:—to the *unity of truth*. It assures us that the differences which exist among us are differences not of real, but of affected opinion, and that the voice of him who maintains fearlessly what he believes honestly, is pretty sure to find an echo (if the speaking be not mad) in the vast heart of the world at large.



The "Writings of CHARLES SPRAGUE" were first collected and published about nine months ago by Mr. Charles S. Francis, of New York. At the time of the issue of the book we expressed our opinion frankly in respect to the general merits of the author—an opinion with which one or two members of the Boston press did not see fit to agree—but which, as yet, we have found no reason for modifying. What we say now is, in spirit, merely a repetition of what we said then. Mr. Sprague is an accomplished *belles lettres* scholar, so far as the usual ideas of scholarship extend. He is a very correct rhetorician of the old school. His versification has not been equalled by that of any American—has been surpassed by no one living or dead. In this regard there are to be found finer passages in his poems than any elsewhere. These are his chief merits. In the *essentials* of poetry he is excelled by twenty of our countrymen whom we could name. Except in a very few instances he gives no evidence of the loftier ideality. His "Winged Worshippers" and "Lines on the Death of M. S. C." are *beautiful* poems—but he has written nothing else which should be called so. His "Shakespeare Ode," upon which his high reputation mainly depended, is quite a *second-hand* affair—with no merit whatever beyond that of a polished and vigorous versification. Its imitation of "Collins' Ode to the Passions" is obvious. Its allegorical conduct is mawkish, *passe*, and absurd. The poem, upon the whole, is just such

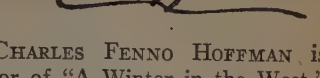
one as would have obtained its author n Etonian prize some forty or fifty ears ago. It is an exquisite specimen f mannerism, without meaning and ithout merit—of an artificial, but ost inartistical style of composition, f which conventionality is the soul,—aste, nature, and reason the antipodes. man may be a clever financier with-ut being a genius.

It requires but little effort to see in Mr. Sprague's MS. all the idiosyncrasy f his intellect. Here are distinctness, recision, and vigour—but vigour em-loyed upon *grace* rather than upon its egitimate functions. The signature ully indicates the general hand—in hich the spirit of elegant imitation nd conservatism may be seen reflected s in a mirror.



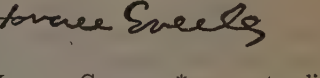
Mr. Cornelius Mathews is one of he editors of "Arcturus," a monthly ournal which has attained much repu-ation during the brief period of its xistence. He is the author of "Puffer Hopkins," a clever satirical tale some-vhat given to excess in caricature, and lso of the well-written retrospective riticisms which appear in his Maga-ine. He is better known, however, by 'The Motley Book," published some ears ago—a work which we had no pportunity of reading. He is a gen-leman of taste and judgment unques-ionably.

His MS. is much to our liking—bold, listinct, and picturesque—such a hand as no one destitute of talent indites. The signature conveys the hand.



Mr. Charles Fenno Hoffman is the author of "A Winter in the West," "Greyslaer," and other productions of merit. At one time he edited, with much ability, the "American Monthly Magazine" in conjunction with Mr. Benjamin, and subsequently with Dr. Bird. He is a gentleman of talent.

His chirography is not unlike that of Mr. Mathews. It has the same boldness, strength, and picturesqueness, but is more diffuse, more ornamented, and less legible. Our *facsimile* is from a somewhat hurried signature, which fails in giving a correct idea of the general hand.



Mr. Horace Greeley,* present editor of "The Tribune," and formerly of the "New-Yorker," has for many years been remarked as one of the most able and honest of American editors. He has written much and invariably well. His political knowledge is equal to that of any of his contemporaries—his general information extensive. As a *belles lettres* critic he is entitled to high respect.

His MS. is a remarkable one—having

* Poe once remarked that Greeley had everything afire. He quoted one simple sentence, five words of which meant something burning.—Ed.

about it a peculiarity which we know not how better to designate than as a *converse* of the picturesque. His characters are scratchy and irregular, ending with an *abrupt taper*—if we may be allowed this contradiction in terms, where we have the *facsimile* to prove that there is no contradiction in fact. All abrupt MSS., save this, have square or *concise* terminations of the letters. The whole chirography puts us in mind of a *jig*. We can fancy the writer jerking up his hand from the paper at the end of each word, and, indeed, of each letter. What mental idiosyncrasy lies *perdu* beneath all this is more than we can say, but we will venture to assert that Mr. Greeley (whom we do not know personally) is, *personally*, a very remarkable man.

The name of Mr. PROSPER M. WETMORE is familiar to all readers of American light literature. He has written a great deal, at various periods, both in prose and poetry (but principally in the latter) for our Papers, Magazines, and Annuals. Of late days we have seen but little, comparatively speaking, from his pen.

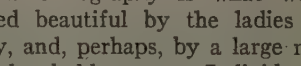
His MS. is not unlike that of Fitz-Greene Halleck, but is by no means so good. Its clerky flourishes indicate a love of the beautiful with an undue straining for effect—qualities which are distinctly traceable in his poetic efforts. As many as five or six words are occasionally run together; and no man who writes thus will be noted for *finish* of style. Mr. Wetmore is sometimes very slovenly in his best compositions.

Professor WARE, of Harvard, has written some very excellent poetry, but is chiefly known by his "Life of the Saviour," "Hints on Extemporaneous Preaching," and other religious works.

His MS. is fully shown in the signature. It evinces the direct unpretending strength and simplicity which characterise the man, not less than his general compositions.

The name of WILLIAM B. O. PEABODY, like that of Mr. Wetmore, is known chiefly to the readers of our light literature, and much more familiarly to Northern than to Southern readers. He is a resident of Springfield, Mass. His occasional poems have been much admired.

His chirography is what would be called beautiful by the ladies universally, and, perhaps, by a large majority of the bolder sex. Individually, we think it a miserable one—too careful, undecided, tapering, and effeminate. It is not unlike Mr. Paulding's, but is more regular and more legible, with less force. We hold it as undeniable that no man of *genius* ever wrote such a hand.



EPES SARGENT, Esq., has acquired high reputation as the author of "Velasco," a tragedy full of beauty as

a poem, but not adapted—perhaps not intended—for representation. He has written, besides, many very excellent poems—"The Missing Ship," for example, published in the "Knickerbocker"—the "Night Storm at Sea"—and, especially, a fine production entitled "Shells and Sea-Weeds." One or two Theatrical Addresses from his pen are very creditable *in their way*—but the way itself is, as we have before said, execrable. As an editor, Mr. Sargent has also distinguished himself. He is a gentleman of taste and high talent.

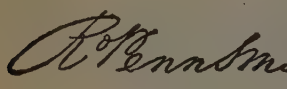
His MS. is too much in the usual clerk style to be either vigorous, graceful, or easily read. It resembles Mr. Wetmore's, but has somewhat more force. The signature is better than the general hand, but conveys its idea very well.

The name of "WASHINGTON ALLSTON," the poet and painter, is one that has been long before the public. Of his paintings we have here nothing to say—except briefly, that the most noted of them are not to our taste. His poems are not all of a high order of merit; and, in truth, the faults of his pencil and of his pen are identical. Yet every reader will remember his "Spanish Maid" with pleasure, and the "Address to Great Britain," first published in Coleridge's "Sibylline Leaves," and attributed to an English author, is a production of which Mr. Allston may be proud.

His MS., notwithstanding an exceedingly simple and boyish air, is one which we particularly admire. It is forcible, picturesque, and legible, without ornament of any description. Each letter is formed with a thorough distinctness and individuality. Such a MS. indicates caution and precision, most unquestionably—but we say of it as we say of Mr. Peabody's (a very different MS.) that no man of original genius ever did or could habitually indite it under any circumstances whatever. The signature conveys the general hand with accuracy.

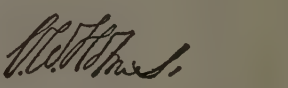
Mr. ALFRED B. STREET has been long before the public as a poet. At as early an age as fifteen, some of his pieces were published by Mr. Bryant in the "Evening Post"—among these was one of much merit, entitled a "Winter Scene." In the "New York Book," and in the collections of American poetry by Messieurs Keese and Bryant, will be found many excellent specimens of his maturer powers. "The Willewemoc," "The Forest Tree," "The Indian's Vigil," "The Lost Hunter," and "White Lake" we prefer to any of his other productions which have met our eye. Mr. Street has fine taste, and a keen sense of the beautiful. He writes carefully, elaborately, and correctly. He has made Mr. Bryant his model, and in all Mr. Bryant's good points would be nearly his equal, were it not for the sad and too perceptible stain of the imitation. That he has imitated at all—or rather that, in mature age, he has persevered in his imitations—is sufficient warranty for placing him among the men of talent rather than among the men of genius.

His MS. is full corroboration of this warranty. It is a very pretty chirography, graceful, legible, and neat. By most persons it would be called beautiful. The fact is, it is without fault—but its merits, like those of his poems, are chiefly negative.



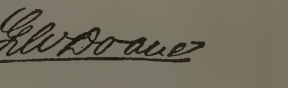
Mr. Richard Penn Smith, although perhaps better known in Philadelphia than elsewhere, has acquired much literary reputation. His chief works are "The Forsaken," a novel; a pseudo-autobiography called "Colonel Crockett's Tour in Texas"; the tragedy of "Caius Marius," and two domestic dramas entitled "The Disowned" and "The Deformed." He has also published two volumes of miscellanies under the title of "The Actress of Padua and other Tales," besides occasional poetry. We are not sufficiently cognisant of any of these works to speak with decision respecting their merits. In a biography of Mr. Smith, however, very well written, by his friend, Mr. McMichael, of this city, we are informed of "The Forsaken" that "a large edition of it was speedily exhausted"—of "The Actress of Padua," that it "had an extensive sale and was much commended"—of the "Tour in Texas," that "few books attained an equal popularity"—of "Caius Marius," that "it has great capabilities for an acting play,"—of "The Disowned" and "The Deformed," that they "were performed at the London theatres, where they both made a favorable impression"—and of his poetry in general, "that it will be found superior to the average quality of that commodity." "It is by his dramatic efforts," says the biographer, "that his merits as a poet must be determined, and judged by these he will be assigned a place in the foremost rank of American writers." We have only to add that we have the highest respect for the judgment of Mr. McMichael.

Mr. Smith's MS. is clear, graceful, and legible, and would generally be called a fine hand, but is sometimes too clerky for our taste.



Dr. Oliver Wendel Holmes, of Boston, late Professor of Anatomy and Physiology at Dartmouth College, has written many productions of merit, and has been pronounced by a very high authority the best of the humorous poets of the day.

His chirography is remarkably fine, and a quick fancy might easily detect, in its graceful yet picturesque quaintness, an analogy with the vivid drollery of his style. The signature is a fair specimen of the general MS.



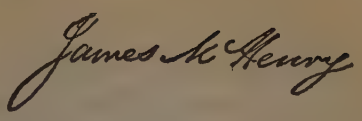
Bishop Doane, of New Jersey, is somewhat more extensively known in his clerical than in a literary capacity, but has accomplished much more than sufficient in the world of books to entitle him to a place among the most noted of our living men of letters. The compositions by which he is best known

were published, we believe, during his professorship of Rhetoric and Belles Lettres in Washington College, Hartford.

His MS. has some resemblance to that of Mr. Greeley of "The Tribune." The signature is far bolder and altogether better than the general hand.

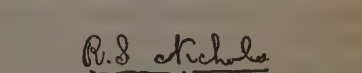
We believe that Mr. ALBERT PIKE has never published his poems in book form; nor has he written anything since 1834. His "Hymns to the Gods," and "Ode to the Mocking Bird," being printed in "Blackwood," are the chief basis of his reputation. His lines "To Spring" are, however, much better in every respect, and a little poem from his pen, entitled "Ariel," originally published in the Boston *Pearl*, is one of the finest of American compositions. Mr. Pike has unquestionable merit, and that of a high order. His ideality is rich and well-disciplined. He is the most *classic* of our poets in the best sense of the term, and of course his classicism is very different from that of Mr. Sprague—to whom, nevertheless, he bears much resemblance in other respects. Upon the whole, there are few of our native writers to whom we consider him inferior.

His MS. shows clearly the spirit of his intellect. We observe in it a keen sense not only of the beautiful and graceful, but of the picturesque—neatness, precision, and general finish, verging upon effeminacy. In force it is deficient. The signature fails to convey the entire MS., which depends upon masses for its peculiar character.



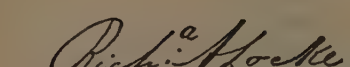
Dr. JAMES MCHENRY, of Philadelphia, is well known to the literary world as the writer of numerous articles in our Reviews and lighter journals, but more especially as the author of "The Antediluvians," an epic poem which has been the victim of a most shameful cabal in this country, and the subject of a very disgraceful pasquinade on the part of Professor Wilson. Whatever may be the demerits, in some regard, of this poem, there can be no question of the utter want of fairness, and even of common decency, which distinguished the Philippic in question. The writer of a *just* review of the "Antediluvians" — the only tolerable American epic—would render an important service to the literature of his country.

Dr. McHenry's MS. is distinct, bold, and simple, without ornament or superfluity. The signature well conveys the idea of the general hand.



Mrs. R. S. NICHOLS has acquired much reputation of late years by frequent and excellent contributions to the Magazines and Annuals. Many of her compositions will be found in our pages.

Her MS. is fair, neat, and legible, but formed somewhat too much upon the ordinary boarding-school model to afford any indication of character. The signature is a good specimen of the hand.



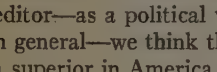
Mr. Richard Adams Locke is one among the few men of *unquestionable genius* whom the country possesses. Of the "Moon Hoax" it is supererogatory to say one word—not to know *that* argues one's self unknown. Its rich imagination will long dwell in the memory of every one who read it, and surely if

> the worth of any thing
> Is just so much as it will bring—

if, in short, we are to judge of the value of a literary composition in any degree by its *effect*—then was the "Hoax" most precious.

But Mr. Locke is also a poet of high order. We have seen—nay more—we have heard him read—verses of his own which would make the fortune of two-thirds of our poetasters; and he is yet so modest as never to have published a volume of poems. As an editor—as a political writer—as a writer in general—we think that he has scarcely a superior in America. There is no man among us to whose sleeves we would rather pin—not our *faith* (of that we say nothing)—but our *judgment*.

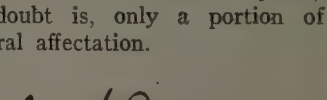
His MS. is clear, bold, and forcible—somewhat modified, no doubt, by the circumstances of his editorial position—but still sufficiently indicative of his fine intellect.



Mr. Ralph Waldo Emerson belongs to a class of gentlemen with whom we have no patience whatever—the mystics for mysticism's sake. Quintilian mentions a pedant who taught obscurity, and who once said to a pupil, "this is excellent, for I do not understand it myself." How the good man would have chuckled over Mr. E.! His present *role* seems to be the out-Carlyling Carlyle. *Lycophron Tenebrosus* is a fool to him. The best answer to his twaddle is *cui bono?*—a very little Latin phrase very generally mistranslated and misunderstood—*cui bono?*—to whom is it a benefit? If not to Mr. Emerson individually, then surely to no man living.

His love of the obscure does not prevent him, nevertheless, from the composition of occasional poems in which beauty is apparent *by flashes*. Several of his effusions appeared in the "Western Messenger"—more in the "Dial," of which he is the soul—or the sun—or the shadow. We remember the "Sphynx," the "Problem," the "Snow Storm," and some fine old-fashioned verses entitled "Oh fair and stately maid whose eye."

His MS. is bad, sprawling, illegible, and irregular—although sufficiently bold. This latter trait may be, and no doubt is, only a portion of his general affectation.



The name of Gulian C. Verplanck has long been familiar to all American readers, and it is scarcely necessary to say more than we coincide in the general view of his merits. His orations,

reviews, and other compositions all evince the cultivated belles lettres scholar, and man of intellect and taste. To high genius he has about the same claim as Mr. Sprague, whom in many respects he closely resembles.

His chirography is unusually rambling and school-boyish—but has vigor and precision. It has no doubt been greatly modified by adventitious circumstances, so that it would be impossible to predicate anything respecting it.

Palaestine

(Published in *Southern Literary Messenger*, February, 1836.—Ed.)

PALÆSTINE derives its name from the Philistæi, who inhabited the coast of Judæa. It has also been called "The Holy Land," as being the scene of the birth, sufferings, and death of our Redeemer. It was bounded on the north by Syria, on the east by Arabia Deserta, on the south by Arabia Petræa, and on the west by the Mediterranean. The principal divisions of the country were Galilea in the north, Samaria in the middle, and Judæa in the south. This country is at present under the Turkish yoke; and the oppression which it now experiences, as well as the visible effects of the divine displeasure, not only during the reign of Titus, and afterwards in the inundations of the northern barbarians, but also of the Saracens and Crusaders, are more than sufficient to have reduced this country, which has been extolled by Moses, and even by Julian the Apostate, for its fecundity, to its present condition of a desert. Galilea, the northern division, is divided by Josephus into Upper Galilea, called Galilea of the Gentiles—because inhabited by heathen nations—and Lower Galilea, which was adjacent to the sea of Tiberias, and which contained the tribes of Zebulon and Ashur. Galilea was a very populous country, containing, according to Josephus, two hundred and four cities and towns, and paying two hundred talents in tribute.

The middle district, Samaria, had its origin in a division of the people of Israel into two distinct kingdoms, during the reign of Jeroboam. One of these kingdoms, called Judah, consisted of such as adhered to the house of David, comprising the two tribes of Judah and Benjamin. The other ten tribes retained the name of Israelites under Jeroboam. Their capital was Samaria, which also became the name of their country. The Samaritans and people of Judæa were bitter enemies. The former differed in many respects from the strictness of the Mosaic law. Among the Judæans, the name of Samaritan was a term of reproach.

The southern division, Judæa, did not assume that name until after the return of the Jews from the Babylonian captivity—though it had been called long before "the kingdom of Judah" in opposition to that of Israel. After the return, the tribe of Judah settled first at Jerusalem; but afterwards spreading over the whole country, gave it the name of "Judæa."

The only rivers of any note in Palæstine are the Jordan, and the Leon-

tes, which latter passes through the northern extremity of Galilea. The Jordan, according to a curious story of Philip the Tetrarch, has its origin in a lake called Phiala, about ten miles north of Cæsarea of Samochon. This is said to have been ascertained by throwing into the lake some straw which came out where the river emerges from the ground, after having run fifteen miles beneath the surface of the earth. Mannert, the German, thinks this fabulous, and places the sources of the river in Mount Panceas, in the province of Dan. The Jordan holds a southwesterly course—flows through the lake Samochon, or Samochonites, or as it is called in the Bible, Merom; after which, proceeding onwards till received by the sea of Tiberias, or lake of Genesareth, it emerges from this, and is finally lost in the Dead Sea. In ancient times it overflowed its banks annually, about the period of early harvest; and thus differing from most other rivers, which generally swell in the winter, it was supposed to have a subterraneous communication with the Nile. But now, we can perceive no rise, which is probably owing to the channel having been deepened by the swiftness of the current. The name is supposed to be derived from the Hebrew "Jarden," on account of the river's rapid *descent* through the country.

The Dead Sea, called also Asphaltites, from the "asphaltos" or bitumen, which it throws up, is situated in Judæa, and near one hundred miles long and twenty-five broad: but it is called by Tacitus "Lacus immenso ambitu." Its waters are extremely salt; but the vapours exhaled from them are found not to be so pestilential as they have been usually represented. It is supposed that the thirteen cities, of which Sodom and Gomorrah, as mentioned in the Bible, are the chief, were destroyed by a volcano, and once occupied the site of the Dead Sea. Earthquakes are now frequent in the country. Volumes of smoke are observed to issue from the lake, and new crevices are daily found on its margin.

The country is mountainous. The range of Libanus, so named on account of their snowy summits, from the Hebrew "Lebanon," *white*, is imperfectly defined. The principal part of them lies towards the north of Galilea, but the name of Libanus is sometimes given to several chains, which run through the whole extent of Palæstine. Between two of these ranges lay a valley so beautiful that some have called it a terrestrial Paradise; though situated in a much higher region than the greater part of the country, it enjoys perpetual spring—the trees are always green, and the orchards full of fruit. Libanus has been famed for its cedars. Mount Carmel is a celebrated mountain, properly belonging to Samaria, but on which the Syrians had an altar, *but not a temple*, dedicated to their god Carmelus. A priest of this deity, according to Tacitus, (Lib. 2, cap. 78), foretold the accession of Vespasian to the throne.

The principal towns in Galilea were Dio-Cæsarea, Jotapata or Gath, Genesareth, and Tiberias. Tiberias was built by Herod, near the lake of the same name, and called after the emperor. After the taking of Jerusalem, there was at Tiberias a succession of Hebrew judges, till about the time of the abdication of Diocletian and Max-

mianus. Epiphanius, bishop of Salamis, says that a Hebrew copy of St. John, and the Acts of the Apostles, was kept in this city.

The chief cities of Samaria were Neapolis, Antipatris, Archelais, Apollonia, Samaria, and Cæsarea. Cæsarea was the principal, and was anciently called "Turris Stratonis." It was much embellished by Herod, who named it Cæsarea in honour of Augustus—and was the station of the Roman governors. Samaria was situated on Mount Sameron, and was the residence of the kings of Israel, from the time of Omri, its founder, to the overthrow of the kingdom.

In Judæa, were the cities of Engedi, Herodium, Hebron, Beersheba, Jericho, and Jerusalem. Jericho was in the tribe of Benjamin, near the river Jordan; and is called by Moses the city of palm-trees, from the palms in the adjacent plain, which are also noticed by Tacitus. It was destroyed by Joshua, but afterwards rebuilt. Jerusalem, the capital, was anciently called Salem, or Jebus, by the Jebusites, who were in possession of it till the time of David; but it was then called by the Hebrews Jeruschalaim, signifying "the possession of the inheritance of peace." The Greeks and Romans called it by the name of Hierosolyma. It was built on several hills, of which Mount Sion, in the southern part of the city, was the largest. To the north was Acra, called the "second," or "lower city"—on the east of which was Solomon's temple, built on Mount Moriah. Northeast of this was the Mount of Olives, and north of it Mount Calvary, the place of the crucifixion. This city was taken by Pompey, who thence derived his name of Hierosolymarius. It was also taken and destroyed by Titus, (in the year of our Lord 71, by the account of Tacitus—but according to Josephus,) on the 8th of September A.D. 70—2,177 years after its foundation.

In this siege 110,000 persons are said to have perished, and 97,000 to have been made prisoners, and as Josephus relates, sold as slaves, or thrown to the wild beasts for the sport of the conquerors.

A Chapter of Suggestions

(Appeared in *The Opal*, 1845.—Ed.)

In the life of every man there occurs at least one epoch when the spirit seems to abandon, for a brief period, the body, and, elevating itself above mortal affairs just so far as to get a comprehensive and *general* view, makes thus an estimate of its humanity, as accurate as is possible, under any circumstances, to that particular spirit. The soul here separates itself from its own idiosyncrasy, or individuality, and considers its own being, not as appertaining solely to itself, but as a portion of the universal Ens. All the important good resolutions which we keep—all startling, marked regenerations of character

—are brought about at these *crises* of life. And thus it is our *sense of self* which debases, and which keeps us debased.

The theory of chance, or as the mathematicians term it, the Calculus of Probabilities, has this remarkable peculiarity, that its truth in general is in direct proportion with its fallacy in particular.

We may judge of the degree of abstraction in one who meditates, by the manner in which he receives an interruption. If he is much startled, his revery was not profound; and the converse. Thus the affectation of the tribe of pretended mental-absentees, becomes transparent. These people awake from their musings with a start, and an air of bewilderment, as men naturally awake from dreams that have a close semblance of reality. But they are, clearly, ignorant that the phenomena of dreaming differ, radically, from those of reverie—of which latter the mesmeric condition is the extreme.

There are few thinkers who will not be surprised to find, upon retrospect of the world of thought, how *very* frequently the first, or intuitive, impressions have been the true ones. A poem, for example, enraptures us in our childhood. In adolescence, we perceive it to be full of fault. In the first years of manhood, we utterly despise and condemn it; and it is not until mature age has given tone to our feelings, enlarged our knowledge, and perfected our understanding, that we recur to our original sentiment and primitive admiration, with the additional pleasure which is always deduced from knowing *how* it was that we once were pleased, and *why* it is that we still admire.

That the imagination has not been unjustly ranked as supreme among the mental faculties, appears from the intense consciousness, on the part of the imaginative man, that the faculty in question brings his soul often to a glimpse of things supernal and eternal —to the very verge of the *great secrets*. There are moments, indeed, in which he perceives the faint perfumes, and hears the melodies of a happier world. Some of the most profound knowledge —perhaps all *very* profound knowledge—has originated from a highly stimulated imagination. Great intellects *guess* well. The laws of Kepler were, professedly, *guesses*.

An excellent magazine paper might be written upon the subject of the progressive steps by which any great work of art—especially of literary art—attained completion. How vast a disssimilarity always exists between the germ and the fruit—between the work and its original conception! Sometimes the original conception is abandoned or left out of sight altogether. Most authors sit down to write with *no* fixed design, trusting to the inspiration of the moment; it is not, therefore, to be wondered at, that *most* books are valueless. Pen should never touch paper until at least a well-digested *general* purpose be established. In fiction, the *denouement*—in all other composition the intended *effect*, should be definitely considered and arranged, before writing the first word; and *no* word should be then written which does not tend, to form a part of a sentence which tends to the development of the *denouement* or to the strengthening of the effect. Where *plot* forms a portion of the contemplated interest, too much precon

deration cannot be had. *Plot* is very imperfectly understood, and has never been rightly defined. Many persons regard it as mere complexity of incident. In its most rigorous acceptation, it is *that from which no component atom can be removed, and in which none of the component atoms can be displaced, without ruin to the whole;* and although a sufficiently good plot may be constructed, without attention to the whole rigor of this definition, still it is the definition which the true artist should always keep in view, and always endeavor to consummate in his works. Some authors appear, however, to be totally deficient in constructiveness, and thus, even with plentiful invention, fail signally in plot. Dickens belongs to this class. His "Barnaby Rudge" shows not the least ability to *adapt*. Godwin and Bulwer are the best constructors of plot in English literature. The former has left a preface to his "Caleb Williams," in which he says that the novel was *written backwards;* the author first completing the second volume, in which the hero is involved in a maze of difficulties, and then casting about him for sufficiently probable cause of these difficulties, out of which to concoct volume the first. This mode cannot surely be recommended, but evinces the idiosyncrasy of Godwin's mind. Bulwer's "Pompeii" is an instance of admirably managed plot. His "Night and Morning," sacrifices to *mere* plot interests of far higher value.

All men of genius have their detractors; but it is merely a *non distributio medii* to argue, thence, that all men who have their detractors are men of genius. Yet, undoubtedly, of all despicable things, your habitual sneerer at real greatness, is the most despicable. What names excite, in mankind, the most unspeakable—the most insufferable disgust? The Dennises—the Frerons—the Desfontaines. Their littleness is measured by the greatness of those whom they have reviled. And yet, in the face of this well-known and natural principle, there will always exist a set of *homunculi,* eager to grow notorious by the pertinacity of their yelpings at the heels of the distinguished. And this eagerness arises, less frequently from inability to appreciate genius, than from a species of cat-and-dog antipathy to it, which no suggestions of worldly prudence are adequate to quell.

That intuitive and seemingly casual perception by which we often attain knowledge, when reason herself falters and abandons the effect, appears to resemble the sudden glancing at a star, by which we see it more clearly than by a direct gaze; or the half-closing the eyes in looking at a plot of grass the more fully to appreciate the intensity of its green.

There are few men of that peculiar sensibility which is at the root of genius, who, in early youth, have not expended much of their mental energy in *living too fast;* and, in later years, comes the unconquerable desire to goad the imagination up to that point which it would have attained in an ordinary, normal, or well-regulated life. The earnest longing for artificial excitement, which, unhappily, has characterized too many eminent men, may thus be regarded as a psychal want, or necessity, —an effort to regain the lost,—a struggle of the soul to assume the position

which, under other circumstances, would have been its due.

The great variety of melodious expression which is given out from the keys of a piano, might be made, in proper hands, the basis of an excellent fairy-tale. Let the poet press his finger steadily upon each key, keeping it down, and imagine each prolonged series of undulations the history, of joy or of sorrow, related by a good or evil spirit imprisoned within. There are some of the notes which almost tell, of their own accord, true and intelligible histories.

A precise or *clear* man, in conversation or in composition, has a very important consequential advantage—more especially in matters of logic. As he proceeds with his argument, the person addressed, exactly comprehending, for that reason, and often for that reason only, agrees. Few minds, in fact, can immediately perceive the distinction between the comprehension of a proposition and an agreement of the reason with the thing proposed. Pleased at comprehending, we often are so excited as to take it for granted that we assent. Luminous writers may thus indulge, for a long time, in pure sophistry, without being detected. Macaulay is a remarkable instance of this species of mystification. We coincide with what he says, too frequently, because we so very distinctly understand what it is that he intends to say. His essay on Bacon has been long and deservedly admired; but its concluding portions (wherein he endeavors to depreciate the *Novum Organum,*) although logical *to a fault,* are irrational in the extreme. But not to confine myself to mere assertion. Let us refer to this great essayist's review of Ranke's "History of the Popes." His strength is here put forth to account for the progress of Romanism, by maintaining that divinity is not a progressive science. "The enigmas," says he, in substance, "which perplex the natural theologian are the same in all ages, while the Bible, where alone we are to seek revealed truth, has been always what it is." Here Mr. Macaulay confounds the nature of that proof from which we reason of the concerns of earth, considered as man's habitation, with the nature of that evidence from which we reason of the same earth, regarded as a unit of the universe. In the former case, the *data* being palpable, the proof is direct; in the latter it is purely *analogical.* Were the indications we derive from science, of the nature and designs of Deity, and thence, by inference, of man's destiny,—were these indications proof *direct,* it is then very true that no advance in science could strengthen them; for, as the essayist justly observes, "nothing can be added to the force of the argument which the mind finds in every beast, bird, and flower"; but, since these indications are rigidly analogical, every step in human knowledge, every astronomical discovery, in especial, throws additional light upon the august subject, *by extending the range of analogy.* That we know no more, to-day, of the nature of Deity, of its purposes, and thus of man himself, than we did even a dozen years ago, is a proposition disgracefully absurd. "If Natural Philosophy," says a greater than Macaulay, "should continue to be improved in its various branches, the bounds of moral philosophy would be enlarged also." These words of the prophetic Newton are felt to be true, and will be fulfilled.

Some Account of Stonehenge the Giant's Dance, a Druidical Ruin in England

(Published in *Burton's Gentleman's Magazine,* June, 1840.—Ed.)

The pile called Stonehenge is an assemblage of upright and prostrate stones on Salisbury plain, England, and is generally supposed to be the remains of an ancient Druidical temple. From its singularity, and the mystery attending its origin and appropriation, it has excited more surprise and curiosity than any other relic of antiquity in Great Britain. It is situated about two miles directly west of Amesbury, and seven north of Salisbury, in Wiltshire. When viewed at a distance it appears but a small and trifling object, for its bulk and character are lost in the extensive space which surrounds it; and even on a near examination it fails to fulfil the expectations of the stranger who visits it with exaggerated prepossessions. To behold this "wonder of Britain," it should be viewed with an artist's eye, and contemplated by an intellect stored with antiquarian and historical knowledge. Stonehenge, notwithstanding much that has been said to the contrary, is utterly unlike any monument now remaining in Europe. Many of its stones have been squared or hewn by art; and on the top of the outer circle has been raised a continued series of squared stones, attached to the uprights by mortices and tenons, or regular cavities in the horizontal blocks, with projecting points on the perpendicular ones. Nearly all other so-called examples of Druidical circles are composed of rough, unhewn stones, and are without imposts.

Our engraving represents the present appearance of Stonehenge—a confused heap of erect and fallen stones. The original arrangement of these, however, may be readily understood; for by the situation and condition of the yet standing and prostrate members, we are enabled to judge of the number and site of those which have been removed. The whole consisted of two circular, and two curved rows, or arrangements of stones, the forms and positions of which may be easily ascertained. Horizontal stones, or imposts, were laid all round, in a continued order, on the outer circle, and five similar imposts or ten uprights of the third row. The whole is surrounded by a ditch and vallum of earth, connected with which are three other stones. The vallum does not exceed fifteen feet in height, and in exterior to the ditch. Through this line of circumvallation there appears to have been one grand entrance from the north-east side, and this is decidedly marked by two banks and ditches, called *The Avenue.* Approaching Stonehenge in this direction, the attention is first arrested by an immense unchiselled stone, called the *Friar's Heel,* which is now in a leaning position, and measures about sixteen feet in height. Imme-

diately within the vallum is another stone lying on the ground. It is twenty-one feet two inches long, and a hundred feet from the stone just mentioned, and about the same distance from the outside of the outermost circle. Each impost of this circle has two mortices in it, to correspond with two tenons on the top of each vertical stone. The imposts were so connected as to form a continued series of architraves. The stones of the inner circle are much smaller and more irregular than those of the outer. Within these two circles are arranged two inner rows of stones, one of which constitutes the grandest portion of Stonehenge. It was formed by five distinct *trilithons*—a trilithon is a large impost upon two uprights. The workmanship here appears to be better. The interior row of stones which next claims attention consisted of nineteen uprights without imposts, and inclined to a pyramidical form. The most perfect among them is seven feet and a half high. The *Altar Stone,* as it is usually called, lies flat on the ground, and occupies the *adytum* of the temple. The total number of stones of which Stonehenge was composed, is, according to Dr. Smith's plan and calculation, one hundred and twenty-nine. Some of these were of a compact sand-tone, some of fine-grained grunstein, interpersed with black hornblende, feldspar, quartz, and chlorite, some a siliceous schistus, others an argillaceous schistus, others horn-stone. The Altar Stone is gray cos.

In regard to the history of these extraordinary monuments, there is little of any definite nature. The earliest account of them occurs in Nennius who lived in the eighth century. He says they were erected by the Britons to commemorate a massacre which took place at the spot. The Historical Triads of the Welsh refer their origin to the same cause. Camden calls the structure *insana,* but says nothing about it entitled to notice. Modern authors have been profuse in speculation, but no more. The general opinion seems to be in favor of a Druidical Temple. The Rev. James Ingram supposes it to have been "a heathen burial-place." Borlase remarks that "the work of Stonehenge must have been that of a great and powerful nation, not of a limited community of priests; the grandeur of the design, the distance of the materials, the tediousness with which all such massive works are necessarily attended, all show that such designs were the fruits of peace and religion." Bryant, whose authority we regard as superior to any, discredits the Druidical theory altogether.

We may be permitted to conclude this cursory article by an extract from the Greek historian, Diodorus Siculus—leaving the application of the passage to the judgment or the fancy of our readers.

"Among the authors of antiquity Hecatæus and some others relate that there is *an island in the ocean, opposite to Celtic Caul,* and not inferior in size to Sicily, lying towards the north, and inhabited by Hyperborei, who are so called because they live more remote from the north wind. The soil is excellent and fertile, and the harvest is made twice in the same year. Tradition says

hat Latona was here born, and therefore Apollo is worshipped above any other deity. To him is also dedicated *a remarkable temple of a round form.*"

The ancient superstitions gave the giants credit for the construction of Stonehenge, believing that the massive piles were moveable but by giant power—hence, the name of *Choir-gaur*, which literally means "The Giant's Dance."

The whole number of stones now visible amounts to one hundred and nine.

VOLUME X

James Russell Lowell *

(Published in *Southern Literary Messenger*, March, 1849.—Ed.)

It has been suggested that the deficiency of satire in America arises from the want of a suitable field for satirical display. In England, it is said, satire abounds, because the people there find a proper target in the aristocracy, whom they (the people) regard as a distinct race with whom they have little in common; relishing even the most virulent abuse of the upper classes with a gusto undiminished by any feeling that they (the people) have any concern in it. In Russia, or Austria, on the other hand, it is urged, satire is unknown; because there is danger in touching the aristocracy, and self-satire would be odious to the mass. In America, also, the people who write are, it is maintained, the people who read:—thus in satirising the people we satirise only ourselves, and are never in condition to sympathise with the satire.

All this is more verisimilar than true. It is forgotten that no individual considers himself as one of the mass. Each person, in his own estimate, is the pivot on which all the rest of the world spins round. We may abuse *the people* by wholesale, and yet with a clear conscience, so far as regards any compunction for offending any one from among the multitude of which "that people" is composed. Every one of the crowd will cry "*Encore!*—give it to them, the vagabonds! it serves them right." It seems to us that, in America, we have refused to encourage satire—not because what we have had touches us too nearly—but because it has been too pointless to touch us at all. Its namby-pambyism has arisen, in part, from the general want, among our men of letters, of that minute *polish*—of that skill in details—which, in combination with natural sarcastic power, satire, more than any other form of literature, so imperatively demands. In part, also, we may attribute our failure to the colonial sin of imitation. We content ourselves—at this point not less supinely than at all others—with doing what not only has been done before, but what, however well done, has yet been done *ad nauseam*. We should not be able to endure infinite repetitions of even absolute excellence; but what is "M'Fingal" more than a faint echo from "Hudibras"?—and what is "The Vision of Rubeta" more than a vast gilded swill-trough overflowing with Dunciad and water?

"The Vision" is bold enough—if we leave out of sight its anonymous issue—and bitter enough, and witty enough, if we forget its pitiable punning on names—and long enough (Heaven

* The first part of this criticism has been omitted as it is verbally the same as that of the Quacks of Helicon—Ed.

knows), and well constructed and decently versified; but it fails in the principal element of all satire—*sarcasm*—because the *intention* to be sarcastic (as in the "English Bards and Scotch Reviewers," and in all the more classical satires) is permitted to render itself manifest. The malevolence *appears*. The author is never very severe, because he is at no time particularly cool. We laugh not so much at his victims as at himself, for letting them put him in such a passion. And where a deeper sentiment than mirth is excited —where it is pity or contempt that we are made to feel—the feeling is too often reflected in its object, from the satirised to the satirist—with whom we sympathise in the discomfort of his animosity. Mr. Osborn has not many superiors in downright invective; but this is the awkward left arm of the satiric Muse. *That* satire alone is worth talking about which at least *appears* to be the genial, good-humoured out-pouring of irrepressible merriment.

The "Fable for the Critics," just issued, has not the name of its author on the title-page; and but for some slight foreknowledge of the literary opinions, likes, dislikes, whims, prejudices, and crochets of Mr. *James Russell Lowell*, we should have had much difficulty in attributing so very *loose* a brochure to *him*. The "Fable" is essentially "loose"—ill-conceived and feebly executed, as well in detail as in general. Some good hints and some sparkling witticisms do not serve to compensate us for its rambling plot (if plot it can be called) and for the want of artistic finish so particularly noticeable throughout the work—especially in its versification. In Mr. Lowell's prose efforts we have before observed a certain *disjointedness*, but never, until now, in his verse—and we confess some surprise at his putting forth so unpolished a performance. The author of 'The Legend of Brittany" (which is decidedly the noblest poem, of the same length, written by an American) could not do a better thing than to take the advice of those who mean him well, in spite of his fanaticism, and leave prose, with satiric verse, to those who are better able to manage them; while he contents himself with that class of poetry for which, and for which alone, he seems to have an especial vocation—the poetry of *sentiment*. This, to be sure, is *not* the very loftiest order of verse; for it is far inferior to either that of the imagination or that of the passions—but it is the loftiest region in which Mr. Lowell can get his breath without difficulty.

Our primary objection to this "Fable for the Critics" has reference to a point which we have already touched in a general way. "The malevolence appears." We laugh not so much at the author's victims as at himself, for letting them put him in such a passion. The very title of the book shows the want of a due sense in respect to the satirical essence, *sarcasm*. This "fable"—this severe lesson—is meant *"for the Critics."* "Ah!" we may say to ourselves at once—"we see how it is. Mr. L. is a poor-devil poet, and some critic has been reviewing him, and making him feel very uncomfortable; whereupon, bearing in mind that Lord Byron, when similarly assailed, avenged his wrongs in a satire which he called 'English Bards and Scotch Reviewers,' he (Mr. Lowell), imitative as usual, has

been endeavouring to get redress in a parallel manner—by a satire with a parallel title—'A Fable for the Critics.'"

All this the reader says to himself; and all this tells *against* Mr. L. in two ways—first, by suggesting unlucky comparisons between Byron and Lowell, and, secondly, by reminding us of the various criticisms, in which we have been amused (rather ill-naturedly) at seeing Mr. Lowell "used up."

The title starts us on this train of thought, and the satire sustains us in it. Every reader versed in our literary gossip is at once put *dessous des cartes* as to the particular provocation which engendered the "Fable." Miss Margaret Fuller, some time ago, in a silly and conceited piece of Transcendentalism, which she called an "Essay on American Literature," or something of that kind, had the consummate pleasantry, after *selecting* from the list of American poets *Cornelius Mathews and William Ellery Channing* for especial commendation, to speak of *Longfellow* as a booby, and of *Lowell* as so wretched a poetaster "as to be disgusting even to his best friends." All this Miss Fuller *said*, if not in our precise words, still in words quite as much to the purpose. *Why* she said it, Heaven only knows—unless it was because she was Margaret Fuller, and wished to be taken for nobody else. Messrs. Longfellow and Lowell, so pointedly picked out for abuse as the *worst* of our poets, are, upon the whole, perhaps, our best—although Bryant and one or two others are scarcely inferior. As for the two favourites selected just as pointedly for laudation by Miss F., it is really difficult to think of them, in connection with poetry, without laughing. Mr. Mathews once wrote some sonnets "On Man," and Mr. Channing some lines on "A Tin Can," or something of that kind—and if the former gentleman be not the very worst poet that ever existed on the face of the earth, it is only because he is not quite so bad as the latter. To speak algebraically:—Mr. M. is *ex*-ecrable, but Mr. C. is (*x* plus 1)-ecrable.

Mr. Lowell has obviously aimed his "Fable" at Miss Fuller's head in the first instance, with an eye to its ricocheting so as to knock down Mr. Mathews in the second. Miss F. is first introduced as Miss F—, rhyming to "cooler," and afterwards as "Miranda": while poor Mr. M. is brought in upon all occasions, head and shoulders; and now and then a sharp thing, although never very original, is said of them or *at* them; but all the true satiric *effect* wrought is that produced by the satirist against himself. The reader is all the time smiling to think that so unsurpassable a—(*what* shall we call her? —we wish to be civil)—a transcendentalist as Miss Fuller, should, by *such* a criticism, have had the power to put a respectable poet in *such* a passion.

As for the plot or conduct of this fable, the less we say of it the better. It is so weak—so flimsy—so ill put together—as to be not worth the trouble of understanding:—something, as usual, about Apollo and Daphne. Is there *no* originality on the face of the earth? Mr. Lowell's total want of it is shown at all points, very especially in his preface of rhyming verse written without distinction by lines or initial capitals (a hackneyed matter, originating, we believe, with *Frazer's Magazine*)—very especially, also, in his long continuations of some particular

rhyme—a fashion introduced, if we remember aright, by Leigh Hunt, more than twenty-five years ago, in his "Feast of the Poets," which, by the way, has been Mr. L.'s model in many respects.

Although ill-temper has evidently engendered this "Fable," it is by no means a satire throughout. Much of it is devoted to panegyric—but our readers would be quite puzzled to know the grounds of the author's laudations in many cases, unless made acquainted with a fact which we think it as well they should be informed of at once. Mr. Lowell is one of the most rabid of the Abolition fanatics; and no Southerner who does not wish to be insulted, and at the same time revolted, by a bigotry the most obstinately blind and deaf, should ever touch a volume by this author.* His fanaticism about slavery is a mere local outbreak of the same innate wrong-headedness which, if he owned slaves, would manifest itself in atrocious ill-treatment of them, with murder of any abolitionist who should endeavour to set them free. A fanatic of Mr. L.'s species is simply a fanatic for the sake of fanaticism, and *must* be a fanatic in whatever circumstances you place him.

His prejudices on the topic of slavery break out everywhere in his present book. Mr. L. has not the common honesty to speak well, even in a literary sense, of any man who is not a ranting abolitionist. With the exception of Mr. Poe (who has written some commendatory criticisms on his poems) no Southerner is mentioned *at all* in this "Fable." It is a fashion among Mr. Lowell's set to affect a belief that there is *no such thing* as Southern Literature. Northerners—people who have really nothing to speak of as men of letters—are cited by the dozen, and lauded by this candid critic without stint, while Legare, Simms, Longstreet, and others of equal note, are passed by in contemptuous silence. Mr. L. cannot carry his frail honesty of opinion even so far South as New York. All whom he praises are Bostonians. Other writers are barbarians, and satirised accordingly—if mentioned at all.

To show the general *manner* of the fable we quote a portion of what he says about Mr. Poe:—

Here comes Poe with his Raven, like
  Barnaby Rudge—
Three-fifths of him genius, and two-
  fifths sheer fudge;
Who talks like a book of iambs and
  pentameters,
In a way to make all men of common
  sense d—n metres;
Who has written some things far the
  best of their kind;
But somehow the heart seems squeezed
  out by the mind.

We may observe here that *profound* ignorance on any particular topic is always sure to manifest itself by some allusion to "common sense" as an all-

---

* This "Fable *for the Critics*"—this *literary* satire—this benevolent *jeu d'esprit* is disgraced by such passages as the following:—

"Forty fathers of Freedom, of whom
  twenty bred
Their sons for the rice swamps at so
  much a head,
And their daughters for—faugh!"
  —E. A. P.

sufficient instructor. So far from Mr. P.'s talking "like a book" on the topic at issue, his chief purpose has been to demonstrate that there exists *no* book on the subject worth talking *about;* and "common sense," after all, has been the basis on which *he* relied in contradistinction from the *un*common nonsense of Mr. L. and the small pedants.

And now let us see how far the unusual "common sense" of our satirist has availed him in the structure of his verse. First, by way of showing what his *intention* was, we quote three accidentally accurate lines:—

But a boy | he could ne | ver be right | ly defined.
As I said | he was ne | ver precise | ly unkind.
But as Ci | cero says | he won't say | this or that.

Here it is clearly seen that Mr. L. intends a line of four anapæsts. (An anapæst is a foot composed of two short syllables followed by a long.) With this observation, we will now simply copy a few of the lines which constitute the body of the poem, asking any of our readers to *read them if they can;* that is to say, we place the question, without argument, on the broad basis of the very commonest "common sense."

They're all from one source, monthly, weekly, diurnal . . .
Disperse all one's good and condense all one's poor traits . . .
The one's two-thirds Norseman, the other half Greek . . .
He has imitators in scores who omit . . .
Should suck milk, strong will-giving brave, such as runs . . .
Along the far rail-road the steam-snake glide white . . .
From the same runic type-fount and alphabet . . .
Earth has six truest patriots, four discoverers of ether . . .
Every cockboat that swims clears its fierce (pop) gundeck at him . . .
Is some of it pr—no, 'tis not even prose . . .
O'er his principles when something else turns up trumps . . .
But a few silly (syllo I mean) gisms that squat 'em . . .
Nos, we don't want extra freezing in winter . . .
Ploughed, dig, sail, forge, build, carve, paint, make all things new.

But enough—we have given a fair specimen of the *general* versification. It might have been better—but we are quite sure that it *could not have been worse.* So much for "common sense," in Mr. Lowell's understanding of the term. Mr. L. should not have meddled with the anapæstic rhythm; it is exceedingly awkward in the hands of one who knows nothing about it, and who *will* persist in fancying that he can write it by ear. Very especially he should have avoided this rhythm in satire, which, more than any other branch of letters, is dependent upon seeming trifles for its effect. Two-thirds of the force of the "Dunciad" may be referred to its exquisite finish; and had the "Fable for the Critics" been (what it is *not*) the quintessence of the satiric spirit itself, it would nevertheless, in so slovenly a form, have failed. As it is, no failure

was ever more complete or more pitiable. By the publication of a book at once so ambitious and so feeble—so malevolent in design and so harmless in execution—a work so roughly and clumsily, yet so weakly constructed—so very different in body and spirit from anything that he has written before—Mr. Lowell has committed an irrevocable *faux pas* and lowered himself at least fifty per cent. in the literary public opinion.

The Poets and Poetry of America

(First published in *Boston Miscellany,* November, 1842.—Ed.)

THAT we are not a poetical people has been asserted so often and so roundly, both at home and abroad, that the slander, through mere dint of repetition, has come to be received as truth. Yet nothing can be further removed from it. The mistake is but a portion or corollary of the old dogma that the calculating faculties are at war with the ideal; while, in fact, it may be demonstrated that the two divisions of mental power are never to be found in perfection apart. The *highest* order of the imaginative intellect is always pre-eminently mathematical, and the converse.

The idiosyncracy of our political position has stimulated into early action whatever practical talent we possessed. Even in our national infancy we evinced a degree of utilitarian ability which put to shame the mature skill of our forefathers. While yet in leading-strings we proved ourselves adepts in all the arts and sciences which promote the *comfort* of the animal man. But the arena of exertion, and of consequent distinction, into which our first and most obvious wants impelled us, has been regarded as the field of our deliberate choice. Our necessities have been mistaken for our propensities. Having been forced to make railroads, it has been deemed impossible that we should make verse. Because it suited us to construct an engine in the first instance, it has been denied that we could compose an epic in the second. Because we were not all Homers in the beginning, it has been somewhat too rashly taken for granted that we shall be all Jeremy Benthams to the end.

But this is the purest insanity. The principles of the poetic sentiment lie deep within the immortal nature of man, and have little necessary reference to the worldly circumstances which surround him. The poet in Arcady is, in Kamschatka, the poet still. The selfsame Saxon current animates the British and the American heart; nor can any social, or political, or moral, or physical conditions do more than momentarily repress the impulses which glow in our own bosoms as fervently as in those of our progenitors.

Those who have taken most careful note of our literature for the last ten or twelve years will be most willing to admit that *we are* a poetical people; and in no respect is the fact more plainly evinced than in the eagerness

with which books professing to compile or select from the productions of our native bards are received and appreciated by the public. Such books meet with success, at least with sale, at periods when the general market for literary wares is in a state of stagnation; and even the ill taste displayed in some of them has not sufficed to condemn.

The "Specimens of American Poetry," by Kettell; the "Commonplace Book of American Poetry," by Cheever; a Selection by General Morris; another by Mr. Bryant; the "Poets of America," by Keese—all these have been widely disseminated and well received. In some measure, to be sure, we must regard their success as an affair of personalities. Each individual honoured with a niche in the compiler's memory is naturally anxious to possess a copy of the book so honouring him; and this anxiety will extend, in some cases, to ten or twenty of the immediate friends of the complimented; while, on the other hand, purchasers will arise, in no small number, from among a very different class—a class animated by very different feelings. I mean the omitted—the large body of those who, supposing themselves entitled to mention, have yet been unmentioned. These buy the unfortunate book as a matter of course, for the purpose of abusing it with a clear conscience and at leisure. But holding these deductions in view, we are still warranted in believing that the demand for works of the kind in question is to be attributed mainly to the general interest of the subject discussed. The public have been desirous of obtaining a more distinct view of our poetical literature than the scattered effusions of our bards and the random criticisms of our periodicals could afford. But, hitherto, nothing has been accomplished in the way of supplying the *desideratum*. The "specimens" of Kettell were specimens of nothing but the ignorance and ill taste of the compiler. A large proportion of what he gave to the world as American poetry, to the exclusion of much that was really so, was the doggerel composition of individuals unheard of and undreamed of, except by Mr. Kettell himself. Mr. Cheever's book did not belie its title, and was excessively "commonplace." The selection by General Morris was in so far good that it accomplished its object to the full extent. This object looked to nothing more than single brief extracts from the writings of every one in the country who had established even the slightest reputation as a poet. The extracts, so far as our truer poets were concerned, were tastefully made; but the proverbial kind feeling of the General seduced him into the admission of an inordinate quantity of the purest twaddle. It was gravely declared that we had more than *two hundred* poets in the land. The compilation of Mr. Bryant, from whom much was expected, proved a source of mortification to his friends, and of astonishment and disappointment to all; merely showing that a poet is, necessarily, neither a critical nor an impartial judge of poetry. Mr. Keese succeeded much better. He brought to his task, if not the most rigorous impartiality, at least a fine taste, a sound judgment, and a more thorough acquaintance with our poetical literature than had distinguished any of his predecessors.

Much, however, remained to be done;

and here it may be right to inquire—"What should be the aim of every compilation of the character now discussed?" The object, in general terms, may be stated as the conveying, within moderate compass, a distinct view of our poetry and of our poets. This, in fact, is the demand of the public. A book is required which shall not so much be the reflection of the compiler's peculiar views and opinions upon poetry in the abstract, as of the popular judgment upon such poetical works as have come immediately within its observation. It is not the author's business to insist upon his own theory, and, in its support, to rake up from the by-ways of the country the "inglorious Miltons" who may possibly there abound; neither, because ill according with this theory, is it his duty to dethrone and reject those who have long maintained supremacy in the estimation of the people. In this view it will be seen that regard must be paid to the mere *quantity* of a writer's effusions. He who has published much is not to be omitted because, in the opinion of the compiler, he has written nothing fit for publication. On the other hand, he who has extemporised a single song, which has met the eye on no one but our bibliographer, is not to be set forth among the poetical magnates, even although the one song itself be esteemed equal to the very best of Beranger.

Of the two classes of sins—the negative and the positive—those of omission and those of commission—obvious ones of the former class are, beyond doubt, the more unpardonable. It is better to introduce half a dozen "great unknowns," than to give the "cut direct" to a single individual who has been fairly acknowledged as known. The public, in short, seem to demand *such a compendium of our poetical literature as shall embrace specimens from those works alone, of our recognised poets, which, either through accident, or by dint of merit, have been most particularly the subjects of public discussion.* We wish this, that we may be put in condition to decide for ourselves upon the justice or injustice of the reputation attained. In critical opinion much diversity exists; and, although there is one true and tenable critical opinion, there are still a thousand, upon all topics, which, being only the shadows, have all the outlines and assume all the movements of the substance of truth. Thus any critic who should exclude from the compendium all which tallied not with his individual ideas of the Muse, would be found to exclude nine hundred and ninety-nine thousandths of that which the public at large, embracing *all* varieties of opinion, has been accustomed to acknowledge as poesy.

These remarks apply only to the admission or rejection of poetical specimens. The public being put fairly in possession of the matter debated, with the provisions above mentioned, the analysis of individual claims, *so far as the specimens extend,* is not only not unbecoming in the compiler, but a thing to be expected and desired. To this department of his work he should bring analytical ability; a distinct impression of the nature, the principles, and the aims of poetry; a thorough contempt for all prejudice at war with principle; a poetic sense of the poetic; sagacity in the detection, and audacity in the exposure of demerit; in a word talent

nd faith; the lofty honour which places nere courtesy beneath its feet; the oldness to praise an enemy, and the nore unusual courage to damn a friend.

It is, in fact, by the criticism of the work that the public voice will, in the nd, decide upon its merits. In proportion to the ability or incapacity here displayed will it, sooner or later, be approved or condemned. Nevertheless, the mere *compilation* is a point, perhaps, of great importance. With the meagre published *aids* existing previously to Mr. Griswold's book, the labour of such an undertaking must have been great; and not less great the industry and general information in respect to our literary affairs which have enabled him so successfully to prosecute it.

The work before us is indeed so vast an improvement upon those of similar character which have preceded it, that we do its author some wrong in classing all together. Having explained, somewhat minutely, our views of the proper mode of compilation, and of the general aims of the species of book in question, it but remains to say that these views have been very nearly fulfilled in "The Poets and Poetry of America," while altogether unsatisfied by the earlier publications.

The volume opens with a preface, which, with some little supererogation, is addressed "To the Reader"; inducing very naturally the query, whether the whole book is not addressed to the same individual. In this preface, which is remarkably well written and strictly to the purpose, the author thus evinces a just comprehension of the nature and objects of true poesy:—

He who looks on Lake George, or sees the sun rise on Mackinaw, or listens to the grand music of a storm, is divested, certainly for a time, of a portion of the alloy of his nature. The elements of power in all sublime sights and heavenly harmonies should live in the poet's song, to which they can be transferred only by him who possesses the creative faculty. The sense of beauty, next to the miraculous divine suasion, is the means through which the human character is purified and elevated. *The creation of beauty, the manifestation of the real by the ideal, 'in words that move in metrical array,' is poetry.*

The italics are our own; and we quote the passage because it embodies the *sole true* definition of what has been a thousand times erroneously defined.

The earliest specimens of poetry presented in the body of the work are from the writings of Philip Freneau, "one of those worthies who, both with lyre and sword, aided in the achievement of our independence." But, in a volume professing to treat generally of the "Poets and Poetry of America," some mention of those who versified before Freneau would of course be considered desirable. Mr. Griswold has included, therefore, most of our earlier votaries of the Muse, with many specimens of their powers, in an exceedingly valuable "Historical Introduction"; his design being to exhibit as well "*the progress* as the condition of poetry in the United States."

The basis of the compilation is formed of short biographical and critical notices, with selections from the works of, in all, eighty-seven authors, chronologically arranged. In an appen-

dix at the end of the volume are included specimens from the works of sixty, whose compositions have either been too few, or in the editor's opinion too *mediocre,* to entitle them to more particular notice. To each of these specimens are appended footnotes, conveying a brief biographical summary, without anything of critical disquisition.

Of the general plan and execution of the work we have already expressed the fullest approbation. We know no one in America who could, or *who would,* have performed the task here undertaken, at once so well in accordance with the judgment of the critical, and so much to the satisfaction of the public. The labours, the embarrassments, the great difficulties of the achievement are not easily estimated by those before the scenes.

In saying that, individually, we disagree with many of the opinions expressed by Mr. Griswold, we merely suggest what. in itself, would have been obvious without the suggestion. It rarely happens that any two persons thoroughly agree upon any one point. It would be mere madness to imagine that any two could coincide in every point of a case where exists a multiplicity of opinions upon a multiplicity of points. There is no one who, reading the volume before us, will not in a thousand instances be tempted to throw it aside, because its prejudices and partialities are, in a thousand instances, altogether at war with his own. But when so tempted, he should bear in mind that had the work been that of Aristarchus himself, the discrepancies of opinion would still have startled him and vexed him as now.

We disagree, then, with Mr. Griswold in *many* of his critical estimates; although, in general, we are proud to find his decisions our own. He has omitted from the body of his book some one or two whom we should have been tempted to introduce. On the other hand, he has scarcely made us amends by introducing some one or two dozen whom we should have treated with contempt. We might complain, too, of a prepossession, evidently unperceived by himself, for the writers of New England. We might hint, also, that in two or three cases he has rendered himself liable to the charge of personal partiality; it is often so *very* difficult a thing to keep separate in the mind's eye our conceptions of the poetry of a friend and our impressions of his goodly fellowship and our recollections of the flavour of his wine.

But having said thus much in the way of fault-finding, we have said all. The book should be regarded as *the most important addition which our literature has for many years received.* It fills a void which should have been long ago supplied. It is written with judgment, with dignity, and candour. Steering with a dexterity not to be sufficiently admired, between the Scylla of Prejudice on the one hand and the Charybdis of Conscience on the other, Mr. Griswold, in "The Poets and Poetry of America," has entitled himself to the thanks of his countrymen, while showing himself a man of taste, talent, *and tact.*

The American Drama

(First published in *American Whig Review*, August, 1845.—Ed.)

A BIOGRAPHIST of Berryer calls him *"l'homme qui, dans sa description, demande le plus grande quantite possible d' antithese,"*—but that ever-recurring topic, the decline of the drama, seems to have consumed of late more of the material in question than would have sufficed for a dozen prime ministers—even admitting them to be French. Every trick of thought and every harlequinade of phrase have been put in operation for the purpose *"de nier ce qui est, et d'expliquer ce qui n'est pas."*

Ce qui n'est pas:—for the drama has *not declined*. The facts and the philosophy of the case seem to be these. The great opponent to Progress is Conservatism. In other words—the great adversary of Invention is Imitation: the propositions are in spirit identical. Just as an art is imitative, is it stationary. The most imitative arts are the most prone to repose—and the converse. Upon the utilitarian—upon the business arts, where Necessity impels, Invention, Necessity's well-understood offspring, is ever in attendance. And the less we see of the mother the less we behold of the child. No one complains of the decline of the art of Engineering. Here the Reason, which never retrogrades or reposes, is called into play. But let us glance at Sculpture. We are not *worse* here than the ancients, let pedantry say what it may (the Venus of Canova is worth, at any time, two of that of Cleomenes), but it is equally certain that we have made, in general, no advances; and Sculpture, properly considered, is perhaps the *most* imitative of all arts which have a right to the title of Art at all. Looking next at Painting, we find that we have to boast of progress only in the ratio of the inferior imitativeness of Painting, when compared with Sculpture. As far indeed as we have any means of judging, our improvement has been exceedingly little, and did we know anything of ancient Art in this department, we might be astonished at discovering that we had advanced even far less than we suppose. As regards Architecture, whatever progress we have made has been precisely in those particulars which have no reference to imitation:—that is to say, we have improved the utilitarian and not the ornamental provinces of the art. Where Reason predominated, we advanced; where mere Feeling or Taste was the guide, we remained as we were.

Coming to the Drama, we shall see that in its mechanisms we have made progress, while in its spirituality we have done little or nothing for centuries certainly—and, perhaps, little or nothing for thousands of years. And this is because what we term the spirituality of the drama is precisely its imitative portion—is exactly that portion which distinguishes it as one of the principal of the imitative arts.

Sculptors, painters, dramatists, are, from the very nature of their material, — their spiritual material — imitators—conservatists—prone to repose in old Feeling and in antique Taste. For this reason—and for this reason

only—the arts of Sculpture, Painting, and the Drama have not advanced—or have advanced feebly, and inversely in the ratio of their imitativeness.

But it by no means follows that either has *declined*. All *seem* to have declined, because they have remained stationary while the multitudinous other arts (of reason) have flitted so rapidly by them. In the same manner the traveller by railroad can imagine that the trees by the wayside are retrograding. The trees in this case are absolutely stationary—but the Drama has not been altogether so, although its progress has been so slight as not to interfere with the general effect—that of seeming retrogradation or decline.

This seeming retrogradation, however, is to all practical intents an absolute one. Whether the Drama has declined, or whether it has merely remained stationary, is a point of no importance, so far as concerns the public encouragement of the Drama. It is unsupported, in either case, because it does not deserve support.

But if this stagnation, or deterioration, grows out of the very idiosyncracy of the drama itself, as one of the principal of the imitative arts, how is it possible that a remedy shall be applied—since it is clearly impossible to alter the nature of the art, and yet leave it the art which it now is?

We have already spoken of the improvements effected in Architecture, in all its utilitarian departments, and in the Drama, at all the points of its mechanism. "Wherever Reason predominates, we advance; where mere Feeling or Taste is the guide, we remain as we are." We wish now to suggest that, by the engrafting of Reason upon Feeling and Taste, we shall be able, and thus alone shall be able, to force the modern drama into the production of any profitable fruit.

At present, what is it we do? We are content if, with Feeling and Taste, a dramatist does *as other dramatists have done*. The most successful of the more immediately modern playwrights has been Sheridan Knowles, and to play Sheridan Knowles seems to be the highest ambition of our writers for the stage. Now the author of "The Hunchback" possesses what we are weak enough to term the true "dramatic feeling," and this true dramatic feeling he has manifested in the most preposterous series of imitations of the Elizabethan drama by which ever mankind were insulted and beguiled. Not only did he adhere to the old plots, the old characters, the old stage conventionalities throughout; but he went even so far as to persist in the obsolete phraseologies of the Elizabethan period—and, just in proportion to his obstinacy and absurdity at all points, did we pretend to like him the better, and pretend to consider him a great dramatist.

Pretend—for every particle of it was pretence. Never was enthusiasm more utterly false than that which so many "respectable audiences" endeavoured to get up for these plays—endeavoured to get up, first, because there was a general desire to see the drama revive, and secondly, because we had been all along entertaining the fancy that "the decline of the drama" meant little, if anything, else than its deviation from the Elizabethan routine—and that, consequently, the return to the Elizabethan routine was, and of necessity must be, the revival of the drama.

But if the principles we have been at some trouble in explaining are true—and most profoundly do we feel them to be so—if the spirit of imitation is, in fact, the real source of the drama's stagnation—and if it is so because of the tendency in all imitation to render Reason subservient to Feeling and to Taste—it is clear that only by deliberate counteracting of the spirit, and of the tendency of the spirit, we can hope to succeed in the drama's revival.

The first thing necessary is to burn or bury the "old models," and to forget, as quickly as possible, that ever a play has been penned. The second thing is to consider *de novo* what are the *capabilities* of the drama—not merely what hitherto have been its conventional purposes. The third and last point has reference to the composition of a play (showing to the fullest extent these capabilities) conceived and constructed with Feeling and with Taste, but with Feeling and Taste guided and controlled in every particular by the details of Reason—of Common Sense—in a word, of a Natural Art.

It is obvious, in the meantime, that towards the good end in view much may be effected by discriminative criticism on what has already been done. The field, thus stated, is, of course, practically illimitable—and to Americans the American drama is the special point of interest. We propose, therefore, in a series of papers, to take a somewhat deliberate survey of some few of the most noticeable American plays. We shall do this without reference either to the date of the composition or its adaptation for the closet or the stage. We shall speak with absolute frankness both of merits and defects—our principal object being understood not as that of mere commentary on the individual play—but on the drama in general, and on the American drama in especial, of which each individual play is a constituent part. We will commence at once with

TORTESA, THE USURER.

This is the third dramatic attempt of Mr. Willis, and may be regarded as particularly successful, since it has received, both on the stage and in the closet, no stinted measure of commendation. This success, as well as the high reputation of the author, will justify us in a more extended notice of the play than might, under other circumstances, be desirable.

The story runs thus:—Tortesa, a usurer of Florence, and whose character is a mingled web of good and evil feelings, gets into his possession the palace and lands of a certain Count Falcone. The usurer would wed the daughter (Isabella) of Falcone, not through love, but in his own words,

To please a devil that inhabits him—

in fact, to mortify the pride of the nobility, and avenge himself of their scorn. He therefore bargains with Falcone [a narrow-souled villain] for the hand of Isabella. The deed of the Falcone property is restored to the Count upon an agreement that the lady shall marry the usurer—this contract being invalid should Falcone change his mind in regard to the marriage, or should the maiden demur—but valid should the wedding be prevented

through any fault of Tortesa, or through any accident not springing from the will of the father or child. The first scene makes us aware of this bargain, and introduces us to Zippa, a glover's daughter, who resolves, with a view of befriending Isabella, to feign a love for Tortesa [which, in fact, she partially feels], hoping thus to break off the match.

The second scene makes us acquainted with a young painter (Angelo), poor, but of high talents and ambition, and with his servant (Tomaso), an old bottle-loving rascal, entertaining no very exalted opinion of his master's abilities. Tomaso does some injury to a picture, and Angelo is about to run him through the body when he is interrupted by a sudden visit from the Duke of Florence, attended by Falcone. The Duke is enraged at the murderous attempt, but admires the paintings in the studio. Finding that the rage of the great man will prevent his patronage if he knows the aggressor as the artist, Angelo passes off Tomaso as himself (Angelo), making an exchange of names. This is a point of some importance, as it introduces the true Angelo to a job which he has long coveted—the painting of the portrait of Isabella, of whose beauty he had become enamoured through report. The Duke wishes the portrait painted. Falcone, however, on account of a promise to Tortesa, would have objected to admit to his daughter's presence the handsome Angelo, but in regard to Tomaso has no scruple. Supposing Tomaso to be Angelo and the artist, the Count writes a note to Isabella, requiring her "to admit the painter Angelo." The real Angelo is thus admitted. He and the lady love at first sight (much in the manner of Romeo and Juliet), each ignorant of the other's attachment.

The third scene of the second act is occupied with a conversation between Falcone and Tortesa, during which a letter arrives from the Duke, who, having heard of the intended sacrifice of Isabella, offers to redeem the Count's lands and palace, and desires him to preserve his daughter for a certain Count Julian. But Isabella,—who, before seeing Angelo, had been willing to sacrifice herself for her father's sake, and who, since seeing him, had entertained hopes of escaping the hateful match through means of a plot entered into by herself and Zippa—Isabella, we say, is now in despair. To gain time, she at once feigns a love for the usurer, and indignantly rejects the proposal of the Duke. The hour for the wedding draws near. The lady has prepared a sleeping potion, whose effects resemble those of death. (Romeo and Juliet.) She swallows it—knowing that her supposed corpse would lie at night, pursuant to an old custom, in the sanctuary of the cathedral; and believing that Angelo—whose love for herself she has elicited, by a stratagem, from his own lips—will watch by the body, in the strength of his devotion. Her ultimate design (we may suppose, for it is not told) is to confess all to her lover on her revival, and throw herself upon his protection—their marriage being concealed, and herself regarded as dead by the world. Zippa, who *really* loves Angelo—(her love for Tortesa, it must be understood, is a very equivocal feeling, for the fact cannot be denied that Mr. Willis makes her love both at the

ame time)—Zippa, who really loves Angelo—who has discovered his passion for Isabella—and who, as well as that lady, believes that the painter will watch the corpse in the cathedral,—determines, through jealousy, to prevent his so doing, and with this view informs Tortesa that she has learned it to be Angelo's design to steal the body *for artistical purposes*,—in short, as a model to be used in his studio. The usurer, in consequence, sets a guard at the doors of the cathedral. This guard does, in fact, prevent the lover from watching the corpse, but, it appears, does *not* prevent the lady, on her revival and disappointment in not seeing the one she sought, from passing unperceived from the church. Weakened by her long sleep, she wanders aimlessly through the streets, and at length finds herself, when just sinking with exhaustion, at the door of her father. She has no resource but to knock. The Count, who here, we must say, acts very much as Thimble of old—the knight, we mean, of the "scolding wife"—maintains that she is dead, and shuts the door in her face. In other words, he supposes it to be the ghost of his daughter who speaks; and so the lady is left to perish on the steps. Meantime Angelo is absent from home, attempting to get access to the cathedral; and his servant Tomaso takes the opportunity of absenting himself also, and of indulging his bibulous propensities while perambulating the town. He finds Isabella as we left her; and through motives which we will leave Mr. Willis to explain, conducts her unresistingly to Angelo's residence, and—*deposits her in Angelo's bed.* The artist now returns—Tomaso is kicked out of doors—and we are not told, but left to presume, that a full explanation and perfect understanding are brought about between the lady and her lover.

We find them, next morning, in the studio, where stands, leaning against an easel, the portrait (a full length) of Isabella, with curtains adjusted before it. The stage-directions, moreover, inform us that "the back wall of the room is such as to form a natural ground for the picture." While Angelo is occupied in retouching it, he is interrupted by the arrival of Tortesa with a guard, and is accused of having stolen the corpse from the sanctuary—the lady, meanwhile, having stepped behind the curtain. The usurer insists upon seeing the painting, with a view of ascertaining whether any new touches had been put upon it, which would argue an examination, *post mortem,* of those charms of neck and bosom which the living Isabella would not have unveiled. Resistance in vain—the curtain is torn down; but, to the surprise of Angelo, the lady herself is discovered, "with her hands crossed on her breast, and her eyes fixed on the ground, standing motionless in the frame which had contained the picture." The *tableau,* we are to believe, deceives Tortesa, who steps back to contemplate what he supposes to be the portrait of his betrothed. In the meantime, the guards, having searched the house, find the veil which had been thrown over the imagined corpse in the sanctuary, and upon this evidence the artist is carried before the Duke. Here he is accused, not only of sacrilege, but of the murder of Isabella, and is about to be condemned to death, when his mistress comes forward in person; thus resigning herself to the

usurer to save the life of her lover. But the noble nature of Tortesa now breaks forth; and, smitten with admiration of the lady's conduct, as well as convinced that her love for himself was feigned, he resigns her to Angelo—although now feeling and acknowledging for the first time that a fervent love has, in his own bosom, assumed the place of the misanthropic ambition which, hitherto, had alone actuated him in seeking her hand. Moreover, he endows Isabella with the lands of her father Falcone. The lovers are thus made happy. The usurer weds Zippa; and the curtain drops upon the promise of the Duke to honour the double nuptials with his presence.

This story, as we have given it, hangs better together (Mr. Willis will pardon our modesty), and is altogether more easily comprehended, than in the words of the play itself. We have really put the best face upon the matter, and presented the whole in the simplest and clearest light in our power.* We mean to say that "Tortesa" (partaking largely, in this respect, of the drama of Cervantes and Calderon) is over-clouded—rendered misty—by a world of unnecessary and impertinent *intrigue*. This folly was adopted by the Spanish comedy, and is imitated by us, with the idea of imparting "action," "business," "vivacity." But vicacity, however desirable, can be attained in many other ways, and is dearly purchased, indeed, when the price is intelligibility.

The truth is that *cant* has never attained a more owl-like dignity than in the discussion of dramatic principle. A modern stage critic is nothing, if not a lofty contemner of all things simple and direct. He delights in mystery—revels in mystification—has transcendental notions concerning P. S. and O. P., and talks about "stage business and stage effect" as if he were discussing the differential calculus. For much of all this we are indebted to the somewhat over-profound criticisms of Augustus William Schlegel.

But the *dicta* of common sense are of universal application, and, touching this matter of *intrigue*, if, from its superabundance, we are compelled, even in the quiet and critical *perusal* of a play, to pause frequently and reflect long—to re-read passages over and over again, for the purpose of gathering their bearing upon the whole—of maintaining in our mind a general connection—what but fatigue can result from the exertion? How, then, when we come to the representation?—when these passages—trifling, perhaps, in themselves, but important when considered in relation to the plot—are hurried and blurred over in the stuttering enunciation of some miserable rantipole, or omitted altogether through the constitutional lapse of memory so peculiar to those lights of the age and stage, bedight (from being of no conceivable use) supernumeraries? For it must be borne in mind that these bits of *intrigue* (we use the term in the sense of the German critics) appertain generally, indeed altogether, to the after thoughts of the drama—to the underplots—are met with consequently, in the mouth of the lackeys and chambermaids—and are thus consigned to the tender mercies of the *stellæ minores*. Of course we get but an imperfect idea

*The student of literature will discover in this the seldom-used power of Poe in careful condensation.—Ed.

of what is going on before our eyes. Action after action ensues whose mystery we can not unlock without the little key which these barbarians have thrown away and lost. Our weariness increases in proportion to the number of these embarrassments, and if the play escape damnation at all, it escapes *in spite* of that intrigue to which, in nine cases out of ten, the author attributes his success, and which he *will* persist in valuing exactly in proportion to the misapplied labour it has cost him.

But dramas of this kind are said, in our customary parlance, to "abound in *plot.*" We have never yet met any one, however, who could tell us what precise ideas he connected with the phrase. A mere succession of incidents, even the most spirited, will no more constitute a plot than a multiplication of zeros, even the most infinite, will result in the production of a unit. This all will admit—but few trouble themselves to think further. The common notion seems to be in favour of mere *complexity;* but a plot, properly understood, is perfect only inasmuch as we shall find ourselves unable to detach from it *or disarrange* any single incident involved, without *destruction* to the mass.

This we say is the point of perfection—a point never yet attained, but not on that account unattainable. Practically, we may consider a plot as of high excellence, when no one of its component parts shall be susceptible of *removal* without *detriment* to the whole. Here, indeed, is a vast lowering of the demand—and with less than this no writer of refined taste should content himself.

As this subject is not only in itself of great importance, but will have at all points a bearing upon what we shall say hereafter, in the examination of various plays, we shall be pardoned for quoting from the *Democratic Review* some passages (of our own) which enter more particularly into the *rationale* of the subject:—*

The pleasure derived from the contemplation of the unity resulting from plot is far more intense than is ordinarily supposed, and, as in Nature we meet with no such combination of *incident,* appertains to a very lofty region of the ideal. In speaking thus we have not said that plot is more than an adjunct to the drama—more than a perfectly distinct and separable source of pleasure. It is *not* an essential. In its intense artificiality it may even be conceived injurious in a certain degree (unless constructed with consummate skill) to that real *lifelikeness* which is the soul of the drama of character. Good dramas have been written with very little plot—capital dramas might be written with none at all. Some plays of high merit, having plot, abound in irrelevant incident—in incident, we mean, which could be displaced or removed altogether without effect upon the plot itself, and yet are by no means objectionable as dramas; and for this reason—that the incidents are *evidently* irrelevant — *obviously* episodical. Of their disgressive nature the spectator is so immediately aware that he views them, as they arise, in the simple light of interlude, and does not fatigue his attention by attempting to establish for them a connection, or more than an illustrative connection, with the great interests of the subject. Such are the

* See *Contents,* Eureka.—Ed.

plays of Shakespeare. But all this is very different from *that* irrelevancy of intrigue which disfigures and very usually damns the work of the unskilful artist. With him the great error lies in *inconsequence*. Underplot is piled upon underplot (the very word is a paradox), and all to no purpose—*to no end*. The interposed incidents have no ultimate effect upon the main ones. They may hang upon the mass—they may even coalesce with it, or, as in some intricate cases, they may be so intimately blended as to be lost amid the chaos which they have been instrumental in bringing about—but still they have no portion in the plot, which exists, if at all, independently of their influence. Yet the *attempt* is made by the author to establish and demonstrate a dependence—an identity; and it is the *obviousness of this attempt* which is the cause of weariness in the spectator, who, of course, cannot at once see that his attention is challenged to no purpose—that intrigues so obstrusively forced upon it are to be found, in the end, without effect upon the leading interests of the play.

"Tortesa" will afford us plentiful examples of this irrelevancy of intrigue—of this misconception of the nature and of the capacities of plot. We have said that our digest of the story is more easy of comprehension than the detail of Mr. Willis. If so, it is because we have forborne to give such portions as had no influence upon the whole. These served but to embarrass the narrative and fatigue the attention. How much was irrelevant is shown by the brevity of the space in which we have recorded, somewhat at length, all the influential incidents of a drama of five acts. There is scarcely a scene in which is not to be found the germ of an underplot—a germ, however, which seldom proceeds beyond the condition of a bud, or, if so fortunate as to swell into a flower, arrives, in no single instance, at the dignity of fruit. Zippa, a lady altogether without character (dramatic), is the most pertinacious of all conceivable concoctors of plans never to be matured—of vast designs that terminate in nothing—of *cul-de-sac* machinations. She plots in one page and counter-plots in the next. She schemes her way from P. S. to O. P., and intrigues perseveringly from the footlights to the slips. A very singular instance of the inconsequence of her manœuvres is found towards the conclusion of the play. The whole of the second scene (occupying five pages), in the fifth act, is obviously introduced for the purpose of giving her information, through Tomaso's means, of Angelo's arrest for the murder of Isabella. Upon learning his danger she rushes from the stage, to be present at the trial, exclaiming that her evidence can save his life. We, the audience, of course applaud, and now look with interest to her movements in the scene of the judgment-hall. She, Zippa, we think, is somebody after all; she will be the means of Angelo's salvation; she will thus be the chief unraveller of the plot. All eyes are bent, therefore, upon Zippa—but, alas! upon the point at issue, Zippa does not so much as open her mouth. It is scarcely too much to say that not a single action of this impertinent little busybody has any real influence upon the play;—yet she appears upon every occasion—appearing only to perplex.

Similar things abound; we should not

ave space even to allude to them all. The whole conclusion of the play is supererogatory. The immensity of sure *fuss* with which it is overloaded orces us to the reflection that all of might have been avoided by one word f explanation to the Duke—an amiable han who admires the talents of Angelo, nd who, *to prevent Isabella's marrying gainst her will,* had *previously* offered o free Falcone of his bonds to the surer. That he would free him *now,* nd thus set all matters straight, the pectator cannot doubt for an instant, nd he can conceive no better reason hy explanations are *not* made than hat Mr. Willis does not think proper hey should be. In fact, the whole rama is exceedingly ill *motivirt.*

We have already mentioned an inadertence, in the fourth act, where Isaella is made to escape from the sanctuary through the midst of guards who prevented the ingress of Angelo. Another occurs where Falcone's conscience s made to reprove him, upon the appearance of his daughter's supposed ghost, for having occasioned her death by forcing her to marry against her will. The author had forgotten that Falcone submitted to the wedding, after the Duke's interposition, only upon Isabella's assurance *that she really loved the usurer.* In the third scene, too, of the first act, the imagination of he spectator is no doubt a little taxed when he finds Angelo, in the first moment of his introduction to the palace of Isabella, commencing her portrait by laying on colour after colour, before he has made any attempt at an outline. In the last act, moreover, Tortesa gives to Isabella a deed

Of the Falcone palaces and lands,
And all the money forfeit by Falcone.

This is a terrible blunder, and the more important as upon this act of the usurer depends the development of his newborn sentiments of honour and virtue—depends, in fact, the most salient *point* of the play. Tortesa, we say, gives to Isabella the lands forfeited by Falcone; but Tortesa was surely not very generous in giving what, clearly, was not his own to give. Falcone had *not forfeited* the deed, which had been restored to him by the usurer, and which was then in his (Falcone's) possession. Here Tortesa:—

He put it in the bond,
That if, by any humour of my own,
Or accident that came not from himself,
Or from his daughter's will, the match were marred,
His tenure stood intact.

Now Falcone is still resolute for the match; but this new generous "humour" of Tortesa induces him (Tortesa) to decline it. Falcone's tenure is then intact; he retains the deed, the usurer is giving away property not his own.

As a drama of character, "Tortesa" is by no means open to so many objections as when we view it in the light of its plot; but it is still faulty. The merits are so exceedingly negative, that it is difficult to say anything about them. The Duke is nobody; Falcone, nothing; Zippa, less than nothing. Angelo may be regarded simply as the medium through which Mr. Willis conveys to the reader his own glowing feelings—his own refined and delicate

fancy—(delicate, yet bold)—his own rich voluptuousness of sentiment—a voluptuousness which would offend in almost any other language than that in which it is so skilfully apparelled. Isabella is—the heroine of the Hunchback. The revolution in the character of Tortesa—or rather the final triumph of his innate virtue—is a dramatic point far older than the hills. It may be observed, too, that although the representation of no human character should be quarrelled with for its inconsistency, we yet require that the inconsistencies be not absolute antagonisms to the extent of neutralization: they may be permitted to be oils and waters, but they must not be alkalis and acids. When, in the course of the *denouement*, the usurer bursts forth into an eloquence virtue-inspired, we cannot sympathize very heartily in his fine speeches, since they proceed from the mouth of the self-same egotist who, urged by a disgusting vanity, uttered so many sotticisms (about his fine legs, etc.) in the earlier passages of the play. Tomaso is, upon the whole, the best personage. We recognize some originality in his conception, and conception was seldom more admirably carried out.

One or two observations at random. In the third scene of the fifth act, Tomaso, the buffoon, is made to assume paternal authority over Isabella (as usual, without sufficient purpose), by virtue of a law which Tortesa thus expounds:—

"My gracious liege, there is a law in Florence
That if a father, for no guilt or shame,
Disown and shut his door upon his daughter,
She is the child of him who succours her,
Who by the shelter of a single night
Becomes endowed with the authority
Lost by the other."

No one, of course, can be made to believe that any such stupid law as this ever existed either in Florence or Timbuctoo; but, on the ground *que le vrai n'est pas toujours le vraisemblable*, we say that even its real existence would be no justification of Mr. Willis. It has an air of the far-fetched—of the desperate—which a fine taste will avoid as a pestilence. Very much of the same nature is the attempt of Tortesa to extort a second bond from Falcone. The evidence which convicts Angelo of murder is ridiculously frail. The idea of Isabella's assuming the place of the portrait, and so deceiving the usurer, is not only glaringly improbable, but seems adopted from the "Winter's Tale." But in this latter play, the deception is at least possible, for the human figure but imitates a statue. What, however, are we to make of Mr. W.'s stage direction about the back wall's being "so arranged as to form a natural ground for the picture"? Of course, the very slightest movement of Tortesa (and he makes many) would have annihilated the illusion by disarranging the perspective; and in no manner could this latter have been arranged at all for more than one particular point of view—in other words, for more than one particular person in the whole audience. The "asides," moreover, are unjustifiably frequent. The prevalence of this folly (of speaking aside) detracts as much from the acting merit of our drama generally as any

other inartisticality. It utterly destroys verisimilitude. People are not in the habit of soliloquising aloud—at least, not to any positive extent; and why should an author have to be told, what the slightest reflection would teach him, that an audience, by dint of no imagination, can or will conceive that what is sonorous in their own ears at the distance of fifty feet cannot be heard by an actor at the distance of one or two?

Having spoken thus of "Tortesa" in terms of nearly unmitigated censure—our readers may be surprised to hear us say that we think highly of the drama as a whole—and have little hesitation in ranking it before most of the dramas of Sheridan Knowles. Its leading faults are those of the modern drama generally—they are not peculiar to itself—while its great merits *are*. If in support of our opinion we do not cite points of commendation, it is because those form the mass of the work. And were we to speak of fine passages, we should speak of the entire play. Nor by "fine passages" do we mean passages of merely fine language, embodying fine sentiment, but such as are replete with truthfulness, and teem with the loftiest qualities of the dramatic art. *Points*—capital points abound; and these have far more to do with the general excellence of a play than a too speculative criticism has been willing to admit. Upon the whole, we are proud of "Tortesa"—and here again, for the fiftieth time at least, record our warm admiration of the abilities of Mr. Willis.

We proceed now to Mr. Longfellow's

THE SPANISH STUDENT

The reputation of its author as a poet, and as a graceful writer of prose, is, of course, long and deservedly established—but as a dramatist he was unknown before the publication of this play. Upon its original appearance, in *Graham's Magazine*, the general opinion was greatly in favour—if not exactly of "The Spanish Student"—at all events of the writer of "Outre-Mer." But this general opinion is the most equivocal thing in the world. It is never self-formed. It has very seldom indeed an original development. In regard to the work of an already famous or infamous author it decides, to be sure, with a laudable promptitude; making up all the mind that it has, by reference to the reception of the author's immediately previous publication—making up thus the ghost of a mind *pro tem.*—a species of critical shadow that fully answers, nevertheless, all the purposes of a substance itself until the substance itself shall be forthcoming. But beyond this point the general opinion can only be considered that of the public, as a man may call a book *his*, having bought it. When a *new* writer arises, the shop of the true, thoughtful, or critical opinion is not simultaneously thrown away—is not immediately set up. Some weeks elapse; and, during this interval, the public, at a loss where to procure an opinion of the *debutante*, have necessarily no opinion of him at all for the nonce.

The popular voice, then, which ran so much in favour of "The Spanish Student," upon its original issue, should be looked upon as merely the ghost *pro tem.*—as based upon critical de-

cisions respecting the previous works of the author—as having reference in no manner to "The Spanish Student" itself—and thus as utterly meaningless and valueless *per se*.

The few, by which we mean those who think, in contradistinction from the many who think they think—the few who think at first hand, and thus twice before speaking at all—these received the play with a commendation somewhat less *pronounced*—somewhat more guardedly qualified—than Professor Longfellow might have desired, or may have been taught to expect. Still the composition was approved upon the whole. The few words of censure were very far indeed from amounting to condemnation. The chief defect insisted upon was the feebleness of the *denouement*, and, generally, of the concluding scenes, as compared with the opening passages. We are not sure, however, that anything like detailed criticism has been attempted in the case—nor do we propose now to attempt it. Nevertheless, the work has interest, not only within itself, but as the first dramatic effort of an author who has remarkably succeeded in almost every other department of light literature than that of the drama. It may be as well, therefore, to speak of it, if not analytically, at least somewhat in detail; and we cannot, perhaps, more suitably commence than by a quotation, without comment, of some of the finer passages:

And, though she is a virgin outwardly,
Within she is a sinner; like those panels
Of doors and altar-pieces the old monks
Painted in convents, with the Virgin Mary
On the outside, and on the inside: Venus. . . .

I believe
That woman, in her deepest degradation,
Holds something sacred, something undefiled,
Some pledge and keepsake of her higher nature,
And, like the diamond in the dark, retains
Some quenchless gleam of the celestial light. . . .

And we shall sit together unmolested,
And words of true love pass from tongue to tongue,
As singing birds from one bough to another. . . .

Our feelings and our thoughts
Tend ever on and rest not in the Present,
As drops of rain fall into some dark well,
And from below comes a scarce audible sound,
So fall our thoughts into the dark Hereafter,
And their mysterious echo reaches us. . . .

Her tender limbs are still, and, on her breast,
The cross she prayed to, ere she fell asleep,
Rises or falls with the soft tide of dreams,
Like a light barge safe moored. . . .

Hark! how the large and ponderous mace of Time
Knocks at the golden portals of the day! . . .

The lady Violante bathed in tears
Of love and anger, like the maid of Colchis,
Whom thou, another faithless Argonaut,
Having won that golden fleece, a woman's love,
Deservest for this Glauce. . . .

I read, or sit in reverie and watch
The changing colour of the waves that break
Upon the idle sea-shore of the mind. . . .

I will forget her. All dear recollections
Pressed in my heart, like flowers within a book,
Shall be torn out and scattered to the winds. . . .

Oh yes! I see it now—
Yet rather with my heart than with mine eyes,
So faint it is. And all my thoughts sail thither,
Freighted with prayers and hopes, and forward urged,
Against all stress of accident, as, in
The Eastern Tale, against the wind and tide
Great ships were drawn to the Magnetic Mountains. . . .

But there are brighter dreams than those of Fame,
Which are the dreams of Love! Out of the heart
Rises the bright ideal of these dreams,
As from some woodland fount a spirit rises
And sinks again into its silent deeps,
Ere the enamoured knight can touch her robe!
'Tis this ideal that the soul of Man,
Like the enamoured knight beside the fountain,
Waits for upon the margin of Life's stream;
Waits to behold her rise from the dark waters,
Clad in a mortal shape! Alas, how many
Must wait in vain! The stream flows evermore,
But from its silent deeps no spirit rises!
Yet I, born under a propitious star,
Have found the bright ideal of my dreams. . . .

Yes; by the Darro's side
My childhood passed. I can remember still
The river, and the mountains capped with snow;
The villages where, yet a little child,
I told the traveller's fortune in the street;
The smuggler's horse; the brigand and the shepherd;
The march across the moor; the halt at noon;
The red fire of the evening camp, that lighted
The forest where we slept; and, farther back,
As in a dream, or in some former life,
Gardens and palace walls. . . .

This path will lead us to it,
Over the wheatfields, where the shadows sail
Across the running sea, now green, now blue,
And, like an idle mariner on the ocean,
Whistles the quail. . . .

These extracts will be universally admired. They are graceful, well ex-

pressed, imaginative, and altogether replete with the true poetic feeling. We quote them *now,* at the beginning of our review, by way of justice to the poet, and because, in what follows, we are not sure that we have more than a very few words of what may be termed commendation to bestow.

"The Spanish Student" has an unfortunate beginning, in a most unpardonable, and yet to render the matter worse, in a most indispensable "Preface":—

"The subject of the following plays [says Mr. L.] is taken in part from the beautiful play of Cervantes, 'La Gitanilla.' To this source, however, I am indebted for the main incident only, the love of a Spanish student for a Gipsy girl, and the name of the heroine, Preciosa. I have not followed the story in any of its details. In Spain this subject has been twice handled dramatically; first by Juan Perez de Montalvan in 'La Gitanilla,' and afterwards by Antonio de Solis y Rivadeneira in 'La Gitanilla de Madrid.' The same subject has also been made use of by Thomas Middleton, an English dramatist of the seventeenth century. His play is called 'The Spanish Gipsy.' The main plot is the same as in the Spanish pieces; but there runs through it a tragic underplot of the loves of Rodrigo and Dona Clara, which is taken from another tale of Cervantes, 'La Fuerza de la Sangre.' The reader who is acquainted with 'La Gitanilla' of Cervantes, and the plays of Montalvan, Solis, and Middleton, will perceive that my treatment of the subject differs entirely from theirs."

Now the autorial originality, properly considered, is threefold. There is, first, the originality of the general thesis; secondly, that of the several incidents or thoughts by which the thesis is developed; and thirdly, that of manner or *tone,* by which means alone an old subject, even when developed through hackneyed incidents or thoughts, may be made to produce a fully original *effect* —which, after all, is the end truly in view.

But originality, as it is one of the highest, is also one of the rarest of merits. In America it is especially and very remarkably rare:—this through causes sufficiently well understood. We are content perforce, therefore, as a general thing, with either of the lower branches of originality mentioned above; and would regard with high favour indeed any author who should supply the great *desideratum* in combining the three. Still the three *should* be combined; and from whom, if not from such men as Professor Longfellow—if not from those who occupy the chief niches in our Literary Temple—shall we expect the combination? But in the present instance, what has Professor Longfellow accomplished? Is he original at any one point? Is he original in respect to the first and most important of our three divisions? "The *subject* of the following play," he says himself, "is taken *in part* from the beautiful play of Cervantes, 'La Gitanilla.' To this source, however, I am indebted for *the main incident only,* the love of the Spanish student for a Gipsy girl, and the name of the heroine, Preciosa."

The italics are our own, and the words italicized involve an obvious constradiction. We cannot understand how "the love of the Spanish student for the Gipsy girl" can be called an "incident,"

or even a "main incident," at all. In fact, this love—this discordant and therefore eventful or incidentful love —is the true *thesis* of the drama of Cervantes. It is this anomalous "love," which originates the incidents by means of which itself, this "love," the thesis, is developed. Having based his play, then, upon this "love," we cannot admit his claim to originality upon our first count; nor has he any right to say that he has adopted his "subject" "in part." It is clear that he has adopted it altogether. Nor would he have been entitled to claim originality of subject, even had he based his story upon *any variety* of love arising between parties naturally separated by prejudices of *caste*—such, for example, as those which divide the Brahmin from the Pariah, the Ammonite from the African, or even the Christian from the Jew. For here in its ultimate analysis, is the real thesis of the Spaniard. But when the drama is founded, not merely upon this general thesis, but upon this general thesis in the identical application given it by Cervantes—that is to say, upon the prejudice of *caste* exemplified in the case of a Catholic, and this Catholic a Spaniard, and this Spaniard a student, and this student loving a Gipsy, and this Gipsy a dancing-girl, and this dancing-girl bearing the name Preciosa—we are not altogether prepared to be informed by Professor Longfellow that he is indebted for an "incident only" to the "beautiful 'Gitanilla' of Cervantes."

Whether our author is original upon our second and third points—in the true incidents of his story, or in the manner and *tone* of their handling—will be more distinctly seen as we proceed.

It is to be regretted that "The Spanish Student" was not sub-entitled "A Dramatic Poem," rather than "A Play." The former title would have more fully conveyed the intention of the poet; for, of course, we shall not do Mr. Longfellow the injustice to suppose that his design has been, in any respect, *a play*, in the ordinary acceptation of the term. Whatever may be its merits in a merely poetical view, "The Spanish Student" could not be endured upon the stage.

Its plot runs thus:—Preciosa, the daughter of a Spanish gentleman, is stolen, while an infant, by Gipsies; brought up as his own daughter, and as a dancing-girl, by a Gipsy leader, Cruzado; and by him betrothed to a young Gipsy, Bartolome. At Madrid, Preciosa loves and is beloved by Victorian, a student of Alcala, who resolves to marry her, notwithstanding her *caste*, rumours involving her purity, the dissuasions of his friends, and his betrothal to an heiress of Madrid. Preciosa is also sought by the Count of Lara, a *roue*. She rejects him. He forces his way into her chamber, and is there seen by Victorian, who, misinterpreting some words overhead, doubts the fidelity of his mistress, and leaves her in anger, after challenging the Count of Lara. In the duel, the Count receives his life at the hands of Victorian; declares his ignorance of the understanding between Victorian and Preciosa; boasts of favours received from the latter; and, to make good his words, produces a ring which she gave him, he asserts, as a pledge of her love. This ring is a duplicate of one previously given the girl by Victorian, and known to have been so given by the Count. Victorian mistakes it for

his own, believes all that has been said, and abandons the field to his rival, who, immediately afterwards, while attempting to procure access to the Gipsy, is assassinated by Bartolome. Meanwhile, Victorian, wandering through the country, reaches Guadarrama. Here he receives a letter from Madrid, disclosing the treachery practiced by Lara, and telling that Preciosa, rejecting his addresses, had been through his instrumentality hissed from the stage, and now again roamed with the Gipsies. He goes in search of her; finds her in a wood near Guadarrama; approaches her, disguising his voice; she recognizes him, pretending she does not, and unaware that he knows her innocence; a conversation of *equivoque* ensues; he sees his ring upon her finger; offers to purchase it; she refuses to part with it; a full eclaircissement takes place; at this juncture a servant of Victorian's arrives with "news from court," giving the first intimation of the true parentage of Preciosa. The lovers set out, forthwith, for Madrid, to see the newly discovered father. On the route, Bartolome dogs their steps; fires at Preciosa; misses her; the shot is returned; he falls; and "The Spanish Student" is concluded.

This plot, however, like that of "Tortesa," looks better in our naked digest than amidst the details which develop only to disfigure it. The reader of the play itself will be astonished, when he remembers the name of the author, at the inconsequence of the incidents—at the utter want of skill—of art—manifested in their conception and introduction. In dramatic writing, no principle is more clear than that nothing should be said or done which has not a tendency to develop the catastrophe, or the characters. But Mr. Longfellow's play abounds in events and conversations that have no ostensible purpose, and certainly answer no end. In what light, for example, since we cannot suppose this drama intended for the stage, are we to regard the second scene of the second act, where a long dialogue between an Archbishop and a Cardinal is wound up by a dance from Preciosa? The Pope thinks of abolishing public dances in Spain, and the priests in question have been delegated to examine, personally, the proprieties or improprieties of such exhibitions. With this view, Preciosa is summoned and required to give a specimen of her skill. Now this, in a mere spectacle, would do very well; for here all that is demanded is an occasion or an excuse for a dance; but what business has it in a pure drama? or in what regard does it further the end of a dramatic poem, intended only to be read? In the same manner, the whole of scene the eighth, in the same act, is occupied with six lines of stage directions, as follows:—

> *The theatre: the orchestra plays the Cachuca. Sound of castanets behind the scenes. The curtain rises and discovers Preciosa in the attitude of commencing the dance. The Cachuca. Tumult. Hisses. Cries of Brava! and Aguera! She falters and pauses. The music stops. General confusion. Preciosa faints.*

But the *inconsequence* of which we complain will be best exemplified by an entire scene. We take scene the fourth, act the first:—

"*An inn on the road to Alcala.* BALTASAR *asleep on a bench. Enter* CHISPA."

Chispa. And here we are, half way to Alcala, between cocks and midnight. Body o' me! what an inn this is! The light out and the landlord asleep! Hola! ancient Baltasar!

Baltasar [*waking*]. Here I am.

Chispa. Yes, there you are, like a one-eyed alcalde in a town without inhabitants. Bring a light, and let me have supper.

Baltasar. Where is your master?

Chispa. Do not trouble yourself about him. We have stopped a moment to breathe our horses; and if he chooses to walk up and down in the open air, looking into the sky as one who hears it rain, that does not satisfy my hunger, you know. But be quick, for I am in a hurry, and every one stretches his legs according to the length of his coverlet. What have we here?

Baltasar [*setting a light on the table*]. Stewed rabbit.

Chispa [*eating*]. Conscience of Portalegre! stewed kitten, you mean!

Baltasar. And a pitcher of Pedro Ximenes, with a roasted pear in it.

Chispa [*drinking*]. Ancient Baltasar, amigo! You know how to cry wine and sell vinegar. I tell you this is nothing but Vino Tinto of La Mancha, with a tang of the swine-skin.

Baltasar. I swear to you by Saint Simon and Judas, it is all as I say.

Chispa. And I swear to you by Saint Peter and Saint Paul, that it is no such thing. Moreover, your supper is like the hidalgo's dinner—very litle meat and a great deal of tablecloth.

Baltasar. Ha! ha! ha!

Chispa. And more noise than nuts.

Baltasar. Ha! ha! ha! You must have your joke, Master Chispa. But shall I not ask Don Victorian in to take a draught of the Pedro Ximenes?

Chispa. No; you might as well say, "Don't you want some?" to a dead man.

Baltasar. Why does he go so often to Madrid?

Chispa. For the same reason that he eats no supper. He is in love. Were you ever in love, Baltasar?

Baltasar. I was never out of it, good Chispa. It has been the torment of my life.

Chispa. What! are you on fire, too, old hay-stack? Why, we shall never be able to put you out.

Victorian [*without.*] Chispa!

Chispa. Go to bed, Pero Grullo, for the cocks are crowing.

Victorian. Ea! Chispa! Chispa!

Chispa. Ea! Senor. Come with me, ancient Baltasar, and bring water for the horses. I will pay for the supper tomorrow. [*Exeunt.*]

Now here the question occurs—what is accomplished? How has the subject been forwarded? We did not need to learn that Victorian was in love—that was known before; and all that we glean is that a stupid imitation of Sancho Panza drinks in the course of two minutes (the time occupied in the perusal of the scene) a bottle of vino tinto, by way of Pedro Ximenes, and devours a stewed kitten in place of a rabbit.

In the beginning of the play this Chispa is the valet of Victorian; subsequently we find him the servant of another; and near the *denouement* he returns to his original master. No cause

is assigned, and not even the shadow of an object is attained; the whole tergiversation being but another instance of the gross inconsequence which abounds in the play.

The author's deficiency of skill is especially evinced in the scene of the *eclaircissement* between Victorian and Preciosa. The former having been enlightened respecting the true character of the latter by means *of a letter* received at Guadarrama, from a friend at Madrid (how wofully inartistical is this!), resolves to go in search of her forthwith, and forthwith, also, discovers her in a wood close at hand. Whereupon he approaches, disguising *his voice*:—yes, we are required to believe that a lover may so disguise his voice from his mistress as even to render his person in full view irrecognizable! He approaches, and each knowing the other, a conversation ensues under the hypothesis that each to the other is unknown—a very unoriginal, and, of course, a very silly source of *equivoque*, fit only for the gum-elastic imagination of an infant. But what we especially complain of here is that our poet should have taken so many and so obvious pains to bring about this position of *equivoque*, when it was impossible that it could have served any other purpose than that of injuring his intended effect! Read, for example, this passage:—

Victorian. I never loved a maid;
For she I loved was then a maid no more.
Preciosa. How know you that?
Victorian. A little bird in the air
Whispered the secret.
Preciosa. There, take back your gold!
Your hand is cold like a deceiver's hand!
There is no blessing in its charity!
Make her your wife, for you have been abused;
And you shall mend your fortunes by mending hers.
Victorian. How like an angel's speaks the tongue of woman,
When pleading in another's cause her own!

Now here it is clear that if we understood Preciosa to be really ignorant of Victorian's identity, the "pleading in another's cause her own" would create a favourable impression upon the reader or spectator. But the advice—"Make her your wife, etc.," takes an interested and selfish turn when we remember that she knows to whom she speaks.

Again, when Victorian says:

That is a pretty ring upon your finger,
Pray give it me!

and when she replies:

No, never from my hand
Shall that be taken,

we are inclined to think her only an artful coquette, knowing, as we do, the extent of her knowledge; on the hand we should have applauded her constancy (as the author intended) had she been represented ignorant of Victorian's presence. The effect upon the audience, in a word, would be pleasant in place of disagreeable were the case altered as we suggest, while the effect upon Victorian would remain altogether untouched.

A still more remarkable instance of deficiency in the dramatic *tact* is to be found in the mode of bringing about the discovery of Preciosa's parentage. In the very moment of the *eclaircissement* between the lovers, Chispa arrives almost as a matter of course, and settles the point in a sentence:—

Good news from Court; Good news! Beltran Cruzado,
The Count of the Cales, is not your father,
But your true father has returned to Spain
Laden with wealth. You are no more a Gipsy.

Now here are three points:—first, the extreme baldness, platitude, and *independence* of the incident narrated by Chispa. The *opportune* return of the father (we are tempted to say the *excessively* opportune) stands by itself—has no relation to any other event in the play—does not appear to arise, in the way of *result*, from any incident or incidents that have arisen before. It has the air of a happy chance, of a God-send, of an ultra-accident, invented by the play-wright by way of compromise for his lack of invention. *Nec deus intersit*, etc.—but here the god has interposed, and the knot is laughably unworthy of the god.

The second point concerns the return of the father "laden with wealth." The lover has abandoned his mistress in her poverty, and, while yet the words of his proffered reconciliation hang upon his lips, comes his own servant with the news that the mistress' father has returned "laden with wealth." Now, so far as regards the audience, who are behind the scenes and know the fidelity of the lover—so far as regards the audience, all is right; but the poet had no business to place his heroine in the said predicament of being forced, provided she is not a fool, to suspect both the ignorance and the disinterestedness of the hero.

The third point has reference to the words—"You are now no more a Gipsy." The thesis of this drama, as we have already said, is love disregarding the prejudices of *caste*, and in the development of this thesis, the powers of the dramatist have been engaged, or should have been engaged, during the whole of the three acts of the play. The interest excited lies in our admiration of the sacrifice, and of the love that could make it; but this interest immediately and disagreeably subsides when we find that the sacrifice has been made to no purpose. "You are no more a Gipsy" dissolves the charm, and obliterates the whole impression which the author has been at so much labour to convey. Our romantic sense of the hero's chivalry declines into a complacent satisfaction with his fate. We drop our enthusiasm, with the enthusiast, and jovially shake by the hand the mere man of good luck. But is not the latter feeling the more comfortable of the two? Perhaps so; but "comfortable" is not exactly the word Mr. Longfellow might wish applied to the end of his drama, and then why be at the trouble of building up an effect through a hundred and eighty pages, merely to knock it down at the end of the hundred and eighty-first?

We have already given, at some length, our conceptions of the nature of *plot*—and of that of "The Spanish

Student" it seems almost superfluous to speak at all. It has nothing of construction about it. Indeed there is scarcely a single incident which has any necessary dependence upon any one other. Not only might we take away two-thirds of the whole without ruin—but without detriment—indeed with a positive benefit to the mass. And, even as regards the mere order of arrangement, we might with a very decided *chance* of improvement, put the scenes in a bag, give them a shake or two by way of shuffle, and tumble them out. The whole mode of collocation—not to speak of the feebleness of the incidents in themselves—evinces, on the part of the author, an utter and radical want of the adapting or constructive power which the drama so imperatively demands.

Of the unoriginality of the thesis we have already spoken; and now, to the unoriginality of the events by which the thesis is developed, we need do little more than allude. What, indeed, *could* we say of such incidents as the child stolen by Gipsies—as her education as a *danseuse*—as her betrothal to a Gipsy—as her preference for a gentleman—as the rumours against her purity—as her persecution by a *roue*—as the irruption of the *roue* into her chamber—as the consequent misunderstanding between her and her lover—as the duel—as the defeat of the *roue*—as the receipt of his life from the hero—as his boasts of success with the girl—as the *ruse* of the duplicate ring—as the field, in consequence, abandoned by the lover—as the assassination of Lara while scaling the girl's bed-chamber—as the disconsolate peregrination of Victorian—as the *equivoque* scene with Preciosa—as the offering to purchase the ring and the refusal to part with it—as the "news from court," telling of the Gipsy's true parentage—what *could* we say of all these ridiculous things, except that we have met them, each and all, some two or three hundred times before, and that they have formed, in a great or less degree, the staple material of every Hop-O'My-Thumb tragedy since the flood? There is not an incident, from the first page of "The Spanish Student" to the last and most satisfactory, which we would not undertake to find bodily at ten minutes' notice, in some one of the thousand and one comedies of intrigue attributed to Calderon and Lope de Vega.

But if our poet is grossly unoriginal in his subject, and in the events which evolve it, may he not be original in his handling or *tone?* We really grieve to say that he is not, unless, indeed, we grant him the need of originality for the peculiar manner in which he has jumbled together the quaint and stilted tone of the old English dramatists with the *degagee* air of Cervantes. But this is a point upon which, through want of space, we must necessarily permit the reader to judge altogether for himself. We quote, however, a passage from the second scene of the first act, by way of showing how very easy a matter it is to make a man discourse Sancho Panza:—

Chispa. Abernuncio Satanas! and a plague upon all lovers who ramble about at night, drinking the elements, instead of sleeping quietly in their beds. Every dead man to his cemetery, say I; and every friar to his monastery. Now, here's my master Victorian, yes—

erday a cow-keeper and to-day a gen-leman; yesterday a student and to-day lover; and I must be up later than the ightingale, for as the abbot sings so nust the sacristan respond. God grant he may soon be married, for then shall ll this serenading cease. Ay, marry, marry, marry! Mother, what does narry mean? It means to spin, to bear hildren, and to weep, my daughter! And, of a truth, there is something more in matrimony than the wedding-ring. And now, gentlemen, *Pax vo-biscum!* as the ass said to the cabbages!

And, we might add, as an ass *only* should say.

In fact, throughout "The Spanish Student," as well as throughout other compositions of its author, there runs a very obvious vein of *imitation*. We are perpetually reminded of something we have seen before—some old acquaintance in manner of matter; and even where the similarity cannot be said to amount to plagiarism, it is still injurious to the poet in the good opinion of him who reads.

Among the minor defects of the play, we may mention the frequent allusion to book incidents not generally known, and requiring each a *note* by way of explanation. The drama demands that everything be so instantaneously evident that he who runs may read; and the only impression effected by these *notes* to a play is, that the author is desirous of showing his reading.

We may mention, also, occasional tautologies, such as:—

Never did I behold thee so *attired*
And *garmented* in beauty as to-night!

Or—

What we need
Is the celestial fire to change the fruit
Into *transparent* crystal, *bright and clear!*

We may speak, too, of more than occasional errors of grammar. For example, page 23:—

"Did no one see thee? None, my love, but *thou.*"

Here "but" is not a conjunction, but a preposition, and governs *thee* in the objective. "None but *thee*" would be right; meaning none *except* thee, *saving* thee. At page 27, "mayst" is somewhat incorrectly written "may'st." At page 34, we have:—

I have no other saint than *thou* to pray to.

Here authority and analogy are both against Mr. Longfellow. "Than" also is here a preposition governing the objective, and meaning *save* or *except*. "I have none other God than thee, etc." See Horne Tooke. The Latin "*quam te*" is exactly equivalent. At page 80 we read:—

Like thee I am a captive, and, *like thee,*
I have a gentle gaoler.

Here "like thee" (although grammatical of course) does not convey the idea. Mr. L. does not mean that the speaker is *like* the bird itself, but that his *condition* resembles it. The true reading would thus be:—

As thou I am a captive, and, *as thou,*
I have a gentle gaoler.

That is to say, *as thou art and as thou hast.*

Upon the whole, we regret that Professor Longfellow has written this work, and feel especially vexed that he has committed himself by its republication. Only when regarded as a mere poem can it be said to have merit of any kind. For in fact it is only when we separate the poem from the drama that the passages we have commended as beautiful can be understood to have beauty. We are not too sure, indeed, that a "dramatic poem" is not a flat contradiction in terms. At all events a man of true genius (and such Mr. L. unquestionably is) has no business with these hybrid and paradoxical compositions. Let a poem be a poem only; let a play be a play and nothing more. As for "The Spanish Student," its thesis is unoriginal; its incidents are antique; its plot is no plot; its characters have no character; in short, it is a little better than a play upon words to style it "A Play" at all.

Longfellow's Ballads

(Published in *Graham's Magazine*, April, 1842.—Ed.)

"*Il y a parier,*" says Chamfort, "*que toute idee publique, toute convention recue, est une sottise, car elle a convenue au plus grand nombre,*"—One would be safe in wagering that any given public idea is erroneous, for it has been yielded to the clamour of the majority;—and this strictly philosophical, although somewhat French assertion, has especial bearing upon the whole race of what are termed maxims and popular proverbs; nine-tenths of which are the quintessence of folly. One of the most deplorably false of them is the antique adage, *De gustibus non est disputandum*—there should be no disputing about taste. Here the idea designed to be conveyed is that any one person has as just right to consider his own taste *the true*, as has any one other—that taste itself, in short, is an arbitrary something, amenable to no law, and measurable by no definite rules. It must be confessed, however, that the exceedingly vague and impotent treatises which are alone extant have much to answer for as regards confirming the general error. Not the least important service which, hereafter, mankind will owe to *Phrenology*, may, perhaps, be recognised in an analysis of the real principles, and a digest of the resulting laws of taste. These principles, in fact, are as clearly traceable, and these laws as readily susceptible of system, as are any whatever.

In the meantime, the insane adage above mentioned is in no respect more generally, more stupidly, and more pertinaciously quoted than by the admirers of what is termed the "good old Pope," or the "good old Goldsmith school" of poetry, in reference to the bolder, more natural and *more ideal* compositions of such authors as Coetlogon and Lamartine in France; Herder, Korner, and Uhland in Germany; Brun and Baggesen in Denmark; Bellman,

Tegner, and Nyberg in Sweden; Keats, Shelley, Coleridge, and Tennyson in England; Lowell and Longfellow in America. "De gustibus non," says these, "good-old-school" fellows; and we have no doubt that their mental translation of the phrase is—"We pity your taste—we pity everybody's taste but our own."

It is our purpose to controvert the popular idea that the poets just mentioned owe to novelty, to trickeries of expression, and to other meretricious effects their appreciation by certain readers:—to demonstrate (for the matter is susceptible of demonstration) that such poetry and *such alone* has fulfilled the legitimate office of the muse; has thoroughly satisfied an earnest and unquenchable desire existing in the heart of man.

This volume of Ballads and Tales includes, with several brief original pieces, a translation from the Swedish of Tegner. In attempting (what never should be attempted) a literal version of both the words and the metre of this poem, Professor Longfellow has failed to do justice either to his author or himself. He has striven to do what no man ever did well, and what, from the nature of language itself, never *can* be well done. Unless, for example, we shall come to have an influx of *spondees* in our English tongue, it will always be impossible to construct an English hexameter. Our spondees, or, we should say, our spondaic words, are rare. In the Swedish they are nearly as abundant as in the Latin and Greek. We have only *"compound," "context," "footfall,"* and a few other similar ones. This is the difficulty; and that it *is* so will become evident upon reading "The Children of the Lord's Supper," where the sole *readable* verses are those in which we meet with the rare spondaic dissyllables. We mean to say *readable as hexameters;* for many of them will read very well as mere English dactylics with certain irregularities.

Much as we admire the genius of Mr. Longfellow, we are fully sensible of his many errors of affectation and imitation. His artificial skill is great, and his ideality high. But his conception of the *aims* of poesy is all *wrong;* and this we shall prove at some future day—to our own satisfaction, at least. His didactics are all *out of place.* He has written brilliant poems—by accident; that is to say when permitting his genius to get the better of his conventional habit of thinking—a habit deduced from German study. We do not mean to say that a didactic moral may not be well made the *undercurrent* of a poetical thesis; but that it can never be well put so obtrusively forth, as in the majority of his compositions. There is a young American who, with ideality not richer than that of Longfellow, and with less artistic knowledge, has yet composed far truer poems, merely through the greater propriety of his themes.

We have said that Mr. Longfellow's conception of the *aims* of poesy is erroneous; and that thus, labouring at a disadvantage, he does violent wrong to his own high powers; and now the question is, What *are* his ideas of the aims of the Muse, as we gather these ideas from the *general* tendency of his poems? It will be at once evident that, imbued with the peculiar spirit of German song (a pure conventionality), he regards the inculcation of a *moral* as essential.

Here we find it necessary to repeat that we have reference only to the *general* tendency of his compositions; for there are some magnificent exceptions, where, as if by accident, he has permitted his genius to get the better of his conventional prejudice. But didacticism is the prevalent *tone* of his song. His invention, his imagery, his all, is made subservient to the elucidation of some one or more points (but rarely of more than one) which he looks upon as *truth*. And that this mode of procedure will find stern defenders should never excite surprise, so long as the world is full to overflowing with cant and conventicles. There are men who will scramble on all fours through the muddiest sloughs of vice to pick up a single apple of virtue. There are things called men who, so long as the sun rolls, will greet with snuffling huzzas every figure that takes upon itself the semblance of truth, even although the figure, in itself only a "stuffed Paddy," be as much out of place as a toga on the statue of Washington, or out of season as rabbits in the days of the dog-star.

Now, with as deep a reverence for "the true" as ever inspired the bosom of mortal man, we would limit, in many respects, its modes of inculcation. We would limit, to enforce them. We would not render them impotent by dissipation. The demands of truth are severe. She has no sympathy with the myrtles. All that is indispensable in song is all with which she has nothing to do. To deck her in gay robes is to render her a harlot. It is but making her a flaunting paradox to wreathe her in gems and flowers. Even in stating this our present proposition, we verify our own words—we feel the necessity, in enforcing this *truth*, of descending from metaphor. Let us then be simple and distinct. To convey "the true" we are required to dismiss from the attention all inessentials. We must be perspicuous, precise, terse. We need concentration rather than expansion of mind. We must be calm, unimpassioned, unexcited—in a word, we must be in that peculiar mood which, as nearly as possible, is the exact converse of the poetical. He must be blind indeed who cannot perceive the radical and chasmal difference between the truthful and the poetical modes of inculcation. He must be grossly wedded to conventionalisms who, in spite of this difference, shall still attempt to reconcile the obstinate oils and waters of Poetry and Truth.

Dividing the world of mind into its most obvious and immediately recognisable distinctions, we have the pure intellect, taste and the moral sense. We place *taste* between the intellect and the moral sense, because it is just this intermediate space which, in the minds, it occupies. It is the connecting link in the triple chain. It serves to sustain a mutual intelligence between the extremes. It appertains, in strict appreciation, to the former, but is distinguished from the latter by so faint a difference that Aristotle has not hesitated to class some of its operations among the Virtues themselves. But the *offices* of the trio are broadly marked. Just as conscience, or the moral sense, recognises duty; just as the intellect deals with *truth;* so is it the part of taste alone to inform us of BEAUTY. And Poesy is the handmaiden but of Taste. Yet we would not be misunderstood. This handmaiden is not for-

bidden to moralise—in her own fashion. She is not forbidden to depict—but to reason and preach of virtue. As of this latter, conscience recognises the obligation, so intellect teaches the expediency, while taste contents herself with displaying the beauty; waging war with vice merely on the ground of its inconsistency with fitness, harmony, proportion—in a word with To Kalon (Gr.).

An important condition of man's immortal nature is thus, plainly, the sense of the Beautiful. This it is which ministers to his delight in the manifold forms and colours and sounds and sentiments amid which he exists. And, just as the eyes of Amaryllis are repeated in the mirror, or the living lily in the lake, so is the mere *record* of these forms and colours and sounds and sentiments—so is their mere oral or written repetition a duplicate source of delight. But this repetition is not Poesy. He who shall merely sing with whatever rapture, in however harmonious strains, or with however vivid a truth of imitation, of the sights and sounds which greet him in common with all mankind—he, we say, has yet failed to prove his divine title. There is still a longing unsatisfied, which he has been impotent to fulfil. There is still a thirst unquenchable, which to allay he has shown us no crystal springs. This burning thirst belongs to the *immortal* essence of man's nature. It is equally a consequence and an indication of his perennial life. It is the desire of the moth for the star. It is not the mere appreciation of the beauty before us. It is a wild effort to reach the beauty above. It is a forethought of the loveliness to come. It is a passion to be satiated by no sublunary sights, or sounds, or sentiments, and the soul thus athirst strives to allay its fever in futile efforts at *creation.* Inspired with a prescient ecstasy of the beauty beyond the grave, it struggles by multiform novelty of combination among the things and thoughts of Time, to anticipate some portion of that loveliness whose very elements, perhaps, appertain solely to Eternity; and the result of such effort, on the part of souls fittingly constituted, is alone what mankind have agreed to denominate Poetry.

We say this with little fear of contradiction. Yet the spirit of our assertion must be more heeded than the letter. Mankind have *seemed* to define Poesy in a thousand, and in a thousand conflicting, definitions. But the war is one only of words. Induction is as well applicable to this subject as to the most palpable and utilitarian; and by its sober processes we find that, in respect to compositions which have been really received as poems, the *imaginative,* or, more popularly, the creative portions *alone* have ensured them to be so received. Yet these works, on account of these portions, having once been so received and so named, it has happened naturally and inevitably, that other portions totally unpoetic have not only come to be regarded by the popular voice as poetic, but have been made to serve as false standards of perfection in the adjustment of other poetical claims. Whatever has been found in whatever has been received as a poem, has been blindly regarded as *ex statu* poetic. And this is a species of gross error which scarcely could have made its way into any less intangible topic. In fact that

license which appertains to the Muse herself, it has been thought decorous, if not sagacious, to indulge in all examination of her character.

Poesy is thus seen to be a response—unsatisfactory it is true—but still in some measure a response, to a natural and irrepressible demand. Man being what he is, the time could never have been in which poesy was not. Its first element is the thirst for supernal BEAUTY—a beauty which is not afforded the soul by any existing collocation of earth's forms—a beauty which, perhaps, *no possible* combination of these forms would fully produce. Its second element is the attempt to satisfy this thirst by *novel* combinations among those forms of beauty which already exist—or by novel combinations of *those combinations which our predecessors, toiling in chase of the same phantom, have already set in order.* We thus clearly deduce the *novelty,* the *originality,* the *invention,* the *imagination,* or lastly the *creation* of BEAUTY (for the terms as here employed are synonymous), as the essence of all Poesy. Nor is this idea so much at variance with ordinary opinion as, at first sight, it may appear. A multitude of antique dogmas on this topic will be found, when divested of extrinsic speculation, to be easily resoluble into the definition now proposed. We do nothing more than present tangibly the vague clouds of the world's idea. We recognise the idea itself floating, unsettled, indefinite, in every attempt which has yet been made to circumscribe the conception of "Poesy" in words. A striking instance of this is observable in the fact that no definition exists in which either the "beautiful," or some one of those qualities which we have above designated synonymously with "creation," has not been pointed out as the *chief* attribute of the Muse. "Invention," however, or "imagination," is by far more commonly insisted upon. The word Poiaesis (Gr.)* itself (creation) speaks volumes upon this point. Neither will it be amiss here to mention Count Bielfeld's definition of poetry as *"L'art d'exprimer les pensees par la fiction."* With this definition (of which the philosophy is profound to a certain extent) the German terms *Dichtkunst,* the art of fiction, and *Dichten,* to feign, which are used for *"poetry"* and *"to make verses,"* are in full and remarkable accordance. It is, nevertheless, in the *combination* of the two omniprevalent ideas that the novelty and, we believe, the force of our own proposition is to be found.

So far we have spoken of Poesy as of an abstraction alone. As such, it is obvious that it may be applicable in various moods. The sentiment may develop itself in Sculpture, in Painting, in Music, or otherwise. But our present business is with its development in words—that development to which, in practical acceptation, the world has agreed to limit the term. And at this point there is one consideration which induces us to pause. We cannot make up our minds to admit (as some have admitted) the inessentiality of rhythm. On the contrary, the universality of its use in the earliest poetical efforts of all mankind would be sufficient to assure us, not merely of its congeniality

---

* To judge Poe, some appreciation of Greek literature is essential. Many critics are deficient in this respect.—Ed.

with the Muse, or of its adaptation to her purposes, but of its elementary and indispensable importance. But here we must, perforce, content ourselves with mere suggestion; for this topic is of a character which would lead us too far. We have already spoken of Music as one of the moods of poetical development. It is in Music, perhaps, that the soul most nearly attains that end upon which we have commented—the creation of supernal beauty. It may be, indeed, that this august aim is here even partially or imperfectly attained, *in fact*. *The elements* of that beauty which is felt in sound, *may be* the mutual or common heritage of Earth and Heaven. In the soul's struggles at combination it is thus not impossible that a harp may strike notes not unfamiliar to the angels. And in this view the wonder may well be less that all attempts at defining the character or sentiment of the deeper musical impressions have been found absolutely futile. Contenting ourselves, therefore, with the firm conviction that music (in its modifications of rhythm and rhyme) is of so vast a moment in Poesy as *never* to be neglected by him who is truly poetical—is of so mighty a force in furthering the great aim intended that he is mad who rejects its assistance—content with this idea we shall not pause to maintain its absolute essentiality, for the mere sake of rounding a definition. We will but add, at this point, that the highest possible development of the Poetical Sentiment is to be found in the union of song with music, in its popular sense. The old Bards and Minnesingers possessed, in the fullest perfection, the finest and truest elements of Poesy; and Thomas Moore, singing his own ballads, is but putting the final touch to their completion as poems.

To recapitulate, then, we would define in brief the Poetry of words as the *Rhythmical Creation of Beauty*. Beyond the limits of Beauty its province does not extend. Its sole arbiter is Taste. With the Intellect or with the Conscience it has only collateral relations. It has no dependence, unless incidentally, upon either Duty or *Truth*. That our definition will necessarily exclude much of what, through a supine toleration, has been hitherto ranked as poetical, is a matter which affords us not even momentary concern. We address but the thoughtful, and heed only their approval—with our own. If our suggestions are truthful, then "after many days" shall they be understood as truth, even though found in contradiction of *all* that has been hitherto so understood. If false, shall we not be the first to bid them die?

We would reject, of course, all such matters as "Armstrong on Health," a revolting production; Pope's "Essay on Man," which may well be content with the title of an "Essay in Rhyme"; "Hudibras," and other merely humorous pieces. We do not gainsay the peculiar merits of either of these latter compositions—but deny them the position they have held. In a notice of Brainard's Poems, we took occasion to show that the common use of a certain instrument (rhythm) had tended, more than aught else, to confound humorous verse with poetry. The observation is now recalled to corroborate what we have just said in respect to the vast effect or force of melody in itself—an effect which could elevate into even

momentary confusion with the highest efforts of mind, compositions such as are the greater number of satires or burlesques.

Of the poets who have appeared most fully instinct with the principles now developed, we may mention *Keats* as the most remarkable. He is the sole British poet who has never erred in his themes. Beauty is always his aim.

We have thus shown our ground of objection to the general *themes* of Professor Longfellow. In common with all who claim the sacred title of poet, he should limit his endeavours to the creation of novel moods of beauty, in form, in colour, in sound, in sentiment; for over all this wide range has the poetry of words dominion. To what the world terms *prose* may be safely and properly left all else. The artist who doubts of his thesis, may always resolve his doubt by the single question—"might not this matter be as well or better handled in *prose?*" If it *may*, then is it no subject for the Muse. In the general acceptation of the term *Beauty* we are content to rest; being careful only to suggest that, in our peculiar views, it must be understood as inclusive of the *sublime*.

Of the pieces which constitute the present volume there are not more than one or two thoroughly fulfilling the idea above proposed; although the volume as a whole is by no means so chargeable with didacticism as Mr. Longfellow's previous book. We would mention as poems *nearly true*, "The Village Blacksmith," "The Wreck of the Hesperus," and especially "The Skeleton in Armour." In the first-mentioned we have the *beauty* of simple-mindedness as a genuine thesis; and this thesis is inimitably handled until the concluding stanza, where the spirit of legitimate poesy is aggrieved in the pointed antithetical deduction of a *moral* from what has gone before. In "The Wreck of the Hesperus" we have the *beauty* of child-like confidence and innocence, with that of the father's courage and affection. But, with slight exception, those particulars of the storm here detailed are not poetic subjects. Their thrilling *horror* belongs to prose, in which it could be far more effectively discussed, as Professor Longfellow may assure himself at any moment by experiment. There *are* points of a tempest which afford the loftiest and truest poetical themes—points in which pure beauty is found, or, better still, beauty heightened into the sublime, by terror. But when we read, among other similar things, that

> The salt sea was frozen on her breast,
> The salt tears in her eyes.

we feel, if not positive disgust, at least a chilling sense of the inappropriate. In "The Skeleton in Armour" we find a pure and perfect thesis artistically treated. We find the beauty of bold courage and self-confidence, of love and maiden devotion, of reckless adventure, and finally the life-contemning grief. Combined with all this, we have numerous *points* of beauty apparently insulated, but all aiding the main effect or impression. The heart is stirred, and the mind does not lament its mal-instruction. The metre is simple, sonorous, well-balanced, and fully adapted to the subject. Upon the whole, there are few truer poems than

this. It has but one defect—an important one. The prose remarks prefacing the narrative are really *necessary*. But every work of art should contain within itself all that is requisite for its own comprehension. And this remark is especially true of the ballad. In poems of magnitude the mind of the reader is not, at all times, enabled to include, in one comprehensive survey, the proportions and proper adjustment of the whole. He is pleased, if at all, with particular passages; and the sum of his pleasure is compounded of the sums of the pleasurable sentiments inspired by these individual passages in the progress of perusal. But, in pieces of less extent, the pleasure is *unique,* in the proper acceptation of this term—the understanding is employed, without difficulty, in the contemplation of the picture *as a whole;* and thus its effect will depend, in great measure, upon the perfection of its finish, upon the nice adaptation of its constituent parts, and especially, upon what is rightly termed by Schlegel *the unity or totality of interest.* But the practice of prefixing explanatory passages is utterly at variance with such unity. By the prefix, we are either put in possession of the subject of the poem, or some hint, historic fact, or suggestion, is thereby afforded, not included in the body of the piece, which, without the hint, is incomprehensible. In the latter case, while perusing the poem, the reader must revert, in mind at least, to the prefix, for the necessary explanation. In the former, the poem being a mere paraphrase of the prefix, the interest is divided between the prefix and the paraphrase. In either instance the totality of effect is destroyed.

Of the other original poems in the volume before us there is none in which the aim of instruction, or *truth*, has not been too obviously substituted for the legitimate aim, *beauty*. We have heretofore taken occasion to say that a didactic moral might be happily made the *under-current* of a poetical theme, and we have treated this point at length in a review of Moore's "Alciphron"; but the moral thus conveyed is invariably an ill effect when obtruding beyond the upper-current of the thesis itself. Perhaps the worst specimen of this obtrusion is given us by our poet in "Blind Bartimeus" and the "Goblet of Life," where it will be observed that the *sole* interest of the upper-current of meaning depends upon its relation or reference to the under. What we read upon the surface would be *vox et præterea nihil* in default of the moral beneath. The Greek *finales* of "Blind Bartimeus" are an affectation altogether inexcusable. What the small, second-hand, Gibbonish pedantry of Byron introduced, is unworthy the imitation of Longfellow.

Of the translations we scarcely think it necessary to speak at all. We regret that our poet will persist in busying himself about such matters. *His* time might be better employed in original conception. Most of these versions are marked with the error upon which we have commented. This error is, in fact, essentially Germanic. "The Luck of Edenhall," however, is a truly beautiful poem; and we say this with all that deference which the opinion of the *Democratic Review* demands. This composition appears to us *one of the very finest*. It has all the free, hearty, *obvious* movement of the true ballad-

legend. The greatest force of language is combined in it with the richest imagination, acting in its most legitimate province. Upon the whole, we prefer it even to the "Sword-Song" of Korner. The pointed moral with which it terminates is so exceedingly natural—so perfectly fluent from the incidents—that we have hardly heart to pronounce it in ill-taste. We may observe of this ballad, in conclusion, that its subject is more *physical* than is usual in Germany. Its images are rich rather in physical than in moral beauty. And this tendency in Song is the true one. It is chiefly, if we are not mistaken—it is chiefly amid forms of physical loveliness (we use the word *forms* in its widest sense as embracing modifications of sound and colour) that the soul seeks the realisation of its dreams of BEAUTY. It is to her demand in this sense especially, that the poet, who is wise, will most frequently and most earnestly respond.

"The Children of the Lord's Supper" is, beyond doubt, a true and most beautiful poem in great part, while, in some particulars, it is too metaphysical to have any pretension to the name. We have already objected, briefly, to its metre—the ordinary Latin or Greek Hexameter—dactyls and spondees at random, with a spondee in conclusion. We maintain that the hexameter can never be introduced into our language, from the nature of that language itself. This rhythm demands, *for English ears,* a preponderance of natural spondees. Our tongue has few. Not only does the Latin and Greek, with the Swedish, and some others, abound in them; but the Greek and Roman ear had become reconciled (why or how is unknown) to the reception of artificial spondees—that is to say, spondaic words formed partly of one word and partly of another, or from an excised part of one word. In short, the ancients were content to read *as they scanned,* or nearly so. It may be safely prophesied that we shall never do this; and thus we shall never admit English hexameters. The attempt to introduce them, after the repeated failures of Sir Philip Sidney and others, is perhaps somewhat discreditable to the scholarship of Professor Longfellow. The *Democratic Review,* in saying that he has triumphed over difficulties in this rhythm, has been deceived, it is evident, by the facility with which some of these verses may be read. In glancing over the poem, we do not observe a single verse which can be read, *to English ears, as a Greek hexameter.* There are many, however, which can be well read as mere English dactylic verses; such, for example, as the well-known lines of Byron,* commencing

Know ye the | land where the | cypress
and | myrtle.

These lines (although full of irregularities) are, in their perfection, formed of three dactyls and a cæsura—just as if we should cut short the initial verse of the Bucolics thus—

Tityre | tu patu | læ recu | bans—

The "myrtle," at the close of Byron's line, is a double rhyme, and must be understood as one syllable.

---

* See *Contents,* "Rationale of Verse."—Ed.

Now a great number of Professor Longfellow's hexameters are merely these dactylic lines, *continued for two feet.* For example—

Whispered the | race of the | flowers
and | merry on | balancing |
branches.

In this example, also, "branches," which is a double ending, must be regarded as the cæsura, or one syllable, of which alone it has the force.

As we have already alluded, in one or two regards, to a notice of these poems which appeared in the *Democratic Review,* we may as well here proceed with some few further comments upon the article in question—with whose general tenor we are happy to agree.

The *Review* speaks of "Maidenhood" as a poem, "not to be understood but at the expense of more time and trouble than a song can justly claim." We are scarcely less surprised at this opinion from Mr. Langtree than we were at the condemnation of "The Luck of Edenhall."

"Maidenhood" is faulty, it appears to us, only on the score of its theme, which is somewhat didactic. Its *meaning* seems simplicity itself. A maiden on the verge of womanhood, hesitating to enjoy life (for which she has a strong appetite) through a false idea of duty, is bidden to fear nothing, having purity of heart as her lion of Una.

What Mr. Langtree styles "an unfortunate peculiarity" in Mr. Longfellow, resulting from "adherence to a false system," has really been always regarded by us as one of his idiosyncratic merits. "In each poem," says the critic, "he has but *one* idea, which, in the progress of his song, is gradually unfolded, and at last reaches its full development in the concluding lines: this singleness of thought might lead a harsh critic to suspect intellectual barrenness." It leads *us,* individually, only to a full sense of the artistical power and knowledge of the poet. We confess that now, for the first time, we hear unity of conception objected to as a defect. But Mr. Langtree seems to have fallen into the singular error of supposing the poet to have absolutely *but one idea* in each of his ballads. Yet how "one idea" can be "gradually unfolded" without other ideas is, to us, a mystery of mysteries. Mr. Longfellow, very properly, has but one *leading* idea which forms the basis of his poem; but to the aid and development of this one there are innumerable others, of which the rare excellence is that all are in keeping, that none could be well omitted, that each tends to the one general effect. It is unnecessary to say another word upon this topic.

In speaking of "Excelsior," Mr. Langtree (are we wrong in attributing the notice to his very forcible pen?) seems to labour under some similar misconception. "It carries along with it," says he, "a false moral which greatly diminishes its merit in our eyes. The great merit of a picture, whether made with the pencil or pen, is its *truth;* and this merit does not belong to Mr. Longfellow's sketch. Men of genius may, and probably do, meet with greater difficulties in their struggles with the world than their fellow-men who are less highly gifted; but their

power of overcoming obstacles is proportionably greater, and the result of their laborious suffering is not death but immortality."

That the chief merit of a picture is its *truth,* is an assertion deplorably erroneous. Even in Painting, which is, more essentially than Poetry, a mimetic art, the proposition cannot be sustained. Truth is not even *the aim.* Indeed it is curious to observe how very slight a degree of truth is sufficient to satisfy the mind, which acquiesces in the absence of numerous essentials in the thing depicted. An outline frequently stirs the spirit more pleasantly than the most elaborate picture. We need only refer to the compositions of Flaxman and of Retzsch. Here all details are omitted—nothing can be farther from *truth.* Without even colour the most thrilling effects are produced. In statues we are rather pleased than disgusted with *the want of the eyeball.* The hair of the Venus de Medicis *was gilded.* Truth indeed! The grapes of Zeuxis as well as the curtain of Parrhasius were received as indisputable evidence of the truthful ability of these artists—but they were not even *classed among their pictures.* If truth is the highest aim of either Painting or Poesy, then Jan Steen was a greater artist than Angelo, and Crabbe is a nobler poet than Milton.

But we have not quoted the observation of Mr. Langtree to deny its philosophy; our design was simply to show that he has misunderstood the poet. "Excelsior" has not even a remote tendency to the interpretation assigned it by the critic. It depicts the *earnest upward impulse of the soul*—an impulse not to be subdued even in Death. Despising danger, resisting pleasure, the youth, bearing the banner inscribed *"Excelsior!"* (higher still!) struggles through all difficulties to an Alpine summit. Warned to be content with the elevation attained, his cry is still *"Excelsior!"* and even in falling dead on the highest pinnacle, his cry is *still "Excelsior!"* There is yet an immortal height to be surmounted—an ascent in Eternity. The poet holds in view the idea of never-ending *progress.* That he is misunderstood is rather the misfortune of Mr. Langtree than the fault of Mr. Longfellow. There is an old adage about the difficulty of one's furnishing an auditor both with matter to be comprehended and brains for its comprehension.

Critics and Criticism

(Published in *Graham's Magazine,* January, 1850.—Ed.)

Our most analytic, if not altogether our best critic (Mr. Whipple, perhaps, excepted), is Mr. William A. Jones, author of "The Analyst." How he would write elaborate criticisms I cannot say; but his summary judgments of authors are, in general, discriminative and profound. In fact, his papers on *Emerson* and *Macaulay,* published in *Arcturus,* are better than merely "profound," if we take the word in its now desecrated sense; for they are at

once pointed, lucid, and just:—as summaries, leaving nothing to be desired.

Mr. Whipple has less analysis, and far less candour, as his depreciation of "Jane Eyre" will show; but he excels Mr. Jones in sensibility to Beauty, and is thus the better critic of Poetry. I have read nothing finer in its way than his eulogy on Tennyson. I say "eulogy"—for the essay in question is unhappily little more—and Mr. Whipple's paper on Miss Barrett was *nothing* more. He has less discrimination than Mr. Jones, and a more obtuse sense of the critical office. In fact, he has been infected with that unmeaning and transparent heresy—the can't of critical Boswellism, by dint of which we are to shut our eyes tightly to all autorial blemishes, and open them, like owls, to all autorial merits. Papers thus composed may be good in their way, just as an impertinent *cicerone* is good in *his* way; and the way, in either case, may still be a small one.

Boccalini, in his "Advertisements from Parnassus," tells us that Zoilus once presented Apollo with a very caustic review of a very admirable poem. The god asked to be shown the beauties of the work; but the critic replied that he troubled himself only about the errors. Hereupon Apollo gave him a sack of unwinnowed wheat—bidding him pick out all the chaff for his pains.

Now this fable does very well as a hit at the critics; but I am by no means sure that the Deity was in the right. The fact is, that the limits of the strict critical duty are grossly misapprehended. We may go so far as to say that, while the critic is *permitted* to play, at times, the part of the mere commentator—while he is *allowed*, by way of merely *interesting* his readers, to put in the fairest light the merits of his author—his *legitimate* task is still, in pointing out and analysing defects and showing how the work might have been improved, to aid the general cause of Letters, without undue heed of the individual literary men. Beauty, to be brief, should be considered in the light of an axiom, which, to become at once evident, needs only to be distinctly *put*. It is *not* Beauty, if it require to be demonstrated as such:—and thus to point out too particularly the merits of a work is to admit that they are *not* merits altogether.

When I say that both Mr. Jones and Mr. Whipple are, in some degree, imitators of Macaulay, I have no design that my words should be understood as disparagement. The style and general conduct of Macaulay's critical papers could scarcely be improved. To call his manner "conventional," is to do it gross injustice. The manner of Carlyle *is* conventional—with himself. The style of Emerson is conventional—with himself *and* Carlyle. The style of Miss Fuller is conventional—with herself and *Emerson* and Carlyle:—that is to say, it is a triple-distilled conventionality—and by the word "conventionality," as here used, I mean very nearly what, as regards personal conduct, we style "affectation"—that is, an assumption of airs or *tricks* which have no basis in reason or common sense. The quips, quirks, and curt oracularities of the Emersons, Alcotts, and Fullers, are simply Lily's Euphuisms revived. Very different, indeed, are the *peculiarities* of Macaulay. He has his mannerisms; but we see that, by dint of them, he is en-

abled to accomplish the extremes of unquestionable excellences—the extreme of clearness, of vigour (dependent upon clearness), of grace, and very especially of thoroughness. For his short sentences, for his antitheses, for his modulations, for his climaxes—for everything that he does—a very slight analysis suffices to show a distinct reason. His manner, thus, is simply the perfection of that justifiable rhetoric which has its basis in common sense; and to say that such rhetoric is never called in to the aid of *genius*, is simply to disparage genius, and by no means to discredit the rhetoric. It is nonsense to assert that the highest genius would not be benefited by attention to its modes of manifestation—by availing itself of that Natural Art which it too frequently despises. Is it not evident that the more intrinsically valuable the rough diamond, the more gain accrues to it from polish?

Now, since it would be nearly impossible to vary the rhetoric of Macaulay, in any material degree, without deterioration in the *essential* particulars of clearness, vigour, etc., those who write *after* Macaulay have to choose between the two horns of a dilemma:—they must be weak and original, or imitative and strong; and since imitation in a case of this kind is merely adherence to *Truth* and *Reason* as pointed out by one who feels their value, the author who should forego the advantages of the "imitation" for the mere sake of being erroneously original *"n'est pas si sage qu'il croit."*

The true course to be pursued by our criticis—justly sensible of Macaulay's excellences—is *not*, however, to be content with tamely following in his footsteps—but to outstrip him in his own path—a path not so much his as Nature's. We must not fall into the error of fancying that he is *perfect* merely because he excels (in point of style) all his British contemporaries. Some such idea as this seems to have taken possession of Mr. Jones, when he says:—

"Macaulay's style is admirable—full of colour, perfectly clear, free from all obstructions, exactly English, and as pointedly antithetical as possible. We have marked two passages on Southey and Byron, so happy *as to defy improvement*. The one is a sharp epigrammatic paragraph on Southey's political bias:—

Government is to Mr. Southey one of the fine arts. He judges of a theory or a public measure, of a religion, a political party, a peace or a war, as men judge of a picture or a statue, by the effect produced on his imagination. A chain of associations is to him what a chain of reasoning is to other men; and what he calls his opinions are, in fact, merely his tastes.

The other a balanced character of Lord Byron:—

In the rank of Lord Byron, in his understanding, in his character, in his very person, there was a strange union of opposite extremes. He was born to all that men covet and admire. But in every one of those eminent advantages which he possessed over others, there was mingled something of misery and debasement. He was sprung from a house, ancient indeed and noble, but degraded and impoverished by a series

of crimes and follies, which had attained a scandalous publicity. The kinsman whom he had succeeded had died poor, and but for merciful judges, would have died upon the gallows. The young peer had great intellectual powers; yet there was an unsound part in his mind. He had naturally a generous and tender heart; but his temper was wayward and irritable. He had a head which statuaries loved to copy, and a foot the deformity of which the beggars in the street mimicked.

Let us now look at the first of these paragraphs. The opening sentence is inaccurate at all points. The word "government" does not give the author's idea with sufficient definitiveness; for the term is *more* frequently applied to the *system* by which the affairs of a nation are regulated than to the act of regulating. "The government," we say, for example, "does so and so" —meaning those who govern. But Macaulay intends simply the act, or acts called "governing," and this word should have been used as a matter of course. The "Mr." prefixed to "Southey," is superfluous; for no sneer is designed; and, in *mistering* a well-known author, we hint that he is not entitled to that exemption which we accord to Homer, Dante, or Shakespeare. *"To* Mr. Southey," would have been right, had the succeeding words been "government *seems* one of the fine arts":—but, as the sentence stands, *"With* Mr. Southey" is demanded. "Southey," too, being the principal subject of the paragraph, should precede "Government," which is mentioned only in its relation to Southey. "One of the fine arts" is pleonastic, since the phrase conveys nothing more than "a fine art" would convey.

The second sentence is quite as faulty. Here Southey loses his precedence as the subject; and thus the "He," should follow "a theory," "a public measure,' etc. By "religion" is meant a *"creed":*—this latter word should therefore be used. The conclusion of the sentence is very awkward. Southey is said to judge of a peace or war, etc., as men judge of a picture of a statue, and the words which succeed are intended to explain *how* men judge of a picture or a statue:—these words should, therefore, run thus—"by the effect produced on *their* imaginations." "Produced," moreover, is neither so exact nor so "English" as "wrought." In saying that Southey judges of a political party, etc., as *men* judge of a picture, etc., Southey is quite excluded from the category of "men." *"Other* men," was no doubt originally written, but "other" erased, on account of the "other men" occurring in the sentence below.

Coming to this last, we find that "a chain of associations" is not properly paralleled by "a chain of reason*ing.*" We must say either "a chain of association," to meet the "reason*ing*" or "a chain of rea*sons,*" to meet the "associations." The repetition of "what" is awkward and unpleasant. The entire paragraph should be thus remodelled:—

With Southey, governing is a fine art. Of a theory or a public measure—of a creed, a political party, a peace or a war—he judges by the imaginative effect; as only such things as pictures or

statues are judged of by other men. What to them a chain of reasoning is, to him is a chain of association; and, as to his opinions, they are nothing but his tastes.

The blemishes in the paragraph about Byron are more negative than those in the paragraph about Southey. The first sentence needs vivacity. The adjective "opposite" is superfluous:—so is the particle "there." The second and third sentences are, properly, one. "Some" would fully supply the place of "something of." The whole phrase "which he possessed over others" is supererogatory. "Was sprung," in place of "sprang," is altogether unjustifiable. The triple repetition of "and," in the fourth sentence, is awkward. "Notorious crimes and follies" would express all that is implied in "crimes and follies which had attained a scandalous publicity." The fifth sentence might be well curtailed; and, as it stands, has an unintentional and unpleasant sneer. "Intellect" would do as well as "intellectual powers"; and this (the sixth) sentence might otherwise be shortened advantageously. The whole paragraph, in my opinion, would be better thus expressed:—

In Lord Byron's rank, understanding, character—even in his person—we find a strange union of extremes. Whatever men covet and admire, became his by right of birth; yet debasement and misery were mingled with each of his eminent advantages. He sprang from a house, ancient it is true, and noble, but degraded and impoverished by a series of notorious crimes. But for merciful judges, the pauper kinsman whom he succeeded would have been hanged. The young peer had an intellect great, perhaps, yet partially unsound. His heart was generous, but his temper wayward; and while statuaries copied his head, beggars mimicked the deformity of his foot.

In these remarks, my object is not so much to point out inaccuracies in the most accurate stylist of his age, as to hint that our critics might surpass him on his own ground, and yet leave themselves something to learn in the moralities of manner.

Nothing can be plainer than that our position, as a literary colony of Great Britain, leads us into wronging, indirectly, our own authors by exaggerating the merits of those across the water. Our most reliable critics extol —and extol without discrimination— such English composition as, if written in America, would be either passed over without notice or unscrupulously condemned. Mr. Whipple, for example, whom I have mentioned in this connection with Mr. Jones, is decidedly one of our most "reliable" critics. His honesty I dispute as little as I doubt his courage or his talents—but here is an instance of the want of common discrimination into which he is occasionally hurried, by undue reverence for British intellect and British opinion.* In a review of "The Drama of Exile

* That Poe was not only a patriotic American but a critic and author whose genius was given to his country as that of no other is proven by such passages as these.—Ed.

and other Poems," by Miss Barrett (now Mrs. Browning), he speaks of the following passage as "in every respect faultless—sublime":—

Hear the steep generations how they fall
Adown the visionary stairs of Time,
Like supernatural thunders—far yet near,
Sowing their fiery echoes through the hills!*

* For criticism here see *Contents* Elizabeth Barrett Barrett. It is verbally identical.—Ed.

J. Fenimore Cooper

(Published in *Graham's Magazine*, November, 1843.—Ed.)

"WYANDOTTE, or The Hutted Knoll," is, in its general features, precisely similar to the novels enumerated in the title.* It is a forest subject; and, when we say this, we give assurance that the story is a good one; for Mr. Cooper has never been known to fail, either in the forest or upon the sea. The interest, as usual, has no reference to *plot*, of which, indeed, our novelist seems altogether regardless, or incapable, but depends, first upon the nature of the theme; secondly, upon a Robinson-Crusoe-like detail in its management; and thirdly, upon the frequently repeated portraiture of the half-civilized Indian. In saying that the interest depends, *first*, upon the nature of the theme, we mean to suggest that this theme—life in the wilderness—is one of intrinsic and universal interest, appealing to the heart of man in all phases; a theme, like that of life upon the ocean, so unfailingly omniprevalent in its power of arresting and absorbing attention, that while success or popularity is, with such a subject, expected as a matter of course, a failure might be properly regarded as conclusive evidence of imbecility on the part of the author. The two theses in question have been handled *usque ad nauseam*—and this through the instinctive perception of the universal interest which appertains to them. A writer, distrustful of his powers, can scarcely do better than discuss either one or the other. A man of genius will rarely, and should never, undertake either; first, because both are excessively hackneyed; and, secondly, because the reader never fails, in forming his opinion of a book, to make discount, either wittingly or unwittingly, for that intrinsic interest which is inseparable from the subject and independent of the manner in which it is treated. Very few and very dull indeed are those who do not instantaneously perceive the distinction; and thus there are two great classes of fictions—a popular and widely circulated class, read with pleasure, but without admiration—in which the author is lost or for-

* "Wyandotte, or the Hutted Knoll," a tale, by the author of "The Pathfinder," "Deerslayer," etc.

gotten, or remembered, if at all, with something very nearly akin to contempt; and then, a class, not so popular, nor so widely diffused, in which, at every paragraph, arises a distinctive and highly pleasurable interest, springing from our perception and appreciation of the skill employed, or the genius evinced in the composition. After perusal of the one class, we think solely of the book—after reading the other, chiefly of the author. The former class leads to popularity—the latter to fame. In the former case, the books sometimes live, while the authors usually die; in the latter, even when the works perish, the man survives. Among American writers of the less generally circulated, but more worthy and more artistical fictions, we may mention Mr. Brockden Brown, Mr. John Neal, Mr. Simms, Mr. Hawthorne; at the head of the more popular division we may place Mr. Cooper.

"The Hutted Knoll," without pretending to detail facts, gives a narrative of fictitious events, similar in nearly all respects to occurrences which actually happened during the opening scenes of the Revolution, and at other epochs of our history. It pictures the dangers, difficulties, and distresses of a large family, living, completely insulated, in the forest. The tale commences with a description of the "region which lies in the angle formed by the junction of the Mohawk with the Hudson, extending as far south as the line of Pennsylvania, and west to the verge of that vast rolling plain which composes Western New York"—a region of which the novelist has already frequently written, and the whole of which, with a trivial exception, was a wilderness before the Revolution. Within this district, and on a creek running into the Unadilla, a certain Captain Willoughby purchases an estate or "patent," and there retires, with his family and dependents, to pass the close of his life in agricultural pursuits. He has been an officer in the British army, but, after serving many years, has sold his commission, and purchased one for his only son, Robert, who alone does not accompany the party into the forest. This party consists of the captain himself; his wife; his daughter, Beulah; an adopted daughter, Maud Meredith; an invalid sergeant, Joyce, who had served under the captain; a Presbyterian preacher, Mr. Woods; a Scotch mason, Jamie Allen; an Irish labourer, Michael O'Hearn; a Connecticut man, Joel Strides; four negroes, Old Plin and Young Plin, Big Smash and Little Smash; eight axemen; a house-carpenter; a mill-wright, etc., etc. Besides these, a Tuscarora Indian called Nick, or *Wyandotte*, accompanies the expedition. This Indian, who figures largely in the story, and gives it its title, may be considered as the principal character—the one chiefly elaborated. He is an outcast from his tribe, has been known to Captain Willoughby for thirty years, and is a compound of all the good and bad qualities which make up the character of the half-civilized Indian. He does not remain with the settlers; but appears and re-appears at intervals upon the scene.

Nearly the whole of the first volume is occupied with a detailed account of the estate purchased (which is termed "The Hutted Knoll," from a natural mound upon which the principal house is built) and of the progressive arrange-

ments and improvements. Towards the close of the volume the Revolution commences; and the party at the "Knoll" are besieged by a band of savages and "rebels," with whom an understanding exists, on the part of Joel Strides, the Yankee. This traitor, instigated by the hope of possessing Captain Willoughby's estate, should it be confiscated, brings about a series of defections from the party of the settlers, and finally, deserting himself, reduces the whole number to six or seven capable of bearing arms. Captain Willoughby resolves, however, to defend his post. His son at this juncture pays him a clandestine visit, and, endeavouring to reconnoitre the position of the Indians, is made captive. The captain, in an attempt at rescue, is murdered by Wyandotte, whose vindictive passions had been aroused by ill-timed allusions, on the part of Willoughby, to floggings previously inflicted, by his orders, upon the Indian. Wyandotte, however, having satisfied his personal vengeance, is still the ally of the settlers. He guides Maud, who is beloved by Robert, to the hut in which the latter is confined, and effects his escape. Aroused by this escape, the Indians precipitate their attack upon the Knoll, which, through the previous treachery of Strides in ill-hanging a gate, is immediately carried. Mrs. Willoughby, Beulah, and others of the party, are killed. Maud is secreted, and thus saved by Wyandotte. At the last moment, when all is apparently lost, a reinforcement appears under command of Evert Beekman, the husband of Beulah; and the completion of the massacre is prevented. Woods, the preacher, had left the Knoll, and made his way through the enemy, to inform Beekman of the dilemma of his friends. Maud and Robert Willoughby are, of course, happily married. The concluding scene of the novel shows us Wyandotte repenting the murder of Willoughby, and converted to Christianity through the agency of Woods.

It will be at once seen that there is nothing *original* in this story. On the contrary, it is even excessively common-place. The lover, for example, rescued from captivity by the mistress; the Knoll carried through the tréachery of an inmate; and the salvation of the besieged, at the very last moment, by a reinforcement arriving, in consequence of a message borne to a friend by one of the besieged, without the cognizance of the others; these, we say, are incidents which have been the common property of every novelist since the invention of letters. And as for *plot*, there has been no attempt at anything of the kind. The tale is a mere succession of events, scarcely any one of which has any necessary dependence upon any one other. Plot, however, is at best an artificial effect, requiring, like music, not only a natural bias, but long cultivation of taste for its full appreciation; some of the finest narratives in the world—"Gil Blas" and "Robinson Crusoe," for example—have been written without its employment; and "The Hutted Knoll," like all the sea and forest novels of Cooper, has been made deeply interesting, although depending upon this peculiar source of interest not at all. Thus the absence of plot can never be critically regarded as a *defect;* although its judicious use, in all cases aiding and in no case injuring other

effects, must be regarded as of a very high order of merit.

There are one or two points, however, in the mere *conduct* of the story now before us, which may, perhaps, be considered as defective. For instance, there is too much *obviousness* in all that appertains to the hanging of the large gate. In more than a dozen instances Mrs. Willoughby is made to allude to the delay in the hanging; so that the reader is too positively and pointedly forced to perceive that this delay is to result in the capture of the Knoll. As we are never in doubt of the fact, we feel diminished interest when it actually happens. A single vague allusion, well managed, would have been in the true artistical spirit.

Again: we see too plainly from the first that Beekman is to marry Beulah, and that Robert Willoughby is to marry Maud. The killing of Beulah, of Mrs. Willoughby, and Jamie Allen, produces, too, a painful impression, which does not properly appertain to the right fiction. Their deaths affect us as revolting and supererogatory; since the purposes of the story are not thereby furthered in any regard. To Willoughby's murder, however, distressing, the reader makes no similar objection, merely because in his decease is fulfilled a species of poetical justice. We may observe here, nevertheless, that his repeated references to his flogging the Indian seem unnatural, because we have otherwise no reason to think him a fool or a madman, and these references, under the circumstances, are absolutely insensate. We object, also, to the manner in which the general interest is dragged out or suspended. The besieging party are kept before the Knoll so long, while so little is done, and so many opportunities of action are lost, that the reader takes it for granted that nothing of consequence will occur —that the beseiged will be finally delivered. He gets so accustomed to the presence of danger that its excitement at length departs. The action is not sufficiently rapid. There is too much procrastination. There is too much talk for talk's sake. The interminable discussions between Woods and Captain Willoughby are, perhaps, the worst feature of the book, for they have not even the merit of referring to the matters on hand. In general, there is quite too much colloquy for the purpose of manifesting character, and too little for the explanation of motive. The characters of the drama would have been better made out by action; while the motives to action, the reasons for the different courses of conduct adopted by the *dramatis personæ*, might have been made to proceed more satisfactorily from their own mouths, in casual conversations, than from that of the author in person. To conclude our remarks upon the head of ill-conduct in the story, we may mention occasional incidents of the merest melodramatic absurdity; as, for example, at page 156 of the second volume, where "Willoughby had an arm round the waist of Maud, and bore her forward with a rapidity to which her own strength was entirely unequal." We may be permitted to doubt whether a young lady, of sound health and limbs, exists, within the limits of Christendom, who could not run faster, on her own proper feet, for any considerable distance, than she could be carried upon *one arm* of

either the Cretan Milo or of the Hercules Farnese.

On the other hand, it would be easy to designate many particulars which are admirably handled. The love of Maud Meredith for Robert Willoughby is painted with exquisite skill and truth. The incident of the trees of hair and box is naturally and effectively conceived. A fine collateral interest is thrown over the whole narrative by the connection of the theme with that of the Revolution; and, especially, there is an excellent dramatic point, at page 124 of the second volume, where Wyandotte, remembering the stripes inflicted upon him by Captain Willoughby, is about to betray him to his foes, when his purpose is arrested by a casual glimpse, through the forest, of the hut which contains Mrs. Willoughby, who had preserved the life of the Indian, by inoculation for the smallpox.

In the depicting of character, Mr. Cooper has been unusually successful in Wyandotte. One or two of his personages, to be sure, must be regarded as little worth. Robert Willoughby, like most novel heroes, is a nobody; that is to say, there is nothing about him which may be looked upon as distinctive. Perhaps he is rather silly than otherwise; as, for instance, when he confuses all his father's arrangements for his concealment, and bursts into the room before Strides—afterwards insisting upon accompanying that person to the Indian encampment, without any possible or impossible object. Woods, the parson, is a sad bore, upon the Dominie Sampson plan, and is, moreover, caricatured. Of Captain Willoughby we have already spoken—he is too often on stilts. Evert Beekman and Beulah are merely episodical. Joyce is nothing in the world but Corporal Trim—or, rather, Corporal Trim and water. Jamie Allen, with his prate about Catholicism, is insufferable. But Mrs. Willoughby, the humble, shrinking, womanly wife, whose whole existence centres in her affections, is worthy of Mr. Cooper. Maud Meredith is still better. In fact, we know no female portraiture, even in Scott, which surpasses her; and yet the world has been given to understand, by the enemies of the novelist, that he is incapable of depicting a woman. Joel Strides will be recognised by all who are conversant with his general prototypes of Connecticut. Michael O'Hearn, the County Leitrim man, is an Irishman all over, and his portraiture abounds in humour; as, for example, at page 31 of the first volume, where he has a difficulty with a skiff, not being able to account for its revolving upon its own axis, instead of moving forward! or, at page 132, where, during divine service, to exclude at least a portion of the heretical doctrine, he stops *one* of his ears with his thumb; or, at page 195, where a passage occurs so much to our purpose that we will be pardoned for quoting it in full. Captain Willoughby is drawing his son up through a window, from his enemies below. The assistants, placed at a distance from this window to avoid observation from without, are ignorant of what burthen is at the end of the rope:—

> The men did as ordered, raising their load from the ground a foot or two at a time. In this manner the burthen approached, yard after yard, until it

was evidently drawing near the window.

"It's the captain hoisting up the big baste of a hog, for provisioning the hoose again a saige," whispered Mike to the negroes, who grinned as they tugged; "and, when the craitur squails, see to it that ye do not squail yourselves." At that moment the head and shoulders of a man appeared at the window. Mike let go the rope, seized a chair, and was about to knock the intruder upon the head; but the captain arrested the blow.

"It's one o' the vagabone Injins that has undermined the hog and come up in its stead," roared Mike.

"It's my son," said the captain; "see that you are silent and secret."

The negroes are, without exception, admirably drawn. The Indian, Wyandotte, however, is the great feature of the book, and is, in every respect, equal to the previous Indian creations of the author of "The Pioneer." Indeed, we think this "forest gentleman" superior to the other noted heroes of his kind—the heroes who have been immortalised by our novelist. His keen sense of the distinction, in his own character, between the chief, Wyandotte, and the drunken vagabond, Sassy Nick; his chivalrous delicacy toward Maud, in never disclosing to her that knowledge of her real feelings toward Robert Willoughby, which his own Indian intuition had discovered; his enduring animosity toward Captain Willoughby, softened, and for thirty years delayed, through his gratitude to the wife; and then, the vengeance consummated, his pity for that wife conflicting with his exultation at the deed —these, we say, are all traits of a lofty excellence indeed. Perhaps the most effective passage in the book, and that which most distinctively brings out the character of the Tuscarora, is to be found at pages 50, 51, 52, and 53, of the second volume, where, for some trivial misdemeanor, the captain threatens to make use of the whip. The manner in which the Indian *harps* upon the threat, returning to it again and again in every variety of phrase, forms one of the finest pieces of mere character-painting with which we have any acquaintance.

The most obvious and most unaccountable faults of "The Hutted Knoll" are those which appertain to the *style* —to the mere grammatical construction;—for, in other and more important particulars of style, Mr. Cooper, of late days, has made a very manifest improvement. His sentences, however, are arranged with an awkwardness so remarkable as to be a matter of absolute astonishment, when we consider the education of the author, and his long and continual practice with the pen. In minute descriptions of localities, any verbal inaccuracy or confusion becomes a source of vexation and misunderstanding, detracting very much from the pleasure of perusal; and in these inaccuracies "Wyandotte" abounds. Although, for instance, we carefully read and re-read that portion of the narrative which details the situation of the Knoll, and the construction of the buildings and walls about it, we were forced to proceed with the story without any exact or definite impressions upon the subject. Similar difficulties, from similar causes, occur *passim* throughout the book. For example, at page 41, vol. i.:—"The Indian gazed

at the house, with that fierce intentness which sometimes glared, in a manner that had got to be, in its ordinary aspects, dull and besotted." This it is utterly impossible to comprehend. We presume, however, the intention is to say that although the Indian's ordinary manner (of gazing) had "got to be" dull and besotted, he occasionally gazed with an intentness that glared, and that he did so in the instance in question. The "got to be" is atrocious—the whole sentence no less so.

Here at page 9, vol. i., is something excessively vague: "Of the latter character is the face of most of that region which lies in the angle formed by the junction of the Mohawk with the Hudson," etc., etc. The Mohawk, joining the Hudson, forms *two* angles, of course—an acute and an obtuse one; and, without further explanation, it is difficult to say which is intended.

At page 55, vol. i., we read: "The captain, owing to his English education, had avoided straight lines, and formal paths; giving to the little spot the improvement on nature which is a consequence of embellishing her works without destroying them. On each side of this lawn was an orchard, thrifty and young, and which *were* already beginning to show signs of putting forth their blossoms." Here we are tautologically informed that improvement is a consequence of embellishment, and supererogatorily told that the rule holds good only where the embellishment is not accompanied by destruction. Upon the "each orchard *were*" it is needless to comment.

At page 30, vol. i., is something similar, where Strides is represented as "never doing anything that required a particle more than the exertion and strength that were absolutely necessary to effect his object." Did Mr. C. ever hear of any labour that *required* more exertion than was *necessary?* He means to say that Strides exerted himself no further than was necessary—that's all.

At page 59, vol. i., we find this sentence: "He was advancing by the only road that was ever travelled by the stranger as he approached the Hut; or, he came up the valley." This is merely a vagueness of speech. "Or" is intended to imply "that is to say." The whole would be clearer thus—"He was advancing by the valley—the only road travelled by a stranger approaching the Hut." We have here sixteen words, instead of Mr. Cooper's twenty-five.

At page 8, vol. ii., is an unpardonable awkwardness, although an awkwardness strictly grammatical. "I was a favourite, I believe, with, certainly was much petted by, both." Upon this we need make no further observation. It speaks for itself.

We are aware, however, that there is a certain air of unfairness, in thus quoting detached passages, for animadversion of this kind; for however strictly at random our quotations may really be, we have, of course, no means of proving the fact to our readers; and there are *no* authors, from whose works individual inaccurate sentences may not be culled. But we mean to say that Mr. Cooper, no doubt through haste or neglect, is *remarkably* and *especially* inaccurate, as a general rule; and, by way of demonstrating this assertion, we will dismiss our extracts at random, and discuss some entire page of his composition. More than this: we will en-

deavour to select that particular page upon which it might naturally be supposed he would bestow the most careful attention. The reader will say at once: "Let this be his *first* page—the first page of his Preface." This page, then, shall be taken of course:—

"The history of the borders is filled with legends of the sufferings of isolated families, during the troubled scenes of colonial warfare. Those which we now offer to the reader, are distinctive in many of their leading facts, if not rigidly true in the details. The first alone is necessary to the legitimate objects of fiction.

"*Abounds* with legends" would be better than "is filled with legends"; for it is clear that if the history were *filled* with legends, it would be all legend and no history. The word "of," too, occurs in the first sentence, with an unpleasant frequency. The *"those"* commencing the second sentence grammatically refers to the noun "scenes," immediately preceding, but is intended for "legends." The adjective *"distinctive"* is vaguely and altogether improperly employed. Mr. C., we believe, means to say, merely, that although the details of his legends may not be strictly true, facts similar to his leading ones have actually occurred. By use of the word *"distinctive,"* however, he has contrived to convey a meaning nearly converse. In saying that his legend is *"distinctive"* in many of the leading facts, he has said what he clearly did not wish to say—*viz.*, that his legend contained facts which distinguished it from all other legends—in other words, facts never before discussed in other legends, and belonging peculiarly to his own. That Mr. C. *did* mean what we suppose, is rendered evident by the third sentence—"The first alone is necessary to the legitimate objects of fiction." This third sentence itself, however, is very badly constructed. "The first" can refer, grammatically, only to "facts"; but no such reference is intended. If we ask the question—what is meant by "the first?" *what* "alone is necessary to the legitimate objects of fiction?"—the natural reply is "that facts similar to the leading ones have actually happened." The circumstance is alone to be cared for—this consideration "alone is necessary to the legitimate objects of fiction."

"One of the misfortunes of a nation is to hear nothing besides its own praises." This is the fourth sentence, and is by no means lucid. The design is to say that individuals composing a nation, and living altogether within the national bounds, hear from each other only praises of the nation, and that this is a misfortune to the individuals, since it misleads them in regard to the actual condition of the nation. Here it will be seen that, to convey the intended idea, we have been forced to make distinction between the nation and its individual members; for it is evident that a nation is considered as such only in reference to other nations; and thus, *as a nation,* it hears *very* much "besides it own praises"; that is to say, it hears the detractions of other rival nations. In endeavouring to compel his meaning within the compass of a brief sentence, Mr. Cooper has completely sacrificed its intelligibility.

The fifth sentence runs thus:—"Although the American Revolution was probably as just an effort as was ever

made by a people to resist the first inroads of oppression, the cause had its evil aspects, as well as all other human struggles."

The American Revolution is here improperly called an "effort." The effort was the cause, of which the Revolution was the result. A rebellion in an "effort" to effect a revolution. An "inroad of oppression" involves an untrue metaphor; for "inroad" appertains to aggression, to attack, to active assault. "The cause had its evil aspects as well as all other human struggles" implies that the cause had not only its evil aspects, but had also all other human struggles. If the words must be retained at all, they should be thus arranged—"The cause, like [or as well as] all other human struggles, had its evil aspects"; or better thus—"The cause had its evil aspect, as have all human struggles." "Other" is superfluous.

The sixth sentence is thus written:—"We have been so much accustomed to hear everything extolled of late years that could be dragged into the remotest connection with that great event, and the principles which led to it, that there is danger of overlooking truth in a pseudo-patriotism." The "of late years," here, should follow the "accustomed" or precede the "We have been"; and the Greek "pseudo" is objectionable, since its exact equivalent is to be found in the English "false." "Spurious" would be better, perhaps, than either.

Inadvertences such as these sadly disfigure the style of "The Hutted Knoll"; and every true friend of its author must regret his inattention to the minor morals of the Muse. But these "minor morals," it may be said, are trifles at best. Perhaps so. At all events, we should never have thought of dwelling so pertinaciously upon the unessential demerits of "Wyandotte," could we have discovered any more momentous upon which to comment.

The Literati of New York

(Published in *Godey's Lady's Book,* May, 1846.—Ed.)

In a criticism of Bryant, I was at some pains in pointing out the distinction between the popular "opinion" of the merits of contemporary authors, and that held and expressed of them in private literary society. The former species of "opinion" can be called "opinion" only by courtesy. It is the public's own, just as we consider a book our own when we have bought it. In general, this opinion is adopted from the journals of the day, and I have endeavoured to show that the cases are rare indeed in which these journals express any other sentiment about books than such as may be attributed directly or indirectly to the authors of the books. The most "popular," the most "successful" writers among us (for a brief period, at least), are, ninety-nine times out of a hundred, persons of mere address, perseverance, effrontery—in a word, busy-bodies, toadies, quacks. These people easily succeed in *boring* editors (whose attention is too often entirely engrossed by

politics or other "business" matter) into the admission of favourable notices, written or caused to be written by interested parties—or, at least, into the admission of *some* notice where, under ordinary circumstances, *no* notice would be given at all. In this way ephemeral "reputations" are manufactured, which, for the most part, serve all the purposes designed—that is to say, the putting money into the purse of the quack and the quack's publisher; for there never was a quack who could be brought to comprehend the value of mere fame. Now, men of genius will not resort to these manœuvres, because genius involves in its very essence a scorn of chicanery; and thus for a time the quacks always get the advantage of them, both in respect to pecuniary profit and what *appears* to be public esteem.

There is another point of view, too. Your literary quacks court, in especial, the personal acquaintance of those "connected with the press." Now these latter, even when penning a voluntary, that is to say, an uninstigated notice of the book of an acquaintance, feel as if writing not so much for the eye of the public as for the eye of the acquaintance, and the notice is fashioned accordingly. The bad points of the work are slurred over, and the good ones brought out in the best light, all this through a feeling akin to that which makes it unpleasant to speak ill of one to one's face. In the case of men of genius, editors, as a general rule, have no such delicacy—for the simple reason that, as a general rule, they have no acquaintance with these men of genius, a class proverbial for shunning society.

But the very editors who hesitate at saying in print an ill word of an author personally known, are usually the most frank in speaking about him privately. In literary society, they seem bent upon avenging the wrongs self-inflicted upon their own consciences. Here, accordingly, the quack is treated as he deserves—by way of striking a balance. True merit, on the same principle, is apt to be slight overrated; but, upon the whole, there is a close approximation to absolute honesty of opinion; and this honesty is further secured by the mere trouble to which it puts one in conversation to model one's countenance to a falsehood. We place on paper without hesitation a tissue of flatteries, to which in society we could not give utterance for our lives, without either blushing or laughing outright.

For these reasons there exists a very remarkable discrepancy between the apparent public opinion of any given author's merits, and the opinion which is expressed of him orally by those who are best qualified to judge. For example, Mr. Hawthorne, the author of "Twice-Told Tales," is scarcely recognised by the press or by the public, and when noticed at all, is noticed merely to be damned by faint praise. Now, my own opinion of him is that, although his walk is limited, and he is fairly to be charged with mannerism, treating all subjects in a similar tone of dreamy *innuendo*, yet in this walk he evinces extraordinary genius, having no rival either in America or elsewhere—and this opinion I have never heard gainsaid by any one literary person in the country. That this opinion, however, is a spoken and not a written one, is referable to the facts, first, that

Mr. Hawthorne *is* a poor man, and, second, that he *is not* a ubiquitous quack.

Again, of Mr. Longfellow, who although a little quacky *per se,* has, through his social and literary position as a man of property and a professor at Harvard, a whole legion of active quacks at his control—of *him* what is the apparent popular opinion? Of course, that he is a poetical phenomenon, as entirely without fault as is the luxurious paper upon which his poems are invariably borne to the public eye. In private society he is regarded with one voice as a poet of far more than usual ability, a skilful artist, and a well-read man, but as less remarkable in either capacity than as a determined imitator and a dexterous adapter of the ideas of other people. For years I have conversed with no literary person who did not entertain precisely these ideas of Professor L.; and, in fact, on all literary topics there is in society a seemingly wonderful coincidence of opinion. The author accustomed to seclusion, and mingling for the first time with those who have been associated with him only through their works, is astonished and delighted at finding common to all whom he meets conclusions which he had blindly fancied were attained by himself alone, and in opposition to the judgment of mankind.

In the series of papers which I now propose, my design is, in giving my own unbiased opinion of the *literati* (male and female) of New York, to give at the same time very closely, if not with absolute accuracy, that of conversational society in literary circles. It must be expected, of course, that, in innumerable particulars, I shall differ from the voice, that is to say, from what appears to be the voice of the public—but this is a matter of no consequence whatever.

New York literature may be taken as a fair representation of that of the country at large. The city itself is the focus of American letters. Its authors include, perhaps, one-fourth of all in America, and the influence they exert on their brethren, if seemingly silent, is not the less extensive and decisive. As I shall have to speak of many individuals, my limits will not permit me to speak of them otherwise than in brief; but this brevity will be entirely consistent with the design, which is that of simple *opinion,* with little of either argument or detail. With one or two exceptions, I am well acquainted with every author to be introduced, and I shall avail myself of the acquaintance to convey, generally, some idea of the personal appearance of all who, in this regard, would be likely to interest my readers. As any precise order or arrangement seems unnecessary and may be inconvenient, I shall maintain none. It will be understood that, without reference to supposed merit or demerit, each individual is introduced absolutely at random.

GEORGE BUSH

THE REV. GEORGE BUSH is Professor of Hebrew in the University of New York, and has long been distinguished for the extent and variety of his attainments in Oriental literature; indeed, as an Oriental linguist, it is probable that he has no equal among us. He has published a great deal, and his books

have always the good fortune to attract attention throughout the civilised world. His "Treatise on the Millennium" is, perhaps, that of his earlier compositions by which he is most extensively as well as most favourably known. Of late days he has created a singular commotion in the realm of theology by his "Anastasis, or the Doctrine of the Resurrection: in which it is shown that the Doctrine of the Resurrection of the Body is not sanctioned by Reason or Revelation." This work has been zealously attacked, and as zealously defended by the professor and his friends. There can be no doubt that up to this period, the Bushites have had the best of the battle. The "Anastasis" is lucidly, succinctly, vigorously, and logically written, and proves, in my opinion, everything that it attempts—provided we admit the imaginary axioms from which it starts; and this is as much as can be well said of any theological disquisition under the sun. It might be hinted, too, in reference as well to Professor Bush as to his opponents, *"que la plupart des sectes ont raison dans une bonne partie de ce qu'elles avancent, mais non pas en ce qu'elles nient."* A subsequent work on "The Soul," by the author of "Anastasis," has made nearly as much noise as the "Anastasis" itself.

Taylor, who wrote so ingeniously "The Natural History of Enthusiasm," might have derived many a valuable hint from the study of Professor Bush. No man is more ardent in his theories; and these latter are neither few nor commonplace. He is a Mesmerist and a Swedenborgian—has lately been engaged in editing Swedenborg's works, publishing them in numbers. He converses with fervour, and often with eloquence. Very probably he will establish an independent Church.

He is one of the most amiable men in the world, universally respected and beloved. His frank, unpretending simplicity of demeanour is especially winning.

In person he is tall, nearly six feet, and spare, with large bones. His countenance expresses rather benevolence and profound earnestness, than high intelligence. The eyes are piercing; the other features, in general, massive. The forehead, phrenologically, indicates causality and comparison, with deficient ideality—the organisation which induces strict logicality from insufficient premises. He walks with a slouching gait and with an air of abstraction. His dress is exceedingly plain. In respect to the arrangements about his study, he has many of the Magliabeccian habits. He is, perhaps, fifty-five years of age, and seems to enjoy good health.

NATHANIEL PARKER WILLIS

WHATEVER may be thought of Mr. Willis' talents, there can be no doubt about the fact that, both as an author and as a man, he has made a good deal of noise in the world—at least for an American. His literary life, in especial, has been one continual *emeute;* but then his literary character is modified or impelled in a very remarkable degree by this personal one. His success (for in point of fame, if of nothing else, he has certainly been successful) is to be attributed, one-third to his mental ability and two-thirds to his physical temperament—the latter goading him into the accomplishment of

what the former merely gave him the means of accomplishing.

At a very early age Mr. Willis seems to have arrived at an understanding that, in a republic such as ours, the *mere* man of letters must ever be a cipher, and endeavoured, accordingly, to unite the *eclat* of the *litterateur* with that of the man of fashion or of society. He "pushed himself," went much into the world, made friends with the gentler sex, "delivered" poetical addresses, wrote "scriptural" poems, travelled, sought the intimacy of noted women, and got into quarrels with notorious men. All these things served his purpose—if, indeed, I am right in supposing that he had any purpose at all. It is quite probable that, as before hinted, he acted only in accordance with his physical temperament; but, be this as it may, his personal greatly advanced, if it did not altogether establish, his literary fame. I have often carefully considered whether, without the *physique* of which I speak, there is that in the absolute *morale* of Mr. Willis which would have earned him reputation as a man of letters, and my conclusion is, that he could not have failed to become noted in *some* degree under almost any circumstances, but that about two-thirds (as above stated) of his appreciation by the public should be attributed to those *adventures* which grew immediately out of his animal constitution.

He received what is usually regarded as a "good education"—that is to say, he graduated at college; but his education, in the path he pursued, was worth to him, on account of his extraordinary *savoir faire,* fully twice as much as would have been its value in any common case. No man's knowledge is more available, no man has exhibited greater *tact* in the seemingly casual display of his wares. With *him,* at least, a little learning is *no* dangerous thing. He possessed at one time, I believe, the average quantum of American collegiate lore—"a little Latin and less Greek," a smattering of physical and metaphysical science, and (I should judge) a *very* little of the mathematics—but all this must be considered as mere *guess* on my part. Mr. Willis speaks French with some fluency, and Italian not quite so well.

Within the ordinary range of *belles lettres* authorship he has evinced much versatility. If called on to designate him by any general literary title, I might term him a magazinist—for his compositions have invariably the species of *effect,* with the brevity which the magazine demands. We may view him as a paragraphist, an essayist, or rather "sketcher," a tale-writer, and a poet.

In the first capacity he fails. His points, however good when deliberately wrought, are too *recherches* to be put hurriedly before the public eye. Mr. W. has by no means the *readiness* which the editing a newspaper demands. He composes (as did Addison, and as do many of the most brilliant and seemingly *dashing* writers of the present day) with great labour and frequent erasure and interlineation. His MSS., in this regard, present a very singular appearance, and indicate the *vacillation* which is, perhaps, the leading trait of his character. A newspaper, too, in its longer articles—its "leaders"—very frequently demands argumentation, and here Mr. W. is remarkably out of his element. His exuberant *fancy* leads

him over hedge and ditch—anywhere from the main-road; and, besides, he is far too readily self-dispossessed. With time at his command, however, his great *tact* stands him instead of all argumentative power, and enables him to overthrow an antagonist without permitting the latter to see how he is overthrown. A fine example of this "management" is to be found in Mr. W.'s reply to a very inconsiderate attack upon his social standing, made by one of the editors of the New York *Courier and Inquirer*. I have always regarded this reply as the highest evidence of its author's ability, as a masterpiece of ingenuity if not of absolute genius. The skill of the whole lay in this—that without troubling himself to refute the charges themselves brought against him by Mr. Raymond, he put forth his strength in rendering them null, to all intents and purposes, by obliterating, incidentally and without letting his design be perceived, all *the impression* these charges were calculated to convey. But this reply can be called a newspaper article only on the ground of its having appeared in a newspaper.

As a writer of "sketches," properly so called, Mr. Willis is unequalled. Sketches—especially of society—are his *forte*, and they are so for no other reason than that they afford him the best opportunity of introducing the personal Willis—or, more distinctly, because this species of composition is most susceptible of impression from his personal character. The *degage* tone of this kind of writing, too, best admits and encourages that *fancy* which Mr. W. possesses in the most extraordinary degree; it is in fancy that he reigns supreme: this, more than any one other quality, and, indeed, more than all his other *literary* qualities combined, has made him what he is. It is this which gives him the originality, the freshness, the point, the piquancy, which appear to be the immediate, but which are, in fact, the mediate sources of his popularity.

FANCY

As, by metaphysicians and in ordinary discourse, the word *fancy* is used with very little determinateness of meaning, I may be pardoned for repeating here what I have elsewhere said on this topic.*

I shall thus be saved much misapprehension in regard to the term—one which will necessarily be often employed in the course of this series.

Imagination, fancy, fantasy, and humour, have in common the elements combination and novelty. The imagination is the artist of the four. From novel arrangements of old forms which present themselves to it, it selects such only as are harmonious; the result, of course, is *beauty* itself—using the word in its most extended sense and as inclusive of the sublime. The pure imagination chooses, *from either beauty or deformity*, only the most combinable things hitherto uncombined; the compound, as a general rule, partaking in character of sublimity or beauty in the ration of the respective sublimity or beauty of the things combined, which are themselves still to be considered as atomic—that is to say, as previous

* See *Contents*, Criticism, Thomas Moore.—Ed.

combinations. But, as often analogously happens in physical chemistry, so not unfrequently does it occur in this chemistry of the intellect, that the admixture of two elements will result in a something that shall have nothing of the quality of one of them—or even nothing of the qualities of either. The range of imagination is thus unlimited. Its materials extend throughout the universe. Even out of deformities it fabricates that *beauty* which is at once its sole object and its inevitable test. But, in general, the richness of the matters combined, the facility of discovering combinable novelties worth combining, and the *absolute "chemical combination"* of the completed mass, are the particulars to be regarded in our estimate of imagination. It is this thorough harmony of an imaginative work which so often causes it to be undervalued by the undiscriminating, through the character of *obviousness* which is superinduced. We are apt to find ourselves asking *why it is that these combinations have never been imagined before.*

Now, when this question *does not occur,* when the harmony of the combination is comparatively neglected, and when, in addition to the element of novelty, there is introduced the subelement of *unexpectedness*—when, for example, matters are brought into combination which not only have never been combined, but whose combination strikes us as a *difficulty happily overcome,* the result then appertains to the fancy, and is, to the majority of mankind, more grateful than the purely harmonious one—although, absolutely, it is less beautiful (or grand) for the reason that *it is* less harmonious.

Carrying its errors into excess—for, however enticing, they *are* errors still, or nature lies—fancy is at length found infringing upon the province of fantasy. The votaries of this latter delight not only in novelty and unexpectedness of combination, but in the *avoidance* of proportion. The result is therefore abnormal, and, to a healthy mind, affords less of pleasure through its novelty than of pain through its incoherence. When, proceeding a step farther, however, fancy seeks not merely disproportionate but incongruous or antagonistic elements, the effect is rendered more pleasurable by its greater positiveness, there is a merry effort of truth to shake from her that which is no property of hers, and we laugh outright in recognising humour.

The four faculties in question seem to me all of their class; but when either fancy or humour is expressed to gain an end, is pointed at a purpose—whenever either becomes objective in place of subjective, then it becomes also pure wit or sarcasm, just as the purpose is benevolent or malevolent.

In *tales* (written with deliberation for the magazines) he has shown greater *constructiveness* than I should have given him credit for had I not read his compositions of this order—for in this faculty all his other works indicate a singular deficiency. The chief charm even of these tales, however, is still referable to *fancy.*

As a poet, Mr. Willis is not entitled, I think, to so high a rank as he may justly claim through his prose; and this for the reason that, although fancy is not inconsistent with any of the demands of those classes of prose com-

position which he has attempted, and, indeed, is a vital element of most of them, still it is at war (as will be understood from what I have said in the footnote) with that purity and perfection of *beauty* which are the soul of the poem proper. I wish to be understood as saying this *generally* of our author's poems. In some instances, seeming to *feel* the truth of my proposition (that fancy should have no place in the loftier poesy), he has denied it a place, as in "Melanie," and his Scriptural pieces; but, unfortunately, he has been unable to supply the void with the true imagination, and these poems consequently are deficient in vigour, in *stamen*. The Scriptural pieces are quite "correct," as the French have it, and are much admired by a certain set of readers, who judge of a poem, not by its effect on themselves, but by the effect which they imagine it *might* have upon themselves were they not unhappily soulless, and by the effect which they take it for granted it *does* have upon others. It cannot be denied, however, that these pieces are, in general, tame, or indebted for what force they possess to the Scriptural passages of which they are merely paraphrastic. I quote what, in my opinion, and in that of nearly all my friends, is really the truest poem ever written by Mr. Willis.*

In classifying Mr. W.'s writings I did not think it worth while to speak of him as a dramatist, because, although he has written plays, what they have of merit is altogether in their character of poem. Of his "Bianca Visconti" I have little to say;—it deserved to fail, and did, although it abounded in *eloquent* passages. "Tortesa" abounded in the same, but had a great many dramatic *points* well calculated to tell with a conventional audience. Its characters, with the exception of Tomaso, a drunken buffoon, had no character at all, and the *plot* was a tissue of absurdities, inconsequences, and inconsistencies; yet I cannot help thinking it, upon the whole, the best play ever written by an American.

Mr. Willis has made very few attempts at criticism, and those few (chiefly newspaper articles) have not impressed me with a high idea of his analytic abilities, although with a *very* high idea of his taste and discrimination.

His *style* proper may be called extravagant, *bizarre,* pointed, epigrammatic without being antithetical (this is very rarely the case), but, through all its whimsicalities, graceful, classic, and *accurate*. He is very seldom to be caught tripping in the minor morals. His English is *correct;* his most outrageous imagery is, at all events, unmixed.

Mr. Willis's career has naturally made him enemies among the envious host of dunces whom he has outstripped in the race for fame; and these his personal manner (a little tinctured with reserve, *brusquerie,* or even haughtiness) is by no means adapted to conciliate. He has innumerable warm friends, however, and is himself a warm friend. He is impulsive, generous, bold, impetuous, vacillating, irregularly energetic—apt to be hurried into error, but incapable of deliberate wrong.

He is yet young, and, without being handsome, in the ordinary sense, is a

* See *Contents* essay, "The Poetic Principle."—Ed.

remarkably well-looking man. In height he is, perhaps, five feet eleven, and justly proportioned. His figure is put in the best light by the ease and assured grace of his carriage. His whole person and personal demeanour bear about them the traces of "good society." His face is somewhat too full, or rather heavy, in its lower proportions. Neither his nose nor his forehead can be defended; the latter would puzzle phrenology. His eyes are a dull bluish grey, and small. His hair is of a rich brown, curling naturally and luxuriantly. His mouth is well cut; the teeth fine; the expression of the smile intellectual and winning. He converses little, *well* rather than fluently, and in a subdued tone. The portrait of him published about three years ago in *Graham's Magazine*, conveys by no means so true an idea of the man as does the sketch (by Lawrence) inserted as frontispiece to a late collection of his poems.

JOHN W. FRANCIS

Doctor Francis, although by no means a *litterateur*, cannot well be omitted in an account of the New York *literati*. In his capacity of physician and medical lecturer he is far too well known to need comment. He was the pupil, friend, and partner of Hossack—the pupil of Abernethy—connected in some manner with everything that has been well said or done medicinally in America. As a medical essayist he has always commanded the highest respect and attention. Among the *points* he has made at various times, I may mention his "Anatomy and Drunkenness," his views of the Asiatic Cholera, his analysis of the Avon waters of the state, his establishment of the comparative immunity of the constitution from a second attack of yellow fever, and his pathological propositions on the changes wrought in the system by specific poisons through their assimilation—propositions remarkably sustained and enforced by recent discoveries of Liebig.

In unprofessional letters Doctor Francis has also accomplished much, although necessarily in a discursive manner. His biography of Chancellor Livingston, his Horticultural Discourse, his Discourse at the opening of the new hall of the New York Lyceum of Natural History, are (each in its way) models of fine writing, just sufficiently toned down by an indomitable common sense. I had nearly forgotten to mention his admirable sketch of the personal associations of Bishop Berkley, of Newport.

Doctor Francis is one of the old spirits of the New York Historical Society. His philanthropy, his active, untiring beneficence, will for ever render his name a household word among the truly Christian of heart. His professional services and his purse are always at the command of the needy; few of our wealthiest men have ever contributed to the relief of distress so bountifully—none certainly with greater readiness or with warmer sympathy.

His person and manner are richly peculiar. He is short and stout, probably five feet eight in height; limbs of great muscularity and strength; the whole frame indicating prodigious vitality and energy—the latter is, in fact, the leading trait in his character. His head is large, massive—the features in

keeping; complexion dark florid; eyes piercingly bright; mouth exceedingly mobile and expressive; hair grey, and worn in matted locks about the neck and shoulders—eyebrows to correspond, jagged and ponderous. His age is about fifty-eight. His general appearance is such as to arrest attention.

His address is the most genial that can be conceived, its *bonhomie* irresistible. He speaks in a loud, clear, hearty tone, dogmatically, with his head thrown back and his chest out; never waits for an introduction to anybody; slaps a perfect stranger on the back and calls him "Doctor" or "Learned Theban"; pats every lady on the head, and (if she be pretty and *petite*) designates her by some such title as "My Pocket Edition of the Lives of the Saints." His conversation proper is a sort of Roman punch, made up of tragedy, comedy, and the broadest of all possible farce. He has a natural, felicitous flow of talk, always overswelling its boundaries, and sweeping everything before it right and left. He is very earnest, intense, emphatic; thumps the table with his fist; shocks the nerves of the ladies. His *forte*, after all, is humour, the richest conceivable—a compound of Swift, Rabelais, and the clown in the pantomime. He is married.

ANNA CORA MOWATT

Mrs. Mowatt is in some respects a remarkable woman, and has undoubtedly wrought a deeper impression upon *the public* than any one of her sex in America.

She became first known through her recitations. To these she drew large and discriminating audiences in Boston, New York, and elsewhere to the north and east. Her subjects were much in the usual way of these exhibitions, including comic as well as serious pieces, chiefly in verse. In her selections she evinced no *very* refined taste, but was probably influenced by the elocutionary rather than by the literary value of her *programmes*. She read well; her voice was melodious; her youth and general appearance excited interest, but, upon the whole, she produced no great effect, and the enterprise may be termed unsuccessful, although the press, as is its wont, spoke in the most sonorous tone of her success.

It was during these recitations that her name, prefixed to occasional tales, sketches, and brief poems in the magazines, first attracted an attention that, but for the recitations, it might not have attracted.

Her sketches and tales may be said to be *cleverly* written. They are lively, easy, *conventional*, scintillating with a species of sarcastic wit, which might be termed good were it in any respect original. In point of style—that is to say, of mere English, they are very respectable. One of the best of her prose papers is entitled "Ennui and its Antidote," published in *The Columbian Magazine* for June, 1845. The subject, however, is an exceedingly hackneyed one.

In looking carefully over her poems, I find no one entitled to commendation as a whole; in very few of them do I observe even noticeable passages, and I confess that I am surprised and disappointed at this result of my inquiry; nor can I make up my mind that there

is not much latent poetical power in Mrs. Mowatt. From some lines addressed to Isabel M——, I copy the opening stanza as the most favourable specimen which I have seen of her verse:—

For ever vanished from thy cheek
Is life's unfolding rose—
For ever quenched the flashing smile
That conscious beauty knows!
Thine orbs are lustrous with a light
Which ne'er illumes the eye
Till heaven is bursting on the sight
And earth is fleeting by.

In this there is much force, and the idea in the concluding quatrian is so well *put* as to have the air of originality. Indeed, I am not sure that the thought of the last two lines is not original;—at all events it is exceedingly *natural* and impressive. I say *"natural,"* because, in any imagined ascent from the orb we inhabit, when heaven should "burst on the sight"—in other words, when the attraction of the planet should be superseded by that of another sphere, then instantly would the "earth" have the appearance of "fleeting by." The versification, also, is much better here than is usual with the poetess. In general she is rough, through excess of harsh consonants. The whole poem is of higher merit than any which I can find with her name attached; but there is little of the spirit of poesy in anything she writes. She evinces more feeling than ideality.

Her first decided success was with her comedy, "Fashion," although much of this success itself is referable to the interest felt in her as a beautiful woman and an authoress.

The play is not without merit. It may be commended especially for its simplicity of plot. What the Spanish playwrights mean by dramas of *intrigue* are the worst acting dramas in the world; the intellect of an audience can never safely be fatigued by complexity. The necessity for verbose explanation, however, on the part of Trueman, at the close of the play, is in this regard a serious defect. A *denouement* should in all cases be taken up with *action*—with nothing else. Whatever cannot be explained by such action should be communicated at the opening of the story.

In the plot, however estimable for simplicity, there is of course not a particle of originality of invention. Had it, indeed, been designed as a burlesque upon the arrant conventionality of stage incidents in general, it might have been received as a palpable hit. There is not an event, a character, a jest, which is not a well-understood thing, a matter of course, a stage-property time out of mind. The general tone is adopted from "The School for Scandal," to which, indeed, the whole composition bears just such an affinity as the shell of a locust to the locust that tenants it—as the spectrum of a Congreve rocket to the Congreve rocket itself. In the *management* of her imitation, nevertheless, Mrs. Mowatt has, I think, evinced a sense of theatrical effect or point which may lead her, at no very distant day, to compose an exceedingly *taking*, although it can never much aid her in composing a very meritorious, drama. "Fashion," in a word, owes what it had of success to its being the work of a lovely woman who had already excited interest, and to the very commonplaceness or spirit of conventionality which

rendered it readily comprehensible and appreciable by the public proper. It was much indebted, too, to the carpets, the ottomans, the chandeliers, and the conservatories, which gained so decided a popularity for that despicable mass of inanity, the "London Assurance" of Boucicault.

Since "Fashion," Mrs. Mowatt has published one or two brief novels in pamphlet form, but they have no particular merit, although they afford glimpses (I cannot help thinking) of a genius as yet unrevealed, except in her capacity of actress.

In this capacity, if she be but true to herself, she will assuredly win a very enviable distinction. She has done well, wonderfully well, both in tragedy and comedy; but if she knew her own strength, she would confine herself nearly altogether to the depicting (in letters not less than on the stage) the more gentle sentiments and the most profound passions. Her sympathy with the latter is evidently intense. In the utterance of the truly generous, of the really noble, of the unaffectedly passionate, we see her bosom heave, her cheek grow pale, her limbs tremble, her lip quiver, and nature's own tear rush impetuously to the eye. It is this freshness of the heart which will provide for her the greenest laurels. It is this enthusiasm, this well of deep feeling, which should be made to prove for her an inexhaustible source of fame. As an actress, it is to her a mine of wealth worth all the dawdling *instruction* in the world. Mrs. Mowatt, on her first appearance as Pauline, was quite as able to give lessons in stage *routine* to any actor or actress in America, as was any actor or actress to give lessons to her. *Now*, at least, she should throw all "support" to the winds, trust proudly to her own sense of art, her own rich and natural elocution, her beauty, which is unusual, her grace, which is queenly, and be assured that these qualities, as she *now* possesses them, are all sufficient to render her a great actress, when considered simply as the means by which the end of natural acting is to be attained, as the mere instruments by which she may effectively and unimpededly lay bare to the audience the movements of her own passionate heart.

Indeed, the great charm of her manner is its naturalness. She looks, speaks, and moves, with a well-controlled impulsiveness, as different as can be conceived from the customary rant and cant, the hack conventionality of the stage. Her voice is rich and voluminous, and although by no means powerful, is so well managed as to seem so. Her utterance is singularly distinct, its sole blemish being an occasional Anglicism of accent, adopted probably from her instructor, Mr. Crisp. Her reading could scarcely be improved. Her action is distinguished by an ease and self-possession which would do credit to a veteran. Her step is the perfection of grace. Often have I watched her for hours with the closest scrutiny, yet never for an instant did I observe her in an attitude of the least awkwardness or even constraint, while many of her seemingly impulsive gestures spoke in loud terms of the woman of genius, of the poet imbued with the profoundest sentiment of the beautiful in motion.

Her figure is slight, even fragile. Her face is a remarkably fine one, and of that precise character best adapted to the stage. The forehead is, perhaps,

the least prepossessing feature, although it is by no means an unintellectual one. Hair light auburn, in rich profusion, and always arranged with exquisite taste. The eyes are grey, brilliant, and expressive, without being full. The nose is well formed, with the Roman curve, and indicative of energy. This quality is also shown in the somewhat excessive prominence of the chin. The mouth is large, with brilliant and even teeth and flexible lips, capable of the most instantaneous and effective variations of expression. A more radiantly beautiful smile it is quite impossible to conceive.

GEORGE B. CHEEVER

THE REVEREND GEORGE B. CHEEVER created at one time something of an excitement by the publication of a little *brochure* entitled "Deacon Giles' Distillery." He is much better known, however, as the editor of "The Commonplace Book of American Poetry," a work which has at least the merit of not belying its title, and *is* exceedingly commonplace. I am ashamed to say that for several years this compilation afforded to Europeans the only material from which it was possible to form an estimate of the poetical ability of Americans. The selections appear to me exceedingly injudicious, and have all a marked leaning to the didactic. Dr. Cheever is not without a certain sort of negative ability as critic, but works of this character should be undertaken by poets or not at all. The verses which I have seen attributed to *him* are undeniably *mediocres*.

His principal publications, in addition to those mentioned above, are "God's Hand in America," "Wanderings of a Pilgrim under the Shadow of Mont Blanc," "Wanderings of a Pilgrim under the Shadow of Jungfrau," and, lately, a "Defence of Capital Punishment." This 'Defence' is at many points well reasoned, and as a clear *resume* of all that has been already said on its own side of the question, may be considered as commendable. Its premises, however (as well as those of all reasoners *pro* or *con* on this vexed topic), are admitted only very partially by the world at large—a fact of which the author affects to be ignorant. Neither does he make the slightest attempt at bringing forward one novel argument. Any man of ordinary invention might have adduced and maintained a dozen.

The two series of "Wanderings" are, perhaps the best works of the writer. They are what is called "eloquent"; a little too much in that way, perhaps, but nevertheless entertaining.

Dr. Cheever is rather small in stature, and his countenance is vivacious; in other respects, there is nothing very observable about his personal appearance. He has been recently married.

CHARLES ANTHON

DOCTOR CHARLES ANTHON is the well-known Jay Professor of the Greek and Latin languages in Columbia College, New York, and Rector of the Grammar School. If not absolutely the best, he is at least generally considered the best, classicist in America. In England, and in Europe, at large, his scholastic acquirements are more sincerely respected than those of any of our countrymen. His additions to Lempiere are there justly regarded as evincing a nice perception of method,

and accurate as well as extensive erudition, but his "Classical Dictionary" has superseded the work of the Frenchman altogether. Most of Professor Anthon's publications have been adopted as textbooks at Oxford and Cambridge —an honour to be properly understood only by those acquainted with the many high requisites for attaining it. As a commentator (if not exactly as a critic) he may rank with any of his day, and has evinced powers very unusual in men who devote their lives to classical lore. His accuracy is very remarkable; in this particular he is always to be relied upon. The trait manifests itself even in his MS., which is a model of neatness and symmetry, exceeding in these respects anything of the kind with which I am acquainted. It is somewhat *too* neat, perhaps, and *too* regular, as well as diminutive, to be called beautiful; it might be mistaken at any time, however, for very elaborate copperplate engraving.

But his chirography, although fully in keeping, so far as precision is concerned, with his mental character, is, in its entire freedom from flourish or superfluity, as much *out* of keeping with his verbal style. In his notes to the Classics he is singularly Ciceronian —if, indeed, not positively Johnsonese.

An attempt was made not long ago to prepossess the public against his 'Classical Dictionary,' the most important of his works, by getting up a hue and cry of plagiarism—in the case of all similar books the most preposterous accusation in the world, although, from its very preposterousness, one not easily rebutted. Obviously, the design in any such compilation is, in the first place, to make a *useful school-book* or book of reference, and the scholar who should be weak enough to neglect this indispensable point for the mere purpose of winning credit with a few bookish men for originality, would deserve to be dubbed, by the public at least, a dunce. There are very few points of classical scholarship which are not the common property of 'the learner' throughout the world, and in composing any book of reference recourse is unscrupulously and even necessarily had in all cases to similar books which have preceded. In availing themselves of these latter, however, it is the practice of quacks to paraphrase page after page, rearranging the order of paragraphs, making a slight alteration in point of fact here and there, but preserving the spirit of the whole, its information, erudition, etc., etc., while everything is so completely *rewritten* as to leave no room for a direct charge of plagiarism; and this is considered and lauded as originality. Now, he who, in availing himself of the labours of his predecessors (and it is clear that all scholars *must* avail themselves of such labours)—he who shall copy *verbatim* the passages to be desired, without attempt at palming off their spirit as original with himself, is certainly no plagiarist, even if he fail to make *direct* acknowledgment of indebtedness—is unquestionably *less* of the plagiarist than the disingenuous and contemptible quack who wriggles himself, as above explained, into a reputation for originality, a reputation quite out of place in a case of this kind—the public, of course, never caring a straw whether he be original or not. These atacks upon the New York professor are to be attributed to a *clique* of pedants in and about Boston, gentle-

men envious of his success, and whose own compilations are noticeable only for the singular patience and ingenuity with which their dovetailing chicanery is concealed from the *public* eye.

Doctor Anthon is, perhaps, forty-eight years of age; about five feet eight inches in height; rather stout; fair complexion; hair light and inclined to curl; forehead remarkably broad and high; eye grey, clear, and penetrating; mouth well formed with excellent teeth—the lips having great flexibility, and consequent power of expression; the smile particularly pleasing. His address in general is bold, frank, cordial, full of *bonhomie*. His whole air is *distingue* in the best understanding of the term—that is to say, he would impress any one at first sight with the idea of his being no ordinary man. He has qualities, indeed, which would have ensured him eminent success in almost any pursuit; and there are times in which his friends are half disposed to regret his exclusive devotion to classical literature. He was one of the originators of the late *New York Review*, his associates in the conduct and proprietorship being Doctor F. L. Hawkes and Professor R. C. Henry. By far the most valuable papers, however, were those of Doctor Anthon.

RALPH HOYT

The Reverend Ralph Hoyt is known chiefly—at least, to the world of letters—by "The Chaunt of Life and other Poems, with Sketches and Essays." The publication of this work, however, was never *completed*, only a portion of the poems having appeared, and none of the essays or sketches. It is hoped that we shall yet have these latter.

Of the poems issued, one, entitled "Old," had so many peculiar excellences that I copied the whole of it, although quite long, in *The Broadway Journal*. It will remind every reader of Durand's fine picture, "An Old Man's Recollections," although between poem and painting there is no more than a very admissible similarity.

I quote a stanza from "Old" (the opening one) by way of bringing the piece to the remembrance of any who may have forgotten it:—

By the wayside, on a mossy stone,
Sat a hoary pilgrim sadly musing;
Oft I marked him sitting there alone,
All the landscape like a page perusing;
Poor unknown.
By the wayside on a mossy stone.

The quaintness aimed at here is, so far as a single stanza is concerned, to be defended as a legitimate effect, conferring high pleasure on a numerous and cultivated class of minds. Mr. Hoyt, however, in his continuous and uniform repetition of the first line in the last of each stanza of twenty-five, has by much exceeded the proper limits of the quaint and impinged upon the ludicrous. The poem, nevertheless, abounds in lofty merit, and has, in especial, some passages of rich imagination and exquisite pathos. For example:—

Seemed it pitiful he should sit there,
No one sympathising, no one heeding,
None to love him for his thin grey hair.

One sweet spirit broke the silent spell—
Ah, to me her name was always Heaven!
She besought him all his grief to tell—
(I was then thirteen and she eleven)
Isabel!
One sweet spirit broke the silent spell.

"Angel," said he sadly, "I am old;
Earthly hope no longer hath a morrow:
Why I sit here thou shalt soon be told"—
(Then his eye betrayed a pearl of sorrow—
Down it rolled—)
"Angel," said he sadly, *"I am old!"*

It must be confessed that some portions of "Old" (which is by far the best of the collection) remind us forcibly of the "Old Man" of Oliver Wendell Holmes.

"Proemus" is the concluding poem of the volume, and itself concludes with an exceedingly vigorous stanza, putting me not a little in mind of Campbell in his best days:—

O'er all the silent sky
A dark and scowling frown—
But darker scowled to die—
When all resolved to die—
When (night of dread renown!)
A thousand stars went down.

Mr. Hoyt is about forty years of age, of the medium height, pale complexion, dark hair and eyes. His countenance expresses sensibility and benevolence. He converses slowly and with perfect deliberation. He is married.

FREEMAN HUNT

Mr. Hunt is the editor and proprietor of the well-known *Merchants' Magazine,* one of the most useful of our monthly journals, and decidedly the best "property" of any work of its class. In its establishment he evinced many remarkable traits of character. He was entirely without means, and even much in debt, and otherwise embarrassed, when by one of those intuitive perceptions which belong only to genius, but which are usually attributed to "good luck," the "happy" idea entered his head of getting up a magazine devoted to the interests of the influential class of merchants. The chief happiness of this idea, however (which no doubt had been entertained and discarded by a hundred projectors before Mr. H.), consisted in the method by which he proposed to carry it into operation. Neglecting the hackneyed modes of advertising largely, circulating flashy prospectuses and sending out numerous "agents," who, in general, merely serve the purpose of boring people into a very temporary support of the work in whose behalf they are employed, he took the whole matter resolutely into his own hands; called personally, in the first place, upon his immediate mercantile friends; explained to them, frankly and succinctly, his object; put the value and necessity of the contemplated publication in the best light—as he well knew how to do—and in this manner obtained to head his subscription list a good many of the most eminent business men in New York. Armed with their names and with recommendatory letters from many of them, he now pushed on to the other chief cities of the Union, and thus, in

less time than is taken by ordinary men to make a preparatory flourish of trumpets, succeeded in building up for himself a permanent fortune and for the public a journal of immense interest and value. In the whole proceeding he evinced a tact, a knowledge of mankind, and a self-dependence which are the staple of even greater achievements than the establishment of a five-dollar magazine. In the subsequent conduct of the work he gave evidence of equal ability. Having, without aid, put the magazine upon a satisfactory footing as regards its circulation, he also, without aid, undertook its editorial and business conduct—from the first germ of the conception to the present moment having kept the whole undertaking within his own hands. His subscribers and regular contributors are now among the most intelligent and influential in America; the journal is regarded as absolute authority in mercantile matters, circulates extensively not only in this country, but in Europe, and even in regions more remote, affording its worthy and enterprising projector a large income, which no one knows better than himself how to put to good use.

The strong points, the marked peculiarities of Mr. Hunt could not have failed in arresting the attention of all observers of character; and Mr. Willis in especial has made him the subject of repeated comment. I copy what follows from the *New York Mirror:*—

"Hunt has been glorified in the *Hong-Kong Gazette,* is regularly complimented by the English mercantile authorities, has every bank in the world for an eager subscriber, every consul, every ship-owner, and navigator; is filed away as authority in every library, and thought of in half the countries of the world as early as No. 3 in their enumeration of distinguished Americans, yet who seeks to do him honour in the city he does honour to? The *Merchants' Magazine,* though a prodigy of perseverance and industry, is not an accidental development of Hunt's energies. He has always been singularly sagacious and original in devising new works and good ones. He was the founder of the first *Ladies' Magazine,* of the first children's periodical; he started the *American Magazine of Useful and Entertaining Knowledge,* compiled the best known collection of American anecdotes, and is an indefatigable writer—the author, among other things, of 'Letters about the Hudson.'

"Hunt was a playfellow of ours in round-jacket days, and we have always looked at him with a reminiscent interest. His luminous, eager eyes, as he goes along the street, keenly bent on his errand, would impress any observer with an idea of his genius and determination, and we think it quite time his earnest head was in the engraver's hand, and his daily passing by a mark for the *digito monstrari.* Few more worthy or more valuable citizens are among us."

Much of Mr. Hunt's character is included in what I have already said and quoted. He is "earnest," "eager," combining in a very singular manner general coolness and occasional excitability. He is a true friend, and the enemy of no man. His heart is full of the warmest sympathies and charities. No one in New York is more universally popular.

He is about five feet eight inches in height, well-proportioned; complexion dark florid; forehead capacious; chin massive and projecting, indicative (ac-

cording to Lavater and general experience) of that energy which is, in fact, the chief point of his character; hair light brown, very fine, of a weblike texture, worn long and floating about the face; eyes of wonderful brilliancy and intensity of expression; the whole countenance beaming with sensibility and intelligence. He is married, and is about thirty-eight years of age.

LAUGHTON OSBORN

PERSONALLY, Mr. Osborn is little known as an author, either to the public or in literary society, but he has made a great many "sensations" anonymously, or with a *nom de plume*. I am not sure that he has published anything with his own name.

One of his earliest works—if not his earliest—was "The Adventures of Jeremy Levis, by Himself," in one volume, a kind of medley of fact, fiction, satire, criticism, and novel philosophy. It is a dashing, reckless *brochure*, brimful of talent and audacity. Of course it was covertly admired by the few, and loudly condemned by all of the many who can fairly be said to have seen it at all. It had no great circulation. There was something wrong, I fancy, in the mode of its issue.

"Jeremy Levis" was followed by "The Dream of Alla-Ad-Deen," from the romance of Anastasia, by Charles Erskine White, D.D. This is a thin pamphlet of thirty-two pages, each page containing about a hundred and forty words. Alla-Ad-Deen is the son of Aladdin, of "wonderful lamp" memory, and the story is in the "Vision of Mirza" or "Rasselas" way. The design is to reconcile us to death and evil, on the somewhat unphilosophical ground that comparatively we are of little importance in the scale of creation. The author himself supposes this scale to be infinite, and thus his argument proves too much; for if evil should be regarded by man as of no consequence because, "comparatively," *he* is of none, it must be regarded as of no consequence by the angels for a similar reason—and so on in a never-ending ascent. In other words, the only thing proved is the rather bullish proposition that evil is no evil at all. I do not find that the "Dream" elicited any attention. It would have been more appropriately published in one of our magazines.

Next in order came, I believe, "The Confessions of a Poet, by Himself." This was in two volumes, of the ordinary novel form, but printed very openly. It made much noise in the literary world, and no little curiosity was excited in regard to its author, who was generally supposed to be John Neal. There were some grounds for this supposition, the tone and matter of the narrative bearing much resemblance to those of "Errata" and "Seventy-Six," especially in the points of boldness and vigour. "The Confessions," however, far surpassed any production of Mr. Neal's in a certain air of cultivation (if not exactly of scholarship) which pervaded it, as well as in the management of its construction—a particular in which the author of "The Battle of Niagara" invariably fails; there is no precision, no finish, about anything he does—always an excessive *force* but little of refined art. Mr. N. seems to be deficient in a sense of *completeness*. He begins well, vigorously, startlingly, and proceeds by fits, quite at random, now

prosing, now exciting vivid interest, but his conclusions are sure to be hurried and indistinct, so that the reader perceives a falling off, and closes the book with dissatisfaction. He has done nothing which, as a whole, is even respectable, and "The Confessions" are quite remarkable for their artistic unity and perfection. But in higher regards they are to be commended. I do not think, indeed, that a better book of its kind has been written in America. To be sure, it is not precisely the work to place in the hands of a lady, but its scenes of passion are intensely wrought, its incidents are striking and original, its sentiments audacious and suggestive at least, if not at all times tenable. In a word, it is that rare thing, a fiction of *power* without rudeness. Its spirit, in general, resembles that of "Miserrimus" and "Martin Faber."

Partly on account of what most persons would term their licentiousness, partly, also, on account of the prevalent idea that Mr. Neal (who was never very popular with the press) had written them, "The Confessions," by the newspapers, were most unscrupulously misrepresented and abused. The *Commercial Advertiser* of New York was, it appears, foremost in condemnation and Mr. Osborn thought proper to avenge his wrongs by the publication of a bulky satirical poem, levelled at the critics in general, but more especially at Colonel Stone, the editor of the *Commercial*. This satire (which was published in exquisite style as regards print and paper) was entitled "The Vision of Rubeta." Owing to the high price necessarily set upon the book, no great many copies were sold, but the few that got into circulation made quite a hubbub, and with reason, for the satire was not only bitter but personal in the last degree. It was, moreover, very censurably indecent—*filthy* is, perhaps, the more appropriate word. The press, without exception, or nearly so, condemned it in loud terms, without taking the trouble to investigate its pretensions as a literary work. But as "The Confessions of a Poet" was *one* of the best novels of its kind ever written in this country, so "The Vision of Rubeta" was decidedly *the best* satire. For its vulgarity and gross personality there is no defence, but its mordacity cannot be gainsaid. In calling it, however, the best American satire, I do not intend any excessive commendation—for it is, in fact, the *only* satire composed by an American. Trumbull's clumsy work is nothing at all, and then we have Halleck's "Croakers," which is very feeble —but what is there besides? "The Vision" is our best satire, and still a sadly deficient one. It was bold enough and bitter enough, and well constructed and decently versified, but it failed in *sarcasm*, because its malignity was permitted to render itself evident. The author is never very severe because he is never sufficiently cool. We laugh not so much at the objects of his satire as we do at himself for getting into so great a passion. But, perhaps, under no circumstances is wit the *forte* of Mr. Osborn. He has few equals at downright invective. "The Vision" was succeeded by "Arthur Carryl and other Poems," including an additional canto of the satire, and several happy although not in all cases accurate or comprehensive imitations in English of the Greek and Roman metres. "Arthur Carryl" is a fragment, in the manner of "Don Juan."

I do not think it especially meritorious. It has, however, a truth-telling and discriminative preface, and its notes are well worthy perusal. Some opinions embraced in these latter on the topic of versification I have examined in one of the series of articles called "Marginalia."

I am not aware that since "Arthur Carryl" Mr. Osborn has written anything more than a "Treatise on Oil Painting," issued not long ago by Messrs. Wiley and Putnam. This work is highly spoken of by those well qualified to judge, but is, I believe, principally a compilation or compendium.

In personal character, Mr. O. is one of the most remarkable men I ever yet had the pleasure of meeting. He is undoubtedly one of "Nature's own noblemen," full of generosity, courage, honour—chivalrous in every respect, but, unhappily, carrying his ideas of chivalry, or rather of independence, to the point of Quixotism, if not of absolute insanity. He has no doubt been misapprehended, and therefore wronged by the world; but he should not fail to remember that the source of the wrong lay in his own idiosyncrasy—one altogether unintelligible and unappreciable by the mass of mankind.

He is a member of one of the oldest and most influential, formerly one of the wealthiest, families in New York. His acquirements and accomplishments are many and unusual. As poet, painter, and musician, he has succeeded nearly equally well, and absolutely succeeded as each. His scholarship is extensive. In the French and Italian languages he is quite at home, and in everything he is thorough and accurate. His critical abilities are to be highly respected, although he is apt to swear somewhat too roundly by Johnson and Pope. Imagination is not Mr. Osborn's *forte*.

He is about thirty-two or three—certainly not more than thirty-five years of age. In person he is well made, probably five feet ten or eleven, muscular and active. Hair, eyes, complexion, rather light; fine teeth; the whole expression of the countenance manly, frank, and prepossessing in the highest degree.

FITZ-GREENE HALLECK

THE name of Halleck is at least as well established in the poetical world as that of any American. Our principal poets are, perhaps, the most frequently named in this order—Bryant, Halleck, Dana, Sprague, Longfellow, Willis, and so on—Halleck coming second in the series, but holding, in fact, a rank in the public opinion quite equal to that of Bryant. The accuracy of the arrangement as above made may, indeed, be questioned. For my own part, I should have it thus—Longfellow, Bryant, Halleck, Willis, Sprague, Dana; and, estimating rather the poetic capacity than the poems actually accomplished, there are three or four comparatively unknown writers whom I would place in the series between Bryant and Halleck, while there are about a dozen whom I should assign a position between Willis and Sprague. Two dozen at least might find room between Sprague and Dana—this latter, I fear, owing a very large portion of his reputation to his *quondam* editorial connection with *The North American Review*. One or two poets, now in my mind's eye, I should have no hesitation in posting

above even Mr. Longfellow—still not intending this as very extravagant praise.

It is noticeable, however, that, in the arrangement which I attribute to the popular understanding, the order observed is nearly, if not exactly, that of the ages—the poetic ages—of the individual poets. Those rank first who were first known. The priority has established the strength of impression. Nor is this result to be accounted for by mere reference to the old saw—that first impressions are the strongest. Gratitude, surprise, and a species of hyper-patriotic triumph have been blended, and finally confounded, with admiration or appreciation in regard to the *pioneers* of American literature, among whom there is not one whose productions have not been grossly overrated by his countrymen. Hitherto we have been in no mood to view with calmness and discuss with discrimination the real claims of the few who were *first* in convincing the mother country that her sons were not all brainless, as at one period she half affected and wholly wished to believe. Is there any one so blind as not to see that Mr. Cooper, for example, owes much, and Mr. Paulding nearly all, of his reputation as a novelist to his early occupation of the field? Is there any one so dull as not to know that fictions which neither of these gentlemen *could* have written are written daily by native authors, without attracting much more of commendation than can be included in a newspaper paragraph? And, again, is there any one so prejudiced as not to acknowledge that all this happens because there is no longer either reason or wit in the query, "Who reads an American book?"

I mean to say, of course, that Mr. Halleck, in the *apparent* public estimate, maintains a somewhat better position than that to which, on absolute grounds, he is entitled. There is something, too, in the *bonhomie* of certain of his compositions—something altogether distinct from poetic merit—which had aided to establish him; and much, also, must be admitted on the score of his personal popularity, which is deservedly great. With all these allowances, however, there will still be found a large amount of poetical fame to which he is *fairly* entitled.

He has written very little, although he began at an early age—when quite a boy, indeed. His "juvenile" works, however, have been kept very judiciously from the public eye. Attention was first called to him by his satires, signed "Croaker" and "Croaker and Co.," published in *The New York Evening Post*, in 1819. Of these the pieces with the signature *"Croaker and Co."* were the joint work of Halleck and his friend Drake. The political and personal features of these *jeux d'esprit* gave them a consequence and a notoriety to which they are entitled on no other account. They are not without a species of drollery, but are loosely and no doubt carelessly written.

Neither was "Fanny," which closely followed the "Croakers," constructed with any great deliberation. "It was printed," say the ordinary memoirs, "within three weeks from its commencement;" but the truth is, that a couple of days would have been an ample allowance of time for any such com-

position. If we except a certain gentlemanly ease and *insouciance*, with some fancy of illustration, there is really very little about this poem to be admired. There has been no positive avowal of its authorship, although there can be no doubt of its having been written by Halleck. He, I presume, does not esteem it very highly. It is a mere extravaganza, in close imitation of "Don Juan"—a vehicle for squibs at contemporary persons and things.

Our poet, indeed, seems to have been much impressed by "Don Juan," and attempts to engraft its farcicalities even upon the grace and delicacy of "Alnwick Castle," as, for example,—

Men in the coal and cattle line,
From Teviot's bard and hero land,
From royal Berwick's beach of sand,
From Wooler, Morpeth, Hexham, *and*
Newcastle-upon-Tyne.

These things may lay claim to oddity but no more. They are totally out of keeping with the tone of the sweet poem into which they are thus clumsily introduced, and serve no other purpose than to deprive it of all unity of effect. If a poet *must* be farcical, let him be just that; he can be nothing better at the same moment. To be drolly sentimental, or even sentimentally droll, is intolerable to men and gods and columns.

"Alnwick Castle" is distinguished, in general, by that air of quiet grace, both in thought and expression, which is the prevailing feature of the muse of Halleck. Its second stanza is a good specimen of this manner. The commencement of the fourth belongs to a very high order of poetry:—

Wild roses by the Abbey towers
Are gay in their young bud and bloom—
They were born of a race of funeral flowers
That garlanded, in long-gone hours,
A Templar's knightly tomb.

This is gloriously imaginative, and the effect is singularly increased by the sudden transition from iambuses to anapæsts. The passage is, I think, the noblest to be found in Halleck, and I would be at a loss to discover its parallel in all American poetry.

"Marco Bozzaris" has much lyrical, without any great amount of *ideal* beauty. Force is its prevailing feature —force resulting rather from well-ordered metre, vigorous rhythm, and a judicious disposal of the circumstances of the poem, than from any of the truer lyric material. I should do my conscience great wrong were I to speak of "Marco Bozzaris" as it is the fashion to speak of it, at least in print. Even as a lyric or ode it is surpassed by many American and a multitude of foreign compositions of a similar character.

"Burns" has numerous passages exemplifying its author's felicity of *expression;* as, for instance—

Such graves as his are pilgrim shrines—
Shrines to no code or creed confined—
The Delphian vales, the Palestines,
The Meccas of the mind.

And, again—

There have been loftier themes than his,
And longer scrolls and louder lyres,
And lays lit up with Poesy's
Purer and holier fires.

But to the *sentiment* involved in this last quatrain I feel disposed to yield an assent more thorough than might be expected. Burns, indeed, was the puppet of circumstance. As a poet, no person on the face of the earth has been more extravagantly, more absurdly overrated.

"The Poet's Daughter" is one of the most characteristic works of Halleck, abounding in his most distinctive traits, grace, expression, repose, *insouciance*. The vulgarity of

I'm busy in the cotton trade
and sugar line,

has, I rejoice to see, been omitted in the late editions. The eleventh stanza is certainly not English as it stands, and, besides, is quite unintelligible. What is the meaning of this?—

But her who asks, though first among
The good, the beautiful, the young,
The birthright of a spell more strong
Than these have brought her.

The "Lines on the Death of Joseph Rodman Drake" is, as a whole, one of the best poems of its author. Its simplicity and delicacy of sentiment will recommend it to all readers. It is, however, carelessly written, and the first quatrain—

Green be the turf above thee,
Friend of my better days—
None knew thee but to love thee,
Nor named thee but to praise—

although beautiful, bears too close a resemblance to the still more beautiful lines of Wordsworth—

She dwelt among the untrodden ways
Beside the springs of Dove,
A maid whom there were none to praise,
And very few to love!

In versification, Mr. Halleck is much as usual, although in this regard Mr. Bryant has paid him numerous compliments. "Marco Bozzaris" has certainly some vigour of rhythm, but its author, in short, writes carelessly, loosely, and, as a matter of course, seldom effectively so far as the outworks of literature are concerned.

Of late days he has nearly given up the muses, and we recognise his existence as a poet chiefly by occasional translations from the Spanish or German.

Personally, he is a man to be admired, respected, but more especially beloved. His address has all the captivating *bonhomie* which is the leading feature of his poetry and, indeed, of his whole moral nature. With his friends he is all ardour, enthusiasm, and cordiality, but to the world at large he is reserved, shunning society, into which he is seduced only with difficulty, and upon rare occasions. The love of solitude seems to have become with him a passion.

He is a good modern linguist, and an excellent *belles lettres* scholar; in general, has read a great deal, although very discursively. He is what the world calls *ultra* in most of his opinions, more particularly about literature and politics, and is fond of broaching and supporting paradoxes. He converses fluently, with animation and zeal; is choice and accurate in his language, exceedingly quick at repartee, and apt at anecdote. His manners are courteous, with dignity and a little tincture of Gal-

ticism. His age is about fifty. In height he is probably five feet seven. He *has been* stout, but may now be called well-proportioned. His forehead is a noble one, broad, massive, and intellectual, a little bald about the temples; eyes dark and brilliant, but not large; nose Grecian; chin prominent; mouth finely chiselled and full of expression, although the lips are thin;—his smile is peculiarly sweet.

In *Graham's Magazine* for September, 1843, there appeared an engraving of Mr. Halleck from a painting by Inman. The likeness conveys a good general idea of the man, but is far too stout and youthful-looking for his appearance at present.

His usual pursuits have been commercial, but he is now the principal superintendent of the business of Mr. John Jacob Astor. He is unmarried.

ANN S. STEPHENS

Mrs. Stephens has made no collection of her works, but has written much for the magazines, and well. Her compositions have been brief tales, with occasional poems. She made her first "sensation" in obtaining a premium of four hundred dollars, offered for "the best prose story" by some one of our journals, her "Mary Derwent" proving the successful article. The *amount* of the prize, however—a much larger one than it has been the custom to offer—had more to do with the *eclat* of the success than had the positive merit of the tale, although this is very considerable. She has subsequently written several better things—"Malina Gray," for example, "Alice Copley," and "The Two Dukes." These are on serious subjects. In comic ones she has comparatively failed. She is fond of the bold, striking, trenchant—in a word, of the melodramatic; has a quick appreciation of the picturesque, and is not unskilful in delineations of character. She seizes adroitly on salient incidents and presents them with vividness to the eye, but in their combinations or adaptations she is by no means so thoroughly at home—that is to say, her plots are not so good as are their individual items. Her style is what the critics usually term "powerful," but lacks real power through its verboseness and floridity. It is, in fact, generally turgid—even bombastic—involved, needlessly parenthetical, and superabundant in epithets, although these latter are frequently well chosen. Her sentences are, also, for the most part too long; we forget their commencements ere we get at their terminations. Her faults, nevertheless, both in matter and manner, belong to the effervescence of high talent, if not exactly of genius.

Of Mrs. Stephens' poetry I have seen so very little that I feel myself scarcely in condition to speak of it.

She began her literary life, I believe, by editing *The Portland Magazine,* and has since been announced as editor of *The Ladies' Companion,* a monthly journal published some years ago in New York, and also, at a later period, of *Graham's Magazine,* and subsequently, again, of *Peterson's National Magazine.* These announcements were announcements and no more; the lady had nothing to do with the editorial control of either of the three last-named works.

The portrait of Mrs. Stephens which appeared in *Graham's Magazine* for November, 1844, cannot fairly be con-

sidered a likeness at all. She is tall and slightly inclined to *embonpoint*—an English figure. Her forehead is somewhat low, but broad; the features generally massive, but full of life and intellectuality. The eyes are blue and brilliant; the hair blonde and very luxuriant.

EVERT A. DUYCKINCK

Mr. Duyckinck is one of the most influential of the New York *litterateurs*, and has done a great deal for the interests of American letters. Not the least important service rendered by him was the projection and editorship of Wiley and Putnam's "Library of Choice Reading," a series which brought to public notice many valuable foreign works which had been suffering under neglect in this country, and at the same time afforded unwonted encouragement to native authors by publishing their books, in good style and in good company, without trouble or risk to the authors themselves, and in the very teeth of the disadvantages arising from the want of an international copyright law. At one period it seemed that this happy scheme was to be overwhelmed by the competition of rival publishers—taken, in fact, quite out of the hands of those who, by "right of discovery," were entitled at least to its first fruits. A great variety of "Libraries," in imitation, were set on foot, but whatever may have been the temporary success of any of these latter, the original one has already too well established itself in the public favour to be overthrown, and thus has not been prevented from proving of great benefit to our literature at large.

Mr. Duyckinck has slyly acquired much fame and numerous admirers under the *nom de plume of* "Felix Merry." The various essays thus signed have attracted attention everywhere from the judicious. The style is remarkable for its very unusual blending of purity and ease, with a seemingly inconsistent originality, force, and independence.

"Felix Merry," in connection with Mr. Cornelius Mathews, was one of the editors and originators of *Arcturus*, decidedly the very best magazine in many respects ever published in the United States. A large number of its most interesting papers were the work of Mr. D. The magazine was, upon the whole, a little *too good* to enjoy extensive popularity—although I am here using an equivocal phrase, for a *better* journal might have been far more acceptable to the public. I must be understood, then, as employing the epithet "good" in the sense of the literary quietists. The general taste of *Arcturus* was, I think, *excessively tasteful;* but this character applies rather more to its external or mechanical appearance than to its essential qualities. Unhappily, magazines and other similar publications, are, in the beginning, judged chiefly by externals. People saw *Arcturus looking* very much like other works which had failed through notorious dulness, although admitted as *arbitri elegantiarum* in all points of what is termed taste or decorum; and they, the people, had no patience to examine any further. Cæsar's wife was required not only to *be* virtuous but to *seem* so, and in letters it is demanded not only that we be not stupid, but that we do not array ourselves in the habiliments of stupidity.

It cannot be said of *Arcturus* exactly that it wanted *force*. It was deficient in power of impression, and this deficiency is to be attributed mainly to the exceeding brevity of its articles—a brevity that degenerated into mere paragraphism, precluding dissertation or argument, and thus all permanent effect. The magazine, in fact, had some of the worst or most inconvenient features without any of the compensating advantages of a weekly literary newspaper. The mannerism to which I refer seemed to have its source in undue admiration and consequent imitation of *The Spectator*.

In addition to his more obvious literary engagements, Mr. Duyckinck writes a great deal, editorially and otherwise, for *The Democratic Review*, *The Morning News*, and other periodicals.

In character he is remarkable, distinguished for the *bonhomie* of his manner, his simplicity and single-mindedness, his active beneficence, his hatred of wrong done even to any enemy, and especially for an almost Quixotic fidelity to his friends. He seems in perpetual good humour with all things, and I have no doubt that in his secret heart he is an optimist.

In person he is equally simple as in character—the one is a *pendent* of the other. He is about five feet eight inches high, somewhat slender. The forehead, phrenologically, is a good one; eyes and hair light; the whole expression of the face that of serenity and benevolence, contributing to give an idea of youthfulness. He is probably thirty, but does not seem to be twenty-five. His dress, also, is in full keeping with his character, scrupulously neat but plain, and conveying an instantaneous conviction of the gentleman. He is a descendant of one of the oldest and best Dutch families in the state. Married.

JAMES ALDRICH

Mr. Aldrich has written much for the magazines, etc., and at one time assisted Mr. Park Benjamin in the conduct of *The New World*. He also originated, I believe, and edited a not very long-lived or successful weekly paper, called *The Literary Gazette*, an imitation in its external appearance of the London journal of the same name. I am not aware that he has made any collection of his writings. His poems abound in the true poetic spirit, but they are frequently chargeable with plagiarism, or something much like it. True, I have seen but three of Mr. Aldrich's compositions in verse—the three (or perhaps there are four of them) included by Mr. Griswold in his "Poets and Poetry of America." Of these three (or four), however, there are two which I cannot help regarding as palpable plagiarisms. Of one of them, in especial, "*A* Death-Bed," it is impossible to say a plausible word in defence. Both in matter and manner it is nearly identical with a little piece entitled "*The* Death-Bed," by Thomas Hood.

The charge of plagiarism, nevertheless, is a purely literary one; and a plagiarism even distinctly proved by no means necessarily involves any moral delinquency. This proposition applies very especially to what appear to be *poetical* thefts. The poetic sentiment presupposes a keen appreciation of the beautiful with a longing for its assimilation into the poetic identity. What the poet intensely admires becomes,

thus, in very fact, although only partially, a portion of his own soul. Within this soul it has a secondary origination; and the poet, thus possessed by another's thought, cannot be said to take of it possession. But in either view he thoroughly feels it as *his own;* and the tendency to this feeling is counteracted only by the sensible presence of the true, palpable origin of the thought in the volume when he has derived it—an origin which, in the long lapse of years, it is impossible *not* to forget, should the thought itself, as it often is, be forgotten. But the frailest association will regenerate it; it springs up with all the vigour of a new birth; its absolute originality is not with the poet a matter even of suspicion; and when he has written it and printed it, and on its account is charged with plagiarism, there will be no one more entirely astounded than himself. Now, from what I have said, it appears that the liability to accidents of this character is in the direct ratio of the poetic sentiment, of the susceptibility to the poetic impression; and, in fact, all literary history demonstrates that, for the most frequent and palpable plagiarisms, we must search the works of the most eminent poets.

Since penning the above I have found five quatrains by Mr. Aldrich, with the heading "Molly Gray." These verses are in the fullest exemplification of what I have just said of their author, evincing at once, in the most remarkable manner, both his merit as an imaginative poet and his unconquerable proneness to imitation. I quote the two concluding quatrains.

Pretty, fairy Molly Gray!
What may thy fit emblems be?
Stream or star or bird or flower—
They are all too poor for thee.

No type to match thy beauty
My wandering fancy brings—
Not fairer than its chrysalis
Thy soul with its golden wings!

Here the "Pretty, fairy Molly Gray!" will put every reader in mind of Tennyson's "Airy, fairy Lillian!" by which Mr. Aldrich's whole poem has been clearly suggested; but the thought in the *finale* is, as far as I know anything about it, original, and is not more happy than happily expressed.

Mr. Aldrich is about thirty-six years of age. In regard to his person there is nothing to be especially noted.

CHRISTOPHER PEARSE CRANCH

The Reverend C. P. Cranch is one of the least intolerable of the school of Boston transcendentalists—and, in fact, I believe that he has at last "come out from among them," abandoned their doctrines (whatever they are), and given up their company in disgust. He was at one time one of the most noted, and undoubtedly one of the least absurd contributors to *The Dial,* but has reformed his habits of thought and speech, domiciliated himself in New York, and set up the easel of an artist in one of the Gothic chambers of the University.

About two years ago a volume of "Poems by Christopher Pearse Cranch" was published by Carey and Hart. It was most unmercifully treated by the critics, and much injustice, in my opin-

ion, was done to the poet. He seems to me to possess unusual vivacity of fancy and dexterity of expression, while his versification is remarkable for its accuracy, vigour, and even for its originality of effect. I might say, perhaps, rather more than all this, and maintain that he has imagination if he would only condescend to employ it, which he will not, or *would* not until lately—the word compounders and quibble concoctors of Frogpondium having inoculated him with a preference for Imagination's half-sister, the Cinderella Fancy. Mr. Cranch has seldom contented himself with harmonious combinations of thought. There must always be, to afford him perfect satisfaction, a certain amount of the odd, of the whimsical, of the affected, of the *bizarre*. He is as full of absurd conceits as Cowley or Donne, with this difference, that the conceits of these latter are Euphuisms beyond redemption—flat, irremediable, self-contented nonsensicalities, and in so much are good of their kind; but the conceits of Mr. Cranch are, for the most part, conceits intentionally manufactured, for conceit's sake, out of the material for properly imaginative, harmonious, proportionate, or poetical ideas. We see every moment that he has been at uncommon *pains* to make a fool of himself.

But perhaps I am wrong in supposing that I am at all in condition to decide on the merits of Mr. Cranch's poetry, which is professedly addressed to the few. "Him we will seek," says the poet—

Him we will seek, and none but him,
Whose inward sense hath not grown dim;
Whose soul is steeped in Nature's tinct,
And to the Universal linked;
Who loves the beauteous Infinite
With deep and ever new delight,
And carrieth where'er he goes
The inborn sweetness of the rose—
The perfume as of Paradise—
The talisman above all price—
The optic glass that wins from far
The meaning of the utmost star—
The key that opes the golden doors
Where earth and heaven have piled their stores—
The magic ring, the enchanter's wand—
The title-deed to Wonder-land—
The wisdom that o'erlooketh sense,
The clairvoyance of Innocence.

This is all very well, fanciful, pretty, and neatly turned—all with the exception of the two last lines, and it is a pity they were not left out. It is laughable to see that the transcendental poets, if beguiled for a minute or two into respectable English and common sense, are always sure to remember their cue just as they get to the end of their song, which, by way of salvo, they then round off with a bit of doggerel about "wisdom that o'erlook*eth* sense" and "the clairvoyance of Innocence." It is especially observable that, in adopting the cant of thought, the cant of phraseology is adopted at the same instant. Can Mr. Cranch, or can anybody else, inform me why it is that, in the really sensible opening passages of what I have here quoted, he employs the modern, and only in the final couplet of "goosetherumfoodle" makes use of the obsolete termination of verbs in the third person singular, present tense?

One of the best of Mr. Cranch's compositions is undoubtedly his poem

on *Niagara.* It has some natural thoughts, and grand ones, suiting the subject; but then they are more than half-divested of their nature by the attempt at adorning them with *oddity* of expression. *Quaintness* is an admissible and important adjunct to ideality—an adjunct whose value has been long misapprehended—but in picturing the sublime it is altogether out of place. What idea of power, of grandeur, for example, can any human being connect even with Niagara, when Niagara is described in language so trippingly fantastical, so palpably adapted to a purpose, as that which follows?

I stood upon a speck of ground;
Before me fell a stormy ocean.
I was like a captive bound;
And around
A universe of sound
Troubled the heaven with ever-quivering motion.

Down, down for ever—down, down for ever—
Something falling, falling, falling;
Up, up for ever—up, up for ever,
Resting never,
Boiling up for ever,
Steam-clouds shot up with thunder-bursts appalling.

It is difficult to conceive anything more ludicrously out of keeping than the thoughts of these stanzas and the *petit-maitre,* fidgety, hop-skip-and-jump air of the words and the Lilliputian parts of the versification.

A somewhat similar metre is adopted by Mr. Cranch in his "Lines on Hearing Triumphant Music," but as the subject is essentially different, so the effect is by no means so displeasing. I copy one of the stanzas as the noblest individual passage which I can find among all the poems of its author:

That glorious strain!
Oh, from my brain
I see the shadows flitting like scared ghosts.
A light—a light
Shines in to-night
Round the good angels trooping to their posts,
And the black cloud is rent in twain
Before the ascending strain.

Mr. Cranch is well educated, and quite accomplished. Like Mr. Osborn, he is musician, painter, and poet, being in each capacity very respectably successful.

He is about thirty-three or four years of age; in height, perhaps five feet eleven; athletic; front face not unhandsome—the forehead evincing intellect, and the smile pleasant; but the profile is marred by the turning up of the nose, and altogether is hard and disagreeable. His eyes and hair are dark brown—the latter worn short, slightly inclined to curl. Thick whiskers meeting under the chin, and much out of keeping with the shirt-collar *a la Byron.* Dresses with marked plainness. He is married.

SARAH MARGARET FULLER

Miss Fuller was at one time editor, or one of the editors of *The Dial,* to which she contributed many of the most forcible and certainly some of the most peculiar papers. She is known, too, by "Summer on the Lakes," a remarkable assemblage of sketches, issued in 1844,

by Little and Brown of Boston. More lately she has published "Woman in the Nineteenth Century," a work which has occasioned much discussion, having had the good fortune to be warmly abused and chivalrously defended. At present, she is assistant editor of *The New York Tribune,* or rather a salaried contributor to that journal, for which she has furnished a great variety of matter, chiefly notices of new books, etc., etc., her articles being designated by an asterisk. Two of the best of them were a review of Professor Longfellow's late magnificent edition of his own works (with a portrait), and an appeal to the public in behalf of her friend Harro Harring. The review did her infinite credit; it was frank, candid, independent—in even ludicrous contrast to the usual mere glorifications of the day—giving honour *only* where honour was due, yet evincing the most thorough capacity to appreciate and the most sincere intention to place in the fairest light the real and idiosyncratic merits of the poet.

In my opinion it is one of the very few reviews of Longfellow's poems, ever published in America, of which the critics have not had abundant reason to be ashamed. Mr. Longfellow is entitled to a certain and very distinguished rank among the poets of his country, but that country is disgraced by the evident toadyism which would award to his social position and influence, to his fine paper and large type, to his morocco binding and gilt edges, to his flattering portrait of himself, and to the illustrations of his poems by Huntingdon, that amount of indiscriminate approbation which neither could nor would have been given to the poems themselves.

The defence of Harro Harring, or rather the Philippic against those who were doing him wrong, was one of the most eloquent and well-*put* articles I have ever yet seen in a newspaper.

"Woman in the Nineteenth Century" is a book which few women in the country could have written, and no woman in the country would have published, with the exception of Miss Fuller. In the way of independence, of unmitigated radicalism, it is one of the "Curiosities of American Literature," and Mr. Griswold should include it in his book. I need scarcely say that the essay is nervous, forcible, thoughtful, suggestive, brilliant, and to a certain extent scholar-like—for all that Miss Fuller produces is entitled to these epithets—but I must say that the conclusions reached are only in part my own. Not that they are too bold by any means—too novel, too startling, or too dangerous in their consequences, but that in their attainment too many premises have been distorted, and too many analogical inferences left altogether out of sight. I mean to say that the intention of the Deity as regards sexual differences—an intention which can be distinctly comprehended only by throwing the exterior (more sensitive) portions of the mental retina *casually* over the wide field of universal *analogy*—I mean to say that this *intention* has not been sufficiently considered. Miss Fuller has erred, too, through her own excessive objectiveness. She judges *woman* by the heart and intellect of Miss Fuller, but there are not more than one or two dozen Miss Fullers on the whole face of the earth. Holding these opinions in regard to "Woman in the Nineteenth Century," I still feel

myself called upon to disavow the silly condemnatory criticism of the work which appeared in one of the earliest numbers of *The Broadway Journal*. That article was *not* written by myself, and *was* written by my associate, Mr. Briggs.

The most favourable estimate of Miss Fuller's genius (for high genius she unquestionably possesses) is to be obtained, perhaps, from her contributions to *The Dial*, and from her "Summer on the Lakes." Many of the *descriptions* in this volume are unrivalled for *graphicality* (why is there not such a word?), for the force with which they convey the true by the novel or unexpected, by the introduction of touches which other artists would be sure to omit as irrelevant to the subject. This faculty, too, springs from her subjectiveness, which leads her to paint a scene less by its features than by its effects.

Here, for example, is a portion of her account of Niagara:—

"Daily these proportions widened and towered more and more upon my sight, and I got at last a proper foreground for these sublime distances. Before coming away I think I really saw the full wonder of the scene. After awhile it *so drew me into itself as to inspire an undefined dread, such as I never knew before, such as may be felt when death is about to usher us into a new existence*. The perpetual trampling of the waters seized my senses. *I felt that no other sound, however near, could be heard, and would start and look behind me for a foe*. I realised the identity of that mood of nature in which these waters were poured down with such absorbing forces with that in which the Indian was shaped on the same soil. For continually upon my mind came, unsought and unwelcome, *images, such as had never haunted it before, of naked savages stealing behind me with uplifted tomahawks*. Again and again this illusion recurred, and even *after I had thought it over, and tried to shake it off, I could not help starting and looking behind me*. What I liked best was to sit on Table Rock close to the great fall; *there all power of observing details, all separate consciousness was quite lost*."

The truthfulness of the passages italicised will be felt by all; the feelings described are, perhaps, experienced by every (imaginative) person who visits the fall; but most persons, through predominant subjectiveness, would scarcely be conscious of the feelings, or, at best, would never think of employing them in an attempt to convey to others an impression of the scene. Hence so many desperate failures to convey it on the part of ordinary tourists. Mr. William W. Lord, to be sure, in his poem "Niagara," is sufficiently objective; he describes not the fall, but very properly the effect of the fall upon him. He says that it made him think of his *own* greatness, of his *own* superiority, and so forth, and so forth; and it is only when we come to think that the thought of Mr. Lord's greatness is quite idiosyncratic, confined exclusively to Mr. Lord, that we are in condition to understand how, in spite of his objectiveness, he has failed to convey an idea of anything beyond one Mr. William W. Lord.

From the essay entitled "Philip Van Artevelde," I copy a paragraph which will serve at once to exemplify Miss Fuller's more earnest (declamatory)

style, and to show the tenor of her prospective speculations:—

"At Chicago I read again 'Philip Van Artevelde,' and certain passages in it will always be in my mind associated with the deep sound of the lake, as heard in the night. I used to read a short time at night, and then open the blind to look out. The moon would be full upon the lake, and the calm breath, pure light, and the deep voice, harmonised well with the thought of the Flemish hero. When will this country have such a man? It is what she needs—no thin Idealist, no coarse Realist, but a man whose eye reads the heavens while his feet step firmly on the ground, and his hands are strong and dexterous in the use of human instruments. A man, religious, virtuous, and—sagacious; a man of universal sympathies, but self-possessed; a man who knows the region of emotion, though he is not its slave; a man to whom this world is no mere spectacle or fleeting shadow, but a great solemn game, to be played with good heed, for its stakes are of eternal value, yet who, if his own play be true, heeds not what he loses by the falsehood of others. A man who lives from the past, yet knows that its honey can but moderately avail him; whose comprehensive eye scans the present, neither infatuated by its golden lures nor chilled by its many ventures; who possesses prescience, as the wise man must, but not so far as to be driven mad to-day by the gift which discerns to-morrow. When there is such a man for America, the thought which urges her on will be expressed."

From what I have quoted a *general* conception of the prose style of the authoress may be gathered. Her manner, however, is infinitely varied. It is always forcible—but I am not sure that it is always anything else, unless I say picturesque. It rather indicates than evinces scholarship. Perhaps only the scholastic, or, more properly, those accustomed to look narrowly at the structure of phrases, would be willing to acquit her of her ignorance of grammar—would be willing to attribute her slovenliness to disregard of the shell in anxiety for the kernel, or to waywardness, or to affectation, or to blind reverence for Carlyle—would be able to detect, in her strange and continual inaccuracies, a capacity for the accurate.

"I cannot sympathise with such an apprehension; the spectacle is *capable to* swallow *up* all such objects."

"It is fearful, too, to know as you look, that whatever has been swallowed by the cataract, is *like* to rise suddenly to light."

"I took our *mutual* friends to see her."

"It was always obvious that they had nothing in common *between them.*"

"The Indian cannot be looked at truly *except* by a poetic eye."

"M'Kenney's Tour to the Lakes gives some facts not to be met *with* elsewhere."

"There is that mixture of culture and rudeness in the aspect of things *as* gives a feeling of freedom," etc., etc., etc.

These are merely a few, a very few instances, taken at random from among a multitude of *wilful* murders committed by Miss Fuller on the American of President Polk. She uses, too, the word "ignore," a vulgarity adopted only of late days (and to no good purpose, since there is no necessity for it) from the barbarisms of the law, and makes

no scruple of giving the Yankee interpretation to the verbs "witness" and "realise," to say nothing of "use," as in the sentence, "I used to read a short time at night." It will not do to say, in defence of such words, that in such senses they may be found in certain dictionaries—in that of Bolles, for instance;—*some* kind of "authority" may be found for *any* kind of vulgarity under the sun.

In spite of these things, however, and of her frequent unjustifiable Carlyleisms (such as that of writing sentences which are no sentences, since, to be parsed, reference must be had to sentences preceding), the style of Miss Fuller is one of the very best with which I am acquainted. In general effect, I know no style which surpasses it. It is singularly piquant, vivid, terse, bold, luminous—leaving details out of sight, it is everything that a style need be.

I believe that Miss Fuller has written much poetry, although she has published little. That little is tainted with the affectation of the *transcendentalists* (I use this term, of course, in the sense which the public of late days seem resolved to give it), but is brimful of the poetic *sentiment*. Here, for example, is something in Coleridge's manner, of which the author of "Genevieve" might have had no reason to be ashamed:—

A maiden sat beneath a tree;
Tear-bedewed her pale cheeks be,
And she sighed heavily.

From forth the wood into the *light*
A hunter strides with carol *light*,
And a glance so bold and bright.

He careless stopped and eyed the maid:
"Why weepest thou?" he gently said;
"I love thee well, be not afraid."

He takes her hand and leads her on—
She should have waited there alone,
For he was not her chosen one.

He *leans* her head upon his breast—
She knew 'twas not her home of rest,
But, ah, she had been sore distrest.

The sacred stars looked sadly down;
The parting moon appeared to frown,
To see thus dimmed the diamond crown.

Then from the thicket starts a deer—
The huntsman, seizing *on* his spear,
Cries, "Maiden, wait thou for me here."

She sees him vanish into night—
She starts from sleep in deep affright,
For it was not her own true knight.

Though but in dream Gunhilda failed—
Though but a fancied ill assailed—
Though she but fancied fault bewailed—

Yet thought of day makes dream of night;
She is not worthy of the knight;
The inmost altar burns not bright.

If loneliness thou canst not bear—
Cannot the dragon's venom dare—
Of the pure meed thou shouldst despair.

Now sadder that lone maiden sighs;
Far bitterer tears profane her eyes;
Crushed in the dust her heart's flower lies.

To show the evident carelessness with which this poem was constructed, I

have italicised an identical rhyme (of about the same force in versification as an identical proposition in logic) and two grammatical improprieties. *To lean* is a neuter verb, and "seizing *on*" is not properly to be called a pleonasm, merely because it is—nothing at all. The concluding line is difficult of pronunciation through excess of consonants. I should have preferred, indeed, the ante-penultimate tristich as the *finale* of the poem.

The supposition that the book of an author is a thing apart from the author's self, is, I think, ill-founded. The soul is a cipher, in the sense of a cryptograph; and the shorter a cryptograph is the more difficulty there is in its comprehension—at a certain point of brevity it would bid defiance to an army of Champollions. And thus he who has written very little may in that little either conceal his spirit or convey quite an erroneous idea of it—of his acquirements, talents, temper, manner, tenor, and depth (or shallowness) of thought—in a word, of his character, of himself. But this is impossible with him who has written much. Of such a person we get, from his books, not merely a just, but the most just representation. Bulwer, the individual, personal man, in a green velvet waistcoat and amber gloves, is not by any means the veritable Sir Edward Lytton, who is discoverable only in "Ernest Maltravers," where his soul is deliberately and nakedly set forth. And who would ever know Dickens by looking at him or talking with him, or doing anything with him except reading his "Curiosity Shop"? What poet, in especial, but must feel at least the better portion of himself more fairly represented in even his commonest sonnet (earnestly written), than in his most elaborate or most intimate personalities?

I put all this as a general proposition, to which Miss Fuller affords a marked exception—to this extent, that her personal character and her printed book are merely one and the same thing. We get access to her soul *as* directly from the one as from the other—no *more* readily from this than from that—easily from either. Her acts are bookish, and her books are less thoughts than acts. Her literary and her conversational manner are identical. Here is a passage from her "Summer on the Lakes":—

"The rapids enchanted me far beyond what I expected; they are so swift that they cease to *seem* so—you can think only of their *beauty*. The fountain beyond the Moss islands I discovered for myself, and thought it for some time an *accidental* beauty which it would not do to *leave*, lest I might never see it again. After I found it *permanent*, I returned many times to watch the play of its crest. In the little waterfall beyond, Nature seems, as she often does, to have made a *study* for some larger design. She delights in this—a sketch within a sketch—a dream within a *dream*. Wherever we see it, the lines of the great buttress in the fragment of stone, the hues of the waterfall, copied in the flowers that *star* its bordering mosses, we are *delighted;* for all the lineaments become *fluent*, and we mould the scene in congenial thought with its *genius*."

Now all this is precisely as Miss Fuller would *speak* it. She is perpetually saying just such things in just such words. To get the *conversational* woman in the mind's eye, all that is

needed is to imagine her reciting the paragraph just quoted: but first let us have the *personal* woman. She is of the medium height; nothing remarkable about the figure; a profusion of lustrous light hair; eyes a bluish grey, full of fire; capacious forehead; the mouth when in repose indicates profound sensibility, capacity for affection, for love—when moved by a slight smile, it becomes even beautiful in the intensity of this expression: but the upper lip, as if impelled by the action of involuntary muscles, habitually uplifts itself, conveying the impression of a sneer. Imagine, now, a person of this description looking you at one moment earnestly in the face, at the next seeming to look only within her own spirit or at the wall; moving nervously every now and then in her chair; speaking in a high key, but musically, deliberately (not hurriedly or loudly), with a delicious distinctness of enunciation—speaking, I say, the paragraph in question, and emphasizing the words which I have italicised, not by impulsion of the breath (as is usual), but by drawing them out as long as possible, nearly closing her eyes the while—imagine all this, and we have both the woman and the authoress before us.

CAROLINE M. KIRKLAND

Mrs. Kirkland's "New Home," published under the *nom de plume* of "Mary Clavers," wrought an undoubted sensation. The cause lay not so much in picturesque description, in racy humour, or in animated individual portraiture, as in *truth* and novelty. The West at the time was a field comparatively untrodden by the sketcher or the novelist. In certain works, to be sure, we had obtained brief glimpses of character strange to us sojourners in the civilised East, but to Mrs. Kirkland alone we were indebted for our acquaintance with the *home* and home-life of the backwoodsman. With a fidelity and vigour that prove her pictures to be taken from the very life, she has represented "scenes" that could have occurred only *as* and *where* she has described them. She has placed before us the veritable settlers of the forest, with all their peculiarities, national and individual; their free and fearless spirit; their homely utilitarian views; their shrewd out-looking for self-interest; their thrifty care and inventions multiform; their coarseness of manner united with real delicacy and substantial kindness when their sympathies are called into action—in a word, with all the characteristics of the Yankee, in a region where the salient points of character are unsmoothed by contact with society. So lifelike were her representations that they have been appropriated as individual portraits by many who have been disposed to plead, trumpet-tongued, against what they supposed to be "the deep damnation of their taking-off."

"Forest Life" succeeded "A New Home," and was read with equal interest. It gives us, perhaps, more of the philosophy of Western life, but has the same freshness, freedom, piquancy. Of course, a truthful picture of pioneer habits could never be given in any grave history or essay so well as in the form of narration, where each character is permitted to develop itself; narration, therefore, was very properly adopted by Mrs. Kirkland in both the books just

mentioned, and even more entirely in her later volume, "Western Clearings." This is the title of a collection of tales, illustrative, in general, of Western manners, customs, ideas. "The Land Fever" is a story of the wild days when the madness of speculation in land was at its height. It is a richly characteristic sketch, as is also "The Ball at Thram's Huddle." Only those who have had the fortune to visit or live in the "back settlements" can enjoy such pictures to the full. "Chances and Changes" and "Love *v.* Aristocracy" are more regularly constructed *tales,* with the "universal passion" as the moving power, but coloured with the glowing hues of the West. "The Bee Tree" exhibits a striking but too numerous class among the settlers, and explains, also, the depth of the bitterness that grows out of an unprosperous condition in that "Paradise of the Poor." "Ambuscades" and "Half-Lengths from Life" I remember as two piquant sketches to which an annual, a year or two ago, was indebted for a most unusual sale among the conscious and pen-dreading denizens of the West. "Half-Lengths" turns on the trying subject of *caste.* "The Schoolmaster's Progress" is full of truth and humour. The Western pedagogue, the stiff, solitary nondescript figure in the drama of a new settlement, occupying a middle position between "our folks" and "company," and "boarding round," is irresistibly amusing, and cannot fail to be recognised as the representative of a class. The occupation, indeed, always seems to mould those engaged in it—they all soon, like Master Horner, learn to "know well what belongs to the pedagogical character, and that facial solemnity stands high on the list of indispensable qualifications." The spelling-school, also, is a "new country" feature which we owe Mrs. Kirkland many thanks for recording. The incidents of "An Embroidered Fact" are singular and picturesque, but not particularly illustrative of the "Clearings." The same may be said of "Bitter Fruits from Chance-Sown Seeds"; but this abounds in capital touches of character: all the horrors of the tale are brought about through suspicion of *pride,* an accusation as destructive in the West as that of witchcraft in olden times, or the cry of mad dog in modern.

In the way of absolute *books,* Mrs. Kirkland, I believe, has achieved nothing beyond the three volumes specified (with another lately issued by Wiley and Putnam), but she is a very constant contributor to the magazines. Unquestionably, she is one of our best writers, has a province of her own, and in that province has few equals. Her most noticeable trait is a certain *freshness* of style, seemingly drawn, as her subjects in general, from the West. In the second place is to be observed a species of *wit,* approximating humour, and so interspersed with pure *fun,* that "wit," after all, is nothing like a definition of it. To give an example—"Old Thoughts on the New Year" commences with a quotation from Tasso's "Aminta":

> Il mondo invecchia
> E invecchiando intristisce;

and the following is given as a "free translation":—

> The world is growing older
> And wiser day by day;

Everybody knows beforehand
What you're going to say.
We used to laugh and frolic—
Now we must behave;
Poor old Fun is dead and buried—
Pride dug his grave.

This, if I am not mistaken, is the only specimen of *poetry* as yet given by Mrs. Kirkland to the world. She has afforded us no means of judging in respect to her inventive powers, although fancy, and even imagination, are apparent in everything she does. Her perceptive faculties enable her to *describe* with great verisimilitude. Her mere style is admirable, lucid, terse, full of variety, faultlessly pure, and yet bold—so bold as to appear heedless of the ordinary *decora* of composition. In even her most reckless sentences, however, she betrays the woman of refinement, of accomplishment, of unusually thorough education. There are a great many points in which her general manner resembles that of Willis, whom she evidently admires. Indeed, it would not be difficult to pick out from her works an occasional Willisism, not less palpable than happy. For example:—

"Peaches were like little green velvet buttons when George was first mistaken for Doctor Beaseley, and *before they were ripe he,"* etc.

And again—

"Mr. Hammond is fortunately settled in our neighbourhood, for the present at least; and he has the neatest little cottage in the world, standing, too, under a very tall oak, which bends kindly over it, looking like the Princess Glumdalclitch inclining her ear to the box which contained her pet Gulliver."

Mrs. Kirkland's personal manner is an echo of her literary one. She is frank, cordial, yet sufficiently dignified—even bold, yet especially lady-like; converses with remarkable accuracy as well as fluency; is brilliantly witty, and now and then not a little sarcastic, but a general amiability prevails.

She is rather above the medium height; eyes and hair dark; features somewhat small, with no marked characteristics, but the whole countenance beams with benevolence and intellect.

EPES SARGENT

Mr. Sargent is well known to the public as the author of "Velasco, a Tragedy," "The Light of the Lighthouse, with other Poems," one or two short *nouvellettes,* and numerous contributions to the periodicals. He was also the editor of *Sargent's Magazine,* a monthly work, which had the misfortune of falling between two stools, never having been able to make up its mind whether to be popular with the three or dignified with the five dollar journal. It was a "happy *medium*" between the two classes, and met the fate of all happy *media* in dying, as well through lack of foes as of friends. *In medio tutissimus ibis* is the worst advice in the world for the editor of a magzine. Its observance proved the downfall of Mr. Lowell and his really meritorious *Pioneer.*

"Velasco" has received some words of commendation from the author of "Ion," and I am ashamed to say, owes most of its home appreciation to this circumstance. Mr. Talfourd's play has, itself, little truly dramatic, with much picturesque and more poetical value; its author, nevertheless, is better en-

titled to respect as a dramatist than as a critic of dramas. "Velasco," compared with American tragedies generally, is a good tragedy—indeed, an excellent one, but positively considered, its merits are very inconsiderable. It has many of the traits of Mrs. Mowatt's "Fashion," to which, in its mode of construction, its scenic effects, and several other points, it bears as close a resemblance as in the nature of things it could very well bear. It is by no means improbable, however, that Mrs. Mowatt received some assistance from Mr. Sargent in the composition of her comedy, or at least was guided by his advice in many particulars of technicality.

"Shells and Sea Weeds," a series of brief poems, recording the incidents of a voyage to Cuba, is, I think, the best work in verse of its author, and evinces a fine fancy, with keen appreciation of the beautiful in natural scenery. Mr. Sargent is fond of sea pieces, and paints them with skill, flooding them with that warmth and geniality which are their character and their due. "A Life on the Ocean Wave" has attained great popularity, but is by no means so good as the less lyrical compositions, "A Calm," "The Gale," "Tropical Weather," and "A Night Storm at Sea." "The Light of the Lighthouse" is a spirited poem, with many musical and fanciful passages, well expressed. For example:

> But, oh, Aurora's crimson light,
> That makes the watch-fire dim,
> Is not a more transporting sight
> Than Ellen is to him.
> He pineth not for fields and brooks,
> Wild flowers and singing birds,
> For summer smileth in her looks
> And singeth in her words.

There is something of the Dibdin spirit throughout the poem, and indeed throughout all the sea poems of Mr. Sargent—a little *too much* of it, perhaps.

His prose is not quite so meritorious as his poetry. He writes "easily," and is apt at burlesque and sarcasm—both rather broad than original. Mr. Sargent has an excellent memory for good *hits*, and no little dexterity in their application. To those who meddle little with books, some of his satirical papers must appear brilliant. In a word, he is one of the most prominent members of a very extensive American family—the men of industry, talent, and tact.

In stature he is short—not more than five feet five—but well proportioned. His face is a fine one; the features regular and expressive. His demeanour is very gentlemanly. Unmarried, and about thirty years of age.

LYDIA M. CHILD

Mrs. Child has acquired a just celebrity by many compositions of high merit, the most noticeable of which are "Hobomok," "Philothea," and a "History of the Condition of Women." "Philothea," in especial, is written with great vigour, and as a classical romance is not far inferior to the "Anacharsis" of Barthelemi; its style is a model for purity, chastity, and ease. Some of her magazine papers are distinguished for graceful and brilliant *imagination*—a quality rarely noticed in our countrywomen. She continues to write a great deal for the monthlies and other journals, and invariably writes well. Poetry she has not often attempted, but I make no doubt that in this she would excel.

It seems, indeed, the legitimate province of her fervid and fanciful nature. I quote one of her shorter compositions, as well to instance (from the subject) her intense appreciation of genius in others as to exemplify the force of her poetic expression:—

MARIUS AMID THE RUINS OF CARTHAGE.

Pillars are fallen at thy feet,
  Fanes quiver in the air,
A prostrate city is thy seat,
  And thou alone art there.

No change comes o'er thy noble brow,
  Though ruin is around thee;
Thine eyebeam burns as proudly now
  As when the laurel crowned thee.

It cannot bend thy lofty soul
  Though friends and fame depart—
The car of Fate may o'er thee roll
  Nor crush thy Roman heart.

And genius hath electric power
  Which earth can never tame;
Bright suns may scorch and dark clouds lower,
  Its flash is still the same.

The dreams we loved in early life
  May melt like mist away;
High thoughts may seem, 'mid passion's strife,
  Like Carthage in decay;

And proud hopes in the human heart
  May be to ruin hurled,
Like mouldering monuments of art
  Heaped on a sleeping world;

Yet there is something will not die
  Where life hath once been fair;
Some towering thoughts still rear on high,
  Some Roman lingers there.

Mrs. Child, casually observed, has nothing particularly striking in her personal appearance. One would pass her in the street a dozen times without notice. She is low in stature and slightly framed. Her complexion is florid; eyes and hair are dark; features in general diminutive. The expression of her countenance, when animated, is highly intellectual. Her dress is usually plain, not even neat—anything but fashionable. Her bearing needs excitement to impress it with life and dignity. She is of that order of beings who are themselves only on "great occasions." Her husband is still living. She has no children. I need scarcely add that she has always been distinguished for her energetic and active philanthropy.

THOMAS DUNN ENGLISH

I HAVE seen one or two brief poems of considerable merit with the signature of *Thomas Dunn English* appended. For example:—

A sound melodious shook the breeze
  When thy beloved name was heard:
  Such was the music in the word,
  Its dainty rhythm the pulses stirred:
But passed for ever joys like these.
  There is no joy, no light, no day,
  But black despair and night *al-way*
    And thickening gloom:
  And this, Azthene, is my doom.

Was it for this, for weary years,
  I strove among the sons of men,
  And by *the magic of my pen*—

Just sorcery—walked the lion's den
Of slander, void of tears and fears—
And all for thee? For thee!—alas,
As is the image on a glass
So baseless *seems*,
Azthene, all my early *dreams*.

I must confess, however, that I do not appreciate the "dainty rhythm" of such a word as "Azthene," and, perhaps, there is a little taint of egotism in the passage about "the magic" of Mr. English's pen. Let us be charitable, however, and set all this down under the head of "pure imagination," or invention—one of the first of poetical requisites. The *inexcusable* sin of Mr. English is imitation—if this be not too mild a term. Barry Cornwall and others of the *bizarre* school are his especial favourites. He has taken, too, most unwarrantable liberties, in the way of downright plagiarism, from a Philadelphian poet whose high merits have not been properly appreciated—*Mr. Henry B. Hirst*.

I place Mr. English, however, on my list of New York *literati*, not on account of his poetry (which I presume he is not weak enough to estimate very highly), but on the score of his having edited for several months, "with the aid of numerous collaborateurs," a monthly magazine called *The Aristidean*. This work, although professedly a monthly, was issued at irregular intervals, and was unfortunate, I fear, in not attaining at any period a very extensive circulation.

I learn that Mr. English is not without talent; but the fate of *The Aristidean* should indicate to him the necessity of applying himself to study. No spectacle can be more pitiable than that of a man without the commonest school education, busying himself in attempts to instruct mankind on topics of polite literature. The absurdity in such cases does not lie merely in the ignorance displayed by the would-be instructor, but in the transparency of the shifts by which he endeavours to keep this ignorance concealed. The editor of *The Aristidean*, for example, was not laughed at so much on account of writing "lay" for "lie," etc., etc., and coupling nouns in the plural with verbs in the singular—as when he writes, above,

So baseless *seems*,
Azthene, all my early *dreams*—

he was not, I say, laughed at *so much* for his excusable deficiencies of English grammar (although an editor should certainly be able to write *his own name*) as that, in the hope of disguising such deficiency, he was perpetually lamenting the "typographical blunders," that "in the most unaccountable manner *would* creep into his work." Nobody was so stupid as to believe for a moment that there existed in New York a single proof-reader—or even a single printer's devil—who would have permitted *such* errors to escape. By the excuses offered, therefore, the errors were only the more manifestly nailed to the country as Mr. English's own.

I make these remarks in no spirit of unkindness. Mr. English is yet young—certainly not more than thirty-five—and might, with his talents, readily improve himself at points where he is most defective. No one of any generosity would think the worse of him for getting instruction.

I do not personally know Mr. Eng-

lish. He is, I believe, from Philadelphia, where he was formerly a doctor of medicine, and subsequently took up the profession of law; more latterly he joined the Tyler party and devoted his attention to politics. About his personal appearance there is nothing very observable. I cannot say whether he is married or not.

CATHERINE M. SEDGWICK

Miss Sedgwick is not only one of our most celebrated and most meritorious writers, but attained reputation at a period when *American* reputation in letters was regarded as a phenomenon; and thus, like Irving, Cooper, Paulding, Bryant, Halleck, and one or two others, she is indebted, certainly, for *some* portion of the esteem in which she was and is held, to our patriotic pride and gratitude to which I have already alluded, and for which we must make reasonable allowance in estimating the absolute merit of our literary pioneers.

Her earliest published work of any length was "A New England Tale," designed in the first place as a religious tract, but expanding itself into a volume of considerable size. Its success—partially owing, perhaps, to the influence of the parties for whom or at whose instigation it was written—encouraged the author to attempt a novel of somewhat greater elaborateness as well as length, and "Redwood" was soon announced, establishing her at once as the first female prose writer of her country. It was reprinted in England, and translated, I believe, into French and Italian. "Hope Leslie" next appeared—also a novel—and was more favourably received even than its predecessors. Afterwards came "Clarence," not quite so successful, and then "The Linwoods," which took rank in the public esteem with "Hope Leslie." These are all of her longer prose fictions, but she has written numerous shorter ones of great merit—such as "The Rich Poor Man, and the Poor Rich Man," "Live and Let Live" (both in volume form), with various articles for the magazines and annuals, to which she is still an industrious contributor. About ten years since she published a compilation of several of her fugitive prose pieces, under the title "Tales of Sketches," and a short time ago a series of "Letters from Abroad"—not the least popular or least meritorious of her compositions.

Miss Sedgwick has now and then been nicknamed "the Miss Edgeworth of America," but she has done nothing to bring down upon her the vengeance of so equivocal a title. That she has thoroughly studied and profoundly admired Miss Edgeworth may, indeed, be gleaned from her works—but what woman has not? Of imitation there is not the slightest perceptible taint. In both authors we observe the same tone of thoughtful morality, but here all resemblance ceases. In the Englishwoman there is far more of a certain Scotch prudence, in the American more of warmth, tenderness, sympathy for the weaknesses of her sex. Miss Edgeworth is the more acute, the more inventive, and the more rigid. Miss Sedgwick is the more womanly.

All her stories are full of interest. The "New England Tale" and "Hope Leslie" are especially so but upon the whole I am best pleased with "The Linwoods." Its prevailing features are

ease, purity of style, pathos, and verisimilitude. To plot it has little pretension. The scene is in America; the date, as the sub-title indicates, "Sixty years since." This, by-the-by, is taken from "Waverley." The adventures of the family of a Mr. Linwood, a resident of New York, form the principal theme. The character of this gentleman is happily drawn, although there is an antagonism between the initial and concluding touches—the end has forgotten the beginning, like the government of Trinculo. Mr. L. has two children, Herbert and Isabella. Being himself a Tory, the boyish impulses of his son in favour of the revolutionists are watched with anxiety and vexation; and on the breaking out of the war, Herbert, positively refusing to drink the king's health, is expelled from home by his father—an event on which hinges the main interest of the narrative. Isabella is the heroine proper, full of generous impulses, beautiful, intellectual, *spirituelle*—indeed a most fascinating creature. But the family of a Widow Lee throws quite a charm over all the book—a matronly, pious, and devoted mother, yielding up her son to the cause of her country—the son gallant, chivalrous, yet thoughtful; a daughter, gentle, loving, melancholy, and susceptible of light impressions. This daughter, Bessie Lee, is one of the most effective personations to be found in our fictitious literature, and may lay claims to the distinction of originality—no slight distinction where *character* is concerned. It is the old story, to be sure, of a meek and trusting heart broken by treachery and abandonment, but in the narration of Miss Sedgwick it breaks upon us with all the freshness of novel emotion. Deserted by her lover, an accomplished and aristocratical coxcomb, the spirits of the gentle girl sink gradually from trust to simple hope, from hope to anxiety, from anxiety to doubt, from doubt to melancholy, and from melancholy to madness. The gradation is depicted in a masterly manner. She escapes from her home in New England and endeavours to make her way alone to New York, with the object of restoring to him who had abandoned her some tokens he had given her of his love—an act which her disordered fancy assures her will effect in her own person a disenthralment from passion. Her piety, her madness, and her beauty stand her in stead of the lion of Una, and she reaches the city in safety. In that portion of the narrative which embodies this journey are some passages which no mind unimbued with the purest spirit of poetry could have conceived, and they have often made me wonder why Miss Sedgwick has never written a poem.

I have already alluded to her usual excellence of style, but she has a very peculiar fault—that of discrepancy between the words and character of the speaker—the fault, indeed, more properly belongs to the depicting of character itself.

For example, at page 38, vol. i, of "The Linwoods":—

"No more of thy contempt for the Yankees, Hal, an thou lovest me," replied Jasper. "You remember Æsop's advice to Crœsus at the Persian court?"

"No, I am sure I do not. You have the most provoking way of resting the lever, by which you bring out your own knowledge, on your friend's ignorance."

Now all this is pointed (although the last sentence would have been improved by letting the words "on your friend's ignorance" come immediately after "resting"), but it is by no means the language of schoolboys—and such are the speakers.

Again at page 226, vol. i, of the same novel:—

"Now, out on you, you lazy, slavish loons!" cried Rose. "Cannot you see these men are raised up to fight for freedom far more than themselves? If the chain be broken at one end, the links will fall apart sooner or later. When you see the sun on the mountain top, you may be sure it will shine into the deepest valleys before long."

Who would suppose this graceful eloquence to proceed from the mouth of a negro woman? Yet such is Rose.

Again at page 24, vol. i, same novel:—

"True, I never saw her; but I tell you, young lad, that there is such a thing as seeing the shadow of things far distant and past, and never seeing the realities, though they it be that cast the shadows."

Here the speaker is an old woman who, a few sentences before, has been boasting of her proficiency in *"tellin' fortins."*

I might object, too, very decidedly to the vulgarity of such a phrase as "I put in my oar" (meaning, "I joined in the conversation"), when proceeding from the mouth of so well-bred a personage as Miss Isabella Linwood. These are, certainly, most remarkable inadvertences.

As the author of many *books*—of several absolutely bound volumes in the ordinary "novel" form of auld lang syne, Miss Sedgwick has a certain adventitious hold upon the attention of the public, a species of tenure that has nothing to do with literature proper—a very decided advantage, in short, over her more modern rivals whom fashion and the growing influence *of the want* of an international copyright law have condemned to the external insignificance of the yellow-backed pamphleteering.

We must permit, however, neither this advantage nor the more obvious one of her having been one of our *pioneers* to bias the critical judgment, as it makes estimate of her abilities in comparison with those of her *present* contemporaries. She has neither the vigour of Mrs. Stephens, nor the vivacious grace of Miss Chubbuck, nor the pure style of Mrs. Embury, nor the classic imagination of Mrs. Child, nor the naturalness of Mrs. Annan, nor the thoughtful and suggestive originality of Miss Fuller; but in many of the qualities mentioned she excels, and in no one of them is she particularly deficient. She is an author of marked talent, but by no means of such decided genius as would entitle her to that precedence among our female writers which, under the circumstances to which I have alluded, *seems* to be yielded her by the voice of the public.

Strictly speaking, Miss Sedgwick is *not* one of the *literati* of New York city, but she passes here about half or rather more than half her time. Her home is Stockbridge, Massachusetts. Her family is one of the first in America.

Her father, Theodore Sedgwick the elder, was an eminent jurist, and descended from one of Cromwell's major-generals. Many of her relatives have distinguished themselves in various ways.

She is about the medium height, perhaps a little below it. Her forehead is an unusually fine one; nose of a slightly Roman curve; eyes dark and piercing; mouth well formed and remarkably pleasant in its expression. The portrait in *Graham's Magazine* is by no means a likeness, and, although the hair is represented as curled (Miss Sedgwick at present wears a cap—at least most usually), gives her the air of being much older than she is.

Her manners are those of a high-bred woman, but her ordinary *manner* vacillates in a singular way between cordiality and a reserve amounting to *hauteur*.

LEWIS GAYLORD CLARK

Mr. Clark is known principally as the twin-brother of the late *Willis* Gaylord Clark, the poet, of Philadelphia, with whom he has often been confounded from similarity both of person and of name. He is known, also, within a more limited circle, as one of the editors of *The Knickerbocker Magazine*, and it is in this latter capacity that I must be considered as placing him among literary people. He writes little himself, the editorial scraps which usually appear in fine type at the end of *The Knickerbocker* being the joint composition of a great variety of gentlemen (most of them possessing shrewdness and talent) connected with diverse journals about the city of New York. It is only in some such manner, as might be supposed, that so amusing and so heterogeneous a medley of chit-chat could be put together. Were a little more pains taken in elevating the *tone* of this "Editor's Table" (which its best friends are forced to admit is at present a little Boweryish), I should have no hesitation in commending it in general as a very creditable and very entertaining specimen of what may be termed easy writing and hard reading.

It is not, of course, to be understood from anything I have here said, that Mr. Clark does not occasionally contribute editorial matter to the magazine. His compositions, however, are far from numerous, and are always to be distinguished by their style, which is "more easily to be imagined than described." It has its merit, beyond doubt, but I shall not undertake to say that either "vigour," "force," or "impressiveness" is the precise term by which that merit should be designated. Mr. Clark once did me the honour to review my poems, and—I forgive him.

The Knickerbocker has been long established, and seems to have in it some important elements of success. Its title, for a merely local one, is unquestionably good. Its contributors have usually been men of eminence. Washington Irving was at one period regularly engaged. Paulding, Bryant, Neal, and several others of nearly equal note have also at various times furnished articles, although none of these gentlemen, I believe, continue their communications. In general the contributed matter has been praiseworthy; the printing, paper, and so forth, have been excellent, and there certainly has been no lack of exertion in the way of

what is termed "putting the work before the eye of the public"; still some incomprehensible *incubus* has seemed always to sit heavily upon it, and it has never succeeded in attaining *position* among intelligent or educated readers. On account of the manner in which it is necessarily edited, the work is deficient in that absolutely indispensable element, *individuality*. As the editor has no precise character, the magazine, as a matter of course, can have none. When I say "no precise character," I mean that Mr. C. as a literary man has about him no determinateness, no distinctiveness, no saliency of point;—an apple in fact, or a pumpkin, has more angles. He is as smooth as oil or a sermon from Doctor Hawks; he is noticeable for nothing in the world except for the markedness by which he is noticeable for nothing.

What is the precise circulation of *The Knickerbocker* at present I am unable to say; it has been variously stated at from eight to eighteen hundred subscribers. The former estimate is no doubt too low, and the latter, I presume, is far too high. There are perhaps some fifteen hundred copies printed.

At the period of his brother's decease, Mr. Lewis G. Clark bore to him a striking resemblance, but within the last year or two there has been much alteration in the person of the editor of *The Knickerbocker*. He is now, perhaps, forty-two or three, but still good-looking. His forehead is phrenologically bad—round and what is termed "bullety." The mouth, however, is much better, although the smile is too constant and lacks expression; the teeth are white and regular. His hair and whiskers are dark; the latter meeting voluminously beneath the chin. In height Mr. C. is about five feet ten or eleven, and in the street might be regarded as quite a "personable man"; in society I have never had the pleasure of meeting him. He is married, I believe.

ANNE C. LYNCH

Miss Anne Charlotte Lynch has written little;—her compositions are even too few to be collected in volume form. Her prose has been, for the most part, anonymous—critical papers in *The New York Mirror* and elsewhere, with unacknowledged contributions to the annuals, especially *The Gift*, and *The Diadem*, both of Philadelphia. Her "Diary of a Recluse," published in the former work, is, perhaps, the best specimen of her prose manner and ability. I remember, also, a fair *critique* on Fanny Kemble's poems;—this appeared in *The Democratic Review*.

In poetry, however, she has done better, and given evidence of, at least, unusual talent. Some of her compositions in this way are of merit, and one or two of excellence. In the former class I place her "Bones in the Desert," published in *The Opal* for 1846, her "Farewell to Ole Bull," first printed in *The Tribune*, and one or two of her sonnets—not forgetting some graceful and touching lines on the death of Mrs. Willis. In the latter class I place two noble poems, "The Ideal" and "The Ideal Found." These should be considered as one, for each is by itself imperfect. In modulation and vigour of rhythm, in dignity and elevation of sentiment, in metaphorical appositeness

and accuracy, and in energy of expression, I really do not know where to point out anything American much superior to them. Their ideality is not so manifest as their passion, but I think it an usual indication of taste in Miss Lynch, or (more strictly) of an intuitive sense of poetry's true nature, that this passion is just sufficiently subdued to lie within the compass of the poetic art, within the limits of the beautiful. A step farther, and it might have passed them. *Mere* passion, however exciting, prosaically excites; it is in its very essence homely, and delights in homeliness; but the *triumph over* passion, as so finely depicted in the two poems mentioned, is one of the purest and most idealising manifestations of moral beauty.

In character Miss Lynch is enthusiastic, chivalric, self-sacrificing, "equal to any fate," capable of even martyrdom in whatever should seem to her a holy cause—a most exemplary daughter. She has her hobbies, however (of which a very indefinite idea of "duty" is one), and is, of course, readily imposed upon by any artful person who perceives and takes advantage of this most amiable failing.

In person she is rather above the usual height, somewhat slender, with dark hair and eyes—the whole countenance at times full of intelligent expression. Her demeanour is dignified, graceful, and noticeable for repose. She goes much into literary society.

CHARLES FENNO HOFFMAN

Mr. Charles Fenno Hoffman has been long known to the public as an author. He commenced his literary career (as is usually the case in America) by writing for the newspapers—for *The New York American* especially, in the editorial conduct of which he became in some manner associated, at a very early age, with Mr. Charles King. His first *book*, I believe, was a collection (entitled "A Winter in the West") of letters published in *The American* during a tour made by their author through the "Far West." This work appeared in 1834, went through several editions, was reprinted in London, was very popular, and deserved its popularity. It conveys the *natural* enthusiasm of a true *idealist*, in the proper phrenological sense, of one sensitively alive to beauty in every development. Its scenic descriptions are vivid, because fresh, genuine, unforced. There is nothing of the cant of the tourist for the sake not of nature but of *tourism*. The author writes *what* he feels, and clearly, *because* he feels it. The style as well as that of all Mr. Hoffman's books, is easy, free from superfluities, and, although abundant in *brocade* phrases, still singularly refined, gentlemanly. This ability to speak boldly without blackguardism, to use the tools of the rabble when necessary without soiling or roughening the hands with their employment, is a rare and unerring test of the natural in contradistinction from the artificial aristocrat.

Mr. H's next work was "Wild Scenes in the Forest and Prairie," very similar to the preceding, but more diversified with anecdote and interspersed with poetry. "Greyslaer" followed, a romance based on the well-known murder of Sharp, the Solicitor-General of Kentucky, by Beauchampe. W. Gilmore Simms (who has far more power, more

passion, more movement, more skill than Mr. Hoffman) has treated the same subject more effectively in his novel "Beauchampe"; but the fact is that both gentlemen have positively failed, as might have been expected. That both books are interesting is no merit either of Mr. H. or of Mr. S. The real events were more impressive than are the fictitious ones. The *facts* of this remarkable tragedy, as arranged by actual circumstances, would put to shame the skill of the most consummate artist. Nothing was left to the novelist but the amplification of *character*, and at this point neither the author of "Greyslaer" nor of "Beauchampe" is especially *au fait*. The incidents might be better woven into a tragedy.

In the way of poetry, Mr. Hoffman has also written a good deal. "The Vigil of Faith and Other Poems" is the title of a volume published several years ago. The subject of the leading poem is happy—whether originally conceived by Mr. H. or based on an actual superstition, I cannot say. Two Indian chiefs are rivals in love. The accepted lover is about to be made happy, when his betrothed is murdered by the discarded suitor. The revenge taken is the careful *preservation* of the life of the assassin, under the idea that the meeting the maiden in another world is the point most desired by both the survivors. The incidents interwoven are picturesque, and there are many quotable passages; the descriptive portions are particularly good, but the author has erred, first, in narrating the story in the first person, and secondly, in putting into the mouth of the narrator language and sentiments above the nature of an Indian. I say that the narration should not have been in the first person, because, although an Indian may and does fully experience a thousand delicate shades of sentiment (the whole idea of the story is essentially sentimental), still he has, clearly, no capacity for their various *expression*. Mr. Hoffman's hero is made to discourse very much after the manner of Rousseau. Nevertheless, "The Vigil of Faith" is, upon the whole, one of our most meritorious poems. The shorter pieces in the collection have been more popular; one or two of the *songs* particularly so—"Sparkling and Bright," for example, which is admirably adapted to song purposes, and is full of lyric feeling. It cannot be denied, however, that, in general, the whole tone, air, and spirit of Mr. Hoffman's fugitive compositions are echoes of Moore. At times the very words and figures of the "British Anacreon" are unconsciously adopted. Neither can there be any doubt that this obvious similarity, if not positive imitation, is the source of the commendation bestowed upon our poet by *The Dublin University Magazine*, which declares him "the best song writer in America," and does him also the honour to intimate its opinion that "he is a better fellow than the whole Yankee crew" of us taken together—after which there is very little to be said.

Whatever may be the merits of Mr. Hoffman as a poet, it may be easily seen that these merits have been put in the worst possible light by the indiscriminate and lavish approbation bestowed on them by Mr. Griswold in his "Poets and Poetry of America." He can find *no* blemish in Mr. H., agrees with everything and copies everything said in his

praise—worse than all, gives him more space in the book than any two, or perhaps three of our poets combined. All this is as much an insult to Mr. Hoffman as to the public, and has done the former irreparable injury—how or why, it is of course unnecessary to say. "Heaven save us from our friends!"

Mr. Hoffman was the original editor of *The Knickerbocker Magazine,* and gave it while under his control a tone and character, the weight of which may be best estimated by the consideration that the work thence received an impetus which has sufficed to bear it on alive, although tottering, month after month, through even that dense region of unmitigable fog—that dreary realm of outer darkness, of utter and inconceivable dunderheadism, over which has so long ruled King Log the Second, in the august person of one Lewis Gaylord Clark, Mr. Hoffman subsequently owned and edited *The American Monthly Magazine,* one of the best journals we have ever had. He also for one year conducted *The New York Mirror,* and has always been a very constant contributor to the periodicals of the day.

He is the brother of Ogden Hoffman. Their father, whose famliy came to New York from Holland before the time of Peter Stuyvesant, was often brought into connection or rivalry with such men as Pickney, Hamilton, and Burr.

The character of no man is more universally esteemed and admired than that of the subject of this memoir. He has a host of friends, and it is quite impossible that he should have an enemy in the world. He is chivalric to a fault, enthusiastic, frank without discourtesy, an ardent admirer of the beautiful, a gentleman of *the best school*—a gentleman by birth, by education, and by instinct. His manners are graceful and winning in the extreme—quiet, affable, and dignified, yet cordial and *dégagés*. He converses much, earnestly, accurately, and well. In person he is remarkably handsome. He is about five feet ten in height, somewhat stoutly made. His countenance is a noble one—a full index of the character. The features are somewhat massive but regular. The eyes are blue or light grey, and full of fire; the mouth finely formed, although the lips have a slight expression of voluptuousness; the forehead, to my surprise, although high, gives no indication, in the region of the temples, of that ideality (or love of the beautiful) which is the distinguishing trait of his moral nature. The hair curls, and is of a dark brown, interspersed with grey. He wears full whiskers. Is about forty years of age. Unmarried.

MARY E. HEWITT

I AM not aware that Mrs. Hewitt has written any prose; but her poems have been many, and occasionally excellent. A collection of them was published, in an exquisitely tasteful form, by Ticknor and Co., of Boston. The leading piece, entitled "Songs of our Land," although the longest, was by no means the most meritorious. In general, these compositions evince poetic fervour, classicism, and keen appreciation both of moral and physical beauty. No one of them, perhaps, can be judiciously commended as a whole; but no one of them is without merit, and there are several which would do credit to any poet in the land. Still, even these latter are particularly rather than generally commendable.

They lack unity, totality—ultimate effect but abound in forcible passages.

Mrs. Hewitt has warm partialities for the sea and all that concerns it. Many of her best poems turn upon sea adventures, or have reference to a maritime life. Some portions of her "God bless the Mariner" are *naive* and picturesque: *e.g.*—

God bless the hardy mariner!
A homely garb wears he,
And he goeth *with a rolling gait,*
Like a ship before the sea.

He hath piped the loud ay, ay, sir!
O'er the voices of the main,
Till his deep tones have the hoarseness
Of the rising hurricane.

But oh, a spirit looketh
From out his clear blue eye,
With a truthful childlike earnestness,
Like an angel from the sky.

A venturous life the sailor leads
Between the sky and sea,
But, when the hour of dread is past,
A merrier who than he?

The tone of some quatrains entitled "Alone" differs materially from that usual with Mrs. Hewitt. The idea is happy and well managed.

Mrs. Hewitt's sonnets are upon the whole her most praiseworthy compositions. One entitled "Hercules and Omphale" is noticeable for the vigour of its rhythm:—

Reclined enervate on the couch of ease,
No more he pants for deeds of high emprise;
For Pleasure holds in soft, voluptuous ties
Enthralled, great Jove-descended Hercules.
The hand that bound the Erymanthian boar,
Hesperia's dragon slew, with bold intent,
That from his quivering side in triumph rent
The skin the Cleonæan lion wore,
Holds forth the goblet—while the Lydian queen,
Robed like a nymph, her brow enwreathed with vine,
Lifts high the amphora brimmed with rosy wine,
And pours the draught the crowned cup within.
And thus the soul, abased to sensual sway,
Its worth forsakes—its might forgoes for aye.

The unusual force of the line italicised will be observed. This force arises, first, from the directness, or colloquialism without vulgarity, of its expression—(above the relative pronoun "which" is very happily omitted between "skin" and "the")—and, secondly, from the musical repetition of the vowel in "Cleonæan," together with the alliterative terminations in "Cleonæ*an*" and "li*on.*" The effect, also, is much aided by the sonorous conclusion "wore."

Another and better instance of fine versification occurs in "Forgotten Heroes"—

And the peasant mother at her door,
To the babe that climbed her knee,

Sang aloud the land's heroic songs—
Sang of Thermopylæ—
Sang of Mycale—of Marathon—
Of proud Platæa's day—
Till the wakened hills from peak to peak
Echoed the glorious lay.
Oh, godlike name!—oh, godlike deed!
Song-borne afar on every breeze,
Ye are sounds to thrill like a battle shout,
Leonidas! Miltiades!

The general intention here is a line of four iambuses alternating with a line of three; but less through rhythmical skill than a musical ear, the poetess has been led into some exceedingly happy variations of the theme. For example:—in place of the ordinary iambus as the first foot of the first of the second, and of the third line, a bastard iambus has been employed. The fourth line is well varied by a trochee, instead of an iambus, in the first foot; and the variation expresses forcibly the enthusiasm excited by the topic of the supposed songs, "Thermopylæ." The fifth line is scanned as the three first. The sixth is the general intention, and consists simply of iambuses. The seventh is like the three first and the fifth. The eighth is like the fourth; and here again the opening trochee is admirably adapted to the *movement* of the topic. The ninth is the general intention, and is formed of four iambuses. The tenth is an alternating line, and yet has four iambuses, instead of the usual three; as has also the final line—an alternating one, too. A fuller volume is in this manner given to the close of the subject; and this volume is fully in keeping with the rising enthusiasm. The last line but one has *two* bastard iambuses.

Upon the whole, it may be said that the most skillful versifier could not have written lines better suited to the purposes of the poet. The errors of "Alone," however, and of Mrs. Hewitt's poems generally, show that we must regard the beauties pointed out above merely in the light to which I have already alluded—that is to say, an occasional happiness to which the poetess is led by a musical ear.

I should be doing this lady injustice were I not to mention that at times she rises into a higher and purer region of poetry than might be supposed or inferred from any of the passages which I have hitherto quoted. The conclusion of her "Ocean Tide to the Rivulet" puts me in mind of the rich spirit of Horne's noble epic "Orion"—

Sadly the flowers their faded petals close
Where on thy banks they languidly repose,
Waiting in vain to hear thee onward press;
And pale Narcissus by thy margin side
Hath lingered for thy coming, drooped, and died,
Pining for thee amid the loneliness.

Hasten, beloved!—*here! 'neath the o'erhanging rock!*
Hark! from the deep, my anxious hope to mock,
They call me back unto my parent main.
Brighter than Thetis thou—and *ah, more fleet!*
I hear the rushing of thy fair white feet!

Joy! joy—my breast receives its own
again!

The personifications here are well managed. The "Here! 'neath the o'erhanging rock!" has the high merit of being truthfully, by which I mean *naturally,* expressed, and imparts exceeding vigour to the whole stanza. The idea of the ebb-tide, conveyed in the second line italicised, is one of the happiest imaginable; and too much praise can scarcely be bestowed on the "rushing" of the "fair white feet." The passage altogether is full of fancy, earnestness, and the truest poetic strength. Mrs. Hewitt has given many such *indications* of a fire which, with more earnest endeavour, might be readily fanned into flame.

In character she is sincere, fervent, benevolent—sensitive to praise and to blame; in temperament melancholy; in manner subdued; converses earnestly yet quietly. In person she is tall and slender, with black hair and full grey eyes; complexion dark; general expression of the countenance singularly interesting and agreeable.

RICHARD ADAMS LOCKE

About twelve years ago, I think, *The New York Sun,* a daily paper, price one penny, was established in the city of New York by Mr. Moses Y. Beach, who engaged Mr. Richard Adams Locke as its editor. In a well-written prospectus, the object of the journal professed to be that of "supplying the public with the news of the day at so cheap a rate as to lie within the means of all." The consequences of the scheme, in their influence on the whole newspaper business of the country, and through this business on the interests of the country at large, are probably beyond all calculation.

Previous to *The Sun,* there had been an unsuccessful attempt at publishing a penny paper in New York, and *The Sun* itself was originally projected and for a short time issued by Messrs. Day and Wisner; its establishment, however, is altogether due to Mr. Beach, who purchased it of its disheartened originators. The first decided *movement* of the journal, nevertheless, is to be attributed to Mr. Locke; and in so saying, I by no means intend any depreciation of Mr. Beach, since in the engagement of Mr. L. he had but given one of the earliest instances of that unusual sagacity for which I am inclined to yield him credit.

At all events, *The Sun* was revolving in a comparatively narrow orbit when, one fine day, there appeared in its editorial columns a prefatory article announcing very remarkable astronomical discoveries made at the Cape of Good Hope by Sir John Herschel. The information was said to have been received by *The Sun* from an early copy of *The Edinburgh Journal of Science,* in which appeared a communication from Sir John himself. This preparatory announcement took very well (there had been no hoaxes in those days), and was followed by full details of the reputed discoveries, which were now found to have been made chiefly in respect to the moon, and by means of a telescope to which the one lately constructed by the Earl of Rosse is a plaything. As these discoveries were gradually spread before the public, the astonishment of that public grew out of all bounds; but

those who questioned the veracity of *The Sun*—the authenticity of the communication to *The Edinburgh Journal of Science*—were really very few indeed; and this I am forced to look upon as a far more wonderful thing than any "man-bat" of them all.

About six months before this occurrence, the Harpers had issued an American edition of Sir John Herschel's "Treatise on Astronomy," and I have been much interested in what is there said respecting the possibility of future lunar investigations. The theme excited my fancy, and I longed to give free rein to it in depicting my day-dreams about the scenery of the moon—in short, I longed to write a story embodying these dreams. The obvious difficulty, of course, was that of accounting for the narrator's acquaintance with the satellite; and the equally obvious mode of surmounting the difficulty was the supposition of an extraordinary telescope. I saw at once that the chief interest of such a narrative must depend upon the reader's yielding his credence in some measure as to details of actual fact. At this stage of my deliberations, I spoke of the design to one or two friends—to Mr. John P. Kennedy, the author of "Swallow Barn"; among others—and the result of my conversations with them was the optical difficulties of constructing such a telescope as I conceived were so rigid and so commonly understood that it would be in vain to attempt giving due verisimilitude to any fiction having the telescope as a basis. Reluctantly therefore, and only half convinced (believing the public, in fact, more readily gullible than did my friends), I gave up the idea of imparting very close verisimilitude to what I should write—that is to say, so close as really to deceive. I fell back upon a style half plausible, half bantering, and resolved to give what interest I could to an actual passage from the earth to the moon, describing the lunar scenery as if surveyed and personally examined by the narrator. In this view I wrote a story which I called "Hans Pfaall," publishing it about six months afterwards in *The Southern Literary Messenger*, of which I was then editor.

It was three weeks after the issue of *The Messenger* containing "Hans Pfaall" that the first of the "Moon-hoax" editorials made its appearance in *The Sun*, and no sooner had I seen the paper than I understood the jest, which not for a moment could I doubt had been suggested by my own *jeu d'esprit*. Some of the New York journals (*The Transcript* among others) saw the matter in the same light, and published the "Moon story" side by side with "Hans Pfaall," thinking that the author of the one had been detected in the author of the other. Although the details are, with some exceptions, very dissimilar, still I maintain that the general features of the two compositions are nearly identical. Both are *hoaxes* (although one is a *tone* of mere banter, the other of downright earnest); both hoaxes are on one subject, astronomy; both on the same point of that subject, the moon; both professed to have derived exclusive information from a foreign country, and both attempt to give plausibility by minuteness of scientific detail. Add to all this that nothing of a similar nature had ever been attempted before these two hoaxes, the one of which followed immediately upon the heels of the other.

Having stated the case, however, in

this form, I am bound to do Mr. Locke the justice to say that he denies having seen my article prior to the publication of his own; I am bound to add, also, that I believe him.

Immediately on the completion of the "Moon story" (it was three or four days in getting finished), I wrote an examination of its claims to credit, showing distinctly its fictitious character, but was astonished at finding that I could obtain few listeners, so really eager were all to be deceived, so magical were the charms of a style that served as the vehicle of an exceedingly clumsy invention.

It may afford even now some amusement to see pointed out those particulars of the hoax which should have sufficed to establish its real character. Indeed, however rich the imagination displayed in this fiction, it wanted much of the force which might have been given it by a more scrupulous attention to general analogy and to fact. That the public were misled, even for an instant, merely proves the gross ignorance which (ten or twelve years ago) was so prevalent on astronomical topics.

The singular blunders to which I have referred being properly understood, we shall have all the better reason for wonder at the prodigious *success* of the hoax. No one person in ten discredited it, and (strangest point of all!) the doubters were chiefly those who doubted without being able to say why—the ignorant, those uninformed in astronomy, people who *would not* believe because the thing was so novel, so entirely "out of the usual way." A grave professor of mathematics in a Virginian college told me seriously that he had *no doubt* of the truth of the whole affair! The great effect wrought upon the public mind is referable, first to *the novelty of the idea;* secondly, to the fancy-exciting and reason-repressing character of the alleged discoveries; thirdly, to the consummate tact with which the deception was brought forth; fourthly, to the exquisite *vraisemblance* of the narration. The hoax was circulated to an immense extent, was translated into various languages—was even made the subject of (quizzical) discussion in astronomical societies; drew down upon itself the grave denunciation of Dick, and was, upon the whole, decidedly the greatest *hit* in the way of *sensation*—of merely popular sensation—ever made by any similar fiction either in America or in Europe.

Having read the Moon story to an end, and found it anticipative of all the main points of my "Hans Pfaall," I suffered the latter to remain unfinished. The chief design in carrying my hero to the moon was to afford him an opportunity of describing the lunar scenery, but I found that he could add very little to the minute and authentic account of Sir John Herschel. The first part of "Hans Pfaall," occupying about eighteen pages of *The Messenger,* embraced merely a journal of the passage between the two orbs, and a few words of general observation on the most obvious features of the satellite; the second part will most probably never appear. I did not think it advisable even to bring my voyager back to his parent earth. He remains where I left him, and is still, I believe, "the man in the moon."

From the epoch of the hoax *The Sun* shone with unmitigated splendour. The start thus given the paper ensured it a triumph; it has now a daily circulation

of not far from fifty thousand copies, and is therefore, probably, the most really influential journal of its kind in the world. Its success firmly established "the penny system" throughout the country, and (*through the Sun*) consequently, we are indebted to the genius of Mr. Locke for one of the most important steps ever yet taken in the pathway of human progress.

On dissolving, about a year afterwards, his connection with Mr. Beach, Mr. Locke established a political daily paper, *The New Era,* conducting it with distinguished ability. In this journal he made, very unwisely, an attempt at a second hoax, giving the *finale* of the adventures of Mungo Park in Africa—the writer pretending to have come into possession, by some accident, of the lost MSS. of the traveler. No one, however, seemed to be deceived (Mr. Locke's columns were a suspected district), and the adventures were never brought to an end. They were richly imaginative.

The next point made by their author was the getting up a book on magnetism as the *primum mobile* of the universe, in connection with Doctor Sherwood, the practitioner of magnetic remedies. The more immediate purpose of the treatise was the setting forth a new magnetic method of obtaining the longitude. The matter was brought before Congress and received with favourable attention. What definite action was had I know not. A review of the work appeared in *The Army and Navy Chronicle,* and made sad havoc of the whole project. It was enabled to do this, however, by attacking in detail the accuracy of some calculations of no very radical importance. These and others Mr. Locke is now engaged in carefully revising, and my own opinion is that his theory (which he has reached more by dint of imagination than of anything else) will finally be established, although, perhaps, never thoroughly by *him.* His prose style is noticeable for its conciseness, luminousness, completeness, each quality in its proper place. He has that method so generally characteristic of genius proper. Everything he writes is a model in its peculiar way, serving just the purposes intended and nothing to spare. He has written some poetry which through certain radical misapprehensions is not so very good.

Like most men of true imagination, Mr. Locke is a seemingly paradoxical combination of coolness and excitability.

He is about five feet seven inches in height, symmetrically formed; there is an air of distinction about his whole person, the *air noble* of genius. His face is strongly pitted by the smallpox and perhaps, from the same cause there is a marked obliquity in the eyes; a certain, calm, clear luminousness, however, about these latter, amply compensates for the defect, and the forehead is truly beautiful in its intellectuality. I am acquainted with no person possessing so fine a forehead as Mr. Locke. He is married and about forty-five years of age, although no one would suppose him to be more than thirty-eight. He is a lineal descendant of the immortal author of the "Essay on the Human Understanding."

FRANCES SARGENT OSGOOD

Mrs. Osgood, for the last three or four years, has been rapidly attaining

distinction; and this, evidently, with no effort at attaining it. She seems, in fact, to have no object in view beyond that of giving voice to the fancies or the feelings of the moment. "Necessity," says the proverb, "is the mother of Invention," and the invention of Mrs. O., at least, springs plainly from necessity—from the necessity of invention. Not to write poetry—not to act it, think it, dream it, and be it, is entirely out of her power.

It may be questioned whether with more industry, more method, more definite purpose, more ambition, Mrs. Osgood would have made a more decided impression on the public mind. She might, upon the whole, have written better poems; but the chances are that she would have failed in conveying so vivid and so just an idea of her powers as a poet. The warm *abandonnement* of her style—that charm which now so captivates—is but a portion and a consequence of her unworldly nature—of her disregard of mere fame; but it affords us glimpses, which we could not otherwise have obtained, of a capacity for accomplishing what she has not accomplished, and in all probability never will. In the world of poetry, however, there is already more than enough of uncongenial ambition and pretence.

Mrs. Osgood has taken no care whatever of her literary fame. A great number of her finest compositions, both in verse and prose, have been written anonymously, and are now lying *perdus* about the country, in out-of-the-way nooks and corners. Many a goodly reputation has been reared upon a far more unstable basis than her unclaimed and uncollected "fugitive pieces."

Her first volume, I believe, was published, seven or eight years ago, by Edward Churton, of London, during the residence of the poetess in that city. I have now lying before me a second edition of it, dated 1842—a beautifully printed book, dedicated to the Reverend Hobard Caunter. It contains a number of what the Bostonians call "juvenile" poems, written when Mrs. O. (then Miss Locke) could not have been more than thirteen, and evincing unusual precocity. The leading piece is "Elfrida, a Dramatic Poem," but in many respects well entitled to the appellation "drama." I allude chiefly to the passionate expression of particular portions, to delineation of character, and to occasional scenic effect. In construction, or plot—in general conduct and plausibility, the play fails; comparatively, of course—for the hand of genius is evinced throughout.

The story is the well-known one of Edgar, Elfrida, and Earl Athelwood. The king, hearing of Elfrida's extraordinary beauty, commissions his favourite, Athelwood, to visit her and ascertain if report speaks truly of her charms. The earl, becoming himself enamoured, represents the lady as anything but beautiful or agreeable. The king is satisfied. Athelwood soon afterwards woos and weds Elfrida—giving Edgar to understand that the heiress's wealth is the object. The true state of the case, however, is betrayed by an enemy; and the monarch resolves to visit the earl at his castle and to judge for himself. Hearing of this resolve, Athelwood, in despair, confesses to his wife his duplicity, and entreats her to render null as far as possible the effect of her charms by dressing with unusual plainness. This the wife promises to

do; but, fired with ambition and resentment at the wrong done her, arrays herself in her most magnificent and becoming costume. The king is charmed, and the result is the destruction of Athelwood and the elevation of Elfrida to the throne.

These incidents are well adapted to dramatic purposes, and with more of that art which Mrs. Osgood does *not* possess, she might have woven them into a tragedy which the world would not willingly let die. As it is, she has merely succeeded in showing what she might, should, and could have done, and yet, unhappily, did not.

The character of Elfrida is the bright point of the play. Her beauty and her consciousness of it—her indignation and uncompromising ambition—are depicted with power. There is a fine blending of the poetry of passion and the passion of poetry in the lines which follow:—

. . . Why even now he bends
In courtly reverence to some mincing dame,
Haply the star of Edgar's festival,
While I, with this high heart and queenly form
Pine in neglect and solitude. Shall it *be?*
Shall I not rend my fetters and be free?
Ay!—be the cooing turtle-dove content,
Safe in her own loved nest!—the eagle soars
On restless plumes to meet the imperial sun.
And Edgar is my day-star in whose light
This heart's proud wings shall yet be furled to rest.
Why wedded I with Athelwood? For this?
No!—even at the altar when I stood—
My hand in his, his gaze upon my cheek—
I did forget his presence and the scene;
A gorgeous vision rose before mine eyes
Of power and pomp and regal pageantry;
A king was at my feet, and as he knelt,
I smiled, and turning met—a husband's kiss.
But still I smiled—for in my guilty soul
I blessed him as the being by whose means
I should be brought within my idol's sphere—
My haughty, glorious, brave, impassioned Edgar!
Well I remember when these wondering eyes
Beheld him first. I was a maiden then—
A dreaming child—but from that thrilling hour
I've been a queen in visions!

Very similar, but even more glowing, is the love-inspired eloquence of Edgar:—

Earth hath no language, love, befitting thee,
For its own children it hath pliant speech;
And mortals know to call a blossom fair,
A wavelet graceful, and a jewel rich;
But thou!—oh, teach me, sweet, the angel tongue
They talked in Heaven ere thou didst leave its bowers
To bloom below!

To this Elfrida replies:—

If Athelwood should hear thee!

And to this Edgar:—

Name not the felon knave to me, Elfrida!
My soul is flame whene'er I think of him,
Thou lovest him not?—oh, *say* thou dost not love him!

The answer of Elfrida at this point is profoundly true to nature, and would alone suffice to assure any critic of Mrs. Osgood's dramatic talent:—

When but a child I saw thee in my dreams!

The woman's soul here shrinks from the direct avowal of want of love for her husband, and flies to poetry and appeals to fate, by way of excusing that infidelity which is at once her glory and her shame.

In general, the "situations" of "Elfrida" are improbable or ultra-romantic, and its incidents inconsequential, seldom furthering the business of the play. The *denouement* is feeble, and its moral of very equivocal tendency indeed—but I have already shown that it is the especial office neither of poetry nor of the drama to inculcate truth, unless incidentally. Mrs. Osgood, however, although she has unquestionably failed in writing a good play, has even in failing, given indication of dramatic power. The great tragic element, passion, breathes in every line of her composition, and had she but the art, or the patience to model or control it, she might be eminently successful as a playwright. I am justified in these opinions not only by "Elfrida," but by "Woman's Trust, a Dramatic Sketch," included, also, in the English edition.

A Masked Ball. Madelon and a Stranger in a Recess.

Mad. Why hast thou led me here?
My friends may deem it strange—unmaidenly,
This lonely converse with an unknown mask.
Yet in thy voice there is a thrilling power
That makes me love to linger. It is like
The tone of one far distant—only his
Was gayer and more soft.
Strang. Sweet Madelon!
Say thou wilt smile upon the passionate love
That thou alone canst waken! Let me hope!
Mad. Hush! Hush! I may not hear thee. Know'st thou not
I am betrothed?
Strang. Alas! too well I know;
But I could tell thee such a tale of him—
Thine early love—'twould fire those timid eyes
With lightning pride and anger—curl that lip—
That gentle lip to passionate contempt
For man's light falsehood. Even now he bends—
Thy Rupert bends o'er one as fair as thou,
In fond affection. Even now in his heart—
Mad. Doth my eye flash?—doth my lip curl with scorn?
'Tis scorn of thee, thou perjured stranger, not—
Oh, not of him, the generous and the true!

Hast thou e'er seen my Rupert?—hast thou met
Those proud and fearless eyes that never quailed,
As Falsehood quails, before another's glance—
As thine even now are shrinking from mine own—
The spirit beauty of that open brow—
The noble head—the free and gallant step—
The lofty mien whose majesty is won
From inborn honour—hast thou seen all this?
And darest thou speak of faithlessness and him
In the same idle breath? Thou little know'st
The strong confiding of a woman's heart,
When woman loves as—I do. Speak no more!

Strang. Deluded girl! I tell thee he is false—
False as yon fleeting cloud!

Mad. True as the sun!

Strang. The very wind less wayward than his heart!

Mad. The forest oak less firm! He loves me not
For the frail rose-hued and the fleeting light
Of youthful loveliness—ah, many a cheek
Of softer bloom, and many a dazzling eye
More rich than mine may win my wanderer's gaze.
He loved me for my love, the deep, the fond—
For my unfaltering truth; he cannot find—
Rove where he will—a heart that beats for him
With such intense, absorbing tenderness—
Such idolising constancy as mine.
Why should he change, then?—I am still the same.

Strang. Sweet infidel! *wilt* thou have ruder proof?
Rememberest thou a little golden case
Thy Rupert wore, in which a gem was shrined?
A gem I would not barter for a world—
An angel face; its *sunny wealth of hair*
In radiant ripples bathed the graceful throat
And dimpled shoulders; round the rosy curve
Of the sweet mouth a smile seemed wandering ever
While in the depths of azure fire that gleamed
Beneath the drooping lashes, slept a world
Of eloquent meaning, passionate yet pure—
Dreamy—subdued—but oh, how beautiful!
A look of timid, pleading tenderness
That should have been a talisman to charm
His restless heart for aye. Remembrest thou?

Mad. (*impatiently*). I do—I do remember—'twas my own.
He prized it as his life—I gave it him—
What of it?—speak!

Strang. (*showing a miniature*). Lady, behold that gift!

Mad. (*clasping her hands*). Merciful Heaven! is my Rupert dead?
(*After a pause, during which she seems overwhelmed with agony.*)
How died he?—when?—oh, *thou* wast by his side
In that last hour and I was far away!

My blessed love!—give me that token!
—speak!
What message sent he to his Madelon?
Strang. (*supporting her and strongly agitated.*)
He is not dead, dear lady!—grieve not thus!
Mad. He is not false, sir stranger!
Strang. For thy sake,
Would he were worthier! One other proof
I'll give thee, loveliest! if thou lov'st him still,
I'll not believe thee, woman. Listen, then!
A faithful lover breathes not of his bliss
To other ears. Wilt hear a fable, lady?

Here the stranger details some incidents of the first wooing of Madelon by Rupert, and concludes with—

Lady, my task is o'er—dost doubt me still?
Mad. Doubt thee, my Rupert! ah, I know thee now.
Fling by that hateful mask!—let me unclasp it!
No! thou wouldst *not* betray thy Madelon.

The "Miscellaneous Poems" of the volume—many of them written in childhood—are, of course, various in character and merit. "The Dying Rosebud's Lament," although by no means one of the best, will very well serve to show the earlier and most characteristic manner of the poetess:—

Ah, me!—ah, wo is me,
That I should perish now,
With the dear sunlight just let in
Upon my balmy brow.

My leaves, instinct with glowing life,
Were quivering to unclose:
My happy heart with love was rife—
I was almost a rose.

Nerved by a hope, warm, rich, intense,
Already I had risen
Above my cage's curving fence—
My green and graceful prison.

My pouting lips, by Zephyr pressed,
Were just prepared to part,
And whispered to the wooing wind
The rapture of my heart.

In new-born fancies revelling,
My mossy cell half-riven,
Each thrilling leaflet seemed a wing
To bear me into Heaven.

How oft, while yet *an infant flower,*
My crimson cheek I've laid
Against the green bars of my bower,
Impatient of the shade.

And, pressing up and peeping through
Its small but precious vistas,
Sighed for the lovely light and dew
That blessed my elder sisters.

I saw the *sweet breeze rippling o'er*
Their leaves that loved the play,
Though the light thief stole all the store
Of dew-drop gems away.

I thought how happy I should be
Such diamond wreaths to wear,
And frolic with a rose's glee
With sunbeam, bird, and air.

Ah, me!—ah, wo is me, that I,
Ere yet my leaves unclose,
With all my wealth of sweets *must die*
Before I am a rose!

The poetical reader will agree with me that few things have ever been written (by any poet, at any age) more delicately fanciful than the passages italicised—and yet they are the work of a girl not more than fourteen years of age. The clearness and force of expression, and the nice appositeness of the overt and insinuated meaning, are, when we consider the youth of the writer, even more remarkable than the fancy.

I cannot speak of Mrs. Osgood's poems without a strong propensity to ring the changes upon the indefinite word "grace" and its derivatives. About everything she writes we perceive this indescribable charm—of which, perhaps, the elements are a vivid fancy and a quick sense of the proportionate. Grace, however, may be most satisfactorily defined as "a term applied, in despair, to that class of the impressions of Beauty which admit of no analysis." It is in this irresoluble effect that Mrs. Osgood excels any poetess of her country—and it is to this easily appreciable effect that her *popularity* is owing. Nor is she more graceful herself than a lover of the graceful, under whatever guise it is presented to her consideration. The sentiment renders itself manifest, in innumerable instances, as well throughout her prose as her poetry. Whatever be her theme, she at once extorts from it its whole essentiality of *grace*. Fanny Ellsler has been often lauded; true poets have sung her praises; but we look in vain for anything written about her, which so distinctly and vividly paints her to the eye as the half-dozen quatrains which follow. They are to be found in the English volume:—

She comes!—the spirit of the dance!
And but for those large eloquent eyes,
Where passion speaks in every glance,
She'd seem a wanderer from the skies.

So light that, *gazing breathless there,*
Lest the celestial dream should go,
You'd think the music in the air
Waved the fair vision to and fro;

Or think the melody's sweet flow
Within the radiant creature played,
And those soft wreathing arms of snow
And white sylph feet the music made.

Now gliding slow with dreamy grace,
Her eyes beneath their lashes lost,
Now motionless, with lifted face,
And small hands on her bosom crossed.

And now with flashing eyes she springs—
Her whole bright figure raised in air,
As if her soul had spread its wings
And poised her one wild instant there!

She spoke not—but, so richly fraught
With language are her glance and smile,
That, when the curtain fell, I thought
She had been talking all the while.

This is, indeed, poetry—and of the most unquestionable kind—poetry *truthful* in the proper sense—that is to say, breathing of Nature. There is here nothing forced or artificial—no hardly sustained enthusiasm. The poetess speaks because she feels, and *what* she feels; but then what she feels is felt only by the truly poetical. The thought in the last line of the third quatrain will not be so fully appreciated by the reader as it should be; for lat-

terly it has been imitated, plagiarised, repeated *ad infinitum*—but the other passages italicised have still left them all their original effect. The idea in the two last lines is exquisitely *naive* and natural; that in the two last lines of the second quatrain, beautiful beyond measure; that of the whole fifth quatrain, *magnificent*—unsurpassed in the entire compass of American poetry. It is instinct with the noblest poetical requisite—imagination.

Of the same trait I find, to my surprise, one of the best exemplifications among the "Juvenile Rhymes."

For Fancy is a fairy that can hear,
Ever, the melody of Nature's voice
And see all lovely visions that she will.
She drew *a picture of a beauteous bird*
With plumes of radiant green and gold inwoven,
Banished from its beloved nesting-place,
And fluttering in vain hope from tree to tree,
And bade us think how, like it, the sweet season
From one bright shelter to another fled—
First from the maple waved her emerald pinions,
But lingered still upon the oak and elm,
Till, frightened by rude breezes even from them,
With mournful sigh she moaned her sad farewell.

The little poem called "The Music Box" has been as widely circulated as any of Mrs. Osgood's compositions. The melody and harmony of this *jeu d'esprit* are perfect, and there is in it a rich tint of that epigrammatism for which the poetess is noted. Some of the *intentional* epigrams interspersed through the works are peculiarly happy. Here is one which, while replete with the rarest "spirit of point," is yet something more than pointed:—

TO AN ATHEIST POET

Lovest thou the music of the sea?
Callest thou the sunshine bright?
His voice is more than melody—
His smile is more than light.

Here, again, is something very similar:—

Fanny shuts her smiling eyes,
Then because she cannot see,
Thoughtless simpleton! she cries
Ah! you can't see me.

Fanny's like the sinner vain
Who, with spirit shut and dim,
Thinks, because he sees not Heaven
Heaven beholds not him.

Is it not a little surprising, however, that a writer capable of so much precision and finish as the author of these epigrams *must* be, should have failed to see how much of force is lost in the inversion of "the sinner vain?" Why not have written "Fanny's like the silly sinner?"—or, if "silly" be thought too jocose, "the blinded sinner?" The rhythm, at the same time, would thus be much improved by bringing the lines,

Fanny's like the silly sinner,
Thinks because he sees not Heaven,

into *exact* equality.

In mingled epigrams and *espieglerie* Mrs. Osgood is even more especially at

home. I have seldom seen anything in this way more happily done than the song entitled *"If he can."*

"The Unexpected Declaration" is, perhaps, even a finer specimen of the same manner. It is one of that class of compositions which Mrs. Osgood has made almost exclusively her own. Had I seen it without her name, I should have had no hesitation in ascribing it to her; for there is no other person—in America certainly—who does anything of a similar kind with anything like a similar piquancy.

The point of this poem, however, might have been sharpened, and the polish increased in lustre, by the application of the emery of brevity. From what the lover says much might well have been omitted; and I should have preferred leaving out altogether the autorial comments, for the story is fully told without them. The "Why do you weep?" "Why do you frown?" and "Why do you smile?" supply all the imagination requires; to supply *more* than it requires, oppresses and offends it. Nothing more deeply grieves it—or more vexes the true taste in general than *hyperism* of any kind. In Germany, *Wohlgeboren* is a loftier title than *Edelgeboren;* and in Greece, the thrice victorious at the Olympic games could claim a statue of the size of life, while he who had conquered but once was entitled *only* to a colossal one.

The English collection of which I speak was entitled "A Wreath of Wild Flowers from New England." It met with a *really* cordial reception in Great Britain—was favourably noticed by the *Literary Gazette, Times, Atlas, Monthly Chronicle,* and especially by the *Court Journal, The Court and Ladies' Magazine, La Belle Assemblee,* and other similar works. "We have long been familiar," says the high authority of the *Literary Gazette,* "with the name of our fair author. . . . Our expectations have been fulfilled, and we have here a delightful gathering of the sweetest of wild flowers, all looking as fresh and beautiful as if they had grown in the richest of English pasture in place of having been 'nursed by the cataract.' True, the wreath might have been improved with a little more care—a trifling attention or two paid to the formation of it. A stalk here and there, that obtrudes itself between the bells of the flowers, might have become so interwoven as to have been concealed, and the whole have looked as if it had grown in that perfect and beautiful form. Though, after all, we are perhaps too chary; for in Nature every leaf is not ironed out to a form, nor propped up with a wiry precision, but blown and ruffled by the refreshing breezes, and looking as careless and easy and unaffected as a child that bounds along with its silken locks tossed to and fro just as the wind uplifts them. Page after page of this volume have we perused with a feeling of pleasure and admiration." The *Court Journal* more emphatically says:—"Her wreath is one of violets, sweet-scented, pure, and modest; so lovely that the hand that wove it should not neglect additionally to enrich it by turning her love and kindness to things of larger beauty. Some of the smaller lyrics in the volume are *perfectly* beautiful—beautiful in their chaste and exquisite simplicity and the perfect elegance of their composition." In fact, there was *that* about "The Wreath of Wild Flowers"—that inex-

pressible *grace* of thought and manner —which never fails to find ready echo in the hearts of the aristocracy and refinement of Great Britain;—and it was here especially that Mrs. Osgood found welcome. Her husband's merits as an artist had already introduced her into distinguished society (she was petted, in especial, by Mrs. Norton and Rogers), but the publication of her poems had at once an evidently favourable effect upon his fortunes. His pictures were placed in a most advantageous light by her poetical and conversational ability.

Messrs. Clarke and Austin, of New York, have lately issued another, but still a very incomplete collection of "Poems by Frances S. Osgood." In general, it includes by no means the best of her works. "The Daughter of Herodias"—one of her longest compositions, and a very noble poem, putting me in mind of the best efforts of Mrs. Hemans—is omitted. In Messrs. C. and A.'s collection there occur, too, very many of those half-sentimental, half-allegorical compositions of which, at one period, the authoress seemed to be particularly fond—for the reason, perhaps, that they afforded her good opportunity for the exercise of her ingenuity and epigrammatic talent;—no poet, however, can admit them to be poetry at all. Still the volume contains some pieces which enable us to take a new view of the powers of the writer. A few additional years, with their inevitable sorrow, appear to have stirred the depths of her *heart*. We see less of frivolity—less of vivacity—more of tenderness—earnestness — even passion —and far more of the true imagination as distinguished from its subordinate, fancy. The one prevalent trait, *grace*, alone distinctly remains. "The Spirit of Poetry," "To Sibyl," "The Birth of the Callitriche," and "The Child and its Angel-Playmate" would do honour to any of our poets. "She Loves Him Yet," nevertheless, will serve better than either of these poems to show the alteration of manner referred to. The verses commencing, "Yes, lower to the level," are in a somewhat similar tone, but are more noticeable for their terse energy of expression.

In not presenting to the public at one view all that she has written in verse, Mrs. Osgood has incurred the risk of losing that credit to which she is entitled on the score of versatility—of variety in invention and expression. There is scarcely a form of poetical composition in which she has not made experiment; and there is none in which she has not very happily succeeded. Her defects are chiefly negative and by no means numerous. Her versification is sometimes exceedingly good, but more frequently feeble through the use of harsh consonants, and such words as *"thou'dst"* for *"thou wouldst,"* with other unnecessary contractions, inversions, and obsolete expressions. Her imagery is often mixed;—indeed, it is rarely otherwise. The epigrammatism of her conclusions gives to her poems, as wholes, the air of being more skilfully constructed than they really are. On the other hand, we look in vain throughout her works for an offence against the finer taste, or against decorum—for a low thought or a platitude. A happy refinement—an instinct of the pure and delicate—is one of her most noticeable excellences. She may be properly commended, too, for origi-

nality of poetic invention, whether in the conception of a theme or in the manner of treating it. Consequences of this trait are her point and piquancy. Fancy and *naivete* appear in all she writes. Regarding the loftier merits, I am forced to speak of her in more measured terms. She has occasional passages of true imagination — but scarcely the glowing, vigorous, and *sustained* ideality of Mrs. Maria Brooks—or even, in general, the less ethereal elevation of Mrs. Welby. In that indescribable something, however, which, for want of a more definite term, we are accustomed to call "grace"—that charm so magical, because at once so shadowy and so potent—that Will o' the Wisp, which, in its *supreme* development, may be said to involve nearly *all* that is valuable in poetry—she has, unquestionably, no rival among her countrywomen.

Of pure prose—of prose proper—she has perhaps never written a line in her life. Her usual magazine papers are a class by themselves. She begins with a resolute effort at being sedate—that is to say, sufficiently prosaic and matter-of-fact for the purpose of a legend or an essay; but after a few sentences, we behold uprising the leaven of the Muse; then with a flourish, and some vain attempts at repression, a scrap of verse renders itself manifest; then comes a little poem outright; then another and another and another, with impertinent patches of prose in between —until at length the mask is thrown fairly off and far away, and the whole article—sings.

Upon the whole, I have spoken of Mrs. Osgood so much in detail, less on account of what she has actually done than on account of what I perceive in her the ability to do.

In character she is ardent, sensitive, impulsive—the very soul of truth and honour; a worshipper of the beautiful, with a heart so radically artless as to seem abundant in art; universally admired, respected, and beloved. In person, she is about the medium height, slender even to fragility, graceful whether in action or repose; complexion usually pale; hair black and glossy; eyes a clear luminous grey, large, and with singular capacity for expression.

VOLUME XI

*Stephens' Arabia Petraea**

(Published in *New York Review,* October, 1837.—Ed.)

Mr. Stephens has here given us two volumes of more than ordinary interest —written with a freshness of manner, and evincing a manliness of feeling, both worthy of high consideration. Although in some respects deficient, the work too presents some points of moment to the geographer, to the antiquarian, and more especially to the theologian. Viewed only as one of a class of writings, whose direct tendency is to throw light upon the Book of Books, it has strong claims upon the attention of all who read. While the vast importance of critical and philological research in dissipating the obscurities and determining the exact sense of the Scriptures cannot be too readily conceded, it may be doubted whether the collateral illustration derivable from records of travel be not deserving at least equal consideration. Certainly the evidence thus afforded, exerting an enkindling influence upon the popular imagination, and so taking palpable hold upon the popular understanding, will not fail to become in time a most powerful because easily available instrument in the downfall of unbelief. Infidelity itself has often afforded unwilling and unwitting testimony to the truth. It is surprising to find with what unintentional precision both Gibbon and Volney (among others) have used, for the purpose of *description,* in their accounts of nations and countries, the identical phraseology employed by the inspired writers when foretelling the most improbable events. In this manner scepticism has been made the root of belief, and the providence of the Deity has been no less remarkable in the extent and nature of the means for bringing to light the evidence of his accomplished word, than in working the accomplishment itself.

Of late days, the immense stores of biblical elucidation derivable from the East have been rapidly accumulating in the hands of the student. When the "Observations" of Harmer were given to the public, he had access to few other works than the travels of Chardin, Pococke, Shaw, Maundrell, Pitts, and D'Arvieux, with perhaps those of Nau and Troilo, and Russell's "Natural History of Aleppo." We have now a vast accession to our knowledge of Oriental regions. Intelligent and observing men, impelled by the various motives of Christian zeal, military adventure, the love of gain, and the love of science, have made their way, often at imminent risk, into every land rendered holy by the words of revelation. Through the medium of the pencil, as well as of the pen, we are even familiarly acquainted with the territories of the Bible. Valuable books of eastern travel

* This author received so much money for his work that Cooper, the then most popular novelist, could not compare with him.—Ed.

are abundant—of which the labours of Niebuhr, Mariti, Volney, Porter, Clarke, Chateaubriand, Burckhardt, Buckingham, Morier, Seetzen, Lamartine, Laborde, Tournefort, Madden, Maddox, Wilkinson, Arundell, Mangles, Leigh, and Hogg, besides those already mentioned, are merely the principal, or the most extensively known. As we have said, however, the work before us is not to be lightly regarded: highly agreeable, interesting, and instructive, in a general view, it also has, in the connection now adverted to, claims to public attention possessed by no other book of its kind.

In an article prepared for this journal some months ago, we had traced the route of Mr. Stephens with a degree of minuteness not desirable now, when the work has been so long in the hands of the public. At this late day we must be content with saying briefly, in regard to the earlier portion of the narrative, that, arriving at Alexander in December, 1835, he thence passed up the Nile as far as the Lower Cataracts. One or two passages from this part of the tour may still be noted for observation. The annexed speculations, in regard to the present city of Alexandria, are well worth attention:—

The present city of Alexandria, even after the dreadful ravages made by the plague last year, is still supposed to contain more than fifty thousand inhabitants, and is decidedly growing. It stands outside the Delta in the Libyan Desert, and as Volney remarks, "It is only by the canal which conducts the waters of the Nile into the reservoirs in the time of inundation that Alexandria can be considered as connected with Egypt." Founded by the great Alexander, to secure his conquests in the East, being the only safe harbour along the coast of Syria or Africa, and possessing peculiar commercial advantages, it soon grew into a giant city. Fifteen miles in circumference, containing a population of three hundred thousand citizens and as many slaves, one magnificent street, two thousand feet broad, ran the whole length of the city, from the Gate of the Sea to the Canopic Gate, commanding a view at each end of the shipping, either in the Mediterranean or in the Mareotic Lake, and another of equal length intersected it at right angles; a spacious circus without the Canopic Gate, for chariot-races, and on the east a splendid gymnasium more than six hundred feet in length, with theatres, baths, and all that could make it a desirable residence for a luxurious people. When it fell into the hands of the Saracens, according to the report of the Saracen general to the Caliph Omar, "it was impossible to enumerate the variety of its riches and beauties"; and it is said to "have contained four thousand palaces, four thousand baths, four hundred theatres or public edifices, twelve thousand shops, and forty thousand tributary Jews." From that time, like everything else which falls into the hands of the Mussulman, it has been going to ruin, and the discovery of the passage to India by the Cape of Good Hope gave the death-blow to its commercial greatness. At present it stands a phenomenon in the history of a Turkish dominion. It appears once more to be raising its head from the dust. It remains to be seen whether this rise is the legitimate and permanent effect of a wise and politic

government, combined with natural advantages, or whether the pacha is not forcing it to an unnatural elevation, at the expense, if not upon the ruins, of the rest of Egypt. It is almost presumptuous, on the threshold of my entrance into Egypt, to speculate upon the future condition of this interesting country; but it is clear that the pacha is determined to build up the city of Alexandria if he can; his fleet is here, his army, his arsenal, and his forts are here; and he has forced and centred here a commerce that was before divided between several places. Rosetta has lost more than two-thirds of its population. Damietta has become a mere nothing, and even Cairo the Grand has become tributary to what is called the regenerated city (vol. i, pp. 21, 22).

We see no presumption in this attempt to speculate upon the future condition of Egypt. Its destinies are matter for the attentive consideration of every reader of the Bible. No words can be more definitive, more utterly free from ambiguity, than the prophecies concerning this region. No events could be more wonderful in their nature, nor more impossible to have been foreseen by the eye of man, than the events foretold concerning it. With the earliest ages of the world its line of monarchs began, and the annihilation of the entire dynasty was predicted during the zenith of that dynasty's power. One of the most lucid of the biblical commentators has justly observed that the very attempt once made by infidels to show, from the recorded number of its monarchs and the duration of their reigns, that Egypt was a kingdom previous to the Mosaic era of the deluge, places in most striking view the extraordinary character of the prophecies regarding it. During two thousand years prior to these predictions Egypt had never been without a prince of its own; and how oppressive was its tyranny over Judea and the neighbouring nations! It, however, was distinctly foretold that this country of kings should no longer have one of its own—that it should be laid waste by the hand of strangers—that it should be a base kingdom, the basest of the base—that it should *never* again exalt itself among the nations—that it should be a desolation surrounded by desolation. Two thousand years have now afforded their testimony to the infallibility of the Divine word, and the evidence is still accumulating. "Its past and present degeneracy bears not a more remote resemblance to the former greatness and pride of its power than the frailty of its mud-walled fabric now bears to the stability of its imperishable pyramids." But it should be remembered that there are other prophecies concerning it which still await their fulfilment. "The whole earth shall rejoice, and Egypt *shall not be for ever base*. The Lord shall smite Egypt; he shall smite and heal it; and they shall be entreated of them, and shall heal them. In that day shall Isaac be the third with Egypt and with Assyria, even a blessing in the midst of the land" (Isa. xix. 19-25). In regard to the present degree of political power and importance to which the country has certainly arisen under Mohammed Aly (an importance unknown for many centuries), the fact, as Mr. Keith observes in his valuable "Evidence of Prophecy," may possibly serve, at no distant period, to illustrate

the prediction which implies, that however base and degraded it might be throughout many generations, it would, notwithstanding, have strength sufficient to be looked to for aid or protection, even at the time of the restoration of the Jews to Judea, who will seek "to strengthen themselves in the strength of Pharoah, and trust in *the shadow of Egypt.*" How emphatically her present feeble prosperity is, after all, but the *shadow* of the Egypt of the Pharaohs we leave to the explorer of her pyramids, the wanderer among the tombs of her kings or the fragments of her Luxor and her Carnac.

At Djiddeh, formerly the capital of Upper Egypt and the largest town on the Nile, Mr. Stephens encountered two large boat-loads of slaves—probably five or six hundred—collected at Dongola and Senuaar.

"In the East," he writes, "slavery exists now precisely as it did in the days of the patriarchs. The slave is received into the family of a Turk, in a relation more confidential and respectable than that of an ordinary domestic, and when liberated, which very often happens, stands upon the same footing with a freeman. The curse does not rest upon him for ever; he may sit at the same boards, dip his hand in the same dish, and, if there are no other impediments, may marry his master's daughter."

Morier says, in his "Journey through Persia":—

The manners of the East, amidst all the changes of government and religion, are *still the same.* They are living impressions from an original mould; and, at every step, some object, some idiom, some dress, or some custom of common life, reminds the traveller of ancient times, and confirms, above all, the beauty, the accuracy, and the propriety of the language and the history of the Bible.

Sir John Chardin also, in the Preface to his "Travels in Persia," employs similar language:—

And the learned, to whom I communicated my design, encouraged me very much by their commendations to proceed in it; and more especially when I informed them that it is not in Asia, as in our Europe, where there are frequent changes, more or less, in the form of things, as the habits, buildings, gardens, and the like. In the East they are constant in all things. The habits are at this day in the same manner as in the precedent ages; so that one may reasonably believe that, in that part of the world, the exterior forms of things (as their manners and customs) are the same now as they were two thousand years since, except in such changes as have been introduced by religion, which are nevertheless very inconsiderable.

Nor is such striking testimony unsupported. From all sources we derive evidence of the conformity, almost of the identity, of the modern with the ancient usages of the East. This steadfast resistance to innovation is a trait remarkably confined to the regions of biblical history, and (it should not be doubted) will remain in force until it shall have fulfilled all the important purposes of biblical elucidation. Here-

after, when the ends of Providence shall be thoroughly answered, it will not fail to give way before the influence of that very Word it has been instrumental in establishing; and the tide of civilization, which has hitherto flowed continuously, from the rising to the setting sun, will be driven back, with a partial ebb, into its original channels.

Returning from the cataracts, Mr. Stephens found himself safely at Cairo, where terminated his journeyings upon the Nile. He had passed "from Migdol to Syene, even unto the borders of Ethiopia." In regard to the facilities, comforts, and minor enjoyments of the voyage, he speaks of them in a manner so favourable that many of our young countrymen will be induced to follow his example. It is an amusement, he says, even ridiculously cheap, and attended with no degree of danger. A boat with ten men is procured for thirty or forty dollars a month, fowls for three piastres a pair, a sheep for a half or three quarters of a dollar, and eggs for the asking. "You sail under your own country's banner; and when you walk along the river, if the Arabs look particularly black and truculent, you proudly feel that there is safety in its folds."

We now approach what is by far the most interesting and the most important portion of his tour. Mr. Stephens had resolved to visit Mount Sinai, proceeding thence to the Holy Land. If he should return to Suez, and thus cross the desert to El Arich and Gaza, he would be subjected to a quarantine of fourteen days on account of the plague in Egypt; and this difficulty might be avoided by striking through the heart of the desert lying between Mount Sinai and the frontier of Palestine. This route was beset with danger; but, apart from the matter of avoiding quarantine, it had other strong temptations for the enterprise and enthusiasm of the traveller—temptations not to be resisted. "The route," says Mr. Stephens, "was hitherto untravelled," and, moreover, it lay through a region upon which has long rested, and still rests, a remarkable curse of the Divinity, issued through the voices of his prophets. We allude to the land of Idumaea—the Edom of the Scriptures. Some English friends, who first suggested this route to Mr. Stephens, referred him, for information concerning it, to Keith on the Prophecies. Mr. Keith, as our readers are aware, contends for the *literal* fulfilment of prophecy, and in the treatise in question brings forward a mass of evidence, and a world of argument, which we, at least, are constrained to consider, as a whole irrefutable. We look upon the *literalness* of the understanding of the Bible predictions as an *essential* feature in prophecy—conceiving minuteness of detail to have been but a portion of the providential plan of the Deity for bringing more visibly to light, in after-ages, the *evidence* of the fulfilment of his word. No general meaning attached to a prediction, no general fulfilment of such prediction, could carry, to the reason of mankind, inferences so unquestionable, as its particular and minutely incidental accomplishment. General statements, except in rare instances, are susceptible of misinterpretation or misapplication: details admit no shadow of ambiguity. That, in many striking cases, the words of the prophets have been brought to pass in every particular of a series of mi-

nutiæ, whose very meaning was unintelligible before the period of fulfilment, is a truth that few are so utterly stubborn as to deny. We mean to say that, in *all* instances, the most strictly literal interpretation will apply. There is, no doubt, much unbelief founded upon the *obscurity* of the prophetic expression; and the question is frequently demanded —wherein lies the use of this obscurity? —why are not the prophecies distinct? —these words, it is said, are incoherent, unintelligible, and should be therefore regarded as untrue. That many prophecies are absolutely unintelligible should not be denied—it is a part of their essence that they should be. The obscurity, like the apparently irrelevant detail, has its object in the providence of God. Were the words of inspiration, affording insight into the events of futurity, *at all times* so pointedly clear that he who runs might read, they would in many cases, even when fulfilled, afford a rational ground for unbelief in the inspiration of their authors, and consequently in the whole truth of revelation; for it would be supposed that these distinct words, exciting union and emulation among Christians, had thus been merely the means of working out their own accomplishment. It is for this reason that the most of the predictions become intelligible only when viewed from the proper point of observation—the period of fulfilment. Perceiving this, the philosophical thinker, and the Christian, will draw no argument from the obscurity, against the verity, of prophecy. Having seen palpably, incontrovertibly fulfilled, even one of these many wonderful predictions, of whose meaning, until the day of accomplishment, he could form no conception; and having thoroughly satisfied himself that no human foresight could have been equal to such amount of foreknowledge, he will await, in confident expectation, that moment certainly to come when the darkness of the veil shall be uplifted from the others.

KEITH

We cannot do better than quote here the words of a writer in the *London Quarterly Review*. "Twenty years ago we read certain portions of the prophetic Scriptures with a belief that they were true, because other similar passages had in the course of ages been proved to be so; and we had an indistinct notion that all these, to us obscure and indefinite denunciations, had been —we knew not very well when or how— accomplished; but to have graphic descriptions, ground plans, and elevations showing the actual existence of all the heretofore vague and shadowy denunciations of God against Edom, does, we confess, excite our feelings, and exalt our confidence in prophecy to a height that no external evidence has hitherto done."

Many prophecies, it should be remembered, are in a state of gradual fulfilment—a chain of evidence being thus made to extend throughout a long series of ages, for the benefit of man at large, without being confined to one epoch or generation, which would be the case in a fulfilment suddenly coming to pass. Thus, some portion of the prophecies concerning Edom has reference to the year of recompense for the controversy of Sion.

One word in regard to the work of Keith. Since penning this article we

have been grieved to see, in a New York daily paper, some strictures on this well-known treatise, which we think unnecessary, if not positively unjust; and which, indeed, are little more than a revival of the old story trumped up for purposes of its own, and in the most bitter spirit of unfairness, by the *London Quarterly Review*. We allude especially to the charge of plagiarism from the work of Bishop Newton. It would be quite as reasonable to accuse Dr. Webster of having stolen his Dictionary from Dr. Johnson, or any other compiler of having plundered any other. But the work of Keith, as we learn from himself, was written hastily, for the immediate service and at the urgent solicitation of a friend, whose faith wavered in regard to the Evidences of Prophecy, and who applied to the author to aid his unbelief with a condensed view of these Evidences. In the preface of the book thus composed, with no view to any merits of authorship, and, indeed, with none except that of immediate utility, there is found the fullest disclaimer of all pretension to originality—surely motives and circumstances such as these should have sufficed to secure Dr. Keith from the unmeaning charges of plagiarism which have been so pertinaciously adduced! We do not mean to deny that, in the blindness of his zeal, and in the firm conviction entertained by him of the general truth of his assumptions, he frequently adopted surmises as facts, and did essential injury to his cause by carrying out his positions to an unwarrantable length. With all its inaccuracies, however, his work must still be regarded as one of the most important triumphs of faith, and beyond doubt as a most lucid and conclusive train of argument.

Having expressed our belief in the literal fulfilment of prophecy in *all* cases,* and having suggested, as one reason for the non-prevalence of this belief, the improper point of view from which we are accustomed to regard it, it remains to be seen what were the principal predictions in respect to Idumaea.

From generation to generation it shall lie waste; *none shall pass through it* for ever and ever. But the cormorant and the bittern shall possess it; the owl also and the raven shall dwell in it; and he shall stretch out upon it the line of confusion and the stones of emptiness. They shall call the nobles thereof to the kingdom, but none shall be there, and all her princes shall be nothing. And thorns shall come up in her palaces, nettles and brambles in the fortresses thereof; and it shall be a habitation of dragons and a court for owls. The wild beasts of the desert shall also meet with the wild beasts of the island, and the satyr shall cry to his fellow; the screech-owl also shall rest there, and find for herself a place of rest. There shall the great owl make her nest, and lay and hatch, and gather under her shadow; there shall the vultures also be gathered, every one with her mate. Seek ye out of the Book of the Lord, and read; no one of these shall fail, none shall want her mate;

* Of course it will be understood that a proper allowance must be made for the usual hyperbolical tendency of the language of the East.

for my mouth it hath commanded, and his spirit it hath gathered them. And he hath cast the lot for them, and his hand hath divided it unto them by line; they shall possess it for ever and ever, from generation to generation shall they dwell therein (Isaiah xxxiv. 5, 10-17). Thus will I make Mount Seir most desolate, and *cut off from it him that passeth out and him that returneth* (Ezekiel xxxv. 7).

In regard to such of the passages here quoted as are not printed in italics, we must be content with referring to the treatise of Keith already mentioned, wherein the evidences of the fulfilment of the predictions in their most minute particulars are gathered into one view. We may as well, however, present here the substance of his observations respecting the words—"none shall pass through it for ever and ever," and "thus will I make Mount Seir desolate, and cut off from it him that passeth out and him that returneth."

He says that Volney, Burckhardt, Joliffe, Henniker, and Captains Irby and Mangles adduce a variety of circumstances, all conspiring to prove that Idumaea, which was long resorted to from every quarter, is so beset on every side with dangers to the traveller, that literally *none pass through it;* that even the Arabs of the neighbouring regions, whose home is the desert, and whose occupation is wandering, are afraid to enter it, or to conduct any within its borders. He says, too, that amid all this manifold testimony to its truth, there is not, in any single instance, the most distant allusion to the prediction—that the evidence is unsuspicious and undesigned.

A Roman road passed directly through Idumaea from Jerusalem to Akaba, and another from Akaba to Moab; and when these roads were made, at a time long posterior to the date of the predictions, the conception could not have been formed, or held credible by man, that the period would ever arrive when none should pass through it. Indeed, seven hundred years after the date of the prophecy, we are informed by Strabo that the roads were actually in use. The prediction is yet more surprising, he says, when viewed in conjunction with that which implies that travellers should *pass* by Idumaea—"every one that goeth by shall be astonished." The routes of the pilgrims from Damascus, and from Cairo to Mecca, the one on the east and the other towards the south of Edom, along the whole of its extent, go by it, or touch partially on its borders, *without going through it.*

Not even, he says, the cases of Seetzen and Burckhardt can be urged against the literal fulfilment, although Seetzen actually *did* pass through Idumaea, and Burckhardt traversed a considerable portion of it. The former died not long after the completion of his journey; and the latter never recovered from the effects of the hardships endured on the route—dying at Cairo. "Neither of them," we have given the precise words of Mr. Keith, "lived to return to Europe. *I will cut off from Mount Seir him that passeth out and him that returneth.* Strabo mentions that there was a direct road from Petra to Jericho, of three or four days' journey. Captains Irby and Mangles were eighteen days in reaching it from Jerusalem. They did not *pass*

through Idumaea, and they did return. Seetzen and Burckhardt did pass through it, and they did *not* return."

"The words of the prediction," he elsewhere observes, "might well be understood as merely implying that Idumaea would cease to be a thoroughfare for the commerce of the nations which adjoined it, and that its highly frequented marts would be forsaken as centres of intercourse and traffic; and easy would have been the task of demonstrating its truth in this limited sense which scepticism itself ought not to be unwilling to authorize."

Here is, no doubt, much inaccuracy and misunderstanding; and the exact boundaries of ancient Edom are, apparently, not borne in mind by the commentator. Idumaea proper was, strictly speaking, only the mountainous tract of country east of the valley of El-Ghor. The Idumaeans, if we rightly apprehend, did not get possession of any portion of the south of Judea till after the exile, and consequently until after the prophecies in question. They then advanced as far as Hebron, where they were arrested by the Maccabees. That "Seetzen actually did pass through Idumaea," cannot therefore be asserted; and thus much is in favour of the whole argument of Dr. Keith, while in contradiction to a branch of that argument. The traveller in question (see his own Narrative), pursuing his route on the east of the Dead Sea, proceeded no farther in this direction than to Kerek, when he retraced his way—afterwards going from Hebron to Mount Sinai, over the desert eastward of Edom. Neither is it strictly correct that he "died not long after the completion of his journey." Several years afterwards he was actively employed in Egypt, and finally died; not from constitutional injury sustained from any former adventure, but, if we remember, from the effects of poison administered by his guide in a journey from Mocha into the heart of Arabia. We see no ground either for the statement that Burckhardt owed his death to hardships endured in Idumaea. Having visited Petra, and crossed the western desert of Egypt in the year 1812, we find him, four years afterwards, sufficiently well, at Mount Sinai. He did not die until the close of 1817, and then of a diarrhœa brought about by the imprudent use of cold water.

But let us dismiss these and some other instances of misstatement. It should not be a matter of surprise, that, perceiving, as he no doubt did, the *object* of the circumstantiality of prophecy, clearly seeing in how many wonderful cases its minutiæ had been fulfilled, and withal being thoroughly imbued with a love of truth, and with that zeal which is becoming in a Christian, Dr. Keith should have plunged somewhat hastily or blindly into these inquiries, and pushed to an improper extent the principle for which he contended. It should be observed that the passage cited just above in regard to Seetzen and Burckhardt is given in a footnote, and has the appearance of an afterthought, about whose propriety its author did not feel perfectly content. It is certainly very difficult to reconcile the literal fulfilment of the prophecy with an acknowledgment militating so violently against it as we find in his own words—"Seetzen actually *did pass through* Idumaea, and Burckhardt *travelled through* a considerable portion of

it." And what we are told subsequently in respect to Irby and Mangles, and Seetzen and Burckhardt—that those *did not* pass through Idumaea and *did* return, while these *did* pass through and *did not* return—where a passage from Ezekiel is brought to sustain collaterally a passage from Isaiah—is certainly not in the spirit of literal investigation—partaking, indeed, somewhat of *equivoque*.

But in regard to the possibility of the actual passage through Edom, we might now consider all ambiguity at an end, could we suffer ourselves to adopt the opinion of Mr. Stephens, that he himself had at length traversed the disputed region. What we have said already, however, respecting the proper boundaries of that Idumaea to which the prophecies have allusion, will assure the reader that we cannot entertain this idea. It will be clearly seen that he did not *pass through* the Edom of Ezekiel. That he might have done so, however, is sufficiently evident. The indomitable perseverance which bore him up amid the hardships and dangers of the route actually traversed, would, beyond doubt, have sufficed to ensure him a successful passage even through Idumaea the proper. And this we say, maintaining still an unhesitating belief in the literal understanding of the prophecies. It is essential, however, that these prophecies be literally rendered; and it is a matter for regret as well as surprise, that Dr. Keith should have failed to determine so important a point as the exactness or falsity of the version of his text. This we will now briefly examine.

Isaiah xxxiv. 10.—"For an eternity";—"of eternities";—"not";—"moving about";—"in it." "For an eternity of eternities (there shall) not (be any one) moving about in it." The literal meaning is *"in it,"* not "through it." The participle refers to one moving to and fro or up and down, and is the same term which is rendered *"current,"* as an epithet of money, in Genesis xxiii. 16. The prophecy means that there shall be no marks of life in the land, no living being there, no one moving up and down in it; and are, of course, to be taken with the usual allowance for that hyperbole which is a main feature, and indeed the genius of the language.

Ezekiel xxxv. 7.—"and I will give";—"the mountain";—"Seir";—"for a desolation";—"and a desolation";—"and I will cut off";—"from it";—"him that goeth";—"and him that returneth." "And I will give Mount Seir for an utter desolation, and will cut off from it him *that passeth and repasseth therein.*" The reference here is the same as in the previous passage, and the inhabitants of the land are alluded to as moving about therein, and actively employed in the business of life. The meaning of "passing and repassing" is sanctioned by Gesenius, s. v. vol. ii. p. 570, Leo's Trans. Compare Zachariah vii. 14, and ix. 8. There is something analogous in the Hebrew-Greek phrase occurring in Acts ix. 28. Kai aen met autoen eisporeuomenos kai ekporeuomenos en Ierousalaem. (Gr.) "And he was with them in Jerusalem coming in and going out." The Latin "versatus est" conveys the meaning precisely; which is, that Saul, the new convert, was on intimate terms with the true believers in Jerusalem, moving about among them to and fro, or in and out. It is plain, therefore, that the

words of the prophets, in both cases, and when literally construed, intend only to predict the general desolation and abandonment of the land. Indeed, it should have been taken into consideration, that a strict prohibition on the part of the Deity of an entrance into, or passage through, Idumaea, would have effectually cut off from mankind all evidence of this prior sentence of desolation and abandonment; the prediction itself being thus rendered a dead letter, when viewed in regard to its ulterior and most important purpose—the dissemination of the faith.

Mr. Stephens was strongly dissuaded from his design. Almost the only person who encouraged him was Mr. Gliddon, our consul; and but for him the idea would have been abandoned. The dangers indeed were many, and the difficulties more. By good fortune, however, the Sheik of Akaba was then at Cairo. The great yearly caravan of pilgrims for Mecca was assembling beneath the walls, and he had been summoned by the pacha to escort and protect them through the desert as far as Akaba. He was the chief of a powerful tribe of Bedouins, maintaining in all its vigor the independence of their race, and bidding defiance to the pacha, while they yielded him such obedience as comported with their own immediate interests.

With this potentate our traveller entered into negotiation. The precise service required of him was to conduct Mr. Stephens from Akaba to Hebron, through the land of Edom, diverging to visit the excavated city of Petra—a journey of about ten days. A very indefinite arrangement was at length made. Mr. Stephens after visiting Mount Sinai was to repair to Akaba, where he would meet the escort of the Bedouin. With a view to protection on his way from Cairo to the Holy Mountain the latter gave him his signet, which he told him would be respected by all Arabs on the route.

The arrangements for the journey as far as Mount Sinai had been made for our traveller by Mr. Gliddon. A Bedouin was procured as guide who had been with M. Laborde to Petra, and whose faith as well as capacity could be depended upon. The caravan consisted of eight camels and dromedaries, with three young Arabs as drivers. The tent was the common tent of the Egyptian soldiers, bought at the Government factory, being very light, easily carried and pitched. The bedding was a mattress and coverlet; provision, bread, biscuit, rice, macaroni, tea, coffee, dried apricots, oranges, a roasted leg of mutton, and two large skins containing the filtered water of the Nile. Thus equipped the party struck immediately into the desert lying between Cairo and Suez, reaching the latter place with but little incident, after a journey of four days. At Suez our traveller, wearied with his experiment of the dromedary, made an attempt to hire a boat, with a view of proceeding down the Red Sea to Tor, supposed to be the Elim, or place of palm-trees mentioned in the Exodus of the Israelites, and only two days' journey from Mount Sinai. The boats, however, were all taken by pilgrims, and none could be procured—at least for so long a voyage. He accordingly sent off his camels round the head of the gulf, and crossing himself by water, met them on the Petraean side of the sea.

"I am aware," says Mr. Stephens, "that there is some dispute as to the precise spot where Moses crossed; but, having no time for scepticism on such matters, I began by making up my mind that this was the place, and then looked around to see whether, according to the account given in the Bible, the face of the country and the natural landmarks did not sustain my opinion. I remember I looked up to the head of the gulf, where Suez or Kolsum now stands, and saw that almost to the very head of the gulf there was a high range of mountains which it would be necessary to cross, an undertaking which it would have been physically impossible for 600,000 people, men, women, and children, to accomplish, with a hostile army pursuing them. At Suez Moses could not have been hemmed in as he was; he could go off into the Syrian desert, or, unless the sea has greatly changed since that time, round the head of the gulf. But here, directly opposite where I sat, was an opening in the mountains, making a clear passage from the desert to the shore of the sea. It is admitted that from the earliest history of the country there was a caravan route from the Rameseh of the Pharaohs to this spot, and it was perfectly clear to my mind that, if the account be true at all, Moses had taken that route; that it was directly opposite me, between the two mountains, where he had come down with his multitude to the shore; and that it was there he had found himself hemmed in, in the manner described in the Bible, with the sea before him, and the army of Pharaoh in his rear; it was there he stretched out his hand and divided the waters; and probably on the very spot where I sat the children of Israel had kneeled upon the sands to offer thanks to God for his miraculous interposition. The distance too was in confirmation of this opinion. It was about twenty miles across; the distance which that immense multitude, with their necessary baggage, could have passed in the space of time (a night) mentioned in the Bible. Besides my own judgment and conclusions, I had authority on the spot, in my Bedouin Toualeb, who talked of it with as much certainty as if he had seen it himself; and by the waning light of the moon, pointed out the metes and bounds according to the tradition received from his fathers."

Mr. Stephens is here greatly in error, and has placed himself in direct opposition to all authority on the subject. It is quite evident that since the days of the miracle, the sea *has* "greatly changed" round the head of the gulf. It is now several feet lower, as appears from the alluvial condition of several bitter lakes in the vicinity. On this topic Niebuhr, who examined the matter with his accustomed learning, acumen, and perseverance, is indisputable authority. But he merely agrees with all the most able writers on this head. The passage occurred at Suez. The chief arguments sustaining this position are deduced from the ease by which the miracle could have been wrought on a sea so shaped, by means of a strong wind blowing from the north-east.

Resuming his journey to the southward, our traveller passed safely through a barren and mountainous region, bare of verdure, and destitute of water, in about seven days to Mount

Sinaï. It is to be regretted that in his account of a country so little traversed as this peninsula Mr. Stephens has not entered more into detail. Upon his adventures at the Holy Mountain, which are of great interest, he dwells somewhat at length.

At Akaba he met the Sheik as by agreement. A horse of the best breed of Arabia was provided, and, although suffering from ill-health, he proceeded manfully through the desert to Petra and Mount Hor. The difficulties of the route proved to be chiefly those arising from the rapacity of his friend, the Sheik of Akaba, who threw a thousand impediments in his way with the purpose of magnifying the importance of the service rendered, and obtaining, in consequence, the larger allowance of *backsheesh*.

The account given of Petra agrees in all important particulars with those rendered by the very few travellers who had previously visited it. With these accounts our readers are sufficiently acquainted. The singular character of the city, its vast antiquity, its utter loss, for more than a thousand years, to the eyes of the civilized world, and above all the solemn denunciations of prophecy regarding it, have combined to invest these ruins with an interest beyond that of any others in existence, and to render what has been written concerning them familiar knowledge to nearly every individual who reads.

Leaving Petra, after visiting Mount Hor, Mr. Stephens returned to the valley of El-Ghor, and fell into the caravan route for Gaza, which crosses the valley obliquely. Coming out from the ravine among the mountains to the westward, he here left the road to Gaza, and pushed immediately on to Hebron. This distance (between the Gaza route and Hebron) is, we believe, the only positively *new* route accomplished by our American tourist. We understand that in 1826 Messieurs Strangeways and Anson passed over the ground, on the Gaza road from Petra, to the point where it deviates for Hebron. On the part of Mr. Stephens' course, which we have thus designated as new, it is well known that a great public road existed in the later days of the Roman empire, and that several cities were located immediately upon it. Mr. Stephens discovered some ruins, but his state of health, unfortunately, prevented a minute investigation. Those which he encountered are represented as forming rude and shapeless masses; there were no columns, no blocks of marble, or other large stones, indicating architectural greatness. The Pentinger Tables place Helusa in this immediate vicinity, and, but for the character of the ruins seen, we might have supposed them to be the remnants of that city.

The latter part of our author's second volume is occupied with his journeyings in the Holy Land, and principally with an account of his visit to Jerusalem. What relates to the Dead Sea we are induced to consider as, upon the whole, the most interesting, if not the most important portion of his book. It was his original intention to circumnavigate this lake, but the difficulty of procuring a boat proved an obstacle not to be surmounted. He traversed, nevertheless, no little extent of its shores, bathed in it, saw distinctly that the Jordan *does* mingle with its

waters, and that birds floated upon it, and flew over its surface.

But it is time that we conclude. Mr. Stephens passed through Samaria and Galilee, stopping at Nablous (the ancient Sychem), the burial-place of the patriarch Joseph, and the ruins of Sebaste; crossed the battle-plain of Jezreel; ascended Mount Tabor; visited Nazareth, the Lake of Genesareth, the cities of Tiberias and Saphet, Mount Carmel, Acre, Tyre, and Sidon. At Beyroot he took passage for Alexandria, and thence finally returned to Europe.

The volumes are written in general with a freedom, a frankness, and an utter absence of pretension, which will secure them the respect and goodwill of all parties. The author professes to have compiled his narrative merely from "brief notes and recollections," admitting that he has probably fallen into errors regarding facts and impressions—errors he has been prevented from seeking out and correcting by the urgency of other occupations since his return. We have, therefore, thought it quite as well not to trouble our readers, in this cursory review, with references to parallel travels, now familiar, and whose merits and demerits are sufficiently well understood.

We take leave of Mr. Stephens with sentiments of hearty respect. We hope it is not the last time we shall hear from him. He is a traveller with whom we shall like to take other journeys. Equally free from the exaggerated sentimentality of Chateaubriand, or the sublimated, the *too French* enthusiasm of Lamartine on the one hand, and on the other from the degrading spirit of utilitarianism, which sees in mountains and waterfalls only quarries and manufacturing sites, Mr. Stephens writes like a man of good sense and sound feeling.

The Quacks of Helicon

(Published in *Graham's Magazine*, August, 1841.—Ed.)

A SATIRE, professedly such, at the present day, and especially by an American writer, is a welcome novelty indeed. We have really done very little in the line upon this side of the Atlantic—nothing certainly of importance—Trumbull's clumsy poem and Halleck's "Croakers" to the contrary notwithstanding. Some things we have produced, to be sure, which were excellent in the way of burlesque, without intending a syllable that was not utterly solemn and serious. Odes, ballads, songs, sonnets, epics, and epigrams, possessed of this unintentional excellence, we could have no difficulty in designating by the dozen; but in the matter of directly meant and genuine satire, it cannot be denied that we are sadly deficient. Although, as a literary people, however, we are not exactly Archilochuses—although we have no pretensions to the aechaentes iamboi (Gr.)—although in short, we are no satirists ourselves, there can be no question that we answer sufficiently well as subjects for satire.

We repeat that we are glad to see this book of Mr. Wilmer's; first, because it is something new under the

sun; secondly, because, in many respects, it is well executed; and thirdly, because, in the universal corruption and rigmarole, amid which we gasp for breath, it is really a pleasant thing to get even one accidental whiff of the unadulterated air of *truth*.

"The Quacks of Helicon," as a poem and otherwise, has many defects, and these we shall have no scruple in pointing out—although Mr. Wilmer is a personal friend of our own, and we are happy and proud to say so—but it has also many remarkable merits—merits which it will be quite useless for those aggrieved by the satire—quite useless for any *clique*, or set of *cliques*, to attempt to frown down, or to affect not to see, or to feel, or to understand.

Its prevalent blemishes are referable chiefly to the leading sin of *imitation*. Had the work been composed professedly in paraphrase of the whole manner of the sarcastic epistles of the times of Dryden and Pope, we should have pronounced it the most ingenious and truthful thing of the kind upon record. So close is the copy that it extends to the most trivial points—for example, to the old forms of punctuation. The turns of phraseology, the tricks of rhythm, the arrangement of the paragraphs, the general conduct of the satire —everything—all—are Dryden's. We cannot deny, it is true, that the satiric model of the days in question is insusceptible of improvement, and that the modern author who deviates therefrom must necessarily sacrifice something of merit at the shrine of originality. Neither can we shut our eyes to the fact that the imitation in the present case has conveyed, in full spirit, the high qualities, as well as in rigid letter, the minor elegancies and general peculiarities of the author of "Absalom and Achitophel." We have here the bold, vigorous, and sonorous verse, the biting sarcasm, the pungent epigrammatism, the unscrupulous directness, as of old. Yet it will not do to forget that Mr. Wilmer has been *shown how* to accomplish these things. He is thus only entitled to the praise of a close observer, and of a thoughtful and skilful copyist. The images are, to be sure, his own. They are neither Pope's, nor Dryden's, nor Rochester's, nor Churchill's—but they are moulded in the identical mould used by these satirists.

This servility of imitation has seduced our author into errors, which his better sense should have avoided. He sometimes mistakes intentions; at other times, he copies faults, confounding them with beauties. In the opening of the poem, for example, we find the lines—

> Against usurpers, Olney, I declare
> A righteous, just, and patriotic war.

The rhymes *war* and *declare* are here adopted from Pope, who employs them frequently; but it should have been remembered that the modern relative pronunciation of the two words differs materially from the relative pronunciation of the era of the "Dunciad."

We are also sure that the gross obscenity, the filth—we can use no gentler name—which disgraces "The Quacks of Helicon," cannot be the result of innate impurity in the mind of the writer. It is but a part of the slavish and indiscriminating imitation of the Swift and Rochester school. It has done the book

an irreparable injury, both in a moral and pecuniary view, without affecting anything whatever on the score of sarcasm, vigour or wit. "Let what is to be said, be said plainly." True; but let nothing vulgar be *ever* said or conceived.

In asserting that this satire, even in its mannerism, has imbued itself with the full spirit of the polish and of the pungency of Dryden, we have already awarded it high praise. But there remains to be mentioned the far loftier merit of speaking fearlessly the truth, at an epoch when truth is out of fashion, and under circumstances of social position which would have deterred almost any man in our community from a similar Quixotism. For the publication of "The Quacks of Helicon"—a poem which brings under review, by name, most of our prominent *literati*, and treats them, generally, as they deserve (what treatment could be more bitter?)—for the publication of this attack, Mr. Wilmer, whose subsistence lies in his pen, has little to look for—apart from the silent respect of those at once honest and timid—but the most malignant open or covert persecution. For this reason, and because it is the truth which he has spoken, do we say to him, from the bottom of our hearts, "God speed!"

We repeat it: *it is* the truth which he has spoken; and who shall contradict us? He has said unscrupulously what every reasonable man among us has long known to be "as true as the Pentateuch"—that, as a literary people, we are one vast perambulating humbug. He has asserted that we are *clique*-ridden; and who does not smile at the obvious truism of that assertion? He maintains that chicanery is, with us, a far surer road than talent to distinction in letters. Who gainsays this? The corrupt nature of our ordinary criticism has become notorious. Its powers have been prostrated by its own arm. The intercourse between critic and publisher, as it now almost universally stands, is comprised either in the paying and pocketing of blackmail, as the price of a simple forebearance, or in a direct system of petty and contemptible bribery, properly so-called—a system even more injurious than the former to the true interests of the public, and more degrading to the buyers and sellers of good opinion, on account of the more positive character of the service here rendered for the consideration received. We laugh at the idea of any denial of our assertions upon this topic; they are infamously true. In the charge of general corruption, there are undoubtedly many noble exceptions to be made. There are, indeed, some very few editors, who, maintaining an entire independence, will receive no books from publishers at all, or who receive them with a perfect understanding, on the part of these latter, that an unbiassed *critique* will be given. But these cases are insufficient to have much effect on the popular mistrust; a mistrust heightened by late exposure of the machinations of *coteries* in New York—*coteries* which, at the bidding of leading booksellers, manufacture, as required from time to time, a pseudo-public opinion by wholesale, for the benefit of any little hanger-on of the party, or pettifogging protector of the firm.

We speak of these things in the bitterness of scorn. It is unnecessary to

cite instances, where one is found in almost every issue of a book. It is needless to call to mind the desperate case of Fay—a case where the pertinacity of the effort to gull—where the obviousness of the attempt at forestalling a judgment—where the wofully overdone bemirrorment of that man-of-straw, together with the pitiable platitude of his production, proved a dose somewhat too potent for even the well-prepared stomach of the mob. We say it is supererogatory to dwell upon "Norman Leslie," or other by-gone follies, when we have before our eyes hourly instances of the machinations in question. To so great an extent of methodical assurance has the *system* of puffery arrived, that publishers, of late, have made no scruple of keeping on hand an assortment of commendatory notices, prepared by their men of all work, and of sending these notices around to the multitudinous papers within their influence, done up within the fly leaves of the book. The grossness of these base attempts, however, has not escaped indignant rebuke from the more honourable portion of the press; and we hail these symptoms of restiveness under the yoke of unprincipled ignorance and quackery (strong only in combination) as the harbinger of a better era for the interests of real merit, and of the national literature as a whole.

It has become, indeed, the plain duty of each individual connected with our periodicals heartily to give whatever influence he possesses to the good cause of integrity and the truth. The resusts thus attainable will be found worthy his closest attention and best efforts. We shall thus frown down all conspiracies to foist inanity upon the public consideration at the obvious expense of every man of talent who is not a member of a *clique* in power. We may even arrive in time at that desirable point from which a distinct view of our men of letters may be obtained, and their respective pretensions adjusted by the standard of a rigorous and self-sustaining criticism alone. That their several positions are as yet properly settled; that the posts which a vast number of them now hold are maintained by any better tenure than that of the chicanery upon which we have commented, will be asserted by none but the ignorant, or the parties who have best right to feel an interest in the "good old condition of things." No two matters can be more radically different than the reputation of some of our prominent *litterateurs* as gathered from the mouths of the people (who glean it from the paragraphs of the papers), and the same reputation as deduced from the private estimate of intelligent and educated men. We do not advance this fact as a new discovery. Its truth, on the contrary, is the subject, and has long been so, of every-day witticism and mirth.

Why not? Surely there can be few things more ridiculous than the general character and assumptions of the ordinary critical notices of new books! An editor, sometimes without the shadow of the commonest attainment —often without brains, always without time—does not scruple to give the world to understand that he is in the *daily* habit of critically reading and deciding upon a flood of publications, one-tenth of whose title pages he may possibly have turned over, three-fourths of whose contents would be Hebrew

to his most desperate efforts at comprehension, and whose entire mass and amount, as might be mathematically demonstrated, would be sufficient to occupy, in the most cursory perusal, the attention of some ten or twenty readers for a month! What he wants in plausibility, however, he makes up in obsequiousness; what he lacks in time he supplies in temper. He is the most easily pleased man in the world. He admires everything, from the big Dictionary of Noah Webster to the last diamond edition of Tom Thumb. Indeed, his sole difficulty is in finding tongue to express his delight. Every pamphlet is a miracle—every book in boards is an epoch in letters. His phrases, therefore, get bigger and bigger every day, and, if it were not for talking Cockney, we might call him a "regular swell."

Yet, in the attempt at getting definite information in regard to any one portion of our literature, the merely general reader, or the foreigner, will turn in vain from the lighter to the heavier journals. But it is not our intention here to dwell upon the radical, antique, and systematized rigmarole of our Quarterlies. The articles here are anonymous. Who writes?—who causes to be written? Who but an ass will put faith in tirades which *may* be the result of personal hostility, or in panegyrics which nine times out of ten may be laid, directly or indirectly, to the charge of the author himself? It is in the favour of these saturnine pamphlets that they contain, now and then, a good essay *de omnibus rebus et quibusdam aliis*, which may be looked into, without decided somnolent consequences, at any period, not immediately subsequent to dinner. But it is useless to expect criticism from periodicals called "Reviews" from never reviewing. Besides, all men know, or should know, that these books are sadly given to verbiage. It is a part of their nature, a condition of their being, a point of their faith. A veteran reviewer loves the safety of generalities and is therefore rarely particular. "Words, words, words," are the secret of his strength. He has one or two ideas of his own and is both wary and fussy in giving them out. His wit lies, with his truth, in a well, and there is always a world of trouble in getting it up. He is a sworn enemy to all things simple and direct. He gives no ear to the advice of the giant Moulineau—*"Belier, mon ami, commencez au commencement."* He either jumps at once into the middle of his subject, or breaks in at a back door, or sidles up to it with the gait of a crab. No other mode of approach has an air of sufficient profundity. When fairly into it, however, he becomes dazzled with the scintillations of his own wisdom, and is seldom able to see his way out. Tired of laughing at his antics, or frightened at seeing him flounder, the reader, at length, shuts him up, with the book.

"What song the Syrens sang," says Sir Thomas Browne, "or what name Achilles assumed when he hid himself among women, though puzzling questions, are not beyond *all* conjecture";—but it would puzzle Sir Thomas, backed by Achilles and all the Syrens in Heathendom, to say, in nine cases out of ten, *what is the object* of a thoroughgoing Quarterly Reviewer.

Should the opinions promulgated by our press at large be taken, in their wonderful aggregate, as an evidence of

what American literature absolutely is (and it may be said that, in general, they are really so taken), we shall find ourselves the most enviable set of people upon the face of the earth. Our fine writers are legion. Our very atmosphere is redolent of genius; and we, the nation, are a huge, well-contented chameleon, grown pursy by inhaling it. We are *teretes et rotundi*—enwrapped in excellence. All our poets are Miltons, neither mute nor inglorious; all our poetesses are "American Hemanses"; nor will it do to deny that all our novelists are Great Knowns or Great Unknowns, and that everybody who writes, in every possible and impossible department, is the Admirable Crichton, or, at least, the Admirable Crichton's ghost. We are thus in a glorious condition, and will remain so until forced to disgorge our ethereal honours. In truth there is some danger that the jealousy of the Old World will interfere. It cannot long submit to that outrageous monopoly of "all the decency and all the talent," of which the gentlemen of the press give such undoubted assurance of our being the possessors.

But we feel angry with ourselves for the jesting tone of our observations upon this topic. The prevalence of the spirit of puffery is a subject far less for merriment than for disgust. Its truckling, yet dogmatical character—its bold, unsustained, yet self-sufficient and wholesale laudation—is becoming, more and more, an insult to the common sense of the community. Trivial as it essentially is, it has yet been made the instrument of the grossest abuse in the elevation of imbecility, to the manifest injury, to the utter ruin, of true merit. Is there any man of good feeling and of ordinary understanding—is there one single individual among all our readers—who does not feel a thrill of bitter indignation, apart from any sentiment of mirth, as he calls to mind instance after instance of the purest, of the most unadulterated quackery in letters, which has risen to a high post in the apparent popular estimation, and which still maintains it, by the sole means of a blustering arrogance, or of a busy wriggling conceit, or of the most barefaced plagiarism, or even through the simple immensity of its assumptions—assumptions not only unopposed by the press at large, but absolutely supported in proportion to the vociferous clamour with which they are made—in exact accordance with their utter baselessness and untenability? We should have no trouble in pointing out to-day some twenty or thirty so-called literary personages, who, if not idiots, as we half think them, or if not hardened to all sense of shame by a long course of disingenuousness, will now blush in the perusal of these words, through consciousness of the shadowy nature of that purchased pedestal upon which they stand—will now tremble in thinking of the feebleness of the breath which will be adequate to the blowing it from beneath their feet. With the help of a hearty good will, even *we* may yet tumble them down.

So firm, through a long endurance, has been the hold taken upon the popular mind (at least so far as we may consider the popular mind reflected in ephemeral letters) by the laudatory system which we have deprecated, that what is, in its own essence, a vice, has become endowed with the appearance, and met with the reception of a virtue.

Antiquity, as usual, has lent a certain degree of speciousness even to the absurd. So continuously have we puffed, that we have, at length, come to think puffing the duty, and plain speaking the dereliction. What we began in gross error, we persist in through habit. Having adopted, in the earlier days of our literature, the untenable idea that this literature, as a whole, could be advanced by an indiscriminate approbation bestowed on its every effort—having adopted this idea, we say, without attention to the obvious fact that praise of all was bitter although negative censure to the few alone deserving, and that the only result of the system, in the fostering way, would be the fostering of folly—we now continue our vile practice through the supineness of custom, even while, in our national self-conceit, we repudiate that necessity for patronage and protection in which originated our conduct. In a word, the press throughout the country has not been ashamed to make head against the very few bold attempts at independence which have from time to time been made in the face of the reigning order of things. And if in one, or perhaps two, insulated cases, the spirit of severe truth, sustained by an unconquerable will, was not to be so put down, then, forthwith, were private chicaneries set in motion; then was had resort, on the part of those who considered themselves injured by the severity of criticism (and who were so, if the just contempt of every ingenuous man is injury), resort to arts of the most virulent indignity, to untraceable slanders, to ruthless assassination in the dark. We say these things were done while the press in general looked on, and, with a full understanding of the wrong perpetrated, spoke not against the wrong. The idea had absolutely gone abroad—had grown up little by little into toleration—that attacks, however just, upon a literary reputation, however obtained, however untenable, were well retaliated by the basest and most unfounded traduction of personal fame. But is this an age—is this a day—in which it can be necessary even to advert to such considerations as that the book of the author is the property of the public, and that the issue of the book is the throwing down of the gauntlet to the reviewer—to the reviewer whose duty is the plainest; the duty not even of approbation, or of censure, or of silence, at his own will, but at the sway of those sentiments and of those opinions which are derived from the author himself, through the medium of his written and published words? True criticism is the reflection of the thing criticized upon the spirit of the critic.

But *a nos moutons*—to "The Quacks of Helicon." This satire has many faults besides those upon which we have commented. The title, for example, is not sufficiently distinctive, although otherwise good. It does not confine the subject to *American* quacks, while the work does. The two concluding lines enfeeble instead of strengthening the *finale*, which would have been exceedingly pungent without them. The individual portions of the thesis are strung together too much at random—a natural sequence is not always preserved—so that, although the lights of the picture are often forcible, the whole has what, in artistical parlance, is termed an accidental and spotty appearance. In truth, the parts of the

poem have evidently been composed each by each, as separate themes, and afterwards fitted into the general satire in the best manner possible.

But a more reprehensible sin than any or than all of these is yet to be mentioned—the sin of indiscriminate censure. Even here Mr. Wilmer has erred through imitation. He has held in view the sweeping denunciations of the Dunciad, and of the later (abortive) satire of Byron. No one in his senses can deny the justice of the general charges of corruption in regard to which we have just spoken from the text of our author. But are there *no* exceptions? We should, indeed, blush if there were not. And is there *no* hope? Time will show. We cannot do everything in a day—*Non se gano Zamora en un ora.* Again, it cannot be gainsaid that the greater number of those who hold high places in our poetical literature are absolute nincompoops—fellows alike innocent of reason and of rhyme. But neither are we *all* brainless, nor is the devil himself so black as he is painted. Mr. Wilmer must read the chapter in Rabelais's "Gargantua," *"de ce qu'est signifie par les couleurs blanc et bleu,"*—for there is *some* difference after all. It will not do in a civilized land to run a-muck like a Malay. Mr. Morris *has* written good songs. Mr. Bryant is not *all* a fool. Mr. Willis is not *quite* an ass. Mr. Longfellow *will* steal, but, perhaps, he cannot help it (for we have heard of such things), and then it must not be denied that *nil tetigit quod non ornavit.* The fact is that our author, in the rank exuberance of his zeal, seems to think as little of discrimination as the Bishop of Autun did of the Bible. Poetical "things in general" are the windmills at which he spurs his Rozinante. He as often tilts at what is true as at what is false; and thus his lines are like the mirrors of the temples of Smyrna, which represent the fairest images as deformed. But the talent, the fearlessness, and especially the *design* of this book, will suffice to preserve it from that dreadful damnation of "silent contempt," to which editors throughout the country, if we are not much mistaken, will endeavour, one and all, to consign it.

Washington Irving's Astoria

(Published in *Southern Literary Messenger*, January, 1837.—Ed.)

Mr. Irving's acquaintance at Montreal, many years since, with some of the principal partners of the great North-West Fur Company was the means of interesting him deeply in the varied concerns of trappers, hunters, and Indians, and in all the adventurous details connected with the commerce in peltries. Not long after his return from his late tour to the prairies, he held a conversation with his friend Mr. John Jacob Astor, of New York, in relation to an enterprise set on foot and conducted by that gentleman about the year 1812,—an enterprise having for its object a participation, on the most ex-

tensive scale, in the fur trade carried on with the Indians in all the western and north-western regions of North America. Finding Mr. I. fully alive to the exciting interest of this subject, Mr. Astor was induced to express a regret that the true nature and extent of the enterprise, together with its great national character and importance, had never been generally comprehended, and a wish that Mr. Irving would undertake to give an account of it. To this he consented. All the papers relative to the matter were submitted to his inspection; and the volumes* now before us (two well-sized octavos) are the result. The work has been accomplished in a masterly manner—the modesty of the title affording no indication of the fulness, comprehensiveness, and beauty, with which a long and entangled series of details, collected necessarily from a mass of vague and imperfect data, has been wrought into completeness and unity.

Supposing our readers acquainted with the main features of the original fur trade in America, we shall not follow Mr. Irving in his vivid account of the primitive French Canadian merchant, his jovial establishments and dependants—of the licensed traders, missionaries, *voyageurs,* and *coureurs des bois*—of the British Canadian Fur Merchant—of the rise of the great Company of the "North-West," its constitution and internal trade, its parliamentary hall and banqueting room, its boatings, its huntings, its wassailings, and other magnificent feudal doings in the wilderness. It was the British Mackinaw Company we presume—(a Company established in rivalry of the "North-West")—the *scene* of whose main operations first aroused the attention of our Government. Its chief factory was established at Michilimackinac, and sent forth its pirogues, by Green Bay, Fox River, and the Wisconsin, to the Mississippi, and thence to all its tributary streams—in this way hoping to monopolise the trade with all the Indian tribes on the southern and western waters of our own territory, as the "North-West" had monopolised it along the waters of the North. Of course, we now began to view with a jealous eye, and to make exertions for counteracting, the influence hourly acquired over our own aborigines by these immense combinations of foreigners. In 1796, the United States sent out agents to establish rival trading houses on the frontier, and thus, by supplying the wants of the Indians, to link their interests with ours, and to divert the trade, if possible, into national channels. The enterprise failed—being, we suppose, inefficiently conducted and supported; and the design was never afterwards attempted until by the individual means and energy of Mr. Astor.

John Jacob Astor was born in Waldorf, a German village near Heidelberg, on the banks of the Rhine. While yet a youth, he foresaw that he would arrive at great wealth, and, leaving home, took his way, alone, to London, where he found himself at the close of the American Revolution. An elder brother being in the United States, he followed him there. In January, 1784, he arrived in Hampton Roads, with some little merchandise suited to the Amer-

* Astoria; or, Anecdotes of an Enterprise beyond the Rocky Mountains. By Washington Irving.

ican market. On the passage he had become acquainted with a countryman of his, a furrier, from whom he derived much information in regard to furs, and the manner of conducting the trade. Subsequently, he accompanied this gentleman to New York, and, by his advice, invested the proceeds of his merchandise in peltries. With these he sailed to London, and, having disposed of this adventure advantageously, he returned the same year (1784) to New York, with a view of settling in the United States, and prosecuting the business thus commenced. Mr. Astor's beginnings in this way were necessarily small—but his perseverance was indomitable, his integrity unimpeachable, and his economy of the most rigid kind. "To these," says Mr. Irving, "were added an aspiring spirit, that always looked upward; a genius bold, fertile, and expansive; a sagacity quick to grasp and convert every circumstance to its advantage, and a singular and never wavering confidence of signal success." These opinions are more than re-echoed by the whole crowd of Mr. Astor's numerous acquaintances and friends, and are most strongly insisted upon by those who have the pleasure of knowing him best.

In the United States, the fur trade was not yet sufficiently organised to form a regular line of business. Mr. A. made annual visits to Montreal for the purpose of buying peltries; and, as no direct trade was permitted from Canada to any country but England, he shipped them, when bought, immediately to London. This difficulty being removed, however, by the treaty of 1795, he made a contract for furs with the North-West Company, and imported them from Montreal into the United States—thence shipping a portion to different parts of Europe, as well as to the principal market in China.

By the treaty just spoken of, the British possessions on our side of the Lakes were given up, and an opening made for the American fur trader on the confines of Canada, and within the territories of the United States. Here Mr. Astor, about the year 1807, adventured largely on his own account; his increased capital now placing him among the chief of American merchants. The influence of the Mackinaw Company, however, proved too much for him, and he was induced to consider the means of entering into successful competition. He was aware of the wish of the Government to concentrate the fur trade within its boundaries in the hands of its own citizens; and he now offered, if national aid or protection should be afforded, "to turn the whole of the trade into American channels." He was invited to unfold his plans, and they were warmly approved, but, we believe, little more. The countenance of the Government was, nevertheless, of much importance, and, in 1809, he procured from the legislature of New York a charter incorporating a company under the name of the "American Fur Company," with a capital of one million of dollars, and the privilege of increasing it to two. He himself constituted the Company, and furnished the capital. The board of directors was merely nominal, and the whole business was conducted with his own resources, and according to his own will.

We here pass over Mr. Irving's lucid, although brief, account of the fur trade in the Pacific, of Russian and Amer-

ican enterprise on the northwestern coast, and of the discovery by Captain Gray, in 1792, of the mouth of the river Columbia. He proceeds to speak of Captain Jonathan Carver of the British provincial army. In 1763, shortly after the acquisition of the Canadas by Great Britain, this gentleman projected a journey across the continent, between the forty-third and forty-sixth degrees of northern latitude, to the shores of the Pacific. His objects were "to ascertain the breadth of the continent at its broadest part, and to determine on some place on the shores of the Pacific where Government might establish a post to facilitate the discovery of a north-west passage, or a communication between Hudson's Bay and the Pacific Ocean." He failed twice in individual attempts to accomplish this journey. In 1774, Richard Whitworth, a member of Parliament, came into this scheme of Captain Carver's. These two gentlemen determined to take with them fifty or sixty men, artificers and mariners, to proceed up one of the branches of the Missouri, find the source of the Oregon (the Columbia), and sail down the river to its mouth. Here a fort was to be erected, and the vessels built necessary to carry into execution their purposed discoveries by sea. The British Government sanctioned the plan, and everything was ready for the undertaking when the American Revolution prevented it.

The expedition of Sir Alexander Mackenzie is well known. In 1793 he crossed the continent, and reached the Pacific Ocean in latitude 52° 20′ 48″. In latitude 52° 30′, he partially descended a river flowing to the South, and which he erroneously supposed to be the Columbia. Some years afterwards he published an account of his journey, and suggested the policy of opening an intercourse between the Atlantic and Pacific Oceans, and forming regular establishments 'through the interior and at both extremes, as well as along the coast and islands.' Thus he thought the entire command of the fur trade of North America might be obtained from latitude 48° north to the pole, excepting that portion held by the Russians. As to the "American adventurers" along the coast, he spoke of them as entitled to but little consideration. "They would instantly disappear," he said, "before a well-regulated trade." Owing to the jealousy existing between the Hudson's Bay and North-West Company, this idea of Sir Alexander Mackenzie's was never carried into execution.

The successful attempt of Messieurs Lewis and Clarke was accomplished, it will be remembered, in 1804. Their course was that proposed by Captain Carver in 1774. They passed up the Missouri to its head-waters, crossed the Rocky Mountains, discovered the source of the Columbia, and followed that river down to its mouth. Here they spent the winter, and retraced their steps in the spring. Their reports declared it practicable to establish a line of communication across the continent, and first inspired Mr. Astor with the design of "grasping with his individual hands this great enterprise, which, for years, had been dubiously, yet desirously contemplated by powerful associations and maternal governments."

His scheme was gradually matured. Its main features were as follows. A line of trading posts was to be estab-

lished along the Missouri and Columbia, to the mouth of the latter, where was to be founded the chief mart. On all the tributary streams throughout this immense route were to be situated inferior posts trading directly with the Indians for their peltries. All these posts would draw upon the mart at the Columbia for their supplies of goods, and would send thither the furs collected. At this latter place, also, were to be built and fitted out coasting-vessels, for the purpose of trading along the north-west coast, returning with the proceeds of their voyages to the same general rendezvous. In this manner, the whole Indian trade, both of the coast and the interior, would converge to one point. To this point, in continuation of his plan, Mr. Astor proposed to despatch, every year, a ship with the necessary supplies. She would receive the peltries collected, carry them to Canton, there invest the proceeds in merchandise, and return to New York.

Another point was also to be attended to. In coasting to the north-west the ship would be brought into contact with the Russian Fur Company's establishments in that quarter; and, as a rivalry might ensue, it was politic to conciliate the goodwill of that body. It depended chiefly for its supplies upon transient trading vessels from the United States. The owners of these vessels, having nothing beyond their individual interests to consult, made no scruple of furnishing the natives with firearms, and were thus productive of much injury. To this effect the Russian Government had remonstrated with the United States, urging to have the traffic in arms prohibited—but no municipal law being infringed, our Government could not interfere. Still, it was anxious not to offend Russia, and applied to Mr. Astor for information as to the means of remedying the evil, knowing him to be well versed in all the concerns of the trade in question. This application suggested to him the idea of paying a regular visit to the Russian settlements with his annual ship. Thus, being kept regularly in supplies, they would be independent of the casual traders, who would, consequently, be excluded from the coast. This whole scheme Mr. Astor communicated to President Jefferson, soliciting the countenance of Government. The Cabinet "joined in warm approbation of the plan, and held out assurance of every protection that could, consistently with general policy, be afforded."

In speaking of the motives which actuated Mr. Astor in an enterprise so extensive, Mr. Irving, we are willing to believe, has done that high-minded gentleman no more than the simplest species of justice. "He was already," says our author, "wealthy beyond the ordinary desires of man, but he now aspired to that honourable fame which is awarded to men of similar scope of mind, who, by their great commercial enterprises, have enriched nations, peopled wildernesses, and extended the bounds of empire. He considered his projected establishment at the mouth of the Columbia, as the emporium to an immense commerce; as a colony that would form the germ of a wide civilisation; that would, in fact, carry the American population across the Rocky Mountains, and spread it along the shores of the Pacific, as it already animated the shores of the Atlantic."

A few words in relation to the North-

West Company. This body, following out in part the suggestion of Sir Alexander Mackenzie, had already established a few trading posts on the coast of the Pacific, in a region lying about two degrees north of the Columbia—thus throwing itself between the Russian and American territories. They would contend with Mr. Astor at an immense disadvantage, of course. They had no good post for the receipt of supplies by sea; and must get them with great risk, trouble, and expense, over land. Their peltries also would have to be taken home the same way—for they were not at liberty to interfere with the East India Company's monopoly, by shipping them directly to China. Mr. Astor would therefore greatly undersell them in that, the principal market. Still, as any competition would prove detrimental to both parties, Mr. A. made known his plans to the North-West Company, proposing to interest them one-third in his undertaking. The British company, however, had several reasons for declining the proposition—not the least forcible of which, we presume, was their secret intention to push on a party forthwith, and forestall their rival in establishing a settlement at the mouth of the Columbia.

In the meantime Mr. Astor did not remain idle. His first care was to procure proper coadjutors, and he was induced to seek them principally from among such clerks of the North-West Company as were dissatisfied with their situation in that body—having served out their probationary term, and being still, through want of influence, without a prospect of speedy promotion. From among these (generally men of capacity and experience in their particular business), Mr. A. obtained the services of Mr. Alexander M'Kay (who had accompanied Sir Alexander Mackenzie in both of his expeditions), Mr. Donald M'Kenzie, and Mr. Duncan M'Dougal. Mr. Wilson Price Hunt, a native citizen of New Jersey, and a gentleman of great worth, was afterwards selected by Mr. Astor as his chief agent, and as the representative of himself at the contemplated establishment. In June, 1810, articles of agreement were entered into between Mr. Astor and these four gentlemen, acting for themselves and for the several persons who had already agreed to become, or should become, associated under the firm of *"The Pacific Fur Company."* This agreement stipulated that Mr. A. was to be the head of the company, to manage its affairs at New York, and to furnish everything requisite for the enterprise at first cost and charges, provided an advance of more than four hundred thousand dollars should not at any time be involved. The stock was to consist of a hundred shares, Mr. Astor taking fifty, the rest being divided among the other partners and their associates. A general meeting was to be held annually at Columbia River, where absent members might vote by proxy. The association was to continue twenty years—but might be dissolved within the first five years, if found unprofitable. For these five years Mr. A. agreed to bear all the loss that might be incurred. An agent, appointed for a like term, was to reside at the main establishment, and Mr. Hunt was the person first selected.

Mr. Astor determined to begin his enterprise with two expeditions—one by sea, the other by land. The former was to carry out everything necessary

for the establishment of a fortified post at the mouth of the Columbia. The latter, under the conduct of Mr. Hunt, was to proceed up the Missouri and across the Rocky Mountains to the same point. In the course of this overland journey, the most practicable line of communication would be explored, and the best situations noted for the location of trading rendezvous. Following Mr. Irving in our brief summary of his narrative, we will now give some account of the first of these expeditions.

A ship was provided called the *Tonquin,* of two hundred and ninety tons, with ten guns, and twenty men. Lieutenant Jonathan Thorn of the United States navy, being on leave of absence, received the command. He was a man of courage, and had distinguished himself in the Tripolitan war. Four of the partners went in the ship—M'Kay and M'Dougal, of whom we have already spoken, and Messieurs David and Robert Stuart, new associates in the firm. M'Dougal was empowered to act as the proxy of Mr. Astor in the absence of Mr. Hunt. Twelve clerks were also of the party. These were bound to the service of the company for five years, and were to receive one hundred dollars a year, payable at the expiration of the term, with an annual equipment of clothing to the amount of forty dollars. By promises of future promotion, their interests were identified with those of Mr. Astor. Thirteen Canadian *voyageurs,* and several artisans, completed the ship's company. On the 8th of September, 1810, the *Tonquin* put to sea. Of her voyage to the mouth of the Columbia Mr. Irving has given a somewhat ludicrous account. Thorn, the stern, straightforward officer of the navy, having few ideas beyond those of duty and discipline, and looking with supreme contempt upon the motley "lubbers" who formed the greater part of his company, is painted with the easy yet spirited pencil of an artist indeed; while M'Dougal, the shrewd Scotch partner, bustling, yet pompous, and impressed with lofty notions of his own importance as proxy for Mr. Astor, is made as supremely ridiculous as possible, with as little apparent effort as can well be imagined;—the portraits, however, carry upon their faces the evidence of their own authenticity. The voyage is prosecuted amid a series of petty quarrels and cross purposes between the captain and his crew, and occasionally between Mr. M'Kay and Mr. M'Dougal. The contests between the two latter gentlemen were brief, it appears, although violent. "Within fifteen minutes," says Captain Thorn in a letter to Mr. Astor, "they would be caressing each other like children." The *Tonquin* doubled Cape Horn on Christmas Day, arrived at Owhyhee on the 11th of February, took on board fresh provisions, sailed again with twelve Sandwich islanders on the 28th, and on the 22nd of March arrived at the mouth of the Columbia. In seeking a passage across the bar, a boat and nine men were lost among the breakers. On the way from Owhyhee a violent storm occurred; and the bickerings still continued between the partners and the captain—the latter, indeed, grievously suspecting the former of a design to depose him.

The Columbia, for about forty miles from its mouth, is, strictly speaking, an estuary, varying in breadth from three to seven miles, and indented by

deep bays. Shoals and other obstructions render the navigation dangerous. Leaving this broad portion of the stream in the progress upwards, we find the mouth of the river proper—which is about half a mile wide. The entrance to the estuary from sea is bounded on the south by a long, low, and sandy beach stretching into the ocean, and called Point Adams. On the northern side of the firth is Cape Disappointment, a steep promontory. Immediately east of this cape is Baker's Bay, and within this the *Tonquin* came to anchor.

Jealousies still continued between the captain and the worthy M'Dougal, who could come to no agreement in regard to the proper location for the contemplated establishment. On April the 5th, without troubling himself further with the opinions of his coadjutors, Mr. Thorn landed in Baker's Bay, and began operations. At this summary proceeding, the partners were, of course, in high dudgeon, and an open quarrel seemed likely to ensue, to the serious detriment of the enterprise. These difficulties, however, were at length arranged, and finally, on the 12th of April, a settlement was commenced at a point of land called Point George, on the southern shore of the firth. Here was a good harbour, where vessels of two hundred tons might anchor within fifty yards of the shore. In honour of the chief partner, the new post received the title of *Astoria*. After much delay, the portion of the cargo destined for the post was landed, and the *Tonquin* left free to proceed on her voyage. She was to coast to the north, to trade for peltries at the different harbours, and to touch at Astoria on her return in the autumn. Mr. M'Kay went in her as supercargo, and a Mr. Lewis as ship's clerk. On the morning of the 5th of June she stood out to sea, the whole number of persons on board amounting to three and twenty. In one of the outer bays Captain Thorn procured the services of an Indian named Lamazee, who had already made two voyages along the coast, and who agreed to accompany him as interpreter. In a few days the ship arrived at Vancouver's Island, and came to anchor in the harbour of Neweetee, much against the advice of the Indian, who warned Captain Thorn of the perfidious character of the natives. The result was the merciless butchery of the whole crew, with the exception of the interpreter and Mr. Lewis, the ship's clerk. The later, finding himself mortally wounded, and without companions, blew up the ship and perished with more than a hundred of the enemy. Lamazee, getting among the Indians, escaped, and was the means of bearing the news of the disaster to Astoria. In relating at length the thrilling details of this catastrophe, Mr. Irving takes occasion to comment on the headstrong, although brave and strictly honourable character of Lieutenant Thorn. The danger and folly, on the part of agents, in disobeying the matured instructions of those who deliberately plan extensive enterprises, such as that of Mr. Astor, is also justly and forcibly shown. The misfortune here spoken of, arose altogether from a disregard of Mr. A.'s often-repeated advice—to admit but few Indians on board the *Tonquin* at one time. Her loss was a serious blow to the infant establishment at Astoria. To this post let us now return.

The natives inhabiting the borders of the estuary were divided into four tribes, of which the Chinooks were the principal. Comcomly, a one-eyed Indian, was their chief. These tribes resembled each other in nearly every respect, and were, no doubt, of a common stock. They live chiefly by fishing —the Columbia and its tributary streams abounding in fine salmon, and a variety of other fish. A trade in peltries, but to no great amount, was immediately commenced and carried on. Much disquiet was occasioned at the post by a rumour among the Indians that thirty white men had appeared on the banks of the Columbia, and were building houses at the second rapids. It was feared that these were an advance party of the North-West Company endeavouring to seize upon the upper parts of the river, and thus forestall Mr. Astor in the trade of the surrounding country. Bloody feuds in this case might be anticipated, such as had prevailed between rival companies in former times. The intelligence of the Indians proved true—the "North-West" had erected a trading-house on the Spokan River, which falls into the north branch of the Columbia. The Astorians could do little to oppose them in their present reduced state as to numbers. It was resolved, however, to advance a counter-check to the post on the Spokan, and Mr. David Stuart prepared to set out for this purpose with eight men and a small assortment of goods. On the 15th of July, when this expedition was about starting, a canoe, manned with nine white men, and bearing the British flag, entered the harbour. They proved to be the party despatched by the rival company to anticipate Mr. Astor in the settlement at the mouth of the river. Mr. David Thompson, their leader, announced himself as a partner of the "North-West" —but otherwise gave a very peaceable account of himself. It appears, however, from information subsequently derived from other sources, that he had hurried with a desperate haste across the mountains, calling at all the Indian villages on his march, presenting them with British flags, and "proclaiming formally that he took possession of the country for the North-West Company, and in the name of the king of Great Britain." His plan was defeated, it seems, by the desertion of a great portion of his followers, and it was thought probable that he now merely descended the river with a view of reconnoitring. M'Dougal treated the gentlemen with great kindness, and supplied them with goods and provisions for their journey back across the mountains—this much against the wishes of Mr. David Stuart, "who did not think the object of their visit entitled them to any favour." A letter for Mr. Astor was entrusted to Thompson.

On the 23rd of July the party for the region of the Spokan set out, and, after a voyage of much interest, succeeded in establishing the first interior trading-post of the company. It was situated on a point of land about three miles long and two broad, formed by the junction of the Oakinagan with the Columbia. In the meantime the Indians near Astoria began to evince a hostile disposition, and a reason for this altered demeanour was soon after found in the report of the loss of the *Tonquin*. Early in August the settlers received intelligence of her fate. They now

found themselves in a perilous situation, a mere handful of men, on a savage coast, and surrounded by barbarous enemies. From their dilemma they were relieved for the present by the ingenuity of M'Dougal. The natives had a great dread of the smallpox, which had appeared among them a few years before, sweeping off entire tribes. They believed it an evil either inflicted upon them by the Great Spirit, or brought among them by the white men. Seizing upon this latter idea M'Dougal assembled several of the chieftains whom he believed to be inimical, and informing them that he had heard of the treachery of their northern brethren in regard to the *Tonquin,* produced from his pocket a small bottle. "The white men among you," said he, "are few in number, it is true, but they are mighty in medicine. See here! In this bottle I hold the smallpox safely corked up; I have but to draw the cork and let loose the pestilence, to sweep man, woman, and child from the face of the earth!" The chiefs were dismayed. They represented to the "Great Smallpox Chief" that they were the firmest friends of the white men, that they had nothing to do with the villains who murdered the crew of the *Tonquin,* and that it would be unjust, in uncorking the bottle, to destroy the innocent with the guilty. M'Dougal was convinced. He promised not to uncork it until some overt act should compel him to do so. In this manner tranquillity was restored to the settlement. A large house was now built, and the frame of a schooner put together. She was named the *Dolly,* and was the first American vessel launched on the coast. But our limits will not permit us to follow too minutely the details of the enterprise. The adventurers kept up their spirits, sending out occasional foraging parties in the *Dolly,* and looking forward to the arrival of Mr. Hunt. So wore away the year 1811 at the little post of Astoria. We now come to speak of the expedition by land.

This, it will be remembered, was to be conducted by Mr. Wilson Price Hunt, a native of New Jersey. He is represented as scrupulously upright, of amiable disposition, and agreeable manners. He had never been in the heart of the wilderness, but having been for some time engaged in commerce at St. Louis, furnishing Indian traders with goods, he had acquired much knowledge of the trade at second hand. Mr. Donald M'Kenzie, another partner, was associated with him. He had been ten years in the interior, in the service of the North-West Company, and had much practical experience in all Indian concerns. In July, 1810, the two gentlemen repaired to Montreal, where everything requisite to the expedition could be procured. Here they met with many difficulties, some of which were thrown in their way by their rivals. Having succeeded, however, in laying in a supply of ammunition, provisions, and Indian goods, they embarked all on board a large boat, and with a very inefficient crew, the best to be procured, took their departure from St. Ann's, near the extremity of the island of Montreal. Their course lay up the Ottawa, and along a range of small lakes and rivers. On the 22nd of July they arrived at Mackinaw, situated on Mackinaw Island, at the confluence of Lakes Huron and Michigan. Here it was necessary to remain some

time to complete the assortment of Indian goods, and engage more *voyageurs*. While waiting to accomplish these objects Mr. Hunt was joined by Mr. Ramsay Crooks, a gentleman whom he had invited by letter to engage as a partner in the expedition. He was a native of Scotland, had served under the North-West Company, and been engaged in private trading adventures among the various tribes of the Missouri. Mr. Crooks represented in forcible terms the dangers to be apprehended from the Indians—especially the Blackfeet and Sioux—and it was agreed to increase the number of the party to sixty upon arriving at St. Louis. Thirty was its strength upon leaving Mackinaw. This occurred on the 12th of August. The expedition pursued the usual route of the fur trader—by Green Bay, Fox and Wisconsin Rivers, to Prairie du Chien, and thence down the Mississippi to St. Louis, where they landed on the 3rd of September. Here Mr. Hunt met with some opposition from an association called the Missouri Fur Company, and especially from its leading partner, a Mr. Manuel Lisa. This company had a capital of about forty thousand dollars, and employed about two hundred and fifty men. Its object was to establish posts along the upper part of the river, and monopolise the trade. Mr. H. proceeded to strengthen himself against competition. He secured to Mr. Astor the services of Mr. Joseph Miller. This gentleman had been an officer of the United States army, but had resigned on being refused a furlough, and taken to trading with the Indians. He joined the association as a partner, and on account of his experience and general acquirements, Mr. Hunt considered him a valuable coadjutor. Several boatmen and hunters were also now enlisted, but not until after a delay of several weeks. This delay, and the previous difficulties at Montreal and Mackinaw, had thrown Mr. H. much behind his original calculations, so that he found it would be impossible to effect his voyage up the Missouri during the present season. There was every likelihood that the river would be closed before the party could reach its upper waters. To winter, however, at St. Louis would be expensive. Mr. H. therefore determined to push up on his way as far as possible, to some point where game might be found in abundance, and there take up his quarters until spring. On the 21st of October he set out. The party were distributed in three boats—two large Schenectady barges and a keel boat. By the 16th of November they reached the mouth of the Nodowa, a distance of four hundred and fifty miles, where they set up their winter quarters. Here Mr. Robert M'Lellan, at the invitation of Mr. Hunt, joined the association as a partner. He was a man of vigorous frame, of restless and imperious temper, and had distinguished himself as a partisan under General Wayne. John Day also joined the company at this place —a tall and athletic hunter from the backwoods of Virginia. Leaving the main body at Nodowa, Mr. Hunt now returned to St. Louis for a reinforcement. He was again impeded by the machinations of the Missouri Fur Company, but finally succeeded in enlisting one hunter, some *voyageurs*, and a Sioux interpreter, Pierre Dorion. With these, after much difficulty, he got back to the encampment on the 17th of April.

Soon after this period, the voyage up the river was resumed. The party now consisted of nearly sixty persons—five partners, Hunt, Crooks, M'Kenzie, Miller, and M'Lellan; one clerk, John Reed; forty Canadian *voyageurs;* and several hunters. They embarked in four boats, one of which, of a large size, mounted a swivel and two howitzers.

We do not intend, of course, to proceed with our travellers throughout the vast series of adventures encountered in their passage through the wilderness. To the curious in these particulars, we recommend the book itself. No details more intensely exciting are to be found in any work of travels within our knowledge. At times full of life and enjoying the whole luxury to be found in the career of the hunter—at times suffering every extremity of fatigue, hunger, thirst, anxiety, terror, and despair—Mr. Hunt still persisted in his journey, and finally brought it to a successful termination. A bare outline of the route pursued is all we can attempt.

Proceeding up the river our party arrived, on the 28th of April, at the mouth of the Nebraska, or Platte, the largest tributary of the Missouri, and about six hundred miles above its junction with the Mississippi. They now halted for two days, to supply themselves with oars and poles from the tough wood of the ash, which is not to be found higher up the river. Upon the 2nd of May two of the hunters insisted upon abandoning the expedition and returning to St. Louis. On the 10th the party reached the Omaha village, and encamped in its vicinity. This village is about eight hundred and thirty miles above St. Louis, and on the west bank of the stream. Three men here deserted, but their place was luckily supplied by three others, who were prevailed upon by liberal promises to enlist. On the 15th Mr. Hunt left Omaha, and proceeded. Not long afterwards a canoe was descried navigated by two white men. They proved to be adventurers, who, for some years past, had been hunting and trapping near the head of the Missouri. Their names were Jones and Carson. They were now on their way to St. Louis, but readily abandoned their voyage, and turned their faces again towards the Rocky Mountains. On the 23rd Mr. Hunt received, by a special messenger, a letter from Mr. Manuel Lisa, the leading partner of the Missouri Fur Company, and the gentleman who rendered him so many disservices at St. Louis. He had left that place with a large party three weeks after Mr. H., and having heard rumours of hostile intentions on the part of the Sioux, a much-dreaded tribe of Indians, made great exertions to overtake him, that they might pass through the dangerous part of the river together. Mr. H., however, was justly suspicious of the Spaniard, and pushed on. At the village of the Poncas, about a league south of the river Quicourt, he stopped only long enough to procure a supply of dried buffalo meat. On the morning of the 25th it was discovered that Jones and Carson had deserted. They were pursued, but in vain. The next day three white men were observed in two canoes descending the river. They proved to be three Kentucky hunters—Edward Robinson, John Hoback, and Jacob Rizner. They also had passed several years in the upper wilderness, and were now on their way

home, but willingly turned back with the expedition. Information derived from these recruits induced Mr. Hunt to alter his route. Hitherto he had intended to follow the course pursued by Messieurs Lewis and Clarke—ascending the Missouri to its forks, and thence, by land, across the mountains. He was informed, however, that in so doing he would have to pass through the country of the Blackfeet, a savage tribe of Indians, exasperated against the whites on account of the death of one of their men by the hands of Captain Lewis. Robinson advised a more southerly route. This would carry them over the mountains about where the headwaters of the Platte and the Yellowstone take their rise, a much more practicable pass than that of Lewis and Clarke. To this counsel Mr. Hunt agreed, and resolved to leave the Missouri at the village of the Arickaras, at which they would arrive in a few days. On the 1st of June they reached "the great bend" of the river, which here winds for about thirty miles round a circular peninsula, the neck of which is not above two thousand yards across. On the morning of the 3rd of June the party were overtaken by Lisa, much to their dissatisfaction. The meeting was, of course, far from cordial, but an outward appearance of civility was maintained for two days. On the third a quarrel took place which was near terminating seriously. It was, however, partially adjusted, and the rival parties coasted along opposite sides of the river, in sight of each other. On the 12th of June they reached the village of the Arickaras, between the forty-sixth and forty-seventh parallels of north latitude, and about fourteen hundred and thirty miles above the mouth of the Missouri. In accomplishing thus much of his journey, Mr. Hunt had not failed to meet with a crowd of difficulties, at which we have not even hinted. He was frequently in extreme peril from large bodies of the Sioux, and at one time it was a mere accident alone which prevented the massacre of the whole party.

At the Arickara village our adventurers were to abandon their boats and proceed westward across the wilderness. Horses were to be purchased from the Indians, who could not, however, furnish them in sufficient numbers. In this dilemma Lisa offered to purchase the boats, now no longer of use, and to pay for them in horses, to be obtained at a fort belonging to the Missouri Fur Company, and situated at the Mandan villages, about a hundred and fifty miles farther up the river. A bargain was made, and Messieurs Lisa and Crooks went for the horses, returning with them in about a fortnight. At the Arickara village, if we understand, Mr. Hunt engaged the services of one Edward Rose. He enlisted an interpreter when the expedition should reach the country of the Upsarokas or Crow Indians, among whom he had formerly resided. On the 18th of July the party took up their line of march. They were still insufficiently provided with horses. The cavalcade consisted of eighty-two, most of them heavily laden with Indian goods, beaver-traps, ammunition, and provisions. Each of the partners was mounted. As they took leave of Arickara, the veterans of Lisa's company, as well as Lisa himself, predicted the total destruction of our ad-

venturers, amid the innumerable perils of the wilderness.

To avoid the Blackfeet Indians, a ferocious and implacable tribe, of which we have before spoken, the party kept a south-western direction. This route took them across some of the tributary streams of the Missouri, and through immense prairies, bounded only by the horizon. Their progress was at first slow, and, Mr. Crooks falling sick, it was necessary to make a litter for him between two horses. On the 23rd of the month, they encamped on the banks of a little stream, nicknamed Big River, where they remained for several days, meeting with a variety of adventures. Among other things, they were enabled to complete their supply of horses from a band of the Cheyenne Indians. On the 6th of August, the journey was resumed, and they soon left the hostile region of the Sioux behind them. About this period a plot was discovered on the part of the interpreter, Edward Rose. This villain had been tampering with the men, and proposed, upon arriving among his old acquaintances the Crows, to desert to the savages with as much booty as could be carried off. The matter was adjusted, however, and Mr. Rose, through the ingenuity of Mr. Hunt, quietly dismissed. On the 13th Mr. H. varied his course to the westward, a route which soon brought him to a fork of the Little Missouri, and upon the skirts of the Black Mountains. These are an extensive chain, lying about a hundred miles east of the Rocky Mountains, stretching north-easterly from the south fork of the river Platte to the great north bend of the Missouri, and dividing the waters of the Missouri from those of the Mississippi and Arkansas. The travellers here supposed themselves to be about two hundred and fifty miles from the village of the Arickaras. Their more serious troubles now commenced. Hunger and thirst, with the minor difficulties of grizzly bears, beset them at every turn, as they attempted to force a passage through the rugged barriers in their path. At length they emerged upon a stream of clear water, one of the forks of Powder River, and once more beheld wide meadows and plenty of buffalo. They ascended this stream about eighteen miles, directing their march towards a lofty mountain, which had been in sight since the 17th. They reached the base of this mountain, which proved to be a spur of the Rocky chain, on the 30th, having now come about four hundred miles since leaving Arickara.

For one or two days they endeavoured in vain to find a defile in the mountains. On the 3rd of September they made an attempt to force a passage to the westward, but soon became entangled among rocks and precipices, which set all their efforts at defiance. They were now, too, in the region of the terrible Upsarokas, and encountered them at every step. They met also with friendly bands of Shoshonies and Flatheads. After a thousand troubles, they made some way upon their journey. On the 9th they reached Wind River, a stream which gives its name to a range of mountains consisting of three parallel chains, eighty miles long and about twenty-five broad. "One of its peaks," says our author, "is probably fifteen thousand feet above the level of the sea." For five days Mr. Hunt followed up the course of Wind River, crossing and recrossing it. He had been assured

by the three hunters who advised him to strike through the wilderness, that, by going on up the river, and crossing a single mountain ridge, he would come upon the head-waters of the Columbia. The scarcity of game, however, determined him to pursue a different course. In the course of the day, after coming to this resolve, they perceived three mountain peaks, white with snow, and which were recognised by the hunters as rising just above a fork of the Columbia. These peaks were named the Pilot Knobs by Mr. Hunt. The travellers continued their course for about forty miles to the south-west, and at length found a river flowing to the west. This proved to be a branch of the Colorado. They followed its current for fifteen miles. On the 18th, abandoning its main course, they took a north-westerly direction for eight miles, and reached one of its little tributaries, issuing from the bosom of the mountains, and running through green meadows abounding in buffalo. Here they encamped for several days, a little repose being necessary for both men and horses. On the 24th the journey was resumed. Fifteen miles brought them to a stream about fifty feet wide, which was recognised as one of the headwaters of the Columbia. They kept along it for two days, during which it gradually swelled into a river of some size. At length it was joined by another current, and both united swept off in an unimpeded stream, which, from its rapidity and turbulence, had received the appellation of Mad River. Down this, they anticipated an uninterrupted voyage in canoes, to the point of their ultimate destination—but their hopes were very far from being realised.

The partners held a consultation. The three hunters, who had hitherto acted as guides, knew nothing of the region to the west of the Rocky Mountains. It was doubtful whether Mad River could be navigated, and they could hardly resolve to abandon their horses upon an uncertainty. The vote, nevertheless, was for embarkation, and they proceeded to build the necessary vessels. In the meantime Mr. Hunt, having now reached the head-waters of the Columbia, reputed to abound in beaver, turned his thoughts to the main object of the expedition. Four men, Alexander Carson, Louis St. Michel, Pierre Detaye, and Pierre Delaunay, were detached from the expedition, to remain and trap beaver by themselves in the wilderness. Having collected a sufficient quantity of peltries, they were to bring them to the depot, at the mouth of the Columbia, or to some intermediate post to be established by the company. These trappers had just departed, when two Snake Indians wandered into the camp, and declared the river to be unnavigable. Scouts sent out by Mr. Hunt finally confirmed this report. On the 4th of October, therefore, the encampment was broken up, and the party proceeded to search for a post in possession of the Missouri Fur Company, and said to be somewhere in the neighbourhood, upon the banks of another branch of the Columbia. This post they found without much difficulty. It was deserted—and our travellers gladly took possession of the rude buildings. The stream here found was upwards of a hundred yards wide. Canoes were constructed with all despatch. In the meantime another detachment of trappers was cast loose

in the wilderness. These were Robinson, Rezner, Hoback, Carr, and Mr. Joseph Miller. This latter, it will be remembered, was one of the partners—he threw up his share in the expedition, however, for a life of more perilous adventure. On the 18th of the month (October), fifteen canoes being completed, the voyagers embarked, leaving their horses in charge of the two Snake Indians, who were still in company.

In the course of the day the party arrived at the junction of the stream, upon which they floated, with Mad River. Here Snake River commences—the scene of a thousand disasters. After proceeding about four hundred miles, by means of frequent portages, and beset with innumerable difficulties of every kind, the adventurers were brought to a halt by a series of frightful cataracts, raging as far as the eye could reach, between stupendous ramparts of black rock, rising more than two hundred feet perpendicularly. This place they called "The Caldron Linn." Here Antoine Clappine, one of the *voyageurs*, perished amid the whirlpools, three of the canoes stuck immovably among the rocks, and one was swept away with all the weapons and effects of four of the boatmen.

The situation of the party was now lamentable indeed—in the heart of an unknown wilderness, at a loss what route to take, ignorant of their distance from the place of their destination, and with no human being near them from whom counsel might be taken. Their stock of provisions was reduced to five days' allowance, and famine stared them in the face. It was therefore more perilous to keep together than to separate. The goods and provisions, except a small supply for each man, were concealed in *caches* (holes dug in the earth), and the party was divided into several small detachments, which started off in different directions, keeping the mouth of the Columbia in view as their ultimate point of destination. From this post they were still distant nearly a thousand miles, although this fact was unknown to them at the time.

On the 21st of January, after a series of almost incredible adventures, the division in which Mr. Hunt enrolled himself struck the waters of the Columbia some distance below the junction of its two great branches, Lewis and Clarke Rivers, and not far from the influx of the Wallah-Wallah. Since leaving the Caldron Linn they had toiled two hundred and forty miles, through snowy wastes and precipitous mountains, and six months had now elapsed since their departure from the Arickara village on the Missouri—their whole route from that point, according to their computation, having been seventeen hundred and fifty-one miles. Some vague intelligence was now received in regard to the other divisions of the party, and also of the settlers at the mouth of the Columbia. On the 31st Mr. Hunt reached the falls of the river, and encamped at the village of Wish-Ram. Here were heard tidings of the massacre on board the *Tonquin*. On the 5th of February, having procured canoes with much difficulty, the adventurers departed from Wish-Ram, and, on the 15th, sweeping round an intervening cape, they came in sight of the long-desired *Astoria*. Among the first to greet them on their landing were some of their old comrades, who had parted from them at the Caldron Linn, and who had reached the settlement nearly

a month before. Mr. Crooks and John Day, being unable to get on, had been left with some Indians in the wilderness—they afterwards came in. Carriere, a *voyageur*, who was also abandoned through the sternest necessity, was never heard of more. Jean Baptiste Prevost, likewise a *voyageur*, rendered frantic by famine, had been drowned in the Snake River. All parties had suffered the extremes of weariness, privation, and peril. They had travelled from St. Louis, thirty-five hundred miles. Let us now return to Mr. Astor.

As yet he had received no intelligence from the Columbia, and had to proceed upon the supposition that all had gone as he desired. He accordingly fitted out a fine ship, the *Beaver*, of four hundred and ninety tons. Her cargo was assorted with a view to the supply of Astoria, the trade along the coast, and the wants of the Russian Fur Company. There embarked in her, for the settlement, a partner, five clerks, fifteen American labourers, and six Canadian *voyageurs*. Mr. John Clarke, the partner, was a native of the United States, although he had passed much of his life in the north-west, having been employed in the fur trade since the age of sixteen. The clerks were chiefly young American gentlemen of good connections. Mr. Astor had selected this reinforcement with the design of securing an ascendancy of American influence at Astoria, and rendering the association decidedly national. This, from the peculiar circumstances of the case, he had been unable to do in the commencement of his undertaking.

Captain Sowle, the commander of the *Beaver*, was directed to touch at the Sandwich Islands to inquire about the fortunes of the *Tonquin*, and ascertain, if possible, whether the settlement had been effected at Astoria. If so, he was to enlist as many of the natives as possible and proceed. He was to use great caution in his approach to the mouth of the Columbia. If everything was found right, however, he was to land such part of his cargo as was intended for the post, and to sail for New Archangel with the Russian supplies. Having received furs in payment, he would return to Astoria, take in the peltries there collected, and make the best of his way to Canton. These were the strict letter of his instructions—a deviation from which was subsequently the cause of great embarrassment and loss, and contributed largely to the failure of the whole enterprise. The *Beaver* sailed on the 10th of October, 1811, and, after taking in twelve natives at the Sandwich Islands, reached the mouth of the Columbia in safety on the 9th of May, 1812. Her arrival gave life and vigour to the establishment, and afforded means of extending the operations of the Company, and founding a number of interior trading posts.

It now became necessary to send despatches overland to Mr. Astor, at New York, an attempt at doing so having been frustrated some time before by the hostility of the Indians at Wish-Ram. The task was confided to Mr. Robert Stuart, who, though he had never been across the mountains, had given evidence of his competency for such undertakings. He was accompanied by Ben Jones and John Day, Kentuckians; Andri Valler and Francis Le Clerc, Canadians; and two of the partners, Messieurs M'Lellan and Crooks, who were

desirous of returning to the Atlantic States. This little party set out on the 29th of June, and Mr. Irving accompanied them, in detail, throughout the whole of their long and dangerous wayfaring. As might be expected, they encountered misfortunes still more terrible than those before experienced by Mr. Hunt and his associates. The chief features of the journey were the illness of Mr. Crooks, and the loss of all the horses of the party through the villainy of the Upsarokas. This latter circumstance was the cause of excessive trouble and great delay. On the 30th of April, however, the party arrived, in fine health and spirits, at St. Louis, having been ten months in performing their perilous expedition. The route taken by Mr. Stuart coincided nearly with that of Mr. Hunt, as far as the Wind River mountains. From this point, the former struck somewhat to the south-east, following the Nebraska to its junction with the Missouri.

War having at length broken out between the United States and England, Mr. Astor perceived that the harbour of New York would be blockaded, and the departure of the annual supply ship in the autumn prevented. In this emergency, he wrote to Captain Sowle, the commander of the *Beaver*, addressing him at Canton. The letter directed him to proceed to the factory at the mouth of the Columbia, with such articles as the establishment might need, and to remain there subject to the orders of Mr. Hunt. In the meantime, nothing had yet been heard from the settlement. Still, not discouraged, Mr. A. determined to send out another ship, although the risk of loss was so greatly enhanced that no insurance could be effected. The *Lark* was chosen—remarkable for her fast sailing. She put to sea on the 6th of March, 1813, under the command of Mr. Northrop, her mate—the officer first appointed to command her having shrunk from his engagement. Within a fortnight after her departure, Mr. A. received intelligence that the North-West Company had presented a memorial to Great Britain, stating the vast scope of the contemplated operations at Astoria, expressing a fear that, unless crushed, the settlement there would effect the downfall of their own fur trade, and advising that a force be sent against the colony. In consequence, the frigate *Phœbe* was ordered to convoy the armed ship *Isaac Todd*, belonging to the North-West Company, and provided with men and munitions for the formation of a new establishment. They were directed "to proceed together to the mouth of the Columbia, capture or destroy whatever American fortress they would find there, and plant the British flag on its ruins." Upon this, matters being represented to our Government, the frigate *Adams*, Captain Crane, was detailed for the protection of Astoria; and Mr. A. proceeded to fit out a ship called the *Enterprise*, to sail in company with the frigate, and freighted with additional supplies. Just, however, as the two vessels were ready, a reinforcement of seamen was wanted for Lake Ontario, and the crew of the *Adams* were necessarily transferred to that service. Mr. A. was about to send off his ship alone, when a British force made its appearance off the Hook, and New York was effectually blockaded. The *Enterprise*, therefore, was unloaded

and dismantled. We now return to the *Beaver*.

This vessel, after leaving at Astoria that portion of her cargo destined for that post, sailed for New Archangel on the 4th of August, 1812. She arrived there on the 19th, meeting with no incidents of moment. A long time was now expended in negotiations with the drunken governor of the Russian fur colony—one Count Baranoff—and when they were finally completed the month of October had arrived. Moreover, in payment for his supplies, Mr. Hunt was to receive seal-skins, and none were on the spot. It was necessary, therefore, to proceed to a seal-catching establishment belonging to the Russian company at the Island of St. Paul, in the Sea of Kamschatka. He set sail for this place on the 4th of October, after having wasted forty-five days at New Archangel. He arrived on the 31st of the month—by which time, according to his arrangement, he should have been back at Astoria. Now occurred great delay in getting the peltries on board; every pack being overhauled to prevent imposition. To make matters worse, the *Beaver* one night was driven off shore in a gale, and could not get back until the 13th of November. Having at length taken in the cargo and put to sea, Mr. Hunt was in some perplexity as to his course. The ship had been much injured in the late gale, and he thought it imprudent to attempt making the mouth of the Columbia in this boisterous time of the year. Moreover, the season was already much advanced; and should he proceed to Astoria as originally intended, he might arrive at Canton so late as to find a bad market. Unfortunately, therefore, he determined to go at once to the Sandwich Islands, there await the arrival of the annual ship from New York, take passage in her to the settlement, and let the *Beaver* proceed on her voyage to China. It is but justice to add that he was mainly induced to this course by the timid representations of Captain Sowle. They reached Woahoo in safety, where the ship underwent the necessary repairs, and again put to sea on the 1st of January, 1813, leaving Mr. Hunt on the island.

At Canton, Captain Sowle found the letter of Mr. Astor, giving him information of the war, and directing him to convey the intelligence to Astoria. He wrote a reply, in which he declined complying with these orders, saying that he would wait for peace, and then return home. In the meantime Mr. Hunt waited in vain for the annual vessel. At length, about the 20th of June, the ship *Albatross*, Captain Smith, arrived from China, bringing the first news of the war to the Sandwich Islands. This ship Mr. H. chartered for two thousand dollars, to land him, with some supplies, at Astoria. He reached this post on the 20th of August, where he found the affairs of the company in a perishing condition, and the partners bent upon abandoning the settlement. To this resolution Mr. Hunt was finally brought to consent. There was a large stock of furs, however, at the factory, which it was necessary to get to a market, and a ship was required for this service. The *Albatross* was bound to the Marquesas, and thence to the Sandwich Islands; and it was resolved that Mr. H. should sail in her in quest of a vessel, returning, if possible, by the 1st of January, and bringing with him a

supply of provisions. He departed on the 26th of August, and reached the Marquesas without accident. Commodore Porter soon afterwards arrived, bringing intelligence that the British frigate *Phœbe* with a store-ship mounted with battering pieces, together with the sloops of war *Cherub* and *Racoon*, had all sailed from Rio Janeiro on the 6th of July, bound for the mouth of the Columbia. Mr. H., after in vain attempting to purchase a whale ship from Commodore Porter, started on the 23rd of November for the Sandwich Islands, arriving on the 20th of December. Here he found Captain Northrop, of the *Lark*, which had suffered shipwreck on the coast about the middle of March. The brig *Pedlar* was now purchased for ten thousand dollars, and, Captain N. being put in command of her, Mr. H. sailed for Astoria on the 22nd of January, 1814, with the view of removing the property there, as speedily as possible, to the Russian settlements in the vicinity—these were Mr. Astor's orders sent out by the *Lark*. On the 28th of February the brig anchored in the Columbia, when it was found that on the 12th of December the British had taken possession of the post. In some negotiations carried on, just before the surrender, on the part of the North-West Company and M'Dougal, that worthy personage gave full evidence that Captain Thorn was not far wrong in suspecting him to be no better than he should be. He had been for some time secretly a partner of the rival association, and shortly before the arrival of the British, took advantage of his situation as head of the post to barter away the property of the company at less than one-third of its value.

Thus failed this great enterprise of Mr. Astor. At the peace, Astoria itself, by the treaty of Ghent, reverted with the adjacent country to the United States, on the principle of *status ante bellum*. In the winter of 1815, Congress passed a law prohibiting all traffic of British traders within our territories, and Mr. A. felt anxious to seize this opportunity for the renewal of his undertaking. For good reasons, however, he could do nothing without the direct protection of the Government. This evinced much supineness in the matter; the favourable moment was suffered to pass unimproved; and, in despite of the prohibition of Congress, the British finally usurped the lucrative traffic in peltries throughout the whole of our vast territories in the north-west. A very little aid from the sources whence he had naturally a right to expect it, would have enabled Mr. Astor to direct this profitable commerce into national channels, and to render New York, what London has now long been, the great emporium for furs.

We have already spoken of the masterly manner in which Mr. Irving has executed his task. It occurs to us that we have observed one or two slight discrepancies in the narrative. There appears to be some confusion between the names of M'Lellan, M'Lennon, and M'Lennan—or do these three appellations refer to the same individual? In going up the Missouri, Mr. Hunt arrives at the Great Bend on the 1st of June, —the third day after which (the day on which the party is overtaken by Lisa) is said to be the 3rd of *July*. Jones and Carson join the expedition just above the Omaha village. At page 187,

vol. i., we are told that the two men "who had joined the company at the Maha village" (meaning Omaha, we presume), deserted and were pursued, but never overtaken—at page 199, however, Carson is recognised by an Indian who is holding a parley with the party. The *Lark*, too, only sailed from New York on the 6th of March, 1813, and on the 10th we find her, much buffeted, somewhere in the near vicinity of the Sandwich Islands. These errors are of little importance in themselves, but may as well be rectified in a future edition.

Elizabeth Barrett Barrett

(Published in *Broadway Journal*, January, 1845.—Ed.)

"A WELL-BRED *man*," says Sir James Puckle, in his "Gray Cap for a Green Head," "will never give himself the liberty to speak ill of women." We emphasise the "man." Setting aside, for the present, certain rare commentators and compilers of the species G——, —creatures neither precisely men, women, nor Mary Wollstonecraft's —setting these aside as unclassifiable, we may observe that the race of critics are masculine—men. With the exception, perhaps, of Mrs. Anne Royal, we can call to mind no female who has occupied, even temporarily, the Zoilus throne. And this, the Salic law, is an evil; for the inherent chivalry of the critical *man* renders it not only an unpleasant task to him "to speak ill of a woman" (and a woman and her book are identical), but an almost impossible task not to laud her *ad nauseam*. In general, therefore, it is the unhappy lot of the authoress to be subjected, time after time, to the downright degradation of mere puffery. On her own side of the Atlantic, Miss Barrett has indeed, in one instance at least, escaped the infliction of this lamentable contumely and wrong; but if she had been really solicitous of its infliction in America, she could not have adopted a more effectual plan than that of saying a few words about "the great American people," in an American edition of her work, published under the superintendence of an American author. Of the innumerable "native" notices of "The Drama of Exile" which have come under our observation, we can call to mind *not one* in which there is anything more remarkable than the critic's dogged determination to find *nothing* barren, from Beersheba to Dan. Some one in the *Democratic Review* has proceeded so far, it is true, as to venture a *very* delicate insinuation to the effect that the poetess "will not fail to speak her mind *though it bring upon her a bad rhyme*"; beyond this, nobody has proceeded; and as for the elaborate paper in the new *Whig Monthly*, all that anybody can say or think, and all that Miss Barrett can *feel* respecting it is, that it is an eulogy as well written as it is an insult well intended. Now, of all the friends of the fair author, we doubt whether one exists, with more profound—with more enthusiastic reverence and admiration of her genius, than

the writer of these words. And it is for this very reason, beyond all others, that he intends to speak of her *the truth*. Our chief regret is, nevertheless, that the limits of this work will preclude the possibility of our speaking this truth so fully and so much in detail as we could wish. By far the most valuable criticism that we, or any one could give, of the volumes now lying before us, would be the quotation of three-fourths of their contents. But we have this advantage—that the work has been long published, and almost universally read—and thus, in some measure, we may proceed, concisely, as if the text of our context were an understood thing.

In her preface to the "American edition" of her late poems, Miss Barrett, speaking of "The Drama of Exile," says:—"I decided on publishing it, after considerable hesitation and doubt. Its subject rather fastened on me than was chosen; and the form, approaching the model of the Greek tragedy, shaped itself under my hand rather by force of pleasure than of design. But when the compositional excitement had subsided, I felt afraid of my position. My own object was the new and strange experiment of the fallen Humanity, as it went forth from Paradise in the Wilderness, with a peculiar reference to Eve's allotted grief, which, considering that self-sacrifice belonged to her womanhood, and the consciousness of being the organ of the Fall to her offence, appeared to me imperfectly apprehended hitherto, and more expressible by a woman than by a man." In this abstract announcement of the theme, it is difficult to understand the ground of the poet's hesitation to publish; for the theme in itself seems admirably adapted to the purposes of the closest drama. The poet, nevertheless, is, very properly, conscious of failure—a failure which occurs not in the general, but in the particular conception, and which must be placed to the account of "the model of the Greek tragedies." The Greek tragedies *had* and even *have* high merits; but we act wisely in now substituting for the external and typified human sympathy of the antique Chorus, a direct internal, living, and moving sympathy itself; and although Æschylus might have done service as "a model" to either Euripides or Sophocles, yet were Sophocles and Euripides in London to-day, they would, perhaps, while granting a certain formless and shadowy grandeur, indulge a quiet smile at the shallowness and uncouthness of that Art, which, in the old amphitheatres, had beguiled them into applause of the "Œdipus at Colonos."

It would have been better for Miss Barrett if, throwing herself independently upon her own very extraordinary resources, and forgetting that a Greek had ever lived, she had involved her Eve in a series of adventures merely natural, or if not this, of adventures preternatural within the limits of at least a conceivable relation—a relation of matter to spirit and spirit to matter, that should have left room for something like palpable action and comprehensible emotion—that should not have utterly precluded the development of that womanly character which is admitted as the principal object of the poem. As the case actually stands, it is only in a few snatches of verbal intercommunication with Adam and

Lucifer that we behold her as a woman at all. For the rest, she is a mystical something or nothing, enwrapped in a fog of rhapsody about Transfiguration, and the Seed, and the Bruising of the Heel, and other talk of a nature that no man ever pretended to understand in plain prose, and which, when solar-microscoped into poetry "upon the model of the Greek drama," is about as convincing as the Egyptian Lectures of Mr. Silk Buckingham—about as much to any purpose under the sun as the *hi presto!* conjurations of Signor Blitz. What are we to make, for example, of dramatic colloquy such as this?—the words are those of a Chorus of Invisible Angels addressing Adam:—

> Live, work on, O Earthy!
> By the Actual's tension
> Speed the arrow worthy
> Of a pure ascension.
> From the low earth around you
> Reach the heights above you;
> From the stripes that wound you
> Seek the loves that love you!
> God's divinest burneth plain
> Through the crystal diaphane
> Of our loves that love you.

Now we do not mean to assert that, by excessive "tension" of the intellect, a reader accustomed to the cant of the transcendentalists (or of those who degrade an ennobling philosophy by styling themselves such) may not succeed in ferreting from the passage quoted, and indeed from each of the thousand similar ones throughout the book, something that shall bear the aspect of an absolute idea—but we do mean to say, first, that in nine cases out of ten, the thought when dug out will be found very poorly to repay the labour of the digging—for it is the nature of thought in general, as it is the nature of some ores in particular, to be richest when most superficial. And we do mean to say, secondly, that, in nineteen cases out of twenty, the reader will suffer the most valuable ore to remain unmined to all eternity before he will be put to the trouble of digging for it one inch. And we do mean to assert, thirdly, that no reader is to be condemned for *not* putting himself to the trouble of digging even the one inch; for no writer has the right to impose any such necessity upon him. What is worth thinking is distinctly thought; what is distinctly thought can and should be distinctly expressed, or should not be expressed at all. Nevertheless, there is no more appropriate opportunity than the present for admitting and maintaining, at once, what has never before been either maintained or admitted—that there is a justifiable exception to the rule for which we contend. It is where the design is to convey the fantastic—not the obscure. To give the idea of the latter we need, as in general, the most precise and definitive terms, and those who employ other terms but confound obscurity of expression with the expression of obscurity. The fantastic in itself, however,—phantasm—may be materially furthered in its development by the *quaint* in phraseology—a proposition which any moralist may examine at his leisure for himself.

"The Drama of Exile" opens with a very palpable *bull:*—"Scene, the outer side of the gate of Eden, shut fast with clouds"—[a scene out of sight!]—"from the depth of which revolves the

sword of fire, self-moved. A watch of innumerable angels rank above rank, slopes up from around it to the zenith; and the glare cast from their brightness and from the sword extends many miles into the wilderness. Adam and Eve are seen in the distance, flying along the glare. The angel Gabriel and Lucifer are beside the gate."—These are the "stage directions" which greet us on the threshold of the book. We complain first of the bull; secondly, of the blue-fire melodramatic aspect of the revolving sword; thirdly, of the duplicate nature of the sword, which, if steel, and sufficiently inflamed to do service in burning, would perhaps have been in no temper to cut; and on the other hand, if sufficiently cool to have an edge, would have accomplished little in the way of scorching a personage so well accustomed to fire and brimstone and all that, as we have very good reason to believe Lucifer was. We cannot help objecting, too, to the "innumerable angels," as a force altogether disproportioned to the one enemy to be kept out; either the self-moving sword itself, we think, or the angel Gabriel alone, or five or six of the "innumerable" angels, would have sufficed to keep the devil (or is it Adam?) outside of the gate—which, after all, he might not have been able to discover, on account of the clouds.

Far be it from us, however, to dwell irreverently on matters which have venerability in the faith or in the fancy of Miss Barrett. We allude to these *niaiseries* at all—found here in the very first paragraph of her poem—simply by way of putting in the clearest light the mass of inconsistency and antagonism in which her *subject* has inextricably involved her. She has made allusion to Milton, and no doubt felt secure in her theme (as a theme merely) when she considered his "Paradise Lost." But even in Milton's own day, when men had the habit of believing all things, the more nonsensical the more readily, and of worshipping, in blind acquiescence, the most preposterous of impossibilities—even *then*, there were not wanting individuals who would have read the great epic with more zest could it have been explained to their satisfaction how and why it was, not only that a snake quoted Aristotle's ethics, and behaved otherwise pretty much as he pleased, but that bloody battles were continually being fought between bloodless "innumerable angels" that found no inconvenience in losing a wing one minute and a head the next, and if pounded up into puff-paste late in the afternoon, were as good "innumerable angels" as new the next morning, in time to be at *reveille* roll-call. And now—at the present epoch—there are few people who do not occasionally *think*. This is emphatically the thinking age—indeed it may very well be questioned whether mankind ever substantially thought before. The fact is, if the "Paradise Lost" were written to-day (assuming that it had never been written when it was), not even its eminent, although over-estimated merits, would counterbalance, either in the public view, or in the opinion of any critic at once intelligent and honest, the multitudinous incongruities which are part and parcel of its plot.

But in the plot of the drama of Miss Barrett it is something even worse than incongruity which affronts:—a continuous mystical strain of ill-fitting and

exaggerated allegory—if, indeed, allegory is not much too respectable a term for it. We are called upon, for example, to sympathise in the whimsical woes of two Spirits, who, upspringing from the bowels of the earth, set immediately to bewailing their miseries in jargon such as this:—

I am the spirit of the harmless earth;
God spake me softly out among the stars,
As softly as a blessing of much worth—
And then His smile did follow unawares,
That all things, fashioned so for use and duty,
Might shine anointed with His chrism of beauty—
Yet I wail!

I drave on with the worlds exultingly,
Obliquely down the Godlight's gradual fall—
Individual aspect and complexity
Of gyratory orb and interval
Lost in the fluent motion of delight
Toward the high ends of Being beyond sight—
Yet I wail!

Innumerable other spirits discourse successively after the same fashion, each ending every stanza of his lamentation with the "yet I wail!" When at length they have fairly made an end, Eve touches Adam upon the elbow, and hazards, also, the profound and pathetic observation—"Lo, Adam, they wail!"—which is nothing more than the simple truth—for they *do*—and God deliver us from any such wailing again!

It is not our purpose, however, to demonstrate what every reader of these volumes will have readily seen self-demonstrated—the utter indefensibility of "The Drama of Exile," considered uniquely, as a work of art. We have none of us to be told that a medley of metaphysical recitatives sung out of tune, at Adam and Eve, by all manner of inconceivable abstractions, is not exactly the best material for a poem. Still it may very well happen that among this material there shall be individual passages of great beauty. But should any one doubt the possibility, let him be satisfied by a single abstract such as follows:—

On a mountain peak
Half-sheathed in primal woods and glittering
In *spasms of awful sunshine,* at that hour
A lion couched—part raised upon his paws,
With his calm massive face turned full on thine,
And his mane listening. When the ended curse
Left silence in the world, right suddenly
He sprang up rampant, and stood straight and stiff,
As if the new reality of death
Were dashed against his eyes,—and roared so fierce
(*Such thick carnivorous passion in his throat*
Tearing a passage through the wrath and fear)—
And roared so wild, and smote from all the hills
Such *fast keen echoes crumbling down the vales*
To distant silence,—that the forest beasts,
One after one, did mutter a response
In savage and in sorrowful complaint
Which trailed along the gorges.

There is an Homeric force here—a vivid picturesqueness which all men will appreciate and admire. It is, however, the longest quotable passage in the drama, not disfigured with blemishes of importance; although there are many—very many passages of a far loftier order of excellence, so disfigured, and which, therefore, it would not suit our immediate purpose to extract. The truth is—and it may be as well mentioned at this point as elsewhere—that we are not to look in Miss Barrett's works for any examples of what has been occasionally termed "sustained effort"; for neither are there, in any of her poems, any long commendable paragraphs, nor are there any individual compositions which will bear the slightest examination as consistent Art-products. Her wild and magnificent genius seems to have contented itself with points—to have exhausted itself in flashes; but it is the profusion—the unparalleled number and close propinquity of these points and flashes which render her book *one flame*, and justify us in calling her unhesitatingly, the greatest—the most glorious of her sex.

"The Drama of Exile" calls for little more, in the way of comment, than what we have generally said. Its finest particular feature is, perhaps, the rapture of Eve—rapture bursting through despair—upon discovering that she still possesses in the unwavering love of Adam, an undreamed-of and priceless treasure. The poem ends, as it commences, with a bull. The last sentence gives us to understand that "there is a sound through the silence, as of the falling tears of an angel." How there can be sound during silence, and how an audience are to distinguish, by such sound, angel tears from any other species of tears, it may be as well, perhaps, not too particularly to inquire.

Next in length to the Drama is "The Vision of Poets." We object to the didacticism of its design, which the poetess thus states: "I have attempted to express here my view of the mission of the veritable poet—of the self-abnegation implied in it, of the uses of sorrow suffered in it, of the great work accomplished in it through suffering, and of the duty and glory of what Balzac has beautifully and truly called *'la patience angelique du genie.'*" This "view" may be correct, but neither its correctness nor its falsity has anything to do with a poem. If a thesis is to be demonstrated, we need *prose* for its demonstration. In this instance, so far as the allegorical instruction and argumentation are lost sight of, in the upper current—so far as the main admitted intention of the work is kept out of view—so far only is the work a poem, and so far only is the poem worth notice, or worthy of its author. Apart from its poetical character, the composition is thoughtful, vivid, epigrammatic, and abundant in just observation—although the critical opinions introduced are not always our own. A reviewer in *Blackwood's Magazine*, quoting many of these critical portraits, takes occasion to find fault with the grammar of this tristich:—

Here Æschylus—the women swooned
To see so awful when he frowned
As the gods did—he standeth crowned.

"What on earth," says the critic, "are we to make of the words 'the women swooned to see so awful?' . . . The

syntax will punish future commentators as much as some of his own corrupt choruses." In general, we are happy to agree with this reviewer, whose decisions respecting the book are, upon the whole, so nearly coincident with ours that we hesitate, through fear of repetition, to undertake a *critique* at all, until we considered that we might say a very great deal in simply supplying his omissions; but he frequently errs through mere hurry, and never did he err more singularly than at the point now in question. He evidently supposes that "awful" has been misused as an adverb and made referable to "women." But not so; and although the construction of the passage is unjustifiably involute, its grammar is intact. Disentangling the construction, we make this evident at once. "Here Æschylus (he) standeth crowned (whom) the women swooned to see so awful, when he frowned as the gods did." The "he" is excessive, and the "whom" is understood. Respecting the lines,

> Euripides, with close and mild
> Scholastic lips, that could be wild,
> And laugh or sob out like a child
> Right in the classes,

the critic observes:—"'Right in the classes' throws our intellect completely upon its beam-ends." But, if so, the fault possibly lies in the crankness of the intellect; for the words themselves mean merely that Euripides laughed or cried like a schoolboy—like a child right (or just) in his classes—one who had not yet left school. The phrase is affected, we grant, but quite intelligible. A still more remarkable misapprehension occurs in regard to the triplet,

> And Goethe, with that reaching eye
> His soul reached out from, far and high,
> And fell from inner entity.

The reviewer's remarks upon this are too preposterous not to be quoted in full; we doubt if any commentator of equal dignity ever so egregiously committed himself before. "Goethe," he says, "is a perfect enigma; what does the word 'fell' mean? *deinos* (Gr.) we suppose—that is, 'not to be trifled with.' But surely it sounds very strange, although it may be true enough, to say that his 'fellness' is occasioned by 'inner entity.' But perhaps the line has some deeper meaning which we are unable to fathom." Perhaps it has: and this is the criticism—the British criticism—the *Blackwood* criticism—to which we have so long implicitly bowed down! As before, Miss Barrett's verses are needlessly involved, but their meaning requires no Œdipus. Their construction is thus intended:—"And Goethe, with that reaching eye from which his soul reached out, far and high, and (in so reaching) fell from inner entity." The plain prose is this:—Goethe (the poet would say), in involving himself too far and too profoundly in external speculations—speculations concerning the world without him—neglected, or made miscalculations concerning his inner entity, or being,—concerning the world within. This idea is involved in the metaphor of a person leaning from a window so far that finally he falls from it—the person being the soul, the window the eye.

Of the twenty-eight "Sonnets" which immediately succeed "The Drama of Exile," and which receive the especial

commendation of *Blackwood*, we have no very enthusiastic opinion. The *best* sonnet is objectionable from its extreme artificiality; and, to be effective, this species of composition requires a minute management—a well-controlled dexterity of touch—compatible neither with Miss Barrett's deficient constructiveness, nor with the fervid rush and whirl of her genius. Of the particular instances here given, we prefer "The Prisoner," of which the conclusion is particularly beautiful. In general, the themes are obtrusively metaphysical or didactic.

"The Romaunt of the Page," an imitation of the old English ballad, is neither very original in subject, nor very skilfully put together. We speak comparatively, of course:—It is not very good—for Miss Barrett; and what we have said of this poem will apply equally to a very similar production, "The Rhyme of the Duchess May." "The Poet and the Bird"—"A Child Asleep"—"Crowned and Wedded"—"Crowned and Buried"—"To Flush, my Dog"—"The Fourfold Aspect"—"A Flower in a Letter"—"A Lay of the Early Rose"—"That Day"—"L. E. L.'s Question"—"Catarina to Camoens"—"Wine of Cyprus"—"The Dead Pan"—"Sleeping and Watching"—"A Portrait"—"The Mournful Mother"—and "A Valediction"—although all burning with divine fire, manifested only in scintillations, have nothing in them idiosyncratic. "The House of Clouds" and "The Lost Bower" are superlatively lovely, and show the vast powers of the poet in the field best adapted to their legitimate display:—the *themes* here could not be improved. The former poem is purely imaginative; the latter is unobjectionably because unobtrusively suggestive of a moral, and is, perhaps, upon the whole, the most admirable composition in the two volumes—or, if it is not, then "The Lay of the Brown Rosarie" *is*. In this last the ballad-character is elevated—etherealised—and thus made to afford scope for an ideality at once the richest and most vigorous in the world. The peculiar foibles of the author are here, too, dropped bodily, as a mantle, in the tumultuous movement and excitement of the narrative.

Miss Barrett has need only of *real* self-interest in her subjects to do justice to her subjects and to herself. On the other hand, "A Rhapsody of Life's Progress," although gleaming with gold coruscations, is the least meritorious, because the most philosophical effusion of the whole:—this we say, in flat contradiction of the *"spoudiotaton kai philosophikotaton genos"* (Gr.) of Aristotle. "The Cry of the Human" is singularly effective, not more from the vigour and ghastly passion of its thought than from the artistically conceived *arabesquerie* of its rhythm. "The Cry of the Children," similar, although superior in tone and handling, is full of a nervous, unflinching energy—a horror sublime in its simplicity—of which Dante himself might have been proud. "Bertha in the Lane," a rich ballad, very singularly excepted from the wholesale commendation of the *Democratic Review* as "perhaps not one of the best," and designated by *Blackwood*, on the contrary, as "decidedly the finest poem of the collection," is *not* the *very* best, we think, only because mere pathos, however exquisite, cannot be ranked with the loftiest exhibitions of the ideal.

Of "Lady Geraldine's Courtship," the magazine last quoted observes that "some pith is put forth in its passionate parts." We will not pause to examine the delicacy or lucidity of the metaphor embraced in the *"putting forth* of some pith"; but unless by "some pith" is intended the utmost conceivable intensity and vigour, then the critic is merely damning with faint praise. With the exception of Tennyson's "Locksley Hall," we have never perused a poem combining so much of the fiercest passion with so much of the most ethereal fancy, as the "Lady Geraldine's Courtship" of Miss Barrett. We are forced to admit, however, that the latter work *is* a very palpable imitation of the former, which it surpasses in plot, or rather in thesis, as much as it falls below it in artistical management, and a certain calm energy—lustrous and indomitable—such as we might imagine in a broad river of molten gold.

It is in the "Lady Geraldine" that the critic of *Blackwood* is again put at fault in the comprehension of a couple of passages. He confesses his inability "to make out the construction of the words, 'all that spirits pure and ardent are cast out of love and reverence, because chancing not to hold.'" There are comparatively few American schoolboys who could not parse it. The prosaic construction would run thus:—"all *that* (wealth understood) because chancing not to hold *which* (or on account of their not holding it), pure and ardent spirits are cast out of love and reverence." The "which" is involved in the relative pronoun "that"—the second word of the sentence. *All that we know is, that Miss Barrett is right:*—here is a parallel phrase meaning "all that (which) we know," etc. The fact is, that the accusation of imperfect grammar would have been more safely urged, if more generally: in descending to particular exceptions, the reviewer has been doing little more than exposing himself at all points.

Turning aside, however, from grammar, he declares his incapacity to fathom the meaning of

> She has halls and she has castles, and the resonant steam-eagles
> *Follow far on the directing of her floating dove-like hand—*
> With a thunderous vapour trailing underneath the starry vigils,
> So to mark upon the blasted heaven the measure of her land.

Now it must be understood that he is profoundly serious in his declaration—he really *does not* apprehend the thought designed—and he is even more than profoundly serious, too, in intending these his own comments upon his own stolidity for wit:—"We thought that steam-coaches generally followed the directing of no hand except the stoker's, but *it* certainly is always much *liker* a raven than a dove." After this, who shall question the infallibility of Christopher North? We presume there are very few of *our* readers who will not easily appreciate the richly imaginative conception of the poetess:—The Lady Geraldine is supposed to be standing in her own door (positively *not* on the top of an engine), and thence pointing, "with her floating dove-like hand," to the lines of vapour, from the "resonant steam-eagles," that designated upon the "blasted heaven," the

remote boundaries of her domain. But perhaps we are guilty of a very gross absurdity ourselves, in commenting *at all* upon the whimsicalities of a reviewer who can deliberately select for special animadversion the second of the four verses we here copy:—

"Eyes," he said, "now throbbing
through me! are ye eyes that did
undo me?
Shining eyes like antique jewels set in
Parian statue-stone!
Underneath that calm white forehead
are ye ever burning torrid
O'er the desolate sand desert of my
heart and life undone?"

The ghost of the great Frederick might, to be sure, quote at us, in his own Latin, his favourite adage, "De gustibus non est disputand*us*";—but when we take into consideration the moral designed, the weirdness of effect intended, and the historical adaptation of the fact alluded to, in the line italicised (a fact of which it is by no means impossible that the critic is ignorant), we cannot refrain from expressing our conviction—and we here *express it* in the teeth of the whole horde of the Ambrosianians—from the entire range of poetical literature there shall not, in a century, be produced a more sonorous—a more vigorous verse—a juster—a nobler—a more ideal—a more magnificent image—than this very image, in this very verse, which the most noted magazine of Europe has so especially and so contemptuously condemned.

"The Lady Geraldine" is, we think, the only poem of its author which is not deficient, considered as an artistical whole. Her constructive ability, as we have already suggested, is either not very remarkable, or has never been properly brought into play: in truth, her genius is too impetuous for the minuter technicalities of that elaborate *Art* so needful in the building up of pyramids for immortality. This deficiency, then—if there be any such—is her chief weakness. Her other foibles, although some of them are, in fact, glaring, glare, nevertheless, to no very material ill purpose. There are none which she will not readily dismiss in her future works. She retains them now, perhaps, because unaware of their existence.

Her affectations are unquestionably many, and generally inexcusable. We may, perhaps, tolerate such words as "ble," "chrysm," "nympholeptic," "œnomel," and "chrysopras"—they have at least the merit either of distinct meaning, or of terse and sonorous expression;—but what can be well said in defence of the unnecessary nonsense of "'ware" for "aware"—of "'bide" for "abide"—of "'gins" for "begins"—of "'las" for "alas"—of "oftly," "ofter," and "oftest," for "often," "more often," and "most often"—or of "erelong" in the sense of "long ago"? That there is *authority* for the mere words proves nothing; those who employed them in their day would not employ them if writing *now*. Although we grant, too, that the poetess is very usually Homeric in her compounds, there is no intelligibility of construction, and therefore no force of meaning in "dew-pallid," "pale-passioned," and "silver-solemn." Neither have we any partiality for "drave" or "*su*preme," or "*la*ment"; and while upon this topic,

we may as well observe that there are few readers who do anything but laugh or stare at such phrases as "L. E. L.'s Last Question"—"The Cry of the Human"—"Leaning from my human"—"Heaven assist the human"—"the full sense of your mortal"—"a grave for your divine"—"falling off from our created"—"he sends this gage for thy pity's counting"—"they could not press their futures on the present of her courtesy"—or "could another fairer lack to thee, lack to thee?" There are few, at the same time, who do not feel disposed to weep outright, when they hear of such things as "Hope withdrawing her peradventure"—"spirits dealing in pathos of antithesis"—"angels in antagonism to God and his reflex beatitudes"—"songs of glories ruffling down doorways"—"God's possibles"—and "rules of Mandom."

We have already said, however, that mere *quaintness*, within reasonable limit, is not only *not* to be regarded as affectation, but has its proper artistic uses in aiding a fantastic effect. We quote, from the lines "To my dog Flush," a passage in exemplification:—

Leap! thy broad tail waves a light!
Leap! thy slender feet are bright,
Canopied in fringes!
Leap! those tasselled ears of thine
Flicker strangely, fair and fine,
Down their golden inches!

And again—from the song of a tree-spirit, in "The Drama of Exile."

The Divine impulsion cleaves
In dim movements to the leaves,
Dropt and lifted, dropt and lifted,
In the sun-light greenly sifted,—
In the sun-light and the moon-light
Greenly sifted through the trees.
Ever wave the Eden trees,
In the night-light and the noon-light,
With a ruffling of green branches,
Shaded off to resonances,
Never stirred by rain or breeze.

The thoughts here belong to the highest order of poetry, but they could not have been wrought into effective expression without the instrumentality of those repetitions—those unusual phrases—in a word, those *quaintnesses*, which it has been too long the fashion to censure, indiscriminately, under the one general head of "affectation." No true poet will fail to be enraptured with the two extracts above quoted—but we believe there are few who would not find a difficulty in reconciling the psychal impossibility of refraining from admiration, with the too-hastily attained mental conviction that, critically, there is nothing to admire.

Occasionally we meet in Miss Barrett's poems a certain *far-fetchedness* of imagery, which is reprehensible in the extreme. What, for example, are we to think of

Now he hears the angel voices
Folding silence in the room?—

undoubtedly, that it is nonsense, and no more; or of

How the silence round you shivers
While our voices through it go?—

again, unquestionably, that it is nonsense, and nothing beyond.

Sometimes we are startled by knotty paradoxes; and it is not acquitting their

perpetrator of all blame on their account to admit that, in some instances, they are susceptible of solution. It is really difficult to discover anything for approbation in enigmas such as

That bright impassive, passive angelhood,

or—

The silence of my heart is full of sound.

At long intervals, we are annoyed by specimens of repulsive imagery, as where the children cry:—

How long, O cruel nation,
Will you stand, to move the world, *on a child's heart*—
Stifle down with a mailed heel its palpitation? etc

Now and then, too, we are confounded by a pure platitude, as when Eve exclaims:—

Leave us not
In agony beyond what we can bear,
And in abasement *below thunder-mark!*

or, when the Saviour is made to say:—

So, at last,
He shall look round on you with lids *too straight*
To hold the grateful tears.

"Strait" was no doubt intended, but does not materially elevate, although it slightly elucidates, the thought. A very remarkable passage is that, also, wherein Eve bids the infant voices

Hear the steep generations, how they fall
Adown the visionary stairs of Time,
Like supernatural thunders—far yet near,
Sowing their fiery echoes through the hills!

Here, saying nothing of the affectation in "adown"; not alluding to the insoluble paradox of "far yet near"; not mentioning the inconsistent metaphor involved in the "sowing of *fiery* echoes"; adverting but slightly to the misusage of "like," in place of "as," and to the impropriety of making anything fall like *thunder,* which has never been known to fall at all; merely hinting, too, at the misapplication of "steep," to the "generations," instead of to the "stairs"—a perversion in no degree to be justified by the fact that so preposterous a figure as *synecdoche* exists in the school-books;—letting these things pass, for the present, we shall still find it difficult to understand how Miss Barrett should have been led to think that the principal idea itself—the abstract idea—the idea of *tumbling down stairs,* in any shape, or under any circumstances—is either a poetical or a decorous conception. And yet we have seen this very passage quoted as "sublime," by a critic who seems to take it for granted, as a general rule, that Nat-Leeism is the loftiest order of literary merit. That the lines very *narrowly missed* sublimity, we grant; that they came within a step of it, we admit;—but, unhappily, the step is that *one* step which, time out of mind, has intervened between the sublime and the ridiculous. So true is this, that any person—that even

we—with a very partial modification of the imagery—a modification that shall not interfere with its richly spiritual *tone*—may elevate the quotation into unexceptionability. For example: and we offer it with profound deference—

Hear the far generations—how they crash,
From crag to crag, down the precipitous Time,
In multitudinous thunders that upstartle,
Aghast, the echoes from their cavernous lairs
In the visionary hills!

We have no doubt that our version has its faults—but it has at least the merit of consistency. Not only is a mountain more poetical than a pair of stairs; but echoes are more appropriately typified as wild beasts than as seeds; and echoes and wild beasts agree better with a mountain than does a flight of stairs with the *sowing* of seeds—even admitting that these seeds be seeds of fire, and be sown broadcast "among the hills," by a steep generation, while in the act of tumbling down the stairs—that is to say, of coming down the stairs in too violent a hurry to be capable of sowing the seeds as accurately as all seeds should be sown; nor is the matter rendered any better for Miss Barrett, even if the construction of her sentence is to be understood as implying that the fiery seeds were sown, not immediately by the steep generations that tumbled down the stairs, but mediately, through the intervention of the "supernatural thunders" that were *occasioned* by the "steep generations" that tumbled down the stairs.

The poetess is not unfrequently guilty of repeating herself. The "thunder cloud veined by lightning" appears, for instance, on pages 34 of the first and 228 of the second volume. The "silver clash of wings" is heard at pages 53 of the first and 269 of the second volume; and angel tears are discovered to be falling as well at page 27 as at the conclusion of "The Drama of Exile." Steam, too, in the shape of Death's White Horse, comes upon the ground, both at pages 244 of the first and 179 of the second volume—and there are multitudinous other repetitions, both of phrase and idea—but it is the excessive reiteration of pet *words* which is, perhaps, the most obtrusive of the minor errors of the poet. "Crystalline," "Apocalypse," "foregone," "evangel," "'ware," "throb," "level," "loss," and the musical term "minor," are for ever upon her lips. The chief favourites, however, are "down" and "leaning," which are echoed and re-echoed not only *ad infinitum*, but in every whimsical variation of import. As Miss Barrett certainly cannot be aware of the extent of this mannerism, we will venture to call her attention to a few—comparatively a *very* few examples.

Pealing *down* the depths of Godhead. . . .
Smiling *down*, as Venus *down* the waves. . . .
Smiling *down* the steep world very purely. . . .
Down the purple of this chamber. . . .
Moving *down* the hidden depths of loving. . . .
Cold the sun shines *down* the door. . . .
Which brought angels *down* our talk. . . .

Let our souls behind you *lean* gently moved. . . .
But angels *leaning* from the golden seats. . . .
And melancholy *leaning* out of heaven. . . .
And I know the heavens are *leaning* down. . . .
Then over the casement she *leaneth*. . . .
Forbear that dream, too near to heaven it *leaned*. . . .
I would *lean* my spirit o'er you. . . .
Thou, O sapient angel, *leanest* o'er. . . .
Shapes of brightness *overlean* thee. . . .
They are *leaning* their young heads. . . .
Out of heaven shall o'er you *lean*. . . .
While my spirit *leans* and reaches. . . .
Etc., etc., etc.

In the matter of grammar, upon which the Edinburgh critic insists so pertinaciously, the author of "The Drama of Exile" seems to us even peculiarly without fault. The nature of her studies has, no doubt, imbued her with a very delicate instinct of constructive accuracy. The occasional use of phrases so questionable as "from whence," and the far-fetchedness and involution of which we have already spoken, are the only noticeable blemishes of an exceedingly chaste, vigorous, and comprehensive style.

In her inattention to rhythm, Miss Barrett is guilty of an error that might have been fatal to her fame—that *would* have been fatal to any reputation less solidly founded than her own. We do not allude so, particularly, to her multiplicity of inadmissible rhymes. We would wish, to be sure, that she had not thought proper to couple Eden and succeeding—glories and floorwise—burning and morning—thither and æther—enclose me and across me—misdoers and flowers—centre and winter—guerdon and pardon—conquer and anchor—desert and unmeasured—atoms and fathoms—opal and people—glory and doorway—trumpet and accompted—taming and overcame him—coming and woman—is and trees—off and sun-proof—eagles and vigils—nature and satire—poems and interflowings—certes and virtues—pardon and burden—thereat and great—children and bewildering—mortal and turtle—moonshine and sunshine. It would have been better, we say, if such apologies for rhymes as these had been rejected. But deficiencies of *rhythm* are more serious. In some cases it is nearly impossible to determine what metre is intended. "The Cry of the Children" cannot be scanned: we never saw so poor a specimen of verse. In imitating the rhythm of "Locksley Hall," the poetess has preserved with accuracy (so far as mere syllables are concerned) the forcible line of seven trochees with a final cæsura. The "double rhymes" have only the force of a single long syllable—a cæsura: but the natural rhythmical division, occurring at the close of the fourth trochee, should never be forced to occur, as Miss Barrett constantly forces it, in the middle of a word, or of an indivisible phrase. If it do so occur, we must sacrifice, in perusal, either the sense or the rhythm. If she will consider, too, that this line of seven trochees and a cæsura is nothing more than two lines written in one—a line of four trochees succeeded by one of three trochees and a cæsura—she will at once see how unwise she has been in composing her poem in quatrains of

the long line with alternate rhymes, instead of immediate ones, as in the case of "Locksley Hall." The result is, that the ear, expecting the rhymes before they occur, does not appreciate them when they do. These points, however, will be best exemplified by transcribing one of the quatrains in its *natural* arrangement. That actually employed is addressed only to the eye:—

Oh, she fluttered like a tame bird
In among its forest brothers
Far too strong for it, then, drooping,
Bowed her face upon her hands—
And I spake out wildly, fiercely,
Brutal truths of her and others!
I, she planted in the desert,
Swathed her, wind-like, with my sands.

Here it will be seen that there is a paucity of rhyme, and that it is expected at places where it does not occur. In fact, if we consider the eight lines as two independent quatrains (which they are), then we find them *entirely rhymeless.* Now so unhappy are these metrical defects—of so much importance do we take them to be, that we do not hesitate in declaring the general inferiority of the poem to its prototype to be altogether chargeable to *them.* With equal rhythm "Lady Geraldine" had been far—very far the superior poem. Inefficient rhythm is inefficient poetical expression: and expression, in poetry,—what is it?—what is it not? No one living can better answer these queries than Miss Barrett.

We conclude our comments upon her versification by quoting (we will not say whence—from what one of her poems)—a few verses without the linear division as it appears in the book. There are many readers who would never suspect the passage to be intended for metre at all.—"Ay!—and sometimes, on the hillside, while we sat down on the gowans, with the forest green behind us, and its shadow cast before, and the river running under, and across it from the rowans a partridge whirring near us till we felt the air it bore—there, obedient to her praying, did I read aloud the poems made to Tuscan flutes, or instruments more various of our own—read the pastoral parts of Spenser—or the subtle interflowings found in Petrarch's sonnets;—here's the book!—the leaf is folded down!"

With this extract we make an end of our fault-finding—and *now,* shall we speak, equally in detail, of the *beauties* of this book? Alas! here, indeed, do we feel the impotence of the pen. We have already said that the supreme excellence of the poetess whose works we review is made up of the multitudinous sums of a world of lofty merits. It is the multiplicity—it is the *aggregation*—which excites our most profound enthusiasm, and enforces our most earnest respect. But unless we had space to extract three-fourths of the volumes, how could we convey this aggregation by specimens? We might quote, to be sure, an example of keen insight into our psychal nature, such as this:—

I fell flooded with a dark,
In the silence of a swoon—
When I rose, still cold and stark,
There was night,—I saw the moon;

And the stars, each in its place,
And the May-blooms on the grass,
Seemed to wonder what I was.
And I walked as if apart
From myself, when I could stand—
And I pitied my own heart,
As if I held it in my hand,
Somewhat coldly, with a sense
Of fulfilled benevolence.

Or we might copy an instance of the purest and most radiant imagination, such as this:—

So, young muser, I sat listening
To my Fancy's wildest word—
On a sudden, through the glistening
Leaves around, a little stirred,
Came a sound, a sense of music,
Which was rather felt than heard.
Softly, finely, it unwound me—
From the world it shut me in—
Like a fountain falling round me
Which with silver waters thin,
Holds a little marble Naiad sitting
smilingly within.

Or, again, we might extract a specimen of wild Dantesque vigour, such as this—in combination with a pathos never excelled:—

Ay! be silent—let them hear each other
breathing
For a moment mouth to mouth—
Let them touch each other's hands in a
fresh wreathing
Of their tender human youth!

Let them feel that this cold metallic
motion
Is not all the life God fashions or
reveals—
Let them prove their inward souls
against the notion
That they live in you, or under you,
O wheels!

Or, still again, we might give a passage embodying the most elevated sentiment, most tersely and musically thus expressed:—

And since, Prince Albert, men have
called thy spirit high and rare,
And true to truth, and brave for truth,
as some at Augsburg were—
We charge thee by thy lofty thoughts
and by thy poet-mind,
Which not by glory or degree takes
measure of mankind,
Esteem that wedded had less dear
for sceptre than for ring,
And hold her uncrowned womanhood
to be the royal thing!

These passages, we say, and a hundred similar ones, exemplifying particular excellences, might be displayed, and we should still fail, as lamentably as the *scholastikos* with his brick, in conveying an idea of the vast *totality*. By no individual stars can we present the constellatory radiance of the book. *To the book*, then, with implicit confidence we appeal.

That Miss Barrett has done more, in poetry, than any woman, living or dead, will scarcely be questioned:—that she has surpassed all her poetical contemporaries of either sex (with a single exception), is our deliberate opinion—not idly entertained, we think, nor founded on any visionary basis. It may not be uninteresting, therefore, in closing this examination of her claims, to determine in what manner she holds poetical

relation with these contemporaries, or with her immediate predecessors, and especially with the great exception to which we have alluded,—if at all.

If ever mortal "wrecked his thoughts upon expression" it was Shelley. If ever poet sang (as a bird sings)—impulsively—earnestly—with utter abandonment—to himself solely—and for the mere joy of his own song—that poet was the author of the "Sensitive Plant." Of Art—beyond that which is the inalienable instinct of Genius—he either had little or disdained all. He *really* disdained that Rule which is the emanation from Law, because his own soul was law in itself. His rhapsodies are but the rough notes—the stenographic memoranda of poems—memoranda which, because they were all-sufficient for his own intelligence, he cared not to be at the trouble of transcribing in full for mankind. In all his works we find no conception thoroughly wrought out. For this reason it is that he is the most fatiguing of poets. Yet he wearies in having done too little rather than too much; what seems in him the diffuseness of one idea, is the conglomerate concision of many;—and this concision it is which renders him obscure. With such a man, to imitate was out of the question; it would have answered no purpose—for he spoke to his own spirit alone, which would have comprehended no alien tongue;—he was, therefore, profoundly original. His quaintness arose from intuitive perception of that truth to which Lord Verulam alone has given distinct voice:—"There is no exquisite beauty which has not some strangeness in its proportion." But whether obscure, original, or quaint, he was at all times sincere. He had no *affectations*.

From the ruins of Shelley there sprang into existence, affronting the Heavens, a tottering and fantastic pagoda, in which the salient angles, tipped with mad jangling bells, were the idiosyncratic *faults* of the great original—faults which cannot be called such in view of his purposes, but which are monstrous when we regard his works as addressed to mankind. A "school" arose—if that absurd term must still be employed—a school—a system of rules—upon the basis of the Shelley who had none. Young men innumerable, dazzled with the glare and bewildered with the *bizarrerie* of the divine lightning that flickered through the clouds of the Prometheus, had no trouble whatever in heaping up imitative vapours, but for the lightning were content, perforce, with its *spectrum*, in which the *bizarrerie* appeared without the fire. Nor were great and mature minds unimpressed by the contemplation of a greater and more mature; and thus gradually were interwoven into this school of all lawlessness—of obscurity, quaintness, exaggeration—the misplaced didacticism of Wordsworth, and the even more preposterously anomalous metaphysicianism of Coleridge. Matters were now fast verging to their worst, and at length, in Tennyson, poetic inconsistency attained its extreme. But it was precisely this extreme which, following the law of all extremes, wrought in him a natural and inevitable revulsion, leading him first to contemn and secondly to investigate his early manner, and finally, to winnow from its magnificent elements the truest

and purest of all poetical styles. But not even yet is the process complete, and for this reason in part, but chiefly on account of the mere fortuitousness of that mental and moral combination which shall unite in one person (if *ever* it shall) the Shelleyan *abandon,* the Tennysonian poetic sense, the most profound instinct of Art, and the sternest Will properly to blend and vigorously to control all;—chiefly, we say, because such combination of antagonisms must be purely fortuitous, has the world never yet seen the noblest of the poems of which it is *possible* that it may be put in possession.

And yet Miss Barrett has narrowly missed the fulfilment of these conditions. Her poetic inspiration is the highest—we can conceive nothing more august. Her sense of Art is pure in itself, but has been contaminated by pedantic study of false models—a study which has the more easily led her astray, because she placed an undue value upon it as rare—as alien to her character of woman. The accident of having been long secluded by ill-health from the world has effected, moreover, in her behalf, what an innate recklessness did for Shelley—has imparted to her, if not precisely that *abandon* to which I have referred, at least a something that stands well in its stead—a comparative independence of men and opinions with which she did not come personally in contact—a happy audacity of thought and expression never before known in one of her sex. It is, however, this same accident of ill-health, perhaps, which has invalidated her original Will—diverted her from proper individuality of purpose—and seduced her into the sin of imitation. Thus what she might have done we cannot altogether determine. What she has actually accomplished is before us. With Tennyson's works beside her, and a keen appreciation of them in her soul—appreciation too keen to be discriminative;—with an imagination even more vigorous than his, although somewhat less ethereally delicate; with inferior art and more feeble volition; she has written poems such as he *could not write,* but such as he, under *her* conditions of ill-health and seclusion, *would have written* during the epoch of his pupildom, in that school which arose out of Shelley, and from which, over a disgustful gulf of utter incongruity and absurdity, lit only by miasmatic flashes, into the broad open meadows of Natural Art and Divine Genius, he—Tennyson—is at once the bridge and the transition.

Thomas Babington Macaulay

(First published in *Graham's Magazine,* June, 1841.—Ed.)

MACAULAY has obtained a reputation which, although deservedly great, is yet in a remarkable measure undeserved. The few who regard him merely as a terse, forcible, and logical writer, full of thought, and abounding in original views, often sagacious, and never otherwise than admirably expressed—appear to us precisely in the right. The many who look upon him as not only all this,

but as a comprehensive and profound thinker, little prone to error, err essentially themselves. The source of the general mistake lies in a very singular consideration—yet in one upon which we do not remember ever to have heard a word of comment. We allude to a tendency in the public mind towards logic for logic's sake—a liability to confound the vehicle with the thing conveyed—an aptitude to be so dazzled by the luminousness with which an idea is set forth as to mistake it for the luminousness of the idea itself. The error is one exactly analogous with that which leads the immature poet to think himself sublime wherever he is obscure, because obscurity is a source of the sublime—thus confounding obscurity of expression with the expression of obscurity. In the case of Macaulay—and we may say, *en passant*, of our own Channing—we assent to what he says too often because we so very clearly understand what it is that he intends to say. Comprehending vividly the points and the sequence of his argument, we fancy that we are concurring in the argument itself. It is not every mind which is at once able to analyse the satisfaction it receives from such Essays as we see here. If it were merely *beauty* of style for which they were distinguished—if they were remarkable only for rhetorical flourishes—we would not be apt to estimate these flourishes at more than their due value. We would not agree with the doctrines of the essayist on account of the elegance with which they were urged. On the contrary, we would be inclined to disbelief. But when all ornament save that of simplicity is disclaimed—when we are attacked by precision of language, by perfect accuracy of expression, by directness and singleness of thought, and above all by a logic the most rigorously close and consequential—it is hardly a matter for wonder that nine of us out of ten are content to rest in the gratification thus received as in the gratification of absolute truth.

Of the terseness and simple vigour of Macaulay's style it is unnecessary to point out instances. Every one will acknowledge his merits on this score. His exceeding *closeness* of logic, however, is more especially remarkable. With this he suffers nothing to interfere. Here, for example, is a sentence in which, to preserve entire the chain of his argument—*to leave no minute gap which the reader might have to fill up with thought*—he runs into most unusual tautology.

"The books and traditions of a sect may contain, mingled with propositions strictly theological, other propositions, purporting to rest on the same authority, which relate to physics. If new discoveries should throw discredit on the physical propositions, the theological propositions, unless they can be separated from the physical propositions, will share in their discredit."

These things are very well in their way; but it is indeed questionable whether they do not appertain rather to the trickery of thought's vehicle than to thought itself—rather to reason's shadow than to reason. Truth, for truth's sake, is seldom so enforced. It is scarcely too much to say that the style of the profound thinker is never closely logical. Here we might instance

George Combe—than whom a more candid reasoner never, perhaps, wrote or spoke—than whom a more complete antipode to Babington Macaulay there certainly never existed. The former *reasons* to discover the true. The latter *argues* to convince the world, and, in arguing, not unfrequently surprises himself into conviction. What Combe appears to Macaulay it would be a difficult thing to say. What Macaulay is thought of by Combe we can understand very well. The man who looks at an argument in its details alone will not fail to be misled by the one; while he who keeps steadily in view the *generality* of a thesis will always at least approximate the truth under guidance of the other.

Macaulay's tendency—and the tendency of mere logic in general—to concentrate force upon minutiæ, at the expense of a subject as a whole, is well instanced in an article (in the volume now before us) on Ranke's "History of the Popes." This article is called a review—possibly because it is anything else—as *lucus* is *lucus a non lucendo*. In fact it is nothing more than a beautifully written treatise on the main theme of Ranke himself; the whole matter of the treatise being deduced from the History. In the way of criticism there is nothing worth the name. The strength of the essayist is put forth to account for the progress of Romanism by maintaining that theology is not a progressive science. The enigmas, says he in substance, which perplex the natural theologian are the same in all ages, while the Bible, where alone we are to seek revealed truth, has always been what it is.

The manner in which these two propositions are set forth is a model for the logician and for the student of *belles lettres*—yet the error into which the essayist has rushed headlong is egregious. He attempts to deceive his readers, or has deceived himself, by confounding the nature of that proof from which we reason of the concerns of earth, considered as man's habitation, and the nature of that evidence from which we reason of the same earth regarded as a unit of that vast whole, the universe. In the former case, the *data* being palpable, the proof is direct: in the latter it is purely *analogical*. Were the indications we derive from science, of the nature and designs of Deity, and thence, by inference, of man's destiny—were these indications proof direct, no advance in science would strengthen them—for, as our author truly observes, "nothing could be added to the force of the argument which the mind finds in every beast, bird, or flower"—but as these indications are rigidly analogical, every step in human knowledge—every astronomical discovery, for instance—throws additional light upon the august subject, *by extending the range of analogy*. That we know no more to-day of the nature of Deity—of his purposes—and thus of man himself—than we did even a dozen years ago—is a proposition disgracefully absurd; and of this any astronomer could assure Mr. Macaulay. Indeed, to our own mind, the *only* irrefutable argument in support of the soul's immortality—or, rather, the only conclusive proof of man's alternate dis-

solution and re-juvenescence *ad infinitum*—is to be found in analogies deduced from the modern established theory of the nebular cosmogony.* Mr. Macaulay, in short, has forgotten that he frequently forgets, or neglects, the very gist of his subject. He has forgotten that analogical evidence cannot, at all times, be discoursed of as if identical with proof direct. Throughout the whole of his treatise he has made no distinction whatever.

Charles Dickens

(Published in *Graham's Magazine*, February, 1842.—Ed.)

We often hear it said of this or of that proposition that it may be good in theory but will not answer in practice, and in such assertions we find the substance of all the sneers at critical art which so gracefully curl the upper lips of a tribe which is beneath it. We mean the small geniuses—the literary Titmice—animalcula which judge of merit solely by *result*, and boast of the solidity, tangibility, and infallibility of the test which they employ. The worth of a work is most accurately estimated, they assure us, by the number of those who peruse it; and "does a book sell?" is a query embodying, in their opinion, all that need be said or sung on the topic of its fitness for sale. We should as soon think of maintaining, in the presence of these creatures, the *dictum* of Anaxagoras, that snow is black, as of disputing, for example, the profundity of that genius which, in a run of five hundred nights, has rendered itself evident in "London Assurance." "What," cry they, "are critical precepts to us, or to anybody? Were we to observe all the critical rules in creation we should still be unable to write a good book"—a point, by the way, which we shall not now pause to deny. "Give us *results*," they vociferate, "for we are plain men of common sense. We contend for fact instead of fancy—for practice in opposition to theory."

The mistake into which the Titmice have been innocently led, however, is precisely that of dividing the practice which they would uphold from the theory to which they would object. They should have been told in infancy, and thus prevented from exposing themselves in old age, that theory and practice are in so much *one*, that the former implies or includes the latter. A theory is only good as such, in proportion to its reducibility to practice. If the practice fail, it is because the theory is imperfect. To say what they are in the daily habit of saying—that such or such a matter may be good in theory but is false in practice,—is to perpetrate a bull—to commit a paradox—to state a contradiction in terms—in plain words, to tell a lie *which is a lie at*

---

* This cosmogony *demonstrates* that all existing bodies in the universe are formed of a nebular matter, a rare ethereal medium pervading space—shows the mode and laws of formation—and *proves* that all things are in a perpetual state of progress—that nothing in nature is *perfected*.—E. A. P.

sight to the understanding of anything bigger than a Titmouse.

But we have no idea just now of persecuting the Tittlebats by too close a scrutiny into their little opinions. It is not our purpose, for example, to press them with so grave a weapon as the *argumentum ad absurdum*, or to ask them why, if the popularity of a book be in fact the measure of its worth, we should not be at once in condition to admit the inferiority of "Newton's Principia" to "Hoyle's Games"; of "Ernest Maltravers" to "Jack the Giant-Killer," or "Jack Sheppard," or "Jack Brag"; and of "Dick's Christian Philosopher" to "Charlotte Temple," or the "Memoirs of De Gramont," or to one or two dozen other works which must be nameless. Our present design is but to speak, at some length, of a book which in so much concerns the Titmice that it affords them the very kind of demonstration which they chiefly affect—*practical* demonstration—of the fallacy of one of their favourite dogmas; we mean the dogma that no work of fiction can fully suit, at the same time, the critical and the popular taste; in fact, that the disregarding or contravening of critical rule is absolutely essential to success, beyond a certain and very limited extent, with the public at large. And if, in the course of our random observations—for we have no space for systematic review—it should appear, incidentally, that the vast popularity of "Barnaby Rudge" must be regarded less as the measure of its value, than as the legitimate and inevitable result of certain well-understood critical propositions reduced by genius into practice, there will appear nothing more than what has before become apparent in the "Vicar of Wakefield" of Goldsmith, or in the "Robinson Crusoe" of De Foe—nothing more, in fact, than what is a truism to all but the Titmice.

Those who know us will not, from what is here premised, suppose it our intention to enter into any wholesale *laudation* of "Barnaby Rudge." In truth, our design may appear, at a cursory glance, to be very different indeed. Boccalini, in his "Advertisements from Parnassus," tells us that a critic once presented Apollo with a severe censure upon an excellent poem. The god asked him for the beauties of the work. He replied that he only troubled himself about the errors. Apollo presented him with a sack of unwinnowed wheat, and bade him pick out all the chaff for his pains. Now we have not fully made up our minds that the god was in the right. We are not sure that the limit of critical duty is not very generally misapprehended. *Excellence* may be considered an axiom, or a proposition which becomes self-evident just in proportion to the clearness or precision with which it is *put*. If it fairly exists, in this sense, it requires no further elucidation. It is not excellence if it need to be demonstrated as such. To point out too particularly the beauties of a work, is to admit tacitly that these beauties are not wholly admirable. Regarding, then, excellence as that which is capable of self-manifestation, it but remains for the critic to show when, where, and how it fails in becoming manifest; and, in this showing, it will be the fault of the book itself if what of beauty it contains be not at least placed in the fairest light. In a word, we may as-

sume, notwithstanding a vast deal of pitiable cant upon this topic, that in pointing out frankly the errors of a work, we do nearly all that is critically necessary in displaying its merits. In teaching what perfection *is*, how, in fact, shall we more rationally proceed than in specifying what it *is not?*

The plot of "Barnaby Rudge" runs thus: About a hundred years ago, Geoffrey Haredale and John Chester were schoolmates in England—the former being the scapegoat and drudge of the latter. Leaving school, the boys become friends, with much of the old understanding. Haredale loves; Chester deprives him of his mistress. The one cherishes the most deadly hatred; the other merely contemns and avoids. By routes widely different both attain mature age. Haredale, remembering his old love, and still cherishing his old hatred, remains a bachelor and is poor. Chester, among other crimes, is guilty of the seduction and heartless abandonment of a gipsy-girl, who, after the desertion of her lover, gives birth to a son, and, falling into evil courses, is finally hung at Tyburn. The son is received and taken charge of at an inn called the Maypole, upon the borders of Epping Forest, and about twelve miles from London. This inn is kept by one John Willet, a burly-headed and very obtuse little man, who has a son, Joe, and who employs his *protege*, under the single name of Hugh, as perpetual hostler at the inn. Hugh's father marries, in the meantime, a rich *parvenue*, who soon dies, but not before having presented Mr. Chester with a boy, Edward. The father (a thoroughly selfish man-of-the-world, whose model is Chesterfield), educates this son at a distance, seeing him rarely, and calling him to the paternal residence, at London, only when he has attained the age of twenty-four or five. He, the father, has long ere this time spent the fortune brought him by his wife, having been living upon his wits and a small annuity for some eighteen years. The son is recalled chiefly that, by marrying an heiress on the strength of his own personal merit and the reputed wealth of old Chester, he may enable the latter to continue his gaieties in old age. But of this design, as well as of his poverty, Edward is kept in ignorance for some three or four years after his recall; when the father's discovery of what he considers an inexpedient love-entanglement on the part of the son induces him to disclose the true state of his affairs, as well as the real tenor of his intentions.

Now the love-entanglement of which we speak is considered inexpedient by Mr. Chester for two reasons—the first of which is that the lady beloved is the orphan niece of his old enemy Haredale, and the second is that Haredale (although in circumstances which have been much and very unexpectedly improved during the preceding twenty-two years) is still insufficiently wealthy to meet the views of Mr. Chester.

We say that about twenty-two years before the period in question, there came an unlooked-for change in the worldly circumstances of Haredale. This gentleman has an elder brother, Reuben, who has long possessed the family inheritance of the Haredales, residing at a mansion called "The Warren," not far from the Maypole Inn, which is itself a portion of the estate. Reuben *is a widower*, with one child,

a daughter, Emma. Besides this daughter, there are living with him a gardener, a steward (whose name is Rudge) and *two* women servants, one of whom is the wife of Rudge. On the night of the nineteenth of March 1733, Rudge murders his master for the sake of a large sum of money which he is known to have in possession. During the struggle Mr. Haredale grasps the cord of an alarm-bell which hangs within his reach, but succeeds in sounding it only once or twice, when it is severed by the knife of the ruffian, who then, completing his bloody business, and securing the money, proceeds to quit the chamber. While doing this, however, he is disconcerted by meeting the gardener, whose pallid countenance evinces suspicion of the deed committed. The murderer is thus forced to kill his fellow-servant. Having done so, the idea strikes him of transferring the burden of the crime from himself. He dresses the corpse of the gardener in his own clothes, puts upon its finger his own ring, and in its pocket his own watch—then drags it to a pond in the grounds and throws it in. He now returns to the house, and disclosing all to his wife, requests her to become a partner in his flight. Horror-stricken she falls to the ground. He attempts to raise her. She seizes his wrist, *staining her hand with blood in the attempt*. She renounces him for ever, yet promises to conceal the crime. Alone he flees the country. The next morning, Mr. Haredale being found murdered, and the steward and gardener being both missing, both are suspected. Mrs. Rudge leaves The Warren and retires to an obscure lodging in London (where she lives upon an annuity allowed her by Haredale), having given birth, *on the very day after the murder*, to a son, Barnaby Rudge, who proves an idiot, who bears upon his wrist a red mark, and who is born possessed with a maniacal horror of blood.

Some months since the assassination having elapsed, what appears to be the corpse of Rudge is discovered, and the outrage is attributed to the gardener. Yet not universally—for as Geoffrey Haredale comes into possession of the estate, there are not wanting suspicions (fomented by Chester) of his own participation in the deed. This taint of suspicion acting upon his hereditary gloom, together with the natural grief and horror of the atrocity, embitters the whole life of Haredale. He secludes himself at The Warren, and acquires a monomaniac acerbity of temper, relieved only by love of his beautiful niece.

Time wears away. Twenty-two years pass by. The niece has ripened into womanhood, and loves young Chester without the knowledge of her uncle or the youth's father. Hugh has grown a stalwart man—the type of man *the animal*, as his father is of man the ultra-civilised. Rudge, the murderer, returns, urged to his undoing by Fate. He appears at the Maypole and inquires stealthily of the circumstances which have occurred at The Warren, in his absence. He proceeds to London, discovers the dwelling of his wife, threatens her with the betrayal of her idiot son into vice, and extorts from her the bounty of Haredale. Revolting at such appropriation of such means, the widow, with Barnaby, again seeks The Warren, renounces the annuity, and, refusing to assign any reason for her conduct, states

her intention of quitting London for ever, and of burying herself in some obscure retreat—a retreat which she begs Haredale not to attempt discovering. When he seeks her in London the next day she is gone, and there are no tidings either of herself or of Barnaby, *until the expiration of five years*—which brings the time up to that of the celebrated "No Popery" riots of Lord George Gordon.

In the meanwhile, and immediately subsequent to the reappearance of Rudge, Haredale and the elder Chester, each heartily desirous of preventing the union of Edward and Emma, have entered into a covenant, the result of which is that by means of treachery on the part of Chester, permitted on that of Haredale, the lovers misunderstand each other and are estranged. Joe, also, the son of the inn-keeper Willet, having been coquetted with to too great an extent by Dolly Varden (the pretty daughter of one Gabriel Varden, a locksmith of Clerkenwell, London), and having been otherwise maltreated at home, enlists in his Majesty's army and is carried beyond seas to America; not returning until towards the close of the riots. Just before this commencement, Rudge, in a midnight prowl about the scene of his atrocity, is encountered by an individual who has been familiar with him in earlier life while living at The Warren. This individual, terrified at what he supposes, very naturally, to be the ghost of the murdered Rudge, relates his adventure to his companions at the Maypole, and John Willet conveys the intelligence forthwith to Mr. Haredale. Connecting the apparition, in his own mind, with the peculiar conduct of Mrs. Rudge, this gentleman imbibes a suspicion at once of the true state of affairs. This suspicion (which he mentions to no one) is, moreover, very strongly confirmed by an occurrence happening to Varden, the locksmith, who, visiting the woman late one night, finds her in communion of a nature apparently most confidential, with a ruffian whom the locksmith knows to be such, without knowing the man himself. Upon an attempt on the part of Varden to seize this ruffian, he is thwarted by Mrs. R.; and upon Haredale's inquiring minutely into the personal appearance of the man, he is found to accord with Rudge. We have already shown that the ruffian was in fact Rudge himself. Acting upon the suspicion thus aroused, Haredale watches by night, alone, in the deserted house formerly occupied by Mrs. R., in hope of her coming upon the murderer, and makes other exertions with the view of arresting him, but all in vain.

It is also at the conclusion *of the five years* that the hitherto uninvaded retreat of Mrs. Rudge is disturbed by a message from her husband demanding money. He has discovered her abode by accident. Giving him what she has at the time, she afterwards eludes him, and hastens with Barnaby to bury herself in the crowd of London, until she can find opportunity again to seek retreat in some more distant region of England. But the riots have now begun. The idiot is beguiled into joining the mob, and becoming separated from his mother (who, growing ill through grief, is borne to an hospital) meets with his old playmate Hugh, and becomes with him a ringleader in the rebellion.

The riots proceed. A conspicuous

part is borne in them by one Simon Tappertit, a fantastic and conceited little apprentice of Varden's, and a sworn enemy to Joe Willet, who has rivalled him in the affections of Dolly. A hangman, Dennis, is also very busy amid the mob. Lord George Gordon, and his secretary, Gashford, with John Grueby, his servant, appear of course upon the scene. Old Chester, who, during the five years, has become Sir John, instigates Gashford, who has received personal insult from Haredale (a Catholic and consequently obnoxious to the mob), instigates Gashford to procure the burning of The Warren, and to abduct Emma during the excitement ensuing. The mansion is burning (Hugh, who also fancies himself wronged by Haredale, being chief actor in the outrage), and Miss H. carried off, in company with Dolly, who had long lived with her, and whom Tappertit abducts upon his own responsibility. Rudge, in the meantime, finding the eye of Haredale upon him (since he has become aware of the watch kept nightly at his wife's), goaded by the dread of solitude, and fancying that his sole chance of safety lies in joining the rioters, hurries upon their track to the doomed Warren. He arrives too late—the mob have departed. Skulking about the ruins, he is discovered by Haredale, and finally captured without a struggle, within the glowing walls of the very chamber in which the deed was committed. He is conveyed to prison, where he meets and recognises Barnaby, who had been captured as a rioter. The mob assail and burn the jail. The father and son escape. Betrayed by Dennis, both are again taken, and Hugh shares their fate. In Newgate, Dennis, through accident, discovers the parentage of Hugh, and an effort is made in vain to interest Chester in behalf of his son. Finally, Varden procures the pardon of Barnaby, but Hugh, Rudge, and Dennis, are hung. At the eleventh hour Joe returns from abroad with one arm. In company with Edward Chester he performs prodigies of valour (during the last riots) on behalf of the Government. The two, with Haredale and Varden, rescue Emma and Dolly. A double marriage of course takes place, for Dolly has repented her fine airs, and the prejudices of Haredale are overcome. Having killed Chester in a duel, he quits England for ever and ends his days in the seclusion of an Italian convent. Thus, after summary disposal of the understrappers, ends the drama of "Barnaby Rudge."

We have given, as may well be supposed, but a very meagre outline of the story, and we have given it in the simple or natural sequence. That is to say, we have related the events, as nearly as might be, in the order of their occurrence. But this order would by no means have suited the purpose of the novelist, whose design has been to maintain the secret of the murder, and the consequent mystery which encircles Rudge, and the actions of his wife, until the catastrophe of his discovery by Haredale. The *thesis* of the novel may thus be regarded as based upon curiosity. Every point is so arranged as to perplex the reader, and whet his desire for elucidation:—for example, the first appearance of Rudge at the Maypole; his questions; his persecution of Mrs. R.; the ghost seen by the frequenter of the Maypole; and Haredale's impressive conduct in consequence. What *we*

have told, in the very beginning of our digest, in regard to the shifting of the gardener's dress, is sedulously kept from the reader's knowledge until he learns it from Rudge's own confession in jail. We say sedulously; for, *the intention once known,* the *traces* of the design can be found upon every page. There is an amusing and exceedingly ingenious instance at page 145, where Solomon Daisy describes his adventure with the ghost:—

"It was a ghost—a spirit," cried Daisy.

"Whose?" they all three asked together.

In the excess of his emotion (for he fell back trembling in his chair and waved his hand as if entreating them to question him no further) *his answer was lost upon all* but old John Willet, who happened to be seated close beside him.

"Who!" cried Parkes and Tom Cobb—"Who was it?"

"Gentlemen," said Mr. Willet, after a long pause, "you needn't ask. The likeness of a murdered man. This is the nineteenth of March."

A profound silence ensued.

The impression here skilfully conveyed is that the ghost seen is that of Reuben Haredale; and the mind of the not-too-acute reader is at once averted from the true state of the case—from the murderer, Rudge, living in the body.

Now there can be no question that, by such means as these, many points which are comparatively insipid in the natural sequence of our digest, and which would have been comparatively insipid even if given in full detail in a natural sequence, are endued with the interest of mystery; but neither can it be denied that a vast many more points are at the same time deprived of all effect, and become null through the impossibility of comprehending them without the key. The author, who, cognisant of his plot, writes with this cognisance continually operating upon him, and thus *writes to himself* in spite of himself, does not, of course, feel that much of what is effective to his own informed perception must necessarily be lost upon his uniformed readers; and he himself is never in condition, as regards his own work, to bring the matter to test. But the reader may easily satisfy himself of the validity of our objection. Let him *re-peruse* "Barnaby Rudge," and with a pre-comprehension of the mystery, these points of which we speak break out in all directions like stars, and throw quadruple brilliance over the narrative—a brilliance which a correct taste will at once declare unprofitably sacrificed at the shrine of the keenest interest of mere mystery.

The design of *mystery,* however, being once determined upon by an author, it becomes imperative, first, that no undue or inartistical means be employed to conceal the secret of the plot; and, secondly, that the secret be well kept. Now, when, at page 16, we read that "the body of *poor Mr. Rudge, the steward, was found*" months after the outrage, etc., we see that Mr. Dickens had been guilty of no misdemeanour against Art in stating what was not the fact; since the falsehood is put into the mouth of Solomon Daisy, and given merely as the impression of this individual and of the public. The writer has

not asserted it in his own person, but ingeniously conveyed an idea (false in itself, yet a belief in which is necessary for the effect of the tale) by the mouth of one of his characters. The case is different, however, when Mrs. Rudge is repeatedly denominated "the widow." It is the author who, himself, frequently so terms her. This is disingenuous and inartistical: accidentally so, of course. We speak of the matter merely by way of illustrating our point, and as an oversight on the part of Mr. Dickens.

That the secret be well kept is obviously necessary. A failure to preserve it until the proper moment of *denouement*, throws all into confusion, so far as regards the *effect* intended. If the mystery leak out, against the author's will, his purposes are immediately at odds and ends; for he proceeds upon the supposition that certain impressions *do* exist, which do *not* exist in the mind of his readers. We are not prepared to say, so positively as we could wish, whether, by the public at large, the whole *mystery* of the murder committed by Rudge, with the identity of the Maypole ruffian with Rudge himself, was fathomed at any period previous to the period intended, or, if so, whether at a period so early as materially to interfere with the interest designed; but we are forced, through sheer modesty, to suppose this the case; since, by ourselves individually, the secret was distinctly understood immediately upon the perusal of the story of Solomon Daisy, which occurs at the seventh page of this volume of three hundred and twenty-three. In the number of the *Philadelphia Saturday Evening Post*, for 1st May, 1841 (the tale having then only begun), will be found a *prospective notice* of some length, in which we make use of the following words:—

That Barnaby is the son of the murderer may not appear evident to our readers—but we will explain. The person murdered is Mr. Reuben Haredale. He was found assassinated in his bedchamber. His steward (Mr. Rudge senior), and his gardener (name not mentioned) are missing. At first both are suspected. "Some months afterward"—here we use the words of the story—"the steward's body, scarcely to be recognized but by his clothes, and the watch and ring he wore—was found at the bottom of a piece of water in the grounds, with a deep gash in the breast, where he had been stabbed by a knife. He was only partly dressed; and all people agreed that he had been sitting up reading in his own room, where there were many traces of blood, and was suddenly fallen upon and killed, before his master."

Now, be it observed, it is not the author himself who asserts that *the steward's body was found;* he has put the words in the mouth of one of his characters. His design is to make it appear, in the *denouement*, that the steward, Rudge, first murdered the gardener, then went to his master's chamber, murdered *him*, was interrupted by his (Rudge's) wife, whom he seized and held *by the wrist*, to prevent her giving the alarm—that he then, after possessing himself of the booty desired, returned to the gardener's room, exchanged clothes with him, put upon the corpse his own watch and ring, and secreted it where it was afterwards

discovered at so late a period that the features could not be identified.

The differences between our preconceived ideas, as here stated, and the actual facts of the story, will be found immaterial. The gardener was murdered, not before but after his master; and that Rudge's wife seized *him* by the wrist, instead of his seizing *her*, has so much the air of a mistake on the part of Mr. Dickens, that we can scarcely speak of our own version as erroneous. The grasp of a murderer's bloody hand on the wrist of a woman *enciente* would have been more likely to produce the effect described (and this every one will allow) than the grasp of the hand of the woman upon the wrist of the assassin. We may therefore say of our supposition as Talleyrand said of some cockney's bad French—*que s'il ne soit pas Francais, assurement donc il le doit etre*—that if we did not rightly prophesy, yet, at least, our prophecy *should have been* right.

We are informed in the Preface to "Barnaby Rudge" that "no account of the Gordon Riots having been introduced into any work of fiction, and the subject presenting very extraordinary and remarkable features," our author "was led to project this tale." But for this distinct announcement (for Mr. Dickens can scarcely have deceived himself) we should have looked upon the riots as altogether an after-thought. It is evident that they have no necessary connection with the story. In our digest, which carefully includes all *essentials* of the plot, we have dismissed the doings of the mob in a paragraph. The whole event of the drama would have proceeded as well without as with them. They have even the appearance of being *forcibly* introduced. In our compendium above it will be seen that we emphasised several allusions to an interval of *five years*. The action is brought up to a certain point. The train of events is, so far, uninterrupted—nor is there any apparent need of interruption—yet all the characters are now thrown forward for a period of *five years*. And why? We ask in vain. It is not to bestow upon the lovers a more decorous maturity of age—for this is the only possible idea which suggests itelf—Edward Chester is already eight-and-twenty, and Emma Haredale would, in America at least, be upon the list of old maids. No—there is no such reason; nor does there appear to be any one more plausible than that, as it is now the year of our Lord 1775, an advance of five years will bring the *dramatis personæ* up to a very remarkable period, affording an admirable opportunity for their display—the period, in short, of the "No Popery" riots. This was the idea with which we were forcibly impressed in perusal, and which nothing less than Mr. Dickens's positive assurance to the contrary would have been sufficient to eradicate.

It is, perhaps, but one of a thousand instances of the disadvantages both to the author and the public of the present absurd fashion of periodical novel-writing, that our author had not sufficiently considered or determined upon *any* particular plot when he began the story now under review. In fact, we see, or fancy that we see, numerous traces of indecision—traces which a dexterous supervision of the complete work might have enabled him to erase.

We have already spoken of the intermission of a lustrum. The opening speeches of old Chester are by far too *truly* gentlemanly for his subsequent character. The wife of Varden, also, is too wholesale a shrew to be converted into the quiet wife—the original design was to punish her. At page 16, we read thus—Solomon Daisy is telling his story:—

"I put as good a face upon it as I could, and muffling myself up, started out with a lighted lantern in one hand and the key of the church in the other" —at this point of the narrative, the dress of the strange man rustled as if he had turned to hear more distinctly.

Here the design is to call the reader's attention to a *point* in the tale; but no subsequent explanation is made. Again, a few lines below—

The houses were all shut up, and the folks indoors, and perhaps there is only one man in the world who knows how dark it really was.

Here the intention is still more evident, but there is no result. Again, at page 54, the idiot draws Mr. Chester to the window, and directs his attention to the clothes hanging upon the lines in the yard—

"Look down," he said softly; "do you mark how they whisper in each other's ears, then dance and leap to make believe they are in sport? Do you see how they stop for a moment, when they think there is no one looking, and mutter among themselves again; and then how they roll and gambol, delighted with the mischief they've been plotting? Look at 'em now! See how they whirl and plunge. And now they stop again, and whisper cautiously together—little thinking, mind, how often I have lain upon the ground and watched them. I say, what is it they plot and hatch? Do you know?"

Upon perusal of these ravings, we at once supposed them to have allusion to some *real* plotting; and even now we cannot force ourselves to believe them not so intended. They suggested the opinion that Haredale himself would be implicated in the murder, and that the counsellings alluded to might be those of that gentleman with Rudge. It is by no means impossible that some such conception wavered in the mind of the author. At page 32 we have a confirmation of our idea, when Varden endeavours to arrest the murderer in the house of his wife—

"Come back—come back!" exclaimed the woman, wrestling with and chasing him. "Do not touch him on your life. *He carries other lives besides his own.*"

The *denouement* fails to account for this exclamation.

In the beginning of the story much emphasis is placed upon the *two* female servants of Haredale, and upon his journey to and from London, as well as upon his wife. We have merely said, in our digest, that he was a widower, italicising the remark. All these other points are, in fact, singularly irrelevant in the supposition that the original design has not undergone modification.

Again, at page 57, when Haredale talks of "his dismantled and beggared

hearth," we cannot help fancying that the author had in view some different wrong, or series of wrongs, perpetrated by Chester, than any which appear in the end. This gentleman, too, takes extreme and frequent pains to acquire dominion over the rough Hugh—this matter is particularly insisted upon by the novelist—we look, of course, for some important result, but the filching of a letter is nearly all that is accomplished. That Barnaby's delight in the desperate scenes of the rebellion is inconsistent with his horror of blood will strike every reader, and this inconsistency seems to be the consequence of the *after-thought* upon which we have already commented. In fact, the title of the work, the elaborate and pointed manner of the commencement, the impressive description of The Warren, and especially of Mrs. Rudge, go far to show that Mr. Dickens has really deceived himself—that the soul of the plot, as originally conceived, was the murder of Haredale, with the subsequent discovery of the murderer in Rudge—but that this idea was afterwards abandoned, or rather suffered to be merged in that of the Popish riots. The result has been most unfavourable. That which, of itself, would have proved highly effective, has been rendered nearly null by its situation. In the multitudinous outrage and horror of the rebellion, the *one* atrocity is utterly whelmed and extinguished.

The reasons of this deflection from the first purpose appear to us self-evident. One of them we have already mentioned. The other is that our author discovered, when too late, that *he had anticipated, and thus rendered valueless, his chief effect.* This will be readily understood. The particulars of the assassination being withheld, the strength of the narrator is put forth, in the beginning of the story, to *whet curiosity* in respect to these particulars; and so far, he is but in proper pursuance of his main design. But from this intention he unwittingly passes into the error of *exaggerating anticipation.* And error though it be, it is an error wrought with consummate skill. What, for example, could more vividly enhance our impression of the unknown horror enacted than the deep and enduring gloom of Haredale—than the idiot's inborn awe of blood—or especially, than the expression of countenance so imaginatively attributed to Mrs. Rudge—"the capacity for expressing terror—something only dimly seen, but never absent for a moment—the shadow of some look to which an instant of intense and most unutterable horror only could have given rise"? But it is a condition of the human fancy that the promises of such words are irredeemable. In the notice before mentioned we thus spoke upon this topic:—

This is a conception admirably adapted to whet curiosity in respect to the character of that event which is hinted at as forming the basis of the story. But this observation should not fail to be made—that the anticipation must surpass the reality; that no matter how terrific be the circumstances which, in the *denouement,* shall appear to have occasioned the expression of countenance worn habitually by Mrs. Rudge, still they will not be able to satisfy the mind of the reader. He will surely be disappointed. The skillful intimation of horror held out by the artist

produces an effect which will deprive his conclusion of all. These intimations—these dark hints of some uncertain evil—are often rhetorically praised as effective—but are only justly so praised where there is *no denouement* whatever—where the reader's imagination is left to clear up the mystery for itself—and this is not the design of Mr. Dickens.

And, in fact, our author was not long in seeing his precipitancy. He had placed himself in a dilemma from which even his high genius could not extricate him. He at once shifts the main interest—and in truth we do not see what better he could have done. The reader's attention becomes absorbed in the riots, and he fails to observe that what should have been the true catastrophe of the novel is exceedingly feeble and ineffective.

A few cursory remarks:—Mr. Dickens fails peculiarly in *pure* narration. See, for example, page 296, where the connection of Hugh and Chester is detailed by Varden. See also in "The Curiosity Shop," where, when the result is fully known, so many words are occupied in explaining the relationship of the brothers. The effect of the present narrative might have been materially increased by confining the action within the limits of London. The "Notre Dame" of Hugo affords a fine example of the force which can be gained by concentration, or unity of place. The unity of time is also sadly neglected, to no purpose, in "Barnaby Rudge." That Rudge should so long and so deeply feel the sting of conscience is inconsistent with his brutality. On page 15, the interval elapsing between the murder and Rudge's return is variously stated at twenty-two and twenty-four years. It may be asked why the inmates of The Warren failed to hear the alarm-bell which was heard by Solomon Daisy. The idea of persecution by being tracked, as by bloodhounds, from one spot of quietude to another, is a favourite one with Mr. Dickens. Its effect cannot be denied. The stain upon Barnaby's wrist, caused by fright in the mother at so late a period of gestation as one day before mature parturition, is shockingly at war with all medical experience. When Rudge escaped from prison, unshackled, with money at command, is in agony at his wife's refusal to perjure herself for his salvation—is it not *queer* that he should demand any other salvation than lay in his heels? At page 17, the road between London and the Maypole is described as a horribly rough and dangerous, and at page 97, as an uncommonly smooth and convenient one. At page 116, how comes Haredale in possession of the key of Mrs. Rudge's vacated house?

Some of the conclusions of chapters—see pages 40 and 100—seem to have been written for the mere purpose of illustrating tailpieces.

The leading idiosyncrasy of Mr. Dickens's remarkable humour is to be found in his *translating the language of gesture, or action, or tone.* For example—

> The cronies nodded to each other, and Mr. Parkes remarked in an undertone, shaking his head meanwhile, *as who should say "Let no man contradict me, for I won't believe him,"* that Willet was in amazing force to-night.

The riots form a series of vivid pictures never surpassed.

Mr. Dickens's English is usually pure. His most remarkable error is that of employing the adverb "directly" in the sense of "as soon as." For example—"Directly he arrived, Rudge said," etc. Bulwer is uniformly guilty of the same blunder.

It is observable that so original a stylist as our author should occasionally lapse into a gross imitation of what, itself, is a gross imitation. We mean the manner of Lamb—a manner based in the Latin construction. For example—

> In summer time its pump suggests to thirsty idlers springs cooler and more sparkling and deeper than other wells; and as they trace the spillings of full pitchers on the heated ground, they snuff the freshness, and sighing, cast sad looks towards the Thames, and think of baths and boats, and saunter on, despondent.

The wood-cut *designs* which accompany the edition before us are occasionally good. The copper engravings are pitiably ill-covered and ill-drawn; and not only this, but are in broad contradiction of the wood-designs and text.

There are many *coincidences* wrought into the narrative—those, for example, which relate to the nineteenth of March; the dream of Barnaby, respecting his father, at the very period when his father is actually in the house; and the dream of Haredale previous to his final meeting with Chester. These things are meant to *insinuate* a fatality which, very properly, is not expressed in plain terms—but it is questionable whether the story derives more in ideality from their introduction than it might have gained of verisimilitude from their omission.

The *dramatis personæ* sustain the high fame of Mr. Dickens as a delineator of character. Miggs, the disconsolate handmaiden of Varden; Tappertit, his chivalrous apprentice; Mrs. Varden herself; and Dennis, a hangman—may be regarded as original caricatures, of the highest merit as such. Their traits are founded in acute observation of nature, but are exaggerated to the utmost admissible extent. Miss Haredale and Edward Chester are commonplaces—no effort has been made in their behalf. Joe Willet is a naturally drawn country youth. Stagg is a mere makeweight. Gashford and Gordon are truthfully copied. Dolly Varden is truth itself. Haredale, Rudge, and Mrs. Rudge are impressive only through the circumstances which surround them. Sir John Chester is, of course, not original, but is a vast improvement upon all his predecessors—his heartlessness is rendered somewhat too amusing, and his end too much that of a man of honour. Hugh is a noble conception. His fierce exultation in his animal powers; his subserviency to the smooth Chester; his mirthful contempt and patronage of Tappertit, and his *brutal* yet firm courage in the hour of death—form a picture to be set in diamonds. Old Willet is not surpassed by any character even among those of Dickens. He is nature itself—yet a step farther would have placed him in the class of caricatures. His combined conceit and obtuseness are indescribably droll, and

his peculiar misdirected energy when aroused is one of the most exquisite touches in all humorous painting. We shall never forget how heartily we laughed at his shaking Solomon Daisy and threatening to put him behind the fire, because the unfortunate little man was too much frightened to articulate. Varden is one of those free, jovial, honest fellows, at charity with all mankind, whom our author is so fond of depicting. And lastly, Barnaby, the hero of the tale—in him we have been somewhat disappointed. We have already said that his delight in the atrocities of the rebellion is at variance with his horror of blood. But this horror of blood is *inconsequential;* and of this we complain. Strongly insisted upon in the beginning of the narrative, it produces no adequate result. And here how fine an opportunity has Mr. Dickens missed! The conviction of the assassin, after the lapse of twenty-two years, might easily have been brought about through his son's mysterious awe of blood—*an awe created in the unborn by the assassination itself*—and this would have been one of the finest possible embodiments of the idea which we are accustomed to attach to "poetical justice." The raven, too, intensely amusing as it is, might have been made, more than we now see it, a portion of the conception of the fantastic Barnaby. Its croakings might have been *prophetically* heard in the course of the drama. Its character might have performed, in regard to that of the idiot, much the same part as does, in music, the accompaniment in respect to the air. Each might have been distinct. Each might have differed remarkably from the other. Yet between them there might have been wrought an analogical resemblance, and although each might have existed apart, they might have formed together a whole which would have been imperfect in the absence of either.

From what we have here said—and perhaps said without due deliberation—(for alas! the hurried duties of the journalist preclude it)—there will not be wanting those who will accuse us of a mad design to detract from the pure fame of the novelist. But to such we merely say, in the language of heraldry, "Ye should wear a plain point sanguine in your arms." If this be understood, well; if not, well again. There lives no man feeling a deeper reverence for genius than ourself. If we have not dwelt so especially upon the high merits as upon the trivial defects of "Barnaby Rudge" we have already given our reasons for the omission, and these reasons will be sufficiently understood by all whom we care to understand them. The work before us is not, we think, equal to the tale which immediately preceded it; but there are few—very few others to which we consider it inferior. Our chief objection has not, perhaps, been so distinctly stated as we could wish. That this fiction, or indeed that any fiction written by Mr. Dickens, should be based in the excitement and maintenance of curiosity we look upon as a misconception, on the part of the writer, of his own very great yet very peculiar powers. He has done this thing well, to be sure—he would do anything well in comparison with the herd of his contemporaries—but he has not done it so thoroughly well as

his high and just reputation would demand. We think that the whole book has been an effort to him—solely through the nature of its design. He has been smitten with an untimely desire for a novel path. The idiosyncrasy of his intellect would lead him naturally into the most fluent and simple style of narration. In tales of ordinary sequence he may and will long reign triumphant. He has a talent for all things, but no positive genius for adaptation, and still less for that metaphysical art in which the souls of all mysteries be. "Caleb Williams" is a far less noble work than "The Old Curiosity Shop"; but Mr. Dickens could no more have constructed the one than Mr. Godwin could have dreamed of the other.

Thomas Hood

(Published in *Broadway Journal*, August, 1845.—Ed.)

"FREQUENTLY since his death," says the American editor of his works, "Hood has been called a great author," a phrase used not inconsiderately or in vain, but if we adopt the conventional idea "of a great author," there has lived, perhaps, no writer of the last half-century who, with equal notoriety, was less entitled than Hood to the term. In fact he was a literary merchant whose principal stock-in-trade was littleness, for during the larger portion of his life he seemed to breathe only for the purpose of perpetrating puns—things of such despicable platitude that the man who is capable of habitually committing them is very seldom capable of anything else. In especial, whatever merit may accidentally be discovered in a pun, arises altogether from *unexpectedness*. This is its element, and is twofold. First, we demand that the combination of the pun be unexpected, and secondly, we demand the most entire unexpectedness in the pun *per se*. A rare pun, rarely appearing, is, to a certain extent, a pleasurable effect—but to no mind, however debased in taste, is a continuous effort at punning otherwise than unendurable. The man who maintains that he derives gratification from any such chapters of punnage as Hood was in the daily habit of putting on paper has no claim to be believed upon his oath.

The continuous and premeditated puns of Hood, however, are to be regarded as the weak points of the man. Independently of their ill effect, in a literary view, as mere puns, they leave upon us a painful impression; for too evidently they are the hypochondriac's struggles at mirth—they are the grinnings of the death's-head. No one can read his "Literary Reminiscences" without being convinced of his habitual despondency—and the species of pseudo-wit in question is precisely of that character which would be adopted by an author of Hood's temperament and cast of intellect when compelled to write at an emergency. That his heart had no interest in these

niaiseries is clear. We allude, of course, to his *mere* puns for the puns' sake—a class of writings by which he attained his most extensive renown. That he did more in this way than in any other would follow as a corollary from what we have already said—for generally he was unhappy, and almost continually he was obliged to write *invita Minerva*. But his true element was a very rare and ethereal class of *humour*, in which the *mere* pun was left altogether out of sight, or took the character of the richest *grotesquerie*, impressing the imaginative reader with very remarkable force, as if by a new phase of the ideal. It is in this species of brilliant *grotesqueries*, uttered with a rushing *abandon* which wonderfully aided its effect, that Hood's marked originality of manner consisted; and it is this which fairly entitles him at times to the epithet "great";—we say, fairly so entitles him; for *that* undeniably may be considered *great* (of whatever seeming littleness in itself) which has the capability of producing intense emotion in the minds of those who are themselves undeniably great.

When we said, however, that Hood wrought profound impressions upon imaginative men, we spoke only of what is imagination in the popular acceptance of the term. His true province—that is to say the field in which he is distinctive—is a kind of borderland between the Fancy and the Fantasy—but in this region he reigns supreme. But when we speak of his province as a borderland between Fantasy and Fancy, of course we do not mean rigorously to confine him to this province. He has made very successful and frequent incursions into the dominions of humour (in general he has been too benevolent to be witty), and there have been one or two occasions in which he has stepped boldly into the realm of Imagination herself. We mean to say, however, that he is rarely imaginative for more than a paragraph at a time. In a word, the genius of Hood is the result of vivid fancy impelled or controlled, certainly tinctured at all points, by hypochondriasis. In his wild "Ode to Melancholy" we perceive this result in the very clearest of manifestations. Few things have ever more deeply affected us than the passages which follows:—

O clasp me, sweet, whilst thou art mine,
And do not take my tears amiss;
For tears must flow to wash away
A thought that shows so stern as this:
Forgive, if somewhile I forget,
In woe to come, the present bliss,
As frighted Proserpine let fall
Her flowers at the sight of Dis,
Ev'n so the dark and bright will kiss.
The sunniest things throw sternest shade,
And there is ev'n a happiness
That makes the heart afraid!

All things are touch'd with melancholy,
Born of the secret soul's mistrust,
To feel her fair ethereal wings
Weigh down with vile degraded dust;
Even the bright extremes of joy
Bring on conclusions of disgust,
Like the sweet blossoms of the May,
Whose fragrance ends in must.
O give her, then, her tribute just,
Her sighs and tears, and musings holy!
There is no music in the life
That sounds with idiot laughter solely;

There's not a string attuned to mirth,
But has its chords of melancholy.

"The Dream of Eugene Aram" is too well known in America to need comment from us. It has more of true imagination than almost any other composition of its author—but even when engaged on so serious a subject, he found great difficulty in keeping aloof from the grotesque—the result (we say) of warm fancy impelled by hypochondriasis. The opening stanza affords an example:—

'Twas in the prime of summer time,
An evening calm and cool,
When four-and-twenty happy boys
Came bounding out of school;
There were some that ran, *and some that leapt*
Like troutlets in a pool.

The twenty-fourth stanza approaches more nearly the imaginative spirit than any passage in the poem, but the taint of the fantastical is over it still:—

And peace went with them one and all,
And each calm pillow spread;
But guilt was my grim chamberlain,
That lighted me to bed;
And drew my midnight curtains round,
With fingers bloody red!*

"Miss Kilmansegg and her Precious Leg" is, perhaps, more thoroughly characteristic of Hood's genius than any single thing which he has written. It is quite a long poem—comprising nearly three thousand lines—and its author has evidently laboured much with it. Its chief defect is in its versification; for this Hood had no ear—of its principles he knew nothing at all. Not that his verses, individually, are very lame, but that they have no capacity for running together. The reader is continually getting baulked, not because the lines are unreadable, but because the lapse of one rhythm to another is so inartistically managed.

The story concerns a very rich heiress who is excessively pampered by her parents, and who at length gets thrown from a horse and so injures a leg as to render amputation inevitable. To supply the place of the true limb, she insists upon a leg of solid gold—a leg of the exact proportions of the original. She puts up with its inconvenience for the sake of the admiration it excites. Its attraction, however, excites the cupidity of a *chevalier d'industrie,* who cajoles her into wedlock, dissipates her fortune, and finally, purloining her golden leg, dashes out her brains with it, elopes, and puts an end to the story. It is wonderfully well told, and abounds in the most brilliant points—embracing something of each of the elementary faculties which we have been discussing—but most especially rich in that which we have termed *Fantasy.*

The most remarkable poems, however, are those which we have still to speak of. They convey, too, most distinctly the genius of the author—nor can any one thoughtfully read them without a conviction that hitherto that genius has been greatly misconceived—without perceiving that even the wit of Hood had its birth in a taint of melancholy perhaps hereditary—and nearly amounting to monomania.

---

* A part of this criticism is in the essay, "Poetic Principle."—Ed.

"The Song of the Shirt" is such a composition as only Hood could have conceived or written. Its popularity has been unbounded. Its effect arises from that *grotesquerie* which we have referred to the vivid fancy of the author, impelled by hypochondriasis; but "The Song of the Shirt" has scarcely a claim to the title of *poem*. This, however, is a mere question of words, and can by no means affect the high merit of the composition, to whatever appellation it may be considered entitled.

"The Bridge of Sighs," on the contrary, is a poem of the loftiest order, and, with one exception, the finest written by Hood—being very far superior to "The Dream of Eugene Aram." Not its least merit is the effective rush and whirl of its singular versification—so thoroughly in accordance with the wild insanity which is the thesis of the whole.

"The Haunted House" we prefer to any composition of its author. It is a masterpiece of its kind—and that kind belongs to a very lofty—if not to the very loftiest order of poetical literature. Had we seen this piece before penning our first notice of Hood we should have had much hesitation in speaking of Fancy and Fantasy as his predominant features. At all events we should have given him credit for much more of true imagination than we did. Not the least merit of the work is its rigorous simplicity. There is no narrative, and no doggerel philosophy. The whole subject is the description of a deserted house which the popular superstition considers haunted. The thesis is one of the truest in all poetry. *As* a mere thesis it is really difficult to conceive anything better. The strength of the poet is put forth in the invention of traits in keeping with the ideas of crime, abandonment, and ghostly visitation. Every legitimate art is brought in to aid in conveying the intended effects; and (what is quite remarkable in the case of Hood) nothing discordant is at any point introduced. He has here very little of what we have designated as the fantastic—little which is not strictly harmonious. The metre and rhythm are not only in themselves admirably adapted to the whole design, but, with a true artistic feeling, the poet has preserved a thorough monotone throughout, and renders its effect more impressive by the repetition (gradually increasing in frequency towards the *finale*) of one of the most pregnant and effective of the stanzas:—

O'er all there hung a shadow and a fear,
A sense of mystery the spirit daunted,
And said, as plain as whisper in the ear,
The place is haunted!

Had Hood only written "The Haunted House" it would have sufficed to render him immortal.

Thomas Moore

(Published in *Burton's Gentleman's Magazine,* January, 1840.—Ed.)

Amid the vague mythology of Egypt, the voluptuous scenery of her Nile, and the gigantic mysteries of her pyramids, Anacreon Moore has found all of that striking *material* which he so much delights in working up, and which he has embodied in the poem before us. The design of the story (for plot it has none) has been a less consideration than its facilities, and is made subservient to its execution. The subject is comprised in five epistles. In the first, Alciphron, the head of the Epicurean sect at Athens, writes, from Alexandria to his friend Cleon, in the former city. He tells him (assigning a reason for quitting Athens and her pleasures) that, having fallen asleep one night after protracted festivity, he beholds, in a dream, a spectre, who tells him that, beside the sacred Nile, he, the Epicurean, shall find that Eternal Life for which he had so long been sighing. In the second, from the same to the same, the traveler speaks, at large and in rapturous terms, of the scenery of Egypt; of the beauty of her maidens; of an approaching Festival of the Moon; and of a wild hope entertained that amid the subterranean chambers of some huge pyramid lies the secret which he covets —the secret of Life Eternal. In the third letter he relates a love adventure at the Festival. Fascinated by the charms of one of the nymphs of a procession, he is first in despair at losing sight of her, then overjoyed at again seeing her in Necropolis, and finally traces her steps until they are lost near one of the smaller pyramids. In epistle the fourth (still from the same to the same) he enters and explores the pyramid, and, passing through a complete series of Eleusinian mysteries, is at length successfully initiated into the secrets of Memphian priestcraft; we learning this latter point from letter the fifth, which concludes the poem, and is addressed by Orcus, high-priest of Memphis, to Decius, a prætorian prefect.

A new poem from Moore calls to mind that critical opinion respecting him which had its origin, we believe, in the dogmatism of Coleridge—we mean the opinion that he is essentially the poet of *fancy*—the term being employed in contradistinction to *imagination.* "The fancy," says the author of the "Ancient Mariner," in his "Biographia Literaria," "the fancy combines, the imagination creates." And this was intended, and has been received, as a distinction. If so at all, it is one without a difference; without even a difference of *degree.* The fancy as nearly creates as the imagination; and neither creates in any respect. All novel conceptions are merely unusual combinations. The mind of man can *imagine* nothing which has not really existed; and this point is susceptible of the most positive demonstration—see the Baron de Bielfeld, in his "Premiers Traits de l'Erudition Universelle, 1767." It will be said, perhaps, that we can imagine a *griffin,* and that a griffin does not exist. Not the griffin certainly, but its

component parts. It is a mere compendium of known limbs and features —of known qualities. Thus with all which seems to be *new*—which appears to be a *creation* of intellect. It is resoluble into the old. The wildest and most vigorous effort of mind cannot stand the test of this analysis.

We might make a distinction, *of degree*, between the fancy and the imagination, in saying that the latter is the former *loftily employed*. But experience proves this distinction to be unsatisfactory. What we *feel* and *know* to be fancy, will be found still only *fanciful*, whatever be the theme which engages it. It retains its idiosyncrasy under all circumstances. No *subject* exalts it into the ideal. We might exemplify this by reference to the writings of one whom our patriotism, rather than our judgment, has elevated to a niche in the Poetic Temple which he does not becomingly fill, and which he cannot long uninterruptedly hold. We allude to the late Dr. Rodman Drake, whose puerile abortion, "The Culprit Fay," we examined, at some length, in a *critique* elsewhere; proving it, we think, beyond all question, to belong to that class of the pseudo-ideal, in dealing with which we find ourselves embarrassed between a kind of half-consciousness that we ought to admire, and the certainty that we do not. Dr. Drake was employed upon a good subject—at least it is a subject precisely identical with those which Shakspeare was wont so happily to treat, and in which, especially, the author of "Lilian" has so wonderfully succeeded. But the American has brought to his task a mere *fancy*, and has grossly failed in doing what many suppose him to have done—in writing an ideal or imaginative poem. There is not one particle of the true poiaesis (Gr.) about "The Culprit Fay." We say that the subject, even at its best points, did not aid Dr. Drake in the slightest degree. He was never more than *fanciful*. The passage, for example, chiefly cited by his admirers is the account of the "Sylphid Queen"; and to show the difference between the false and true ideal, we collated, in the review just alluded to, this, the most admired passage, with one upon a similar topic by Shelley. We shall be pardoned for repeating here, as nearly as we remember them, some words of what we then said.

The description of the Sylphid Queen runs thus:

But oh, how fair the shape that lay
  Beneath a rainbow bending bright;
She seemed to the entranced Fay
  The loveliest of the forms of light;
Her mantle was the purple rolled
  At twilight in the west afar;
'Twas tied with threads of dawning gold,
  And buttoned with a sparkling star.
Her face was like the lily roon
  That veils the vestal planet's hue;
Her eyes two beamlets from the moon
  Set floating in the welkin blue.
Her hair is like the sunny beam,
And the diamond gems which round it gleam
Are the pure drops of dewy even
That ne'er have left their native heaven.

In the "Queen Mab" of Shelley, a Fairy is thus introduced:—

Those who had looked upon the sight,
  Passing all human glory

Saw not the yellow moon,
Saw not the mortal scene,
Heard not the night-wind's rush,
Heard not an earthly sound,
Saw but the fairy pageant,
Heard but the heavenly strains
That filled the lonely dwelling—

And thus described:—

The Fairy's frame was slight; yon fibrous cloud
That catches but the palest tinge of even,
And which the straining eye can hardly seize
When melting into eastern twilight's shadow,
Were scarce so thin, so slight; but the fair star
That gems the glittering coronet of morn,
Sheds not a light so mild, so powerful,
As that which, bursting from the Fairy's form,
Spread a purpureal halo round the scene,
Yet with an undulating motion,
Swayed to her outline gracefully.

In these exquisite lines the faculty of mere comparison is but little exercised —that of ideality in a wonderful degree. It is probable that in a similar case Dr. Drake would have formed the face of the fairy of the "fibrous cloud," her arms of the "pale tinge of even," her eyes of the "fair stars," and her body of the "twilight shadow." Having so done, his admirers would have congratulated him upon his *imagination,* not taking the trouble to think that they themselves could at any moment *imagine* a fairy of materials equally as good, and conveying an equally distinct idea. Their mistake would be precisely analogous to that of many a schoolboy who admires the imagination displayed in "Jack the Giant-Killer," and is finally rejoiced at discovering his own imagination to surpass that of the author, since the monsters destroyed by Jack are only about forty feet in height, and he himself has no trouble in imagining some of one hundred and forty. It will be seen that the fairy of Shelley is not a mere compound of incongruous natural objects, inartificially put together, and unaccompanied by any *moral* sentiment—but a being, in the illustration of whose nature some physical elements are used collaterally as adjuncts, while the main conception springs immediately, *or thus apparently springs,* from the brain of the poet, enveloped in the moral sentiments of grace, of colour, of motion—of the beautiful, of the *mystical,* of the august— in short, of the ideal.

The truth is, that the just distinction between the fancy and the imagination (and which is still but a distinction *of degree*) is involved in the consideration of the *mystic.* We give this as an idea of our own altogether. We have no authority for our opinion—but do not the less firmly hold it. The term *mystic* is here employed in the sense of Augustus William Schlegel, and of most other German critics. It is applied by them to that class of composition in which there lies beneath the transparent upper current of meaning an under or *suggestive* one. What we vaguely term the *moral* of any sentiment is its mystic or secondary expression. It has the vast force of an accompaniment in music. This vivifies

the air; that spiritualises the *fanciful* conception, and lifts it into the *ideal*.

This theory will bear, we think, the most rigorous tests which can be made applicable to it, and will be acknowledged as tenable by all who are themselves imaginative. If we carefully examine those poems, or portions of poems, or those prose romances which mankind have been accustomed to designate as *imaginative* (for an instinctive feeling leads us to employ properly the term whose full import we have still never been able to define), it will be seen that all so designated are remarkable for the *suggestive* character which we have discussed. They are strongly *mystic*—in the proper sense of the word. We will here only call to the reader's mind the "Prometheus Vinctus" of Æschylus; the "Inferno" of Dante; the "Destruction of Numantia" by Cervantes; the "Comus" of Milton; the "Ancient Mariner," the "Christabel," and the "Kubla Khan," of Coleridge; the "Nightingale" of Keats; and, most especially, the "Sensitive Plant" of Shelley, and the "Undine" of De la Motte Fouque. These two latter poems (for we call them both such) are the finest possible examples of the purely *ideal*. There is little of fancy here, and everything of imagination. With each note of the lyre is heard a ghostly, and not always a distinct, but an august and soul-exalting *echo*. In every glimpse of beauty presented we catch, through long and wild vistas, dim bewildering visions of a far more ethereal beauty *beyond*. But not so in poems which the world has always persisted in terming *fanciful*. Here the upper current is often exceedingly brilliant and beautiful; but then men *feel* that this upper current *is all*. No Naiad voice addresses them *from below*. The notes of the air of the song do not tremble with the according tones of the accompaniment.

It is the failure to perceive these truths which has occasioned the embarrassment experienced by our critics while discussing the topic of Moore's station in the poetic world—that hesitation with which we are obliged to refuse him the loftiest rank among the most noble. The popular voice, and the popular heart, have denied him that happiest quality, imagination—and here the popular voice (*because* for once it is gone with the popular heart) is right—but yet only relatively so. Imagination is not the leading feature of the poetry of Moore; but he possesses it in no little degree.

We will quote a few instances from the poem now before us—instances which will serve to exemplify the distinctive feature which we have attributed to ideality.

It is the *suggestive* force which exalts and etherealises the passages we copy:—

Or is it that there lurks, indeed,
Some truth in man's prevailing creed,
And that our guardian from on high,
  Come, in that pause from toil and sin,
To put the senses' curtain by,
  And on the wakeful soul look in!

Again—

The eternal pyramids of Memphis burst
Awfully on my sight—standing sublime
'Twixt earth and heaven, the watch-towers of time,

From whose lone summit, when his reign hath past
From earth for ever, he will look his last.

And again—

Is there for man no hope—but this which dooms
His only lasting trophies to be tombs!
But 'tis not so—earth, heaven, all nature shows
He *may* become immortal, *may* unclose
The wings within him wrapt, and proudly rise
Redeemed from earth a creature of the skies!

And here—

The pyramid shadows, stretching from the light,
Look like the first colossal steps of night,
Stalking across the valley to invade
The distant hills of porphyry with their shade!

And once more—

There Silence, thoughtful God, who loves
The neighbourhood of Death, in groves
Of asphodel lies hid, and weaves
His hushing spell among the leaves.

Such lines as these, we must admit, however, are not of frequent occurrence in the poem—the sum of whose great beauty is composed of the several sums of a world of minor excellences.

Moore has always been renowned for the number and appositeness, as well as novelty, of his similes; and the renown thus acquired is strongly indicative of his deficiency in that nobler merit—the noblest of them all. No poet thus distinguished was ever richly ideal. Pope and Cowper are remarkable instances in point. Similes (so much insisted upon by the critics of the reign of Queen Anne) are never, in our opinion, strictly in good taste, whatever may be said to the contrary, and certainly can never be made to accord with other high qualities, except when naturally arising from the subject in the way of illustration—and, when thus arising, they have seldom the merit of novelty. To be novel, they must fail in essential particulars. The higher minds will avoid their frequent use. They form no portion of the ideal, and appertain to the fancy alone.

We proceed with a few random observations upon "Alciphron." The poem is distinguished throughout by a very happy facility which has never been mentioned in connection with its author, but which has much to do with the reputation he has obtained. We allude to the facility with which he recounts a poetical story in a *prosaic* way. By this is meant that he preserves the tone and method of arrangement of a prose relation, and thus obtains great advantages over his more stilted compeers. His is no poetical *style* (such, for example, as the French have—a distinct style for a distinct purpose), but an easy and ordinary prose manner, *ornamented into poetry.* By means of this he is enabled to enter, with ease, into details which would baffle any other versifier of the age, and at which Lamartine would stand aghast. For anything that we see to the contrary, Moore might solve a cubic equation in verse.

His facility in this respect is truly admirable, and is, no doubt, the result of long practice after mature deliberation. We refer the reader to page 50 of the pamphlet now reviewed, where the minute and conflicting incidents of the descent into the pyramid are detailed with absolutely *more* precision than we have ever known a similar relation detailed with in prose.

In general dexterity and melody of versification the author of "Lalla Rookh" is unrivalled; but he is by no means at all times accurate, falling occasionally into the common foible of throwing accent upon syllables too unimportant to sustain it. Thus, in the lines which follow, where we have italicised the weak syllables:—

And mark 'tis night; already *the* sun
bids . . .
While hark from all the temples *a* rich
swell. . .
I rushed *into* the cool night air.

He also too frequently draws out the word Heaven into two syllables—a protraction which it *never* will support.

His English is now and then objectionable, as at page 26, where he speaks of

lighted barks
That down Syene's cataract *shoots*

(where, too, he makes *shoots* rhyme with *flutes*); also, at page 6, and elsewhere, where the word *none* has improperly a singular, instead of a plural force. But such criticism as this is somewhat captious, for in general he is most highly polished.

At page 27, he has stolen his 'woven snow' from the *ventum textilem* of Apuleius.

At page 8, he either himself has misunderstood the tenets of Epicurus, or wilfully misrepresents them through the voice of Alciphron. We incline to the former idea, however, as the philosophy of that most noble of the sophists is habitually perverted by the moderns. Nothing could be more spiritual and less sensual than the doctrines we so torture into wrong. But we have drawn out this notice at somewhat too great length, and must conclude. In truth, the exceeding beauty of "Alciphron" has bewildered and detained us. We could not point out a poem in any language which, as a whole, greatly excels it. It is far superior to "Lalla Rookh." While Moore does not reach, except in rare snatches, the height of the loftiest qualities of some whom we have named, yet he has written finer poems than any of equal length, by the greatest of his rivals. His radiance, not always as bright as some flashes from other pens, is yet a radiance of equable glow, whose total amount of light exceeds, by very much, we think, that total amount in the case of any contemporary writer whatsoever. A vivid fancy, an epigrammatic spirit, a fine taste, vivacity, dexterity, and a musical ear, have made him very easily what he is, the most popular poet now living—if not the most popular that ever lived—and, perhaps, a slight modification at birth of that which phrenologists have agreed to term *temperament* might have made him the truest and noblest votary of the muse of any age or clime. As it is, we have only casual glimpses of that *mens divinior* which is assuredly enshrined within him.

Old English Poetry[*]

(Published in *Southern Literary Messenger*, August, 1836.—Ed.)

It should not be doubted that at least one-third of the affection with which we regard the older poets of Great Britain should be attributed to what is, in itself, a thing apart from poetry—we mean to the simple love of the antique—and that, again, a third of even the proper *poetic sentiment* inspired by their writings should be ascribed to a fact which, while it has strict connection with poetry in the abstract, and with the old British poems themselves, should not be looked upon as a merit appertaining to the authors of the poems. Almost every devout admirer of the old bards, if demanded his opinion of their productions, would mention vaguely, yet with perfect sincerity, a sense of dreamy, wild, indefinite, and he would perhaps say, indefinable delight; on being required to point out the source of this so shadowy pleasure, he would be apt to speak of the quaint in phraseology and in general handling. This quaintness is, in fact, a very powerful adjunct to ideality, but in the case in question it arises independently of the author's will, and is altogether apart from his intention. Words and their rhythm have varied. Verses which affect us to-day with a vivid delight, and which delight, in many instances, may be traced to the one source, quaintness, must have worn in the days of their construction a very commonplace air. This is, of course, no argument against the poems *now*—we mean it only as against the poets *then*. There is a growing desire to overrate them. The old English muse was frank, guileless, sincere, and although very learned, still learned without art. No general error evinces a more thorough confusion of ideas than the error of supposing Donne and Cowley metaphysical in the sense wherein Wordsworth and Coleridge are so.

With the two former ethics were the end—with the two latter the means. The poet of the "Creation" wished, by highly artificial verse, to inculcate what he supposed to be moral truth—the poet of the "Ancient Mariner" to infuse the Poetic Sentiment through channels suggested by analysis. The one finished by complete failure what he commenced in the grossest misconception; the other, by a path which could not possibly lead him astray, arrived at a triumph which is not the less glorious because hidden from the profane eyes of the multitude. But in this view even the "metaphysical verse" of Cowley is but evidence of the simplicity and single-heartedness of the man. And he was in this but a type of his *school*—for we may as well designate in this way the entire class of writers whose poems are bound up in the volume before us, and throughout all of whom there runs a very perceptible general character. They used little art in composition. Their writings sprang immediately from the soul—and partook intensely of that soul's nature.

*"The Book of Gems." Edited by S. C. Hall.

Nor is it difficult to perceive the tendency of this *abandon*—to elevate immeasurably all the energies of mind—but, again, so to mingle the greatest possible fire, force, delicacy, and all good things, with the lowest possible bathos, baldness, and imbecility, as to render it not a matter of doubt that the average results of mind in such a school will be found inferior to those results in one (*ceteris paribus*) more artificial.

We cannot bring ourselves to believe that the selections of the "Book of Gems" are such as will impart to a poetical reader the clearest possible idea of the beauty of the *school*—but if the intention had been merely to show the school's character, the attempt might have been considered successful in the highest degree. There are long passages now before us of the most despicable trash, with no merit whatever beyond that of their antiquity. The criticisms of the editor do not particularly please us. His enthusiasm is too general and too vivid not to be false. His opinion, for example, of Sir Henry Wotton's "Verses on the Queen of Bohemia"—that "there are few finer things in our language"—is untenable and absurd.

In such lines we can perceive not one of those higher attributes of Poesy which belong to her in all circumstances and throughout all time. Here everything is art, nakedly, or but awkwardly concealed. No prepossession for the mere antique (and in this case we can imagine no other prepossession) should induce us to dignify with the sacred name of poetry a series, such as this, of elaborate and threadbare compliments, stitched, apparently, together, without fancy, without plausibility, and without even an attempt at adaptation.

In common with all the world, we have been much delighted with "The Shepherd's Hunting" by Wither—a poem partaking, in a remarkable degree, of the peculiarities of *Il Penseroso*. Speaking of Poesy, the author says:—

> By the murmur of a spring,
> Or the least boughs rustling,
> By a daisy whose leaves spread
> Shut when Titan goes to bed,
> Or a shady bush or tree,
> She could more infuse on me
> Than all Nature's beauties can
> In some other wiser man.
> By her help I also now
> Make this churlish place allow
> Something that may sweeten gladness
> In the very gall of sadness—
> The dull loneness, the black shade,
> That these hanging vaults have made,
> The strange music of the waves
> Beating on these hollow caves,
> This black den which rocks emboss,
> Overgrown with eldest moss,
> The rude portals that give light
> More to terror than delight,
> This my chamber of neglect
> Walled about with disrespect,
> From all these and this dull air
> A fit object for despair,
> She hath taught me by her might
> To draw comfort and delight.

But these lines, however good, do not bear with them much of the general character of the English antique. Something more of this will be found in Corbet's "Rewards and Fairies!" We copy a portion of Marvell's "Maiden lamenting for her Fawn"—which we prefer, not only as a specimen of the

elder poets, but in itself as a beautiful poem, abounding in pathos, exquisitely delicate imagination and truthfulness, to anything of its species:—

It is a wondrous thing how fleet
'Twas on those little silver feet,
With what a pretty skipping grace
It oft would challenge me the race,
And when 't had left me far away
'Twould stay, and run again, and stay;
For it was nimbler much than hinds,
And trod as if on the four winds.
I have a garden of my own,
But so with roses overgrown,
And lilies, that you would it guess
To be a little wilderness;
And all the spring-time of the year
It only loved to be there.
Among the beds of lilies I
Have sought it oft, where it should lie,
Yet could not, till itself would rise,
Find it, although before mine eyes.
For in the flaxen lilies shade
It like a bank of lilies laid;
Upon the roses it would feed
Until its lips even seemed to bleed,
And then to me 'twould boldly trip,
And print those roses on my lip;
But all its chief delight was still
With roses thus itself to fill,
And its pure virgin limbs to fold
In whitest sheets of lilies cold.
Had it lived long it would have been
Lilies without, roses within.

How truthful an air of lamentation hangs here upon every syllable! It pervades all. It comes over the sweet melody of the words—over the gentleness and grace which we fancy in the little maiden herself—even over the half-playful, half-petulant air with which she lingers on the beauties and good qualities of her favourite—like the cool shadow of a summer cloud over a bed of lilies and violets, "and all sweet flowers." The whole is redolent of poetry of a very lofty order. Every line is an idea conveying either the beauty and playfulness of the fawn, or the artlessness of the maiden, or her love, or her admiration, or her grief, or the fragrance and warmth and *appropriateness* of the little nest-like bed of lilies and roses which the fawn devoured as it lay upon them, and could scarcely be distinguished from them by the once happy little damsel who went to seek her pet with an arch and rosy smile on her face. Consider the great variety of truthful and delicate thought in the few lines we have quoted—the *wonder* of the "little silver feet"—the fawn challenging his mistress to a race with "a pretty skipping grace," running on before, and then, with head turned back, awaiting her approach only to fly from it again—can we not distinctly perceive all these things? How exceedingly vigorous, too, is the line,

And trod as if on the four winds!

a vigour apparent only when we keep in mind the artless character of the speaker and the four feet of the favourite, one for each wind. Then consider the garden of "my own," so overgrown, entangled with roses and lilies, as to be "a little wilderness"—the fawn loving to be there, and there "only"—the maiden seeking it "where it *should* lie"—and not being able to distinguish it from the flowers until "itself would rise"—the lying among the

lilies "like a bank of lilies"—the loving to "fill itself with roses,"

And its pure virgin limbs to fold
In whitest sheets of lilies cold,

and these things being its "chief" delights—and then the pre-eminent beauty and naturalness of the concluding lines, whose very hyperbole only renders them more true to nature when we consider the innocence, the artlessness, the enthusiasm, the passionate grief, and more passionate admiration, of the bereaved child—

Had it lived long it would have been
Lilies without, roses within.

---

*William Cullen Bryant**

(Published in *Godey's Lady's Book,* April, 1846.—Ed.)

Mr. Bryant's position in the poetical world is perhaps better settled than that of any American. There is less difference of opinion about his rank; but as usual the agreement is more decided in private literary circles than in what appears to be the public expression of sentiment as gleaned from the press. I may as well observe here, too, that this coincidence of opinion in private circles is in all cases very noticeable when compared with the discrepancy of the apparent public opinion. In private it is quite a rare thing to find any strongly-marked disagreement—I mean of course about mere autorial merit. That the opinion of the press is not an honest opinion—that necessarily it is impossible that it should be an honest opinion, is never denied by the members of the press themselves. Individual presses, of course, are now and then honest, but I speak of the combined effect. Indeed, it would be difficult for those conversant with the *modus operandi* of public journals to deny the general falsity of impression conveyed. Let in America a book be published by an unknown, careless or uninfluential author; if he publishes it "on his own account" he will be confounded at finding that no notice of it is taken at all. If it has been entrusted to a publisher of *caste,* there will appear forthwith in each of the leading *business* papers a variously-phrased *critique* to the extent of three or four lines, and to the effect that "we have received from the fertile press of So and So a volume entitled This and That, which appears to be well worthy perusal, and which is 'got up' in the customary neat style of the enterprising firm of So and So." On the other hand, let our author have acquired influence, experience, or (what will stand him in good stead of either) effrontery, on the issue of his book he will obtain from his publisher a hundred copies (or more, as the case may be), "for distribution among friends connected with the press."

---

* A part of this criticism is the same as the Introduction to the Literati of New York. We have omitted it here.—Ed.

Armed with these, he will call personally either at the office or (if he understands his game) at the private residence of every editor within his reach, enter into conversation, compliment the journalist, interest him, as if incidentally, in the subject of the book, and finally, watching an opportunity, beg leave to hand him "a volume which, quite opportunely, is on the very matter now under discussion." If the editor seems sufficiently interested, the rest is left to fate; but if there is any lukewarmness (usually indicated by a polite regret on the editor's part that he really has "no time to render the work that justice which its importance demands"), then our author is prepared to understand and to sympathise; has, luckily, a friend thoroughly conversant with the topic, and who (perhaps) could be persuaded to write some account of the volume—provided that the editor would be kind enough just to glance over the *critique* and amend it in accordance with his own particular views. Glad to fill half a column or so of his editorial space, and still more glad to get rid of his visitor, the journalist assents. The author retires, consults the friend, instructs him touching the strong points of the volume, and insinuating in *some* shape a *quid pro quo* gets an elaborate *critique* written (or, what is more usual and far more simple, writes it himself), and his business in this individual quarter is accomplished. Nothing more than sheer impudence is requisite to accomplish it in all.

In general, the books of the toadies and quacks, not being read at all, are safe from any contradiction of this self-bestowed praise; but now and then it happens that the excess of the laudation works out in part its own remedy. Men of leisure, hearing one of the toady works commended, look at it, read its preface and a few pages of its body, and throw it aside with disgust, wondering at the ill taste of the *editors* who extol it. But there is an iteration, and then a continuous reiteration of the panegyric, till these men of leisure begin to suspect themselves in the wrong, to fancy that there may really be something good lying *perdu* in the volume. In a fit of desperate curiosity they read it through critically, their indignation growing hotter at each succeeding page till it gets the better even of contempt. The result is, that reviews now appear in various quarters entirely at variance with the opinions so generally expressed, and which, but for these indignation reviews, would have passed universally current as the opinion of the public. It is in this manner that those gross *seeming* discrepancies arise which so often astonish us, but which vanish instantaneously in private society.

But although it may be said, in general, that Mr. Bryant's position is *comparatively* well settled, still for some time past there has been a growing tendency to underestimate him. The new licentious "schools" of poetry—I do not now speak of the transcendentalists, who are the merest nobodies, fatiguing even themselves, but the Tennysonian and Barrettian schools—having, in their rashness of spirit, much in accordance with the whole spirit of the age, thrown into the shade necessarily all that seems akin to the conservatism of half a century ago, the conventionalities, even the most justifiable *decora* of composition, are regarded, *per se*, with a suspicious eye. When I say *per se*, I mean that,

from finding them so long in connection with conservatism of thought, we have come at last to dislike them, not merely as the outward visible signs of that conservatism, but as things evil in themselves. It is very clear that those accuracies and elegancies of style, and of general manner, which in the time of Pope were considered as *prima facie* and indispensable indications of genius, are now conversely regarded. How few are willing to admit the possibility of reconciling genius with artistic skill! Yet this reconciliation is not only possible, but an absolute necessity. It is a mere prejudice which has hitherto prevented the union, by studiously insisting upon a natural repulsion which not only does not exist, but which is at war with all the analogies of nature. The greatest poems will not be written until this prejudice is annihilated; and I mean to express a very exalted opinion of Mr. Bryant when I say that his works in time to come will do much towards the annihilation.

I have never disbelieved in the perfect consistency, and even congeniality, of the highest genius and the profoundest art; but in the case of the author of "The Ages," I *have* fallen into the general error of undervaluing his poetic ability on account of the mere "elegancies and accuracies" to which allusion has already been made. I confess that, with an absolute abstraction from all personal feelings, and with the most sincere intention to do justice, I was at one period beguiled into this popular error; there can be no difficulty, therefore, on my part, in excusing the inadvertence in others.

It will never do to claim for Bryant a genius of the loftiest order, but there has been latterly, since the days of Mr. Longfellow and Mr. Lowell, a growing disposition to deny him *genius* in *any* respect. He is now commonly spoken of as "a man of high poetical *talent*, very *'correct,'* with a warm appreciation of the beauty of nature and great descriptive powers, but rather too much of the old-school manner of Cowper, Goldsmith, and Young." This is the truth, but not the whole truth. Mr. Bryant has genius, and that of a marked character, but it has been overlooked by modern schools, because deficient in those externals which have become in a measure symbolical of those schools.

Mr. Griswold, in summing up his comments on Bryant, has the following significant objections: "His genius is not versatile; he has related no history; he has not sung of the passion of love; he has not described artificial life. Still the tenderness and feeling in 'The Death of the Flowers,' 'Rizpah,' 'The Indian Girl's Lament,' and other pieces, show that he might have excelled in delineations of the gentler passions had he made them his study."

Now, in describing *no* artificial life, in relating *no* history, in *not* singing the passion of love, the poet has merely shown himself the profound artist, has merely evinced a proper consciousness that such are not the legitimate themes of poetry. That they are not, I have repeatedly shown, or attempted to show, and to go over the demonstration now would be foreign to the gossiping and desultory nature of the present article. What Mr. Griswold means by "the gentler passions" is, I presume, not very clear to himself, but it is possible that he employs the phrase in consequence of the gentle, unpassionate emotion in-

duced by the poems of which he quotes the titles. It is precisely this "unpassionate emotion" which is the limit of the true poetical art. Passion proper and poesy are discordant. Poetry, in elevating, tranquillises *the soul*. With *the heart* it has nothing to do. For a fuller explanation of these views I refer the reader to an analysis of a poem by Mrs. Welby—an analysis published about a year ago in *The Democratic Review*.

The editor of "The Poets and Poetry of America" thinks the literary precocity of Bryant remarkable. "There are few recorded *more* remarkable," he says. The first edition of "The Embargo" was in 1808, and the poet was born in 1794; he was more than thirteen, then, when the satire was printed —although it is reported to have been written a year earlier. I quote a few lines:—

Oh, might some patriot rise, the gloom dispel,
Chase Error's mist and break the magic spell!
But vain the wish; for hark! the murmuring meed
Of hoarse applause from yonder shed proceed.
Enter and view the thronging concourse there,
Intent with gaping mouth and stupid stare;
While in the midst their supple leader stands,
Harangues aloud and flourishes his hands,
To adulation tunes his servile throat,
And sues successful for each blockhead's vote.

This is a fair specimen of the whole, both as regards its satirical and rhythmical power. A satire is, of course, no *poem*. I have known boys of an earlier age do better things, although the case is rare. All depends upon the course of education. Bryant's father "was familiar with the best English literature, and perceiving in his son indications of superior genius, attended carefully to his instruction, taught him the art of composition, and guided his literary taste." This being understood, the marvel of such verse as I have quoted ceases at once, even admitting it to be the boy's own work; but it is difficult to make any such admission. The father *must* have suggested, revised, retouched.

The longest poem of Bryant's is "The Ages"—thirty-five Spenserian stanzas. It is the one improper theme of its author. The design is, "from a survey of the past ages of the world, and of the successive advances of mankind in knowledge and virtue, to justify and confirm the hopes of the philanthropist for the future destinies of the human race." All this would have been more rationally, because more effectually, accomplished in prose. Dismissing it as a poem (which in its general tendency it is not), one might commend the force of its argumentation but for the radical error of deducing a hope of *progression* from the cycles of physical nature.

The sixth stanza is a specimen of noble versification (within the narrow limits of the Iambic Pentameter).

Look on this beautiful world and read the truth
In her fair page; see, every season brings

New change to her of everlasting youth;
Still the green soil with joyous living things
Swarms; the wide air is full of joyous wings;
And myriads still are happy in the sleep
Of Ocean's azure gulphs and where he flings
The restless surge. Eternal Love doth keep
In his complacent arms, the earth, the air, the deep.

The cadences here at *page, swarms,* and *surge,* cannot be surpassed. There are comparatively few consonants. Liquids and the softer vowels abound, and the partial line after the pause at "surge," with the stately march of the succeeding Alexandrine, is one of the finest conceivable *finales.*

The poem, in general, has unity, completeness. Its tone of calm, elevated, and hopeful contemplation is well sustained throughout. There is an occasional quaint grace of expression, as in

Nurse of full streams and lifter up of proud
Sky-mingling mountains that o'erlook the cloud!

or of antithetical and rhythmical force combined, as in

The shock that hurled
To dust, in many fragments dashed and strown,
The throne whose roots were in another world
And whose far-stretching shadow awed our own.

But we look in vain for anything more worthy commendation.

"Thanatopsis" is the poem by which its author is best known, but is by no means his best poem. It owes the *extent* of its celebrity to its nearly absolute freedom from *defect,* in the ordinary understanding of the term. I mean to say that its negative merit recommends it to the public attention. It is a thoughtful, well-phrased, well-constructed, well-versified poem. The concluding thought is exceedingly noble, and has done wonders for the success of the whole composition.

"The Waterfowl" is very beautiful, but, like "Thanatopsis," owes a great deal to its completeness and pointed termination.

"Oh, Fairest of the Rural Maids!" will strike every poet as the truest *poem* written by Bryant. It is richly ideal.

"June" is sweet and perfectly well modulated in its rhythm, and inexpressibly pathetic. It serves well to illustrate my previous remarks about passion in its connection with poetry. In "June" there is, very properly, nothing of the intense *passion* of grief, but the subdued sorrow which comes up, as if perforce, to the surface of the poet's gay sayings about his grave, we find thrilling us to the soul, while there is yet a spiritual *elevation* in the thrill.

And what if cheerful shouts at noon
Come, from the village sent,
Or songs of maids beneath the moon
With fairy laughter blent?
And what if, in the evening light,
Betrothed lovers walk in sight
Of my low monument?
I would the lovely scene around
Might know no sadder sight nor sound.
I know—I know I should not see
The season's glorious show,

Nor would its brightness shine for me,
Nor its wild music flow;
But if around my place of sleep
The friends I love should come to weep,
They might not haste to go:—
Soft airs, and song, and light, and bloom,
Should keep them lingering by my tomb.

The thoughts here belong to the highest class of poetry, the imaginative-natural, and are of themselves sufficient to stamp their author a man of genius. In a "Sonnet, To ——," are some richly imaginative lines. I quote the whole:—

Ay, thou art for the grave; thy glances shine
Too brightly to shine long; another spring
Shall deck her for men's eyes, but not for thine,
Sealed in a sleep which knows no waking.
The fields for thee have no medicinal leaf,
And the vexed ore no mineral of power;
And they who love thee wait in anxious grief,
Till the slow plague shall bring the fatal hour.
Glide softly to thy rest, then; death should come
Gently to one of gentle mould like thee,
As light winds wandering through groves of bloom,
Detach the delicate blossom from the tree,
Close thy sweet eyes calmly and without pain,
And we will trust in God to see thee yet again.

The happiest *finale* to these extracts will be the magnificent conclusion of "Thanatopsis."

So live, that, when thy summons comes to join
The innumerable caravan that moves
To that mysterious realm where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to his dungeon, but sustained and soothed
By an unfaltering trust, approach thy grave—
Like one that draws the drapery of his couch
About him and lies down to pleasant dreams.

In the minor morals of the muse Mr. Bryant excels. In versification (*as far as he goes*) he is unsurpassed in America—unless, indeed, by Mr. Sprague. Mr. Longfellow is not so thorough a versifier within Mr. Bryant's limits, but a far better one upon the whole, on account of his greater range. Mr. B., however, is by no means always accurate—or defensible, for accurate is not the term. His lines are occasionally unpronounceable through excess of harsh consonants, as in

As if they loved to breast the breeze
that sweeps the cool, clear sky.

Now and then he gets out of his depth in attempting anapæstic rhythm, of which he makes sad havoc, as in

And Rizpah, once the loveliest of all
That bloomed and smiled in the court of Saul.

Not unfrequently, too, even his pentameters are inexcusably rough, as in

Kind influence. Lo! their orbs burn more bright,

which can only be read metrically by drawing out "influence" into three marked syllables, shortening the long monosyllable "Lo!" and lengthening the short one "their."

Mr. Bryant is not devoid of mannerisms, one of the most noticeable of which is his use of the epithet "old" preceded by some other adjective, *e.g.*—

In all that proud old world beyond the deep; . . .
There is a tale about these grey old rocks; . . .
The wide old woods resounded with her song; . . .
And from the grey old trunks that high in heaven,

etc., etc., etc. These duplicates occur so frequently as to excite a smile upon each repetition.

Of merely grammatical errors the poet is rarely guilty. Faulty constructions are more frequently chargeable to him. In "The Massacre of Scio" we read—

Till the last link of slavery's chain
Is shivered to be worn no more.

What shall be worn no more? The chain, of course,—but the link is implied. It will be understood that I pick these flaws only with difficulty from the poems of Bryant. He is, in the "minor morals," the most generally correct of our poets.

He is now fifty-two years of age. In height he is, perhaps, five feet nine. His frame is rather robust. His features are large but thin. His countenance is sallow, nearly bloodless. His eyes are piercing grey, deep set, with large projecting eyebrows. His mouth is wide and massive, the expression of the smile hard, cold—even sardonic. The forehead is broad, with prominent organs of ideality; a good deal bald; the hair thin and greyish, as are also the whiskers, which he wears in a simple style. His bearing is quite distinguished, full of the aristocracy of intellect. In general, he looks in better health than before his last visit to England. He seems active—physically and morally energetic. His dress is plain to the extreme of simplicity, although of late there is a certain degree of Anglicism about it.

In character no man stands more loftily than Bryant. The peculiarly melancholy expression of his countenance has caused him to be accused of harshness, or coldness of heart. Never was there a greater mistake. His soul is charity itself, in all respects generous and noble. His manners are undoubtedly reserved.

Of late days he has nearly, if not altogether abandoned literary pursuits, although still editing, with unabated vigour, *The New York Evening Post*. He is married (Mrs. Bryant still living), has two daughters (one of them Mrs. Parke Godwin), and is residing for the present at Vice-Chancellor McCown's near the junction of Warren and Church Streets.

Nathaniel Hawthorne

(Published in *Godey's Lady's Book*, November, 1847.—Ed.)

THE pieces in the volumes entitled "Twice-Told Tales" are now in their third republication, and, of course, are thrice-told. Moreover, they are by no means *all* tales, either in the ordinary or in the legitimate understanding of the term. Many of them are pure essays; for example, "Sights from a Steeple," "Sunday at Home," "Little Annie's Ramble," "A Rill from the Town-Pump," "The Toll-Gatherer's Day," "The Haunted Mind," "The Sister Years," "Snow-Flakes," "Night Sketches," and "Foot-Prints on the Sea-Shore." I mention these matters chiefly on account of their discrepancy with that marked precision and finish by which the body of the work is distinguished.

Of the Essays just named, I must be content to speak in brief. They are each and all beautiful, without being characterised by the polish and adaptation so visible in the tales proper. A painter would at once note their leading or predominant feature, and style it *repose*. There is no attempt at effect. All is quiet, thoughtful, subdued. Yet this repose may exist simultaneously with high originality of thought; and Mr. Hawthorne has demonstrated the fact. At every turn we meet with novel combinations; yet these combinations never surpass the limits of the quiet. We are soothed as we read; and withal is a calm astonishment that ideas so apparently obvious have never occurred or been presented to us before. Herein our author differs materially from Lamb or Hunt or Hazlitt—who, with vivid originality of manner and expression, have less of the true novelty of thought than is generally supposed, and whose originality at best has an uneasy and meretricious quaintness, replete with startling effects unfounded in nature, and inducing trains of reflection which lead to no satisfactory result. The Essays of Hawthorne have much of the character of Irving, with more of originality, and less of finish; while compared with "The Spectator," they have a vast superiority at all points. "The Spectator," Mr. Irving, and Hawthorne have in common that tranquil and subdued manner which I have chosen to denominate *repose;* but, in the case of the two former, this repose is attained rather by the absence of novel combination, or of originality, than otherwise, and consists chiefly in the calm, quiet, unostentatious expression of commonplace thoughts, in an unambitious, unadulterated Saxon. In them, by strong effort, we are made to conceive the absence of all. In the essays before me the absence of effort is too obvious to be mistaken, and a strong under-current of *suggestion* runs continuously beneath the upper stream of the tranquil thesis. In short, these effusions of Mr. Hawthorne are the product of a truly imaginative intellect, restrained, and in some measure repressed, by fastidiousness of taste, by constitutional melancholy, and by indolence.

But it is of his tales that I desire principally to speak. The tale proper, in my opinion, affords unquestionably the fairest field for the exercise of the loftiest talent which can be afforded by the wide domains of mere prose. Were I bidden to say how the highest genius could be most advantageously employed for the best display of its own powers, I should answer, without hesitation—in the composition of a rhymed poem, not to exceed in length what might be perused in an hour. Within this limit alone can the highest order of true poetry exist. I need only here say, upon this topic, that, in almost all classes of composition, the unity of effect or impression is a point of the greatest importance. It is clear, moreover, that this unity cannot be thoroughly preserved in productions whose perusal cannot be completed at one sitting. We may continue the reading of a prose composition, from the very nature of prose itself, much longer than we can persevere, to any good purpose, in the perusal of a poem. This latter, if truly fulfilling the demands of the poetic sentiment, induces an exaltation of the soul which cannot be long sustained. All high excitements are necessarily transient. Thus a long poem is a paradox. And, without unity of impression, the deepest effects cannot be brought about. Epics were the offspring of an imperfect sense of Art, and their reign is no more. A poem *too* brief may produce a vivid, but never an intense or enduring impression. Without a certain continuity of effort—without a certain duration or repetition of purpose—the soul is never deeply moved. There must be the dropping of the water upon the rock. De Beranger has wrought brilliant things—pungent and spirit-stirring—but, like all immassive bodies, they lack *momentum*, and thus fail to satisfy the Poetic Sentiment. They sparkle and excite, but, from want of continuity, fail deeply to impress. Extreme brevity will degenerate into epigrammatism; but the sin of extreme length is even more unpardonable. *In medio tutissimus ibis.*

Were I called upon, however, to designate that class of composition which, next to such a poem as I have suggested, should best fulfil the demands of high genius—should offer it the most advantageous field of exertion—I should unhesitatingly speak of the prose tale, as Mr. Hawthorne has here exemplified it. I allude to the short prose narrative, requiring from a half-hour to one or two hours in its perusal. The ordinary novel is objectionable, from its length, for reasons already stated in substance. As it cannot be read at one sitting, it deprives itself, of course, of the immense force derivable from *totality*. Worldly interests intervening during the pauses of perusal, modify, annul, or counteract, in a greater or less degree, the impressions of the book. But simple cessation in reading would, of itself, be sufficient to destroy the true unity. In the brief tale, however, the author is enabled to carry out the fulness of his intention, be it what it may. During the hour of perusal the soul of the reader is at the writer's control. There are no external or extrinsic influences—resulting from weariness or interruption.

A skilful literary artist has constructed a tale. If wise, he has not fashioned his thoughts to accommodate

his incidents; but having conceived, with deliberate care, a certain unique or single *effect* to be wrought out, he then invents such incidents—he then combines such events as may best aid him in establishing this preconceived effect. If his very initial sentence tend not to the outbringing of this effect, then he has failed in his first step. In the whole composition there should be no word written, of which the tendency, direct or indirect, is not to the one pre-established design. And by such means, with such care and skill, a picture is at length painted which leaves in the mind of him who contemplates it with a kindred art, a sense of the fullest satisfaction. The idea of the tale has been presented unblemished, because undisturbed; and this is an end unattainable by the novel. Undue brevity is just as exceptionable here as in the poem; but undue length is yet more to be avoided.

We have said that the tale has a point of superiority even over the poem. In fact, while the *rhythm* of this latter is an essential aid in the development of the poem's highest idea—the idea of the Beautiful—the artificialities of this rhythm are an inseparable bar to the development of all points of thought or expression which have their basis in *Truth*. But truth is often, and in very great degree, the aim of the tale. Some of the finest tales are tales of ratiocination. Thus the field of this species of composition, if not in so elevated a region on the Mountain of Mind, is a table-land of far vaster extent than the domain of the mere poem. Its products are never so rich, but infinitely more numerous, and more appreciable by the mass of mankind. The writer of the prose tale, in short, may bring to his theme a vast variety of modes or inflections of thought and expression—(the ratiocinative, for example, the sarcastic, or the humorous) which are not only antagonistical to the nature of the poem, but absolutely forbidden by one of its most peculiar and indispensable adjuncts; we allude, of course, to rhythm. It may be added, here, *par parenthese*, that the author who aims at the purely beautiful in a prose tale is labouring at a great disadvantage. For Beauty can be better treated in the poem. Not so with terror, or passion, or horror, or a multitude of such other points. And here it will be seen how full of prejudice are the usual animadversions against those *tales of effect*, many fine examples of which were found in the earlier numbers of *Blackwood*. The impressions produced were wrought in a legitimate sphere of action, and constituted a legitimate although sometimes an exaggerated interest. They were relished by every man of genius: although there were found many men of genius who condemned them without just ground. The true critic will but demand that the design intended be accomplished, to the fullest extent, by the means most advantageously applicable.

We have very few American tales of real merit—we may say, indeed, none with the exception of "The Tales of a Traveller" of Washington Irving, and these "Twice-Told Tales" of Mr. Hawthorne. Some of the pieces of Mr. John Neal abound in vigour and originality; but in general, his compositions of this class are excessively diffuse, extravagant, and indicative of an im-

perfect sentiment of Art. Articles at random are, now and then, met with in our periodicals which might be advantageously compared with the best effusions of the British Magazines; but, upon the whole, we are far behind our progenitors in this department of literature.

Of Mr. Hawthorne's Tales we would say, emphatically, that they belong to the highest region of Art—an Art subservient to genius of a very lofty order. We had supposed, with good reason for so supposing, that he had been thrust into his present position by one of the impudent *cliques* which beset our literature, and whose pretensions it is our full purpose to expose at the earliest opportunity; but we have been most agreeably mistaken. We know of few compositions which the critic can more honestly commend than these "Twice-Told Tales." As Americans, we feel proud of the book.*

Mr. Hawthorne's distinctive trait is invention, creation, imagination, originality—a trait which, in the literature of fiction, is positively worth all the rest. But the nature of the originality, so far as regards its manifestation in letters, is but imperfectly understood. The inventive or original mind as frequently displays itself in novelty of *tone* as in novelty of matter. Mr. Hawthorne is original in *all* points.

It would be a matter of some difficulty to designate the best of these tales; we repeat that, without exception, they are beautiful. "Wakefield" is remarkable for the skill with which an old idea—a well-known incident—is worked up or discussed. A man of whims conceives the purpose of quitting his wife and residing *incognito*, for twenty years in her immediate neighbourhood. Something of this kind actually happened in London. The force of Mr. Hawthorne's tale lies in the analysis of the motives which must or might have impelled the husband to such folly, in the first instance, with the possible causes of his perseverance. Upon this thesis a sketch of singular power has been constructed. "The Wedding Knell" is full of the boldest Imagination—an imagination fully controlled by taste. The most captious critic could find no flaw in this production. "The Minister's Black Veil" is a masterly composition, of which the sole defect is that to the rabble its exquisite skill will be *caviare*. The *obvious* meaning of this article will be found to smother its insinuated one. The *moral* put into the mouth of the dying minister will be supposed to convey the *true* import of the narrative; and that a crime of dark dye (having reference to the "young lady") has been committed, is a point which only minds congenial with that of the author will perceive. "Mr. Higginbotham's Catastrophe" is vividly original and managed most dexterously. "Dr. Heidegger's Experiment" is exceedingly well imagined, and executed with surpassing ability. The artist breathes in every line of it. "The White Old Maid" is objectionable even more than "The Minister's Black Veil," on the score of its mysticism. Even with the thoughtful and analytic there will be much trouble in penetrating its entire import.

"The Hollow of the Three Hills" we

* This one sentence proves Poe's critical powers and true, ardent patriotism.—Ed.

would quote in full had we space; not as evincing higher talent than any of the other pieces, but as affording an excellent example of the author's peculiar ability. The subject is commonplace. A witch subjects the Distant and the Past to the view of a mourner. It has been the fashion to describe, in such cases, a mirror in which the images of the absent appear; or a cloud of smoke is made to arise, and thence the figures are gradually unfolded. Mr. Hawthorne has wonderfully heightened his effect by making the ear, in place of the eye, the medium by which the fantasy is conveyed. The head of the mourner is enveloped in the cloak of the witch, and within its magic folds there arise sounds which have an all-sufficient intelligence. Throughout this article also, the artist is conspicuous—not more in positive than in negative merits. Not only is all done that should be done, but (what perhaps is an end with more difficulty attained) there is nothing done which should not be. Every word *tells*, and there is not a word which does *not* tell.

In "Howe's Masquerade" we observe something which resembles a plagiarism —but which *may be* a very flattering coincidence of thoughts. We quote the passage in question:—

With a dark flush of wrath upon his brow they saw the general *draw his sword* and *advance to meet* the figure *in the cloak* before the latter had stepped one pace upon the floor. *'Villain, unmuffle yourself,'* cried he, 'you pass no farther!' The figure, without blenching a hair's-breadth from the sword which was pointed at his breast, made a solemn pause, and *lowered the cape of the cloak* from his face, yet not sufficiently for the spectators to catch a glimpse of it. But Sir William Howe had evidently seen enough. The sternness of his countenance gave place to a look of wild amazement, if not horror, while he recoiled several steps from the figure, *and let fall his sword* upon the floor.

The idea here is that the figure in the cloak is the phantom or reduplication of Sir William Howe; but in an article called "William Wilson," one of the "Tales of the Grotesque and Arabesque," we have not only the same idea, but the same idea similarly presented in several respects. We quote two paragraphs, which our readers may compare with what has been already given. We have italicised, above, the immediate particulars of resemblance.

The brief moment in which I averted my eyes had been sufficient to produce, apparently, a material change in the arrangement at the upper or farther end of the room. A large mirror, it appeared to me, now stood where none had been perceptible before; and as I stepped up to it in extremity of terror, mine own image, but with features all pale and dabbled in blood, *advanced* with a feeble and tottering gait to meet me. Thus it appeared I say, but was not. It was Wilson, who then stood before me in the agonies of dissolution. Not a line in all the marked and singular lineaments of that face which was not even identically mine own. *His mask and cloak lay where he had thrown them upon the floor.*

Here, it will be observed that not only are the two general conceptions identical, but there are various *points* of similarity. In each case the figure seen is the wraith or duplication of the beholder. In each case the scene is a masquerade. In each case the figure is cloaked. In each there is a quarrel—that is to say, angry words pass between the parties. In each the beholder is enraged. In each the cloak and sword fall upon the floor. The "Villain, unmuffle yourself" of Mr. H. is also precisely paralleled by a passage in "William Wilson."

In the way of objection I have scarcely a word to say of these tales. There is, perhaps, a somewhat too general or prevalent *tone*—a tone of melancholy and mysticism. The subjects are insufficiently varied. There is not so much of versatility evinced as we might well be warranted in expecting from the high powers of Mr. Hawthorne. But beyond these trivial exceptions we have really none to make. The style is purity itself. Force abounds. High imagination gleams from every page. Mr. Hawthorne is a man of the truest genius. I only regret that my limits will not permit me to pay him that full tribute of commendation which, under other circumstances, I should be so eager to pay.

The reputation of the author of "Twice-Told Tales" has been confined, until very lately, to literary society; and I have not been wrong, perhaps, in citing him as *the* example, *par excellence*, in this country, of the privately admired and publicly unappreciated man of genius. Within the last year or two, it is true, an occasional critic has been urged, by honest indignation, into very warm approval. Mr. Webber, for instance (than whom no one has a keener relish for that kind of writing which Mr. Hawthorne has best illustrated), gave us, in a late number of the *American Review*, a cordial and certainly a full tribute to his talents; and since the issue of the "Mosses from an Old Manse," criticisms of similar tone have been by no means infrequent in our more authoritative journals. I can call to mind few reviews of Hawthorne published *before* the "Mosses." One I remember in *Arcturus* (edited by Matthews and Duyckinck) for May, 1841; another in the *American Monthly* (edited by Hoffman and Herbert) for March, 1838; a third in the ninety-sixth number of the *North American Review*. These criticisms, however, seemed to have little effect on the popular taste—at least, if we are to form any idea of the popular taste by reference to its expression in the newspapers, or by the sale of the author's book. It was never the fashion (until lately) to speak of him in any summary of our best authors.

The daily critics would say, on such occasions, "Is there not Irving, and Cooper, and Bryant, and Paulding, and —Smith?" or, "Have we not Halleck, and Dana, and Longfellow, and—Thompson?" or, "Can we not point triumphantly to our own Sprague, Willis, Channing, Bancroft, Prescott, and—Jenkins?" but these unanswerable queries were never wound up by the name of Hawthorne.

Beyond doubt, this inappreciation of him on the part of the public arose chiefly from the two causes to which I have referred—from the facts that he is neither a man of wealth nor a

quack; but these are insufficient to account for the whole effect. No small portion of it is attributable to the very marked idiosyncrasy of Mr. Hawthorne himself. In one sense, and in great measure, to be peculiar is to be original, and than the true originality there is no higher literary virtue. This true or commendable originality, however, implies not the uniform, but the continuous peculiarity—a peculiarity springing from ever-active vigor of fancy—better still if from ever-present force of imagination, giving its own hue, its own character to everything it touches, and especially, *self-impelled to touch everything.*

It is often said, inconsiderately, that very original writers always fail in popularity—that such and such persons are too original to be comprehended by the mass. "Too peculiar," should be the phrase, "too idiosyncratic." It is, in fact, the excitable, undisciplined, and child-like popular mind which most keenly feels the original.

The criticism of the conservatives, of the hackneys, of the cultivated old clergymen of the *North American Review,* is precisely the criticism which condemns and alone condemns it. "It becometh not a divine," saith Lord Coke, "to be of a fiery and salamandrine spirit." Their conscience allowing them to move nothing themselves, these dignitaries have holy horror of being moved. "Give us *quietude,*" they say. Opening their mouths with proper caution, they sigh forth the word *"Repose."* And this is, indeed, the one thing they should be permitted to enjoy, if only upon the Christian principle of give and take.

The fact is, that if Mr. Hawthorne were really original, he could not fail of making himself felt by the public. But the fact is, he is *not* original in any sense. Those who speak of him as original, mean nothing more than that he differs in his manner, or tone, and in his choice of subjects, from any author of their acquaintance—their acquaintance not extending to the German Tieck, whose manner, in *some* of his works, is absolutely identical with that *habitual* to Hawthorne. But it is clear that the element of the literary originality is novelty. The element of its appreciation by the reader is the reader's sense of the new. Whatever gives him a new and in so much a pleasurable emotion, he considers original, and whoever frequently gives him such emotion, he considers an original writer. In a word, it is by the sum total of these emotions that he decides upon the writer's claim to originality. I may observe here, however, that there is clearly a point at which even novelty itself would cease to produce the legitimate originality, if we judge this originality, as we should, by the effect designed: this point is that at which *novelty becomes nothing novel;* and here the artist, *to preserve his originality,* will subside into the commonplace. No one, I think, has noticed that, merely through inattention to this matter, Moore has comparatively failed in his "Lalla Rookh." Few readers, and indeed few critics, have commended this poem for originality—and, in fact, the effect, originality, is not produced by it—yet no work of equal size so abounds in the happiest originalities, individually considered. They are so excessive as, in the end, to deaden in the reader all capacity for their appreciation.

These points properly understood, it will be seen that the critic (unacquainted

with Tieck) who reads a single tale or essay by Hawthorne, may be justified in thinking him original; but the tone, or manner, or choice of subject, which induces in this critic the sense of the new, will—if not in a second tale, at least in a third and all subsequent ones —not only fail of inducing it, but bring about an exactly antagonistic impression. In concluding a volume, and more especially in concluding all the volumes of the author, the critic will abandon his first design of calling him "original," and content himself with styling him "peculiar."

With the vague opinion that to be original is to be unpopular, I could indeed agree, were I to adopt an understanding of originality which, to my surprise, I have known adopted by many who have a right to be called critical. They have limited, in a love for mere words, the literary to the metaphysical originality. They regard as original in letters, only such combinations of thought, of incident, and so forth, as are, in fact, absolutely novel. It is clear, however, not only that it is the novelty of *effect* alone which is worth consideration, but that this effect is *best* wrought, for the end of all fictitious composition, pleasure, by shunning rather than by seeking the absolute novelty of combination. Originality, thus understood, tasks and startles the intellect, and so brings into undue action the faculties to which, in the lighter literature, we least appeal. And thus understood, it cannot fail to prove unpopular with the masses, who, seeking in this literature amusement, are positively offended by instruction. But the true originality—true in respect of its purposes—is that which, in bringing out the half-formed, the reluctant, or the unexpressed fancies of mankind, or in exciting the more delicate pulses of the heart's passion, or in giving birth to some universal sentiment, or instinct in embryo, thus combines with the pleasurable effect of *apparent* novelty, a real egotistic delight. The reader, in the case first supposed (that of the absolute novelty), is excited, but embarrassed, disturbed, in some degree even pained at his own want of perception, at his own folly in not having himself hit upon the idea. In the second case, his pleasure is doubled. He is filled with an intrinsic and extrinsic delight. He feels and intensely enjoys the seeming novelty of the thought, enjoys it as really novel, as absolutely original with the writer—*and* himself. They two, he fancies, have, alone of all men, thought thus. They two have, together, created this thing. Henceforward there is a bond of sympathy between them—a sympathy which irradiates every subsequent page of the book.

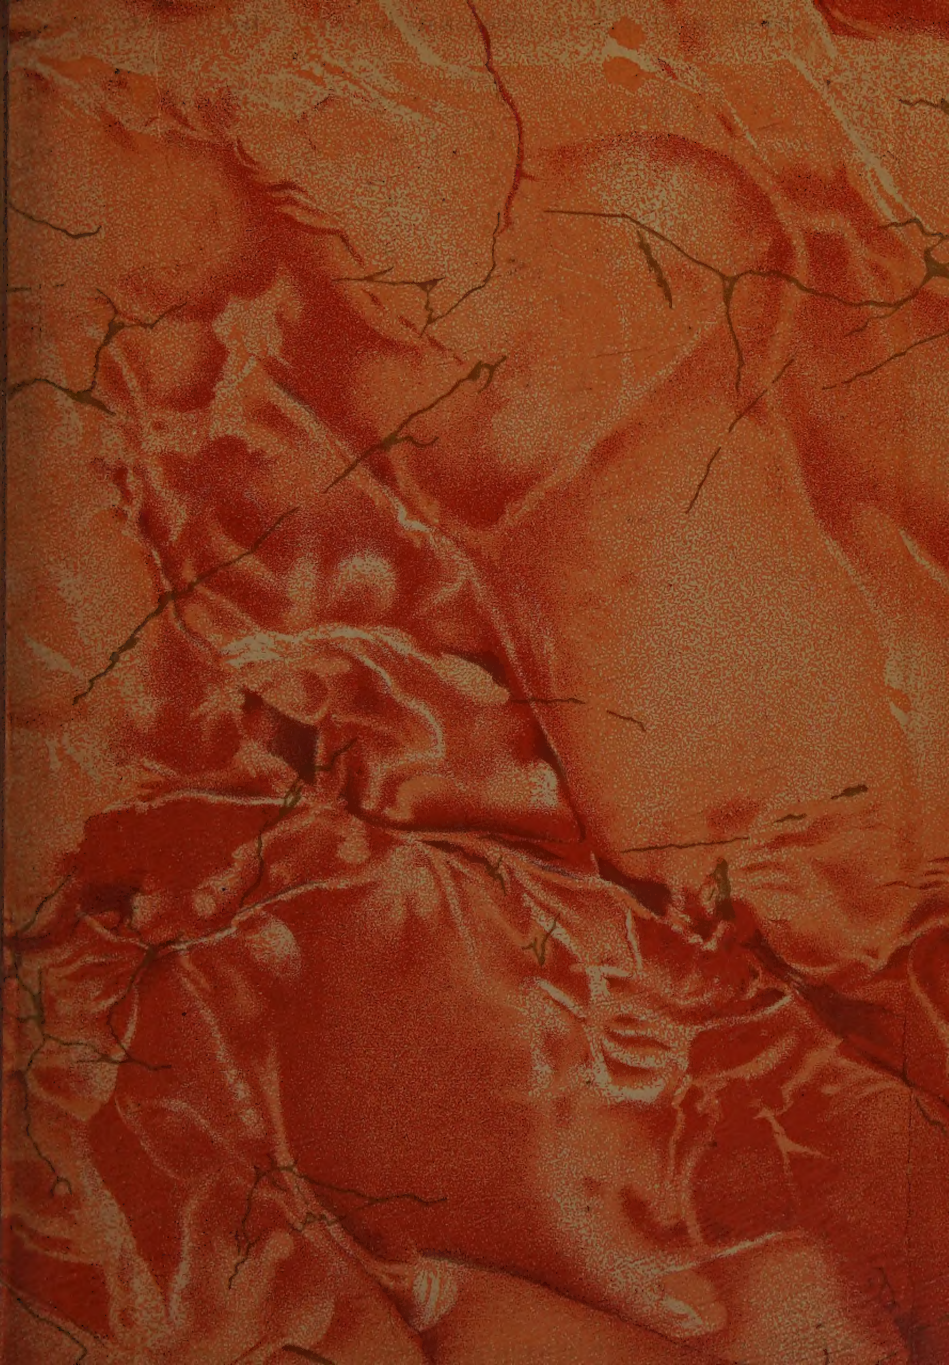
There is a species of writing which, with some difficulty, may be admitted as a lower degree of what I have called the true original. In its perusal, we say to ourselves, not "how original this is!" nor "here is an idea which I and the author have alone entertained," but "here is a charmingly obvious fancy," or sometimes even, "here is a thought which I am not sure has ever occurred to myself, but which, of course, has occurred to all the rest of the world." This kind of composition (which still appertains to a high order) is usually designated as the "natural." It has little external resemblance, but strong internal affinity to the true original, if, indeed, as I have suggested, it is not of this latter an inferior degree. It is best

exemplified, among English writers, in Addison, Irving, and *Hawthorne*. The "ease" which is so often spoken of as its distinguishing feature, it has been the fashion to regard as ease in appearance alone, as a point of really difficult attainment. This idea however, must be received with some reservation. The natural style is difficult only to those who should never intermeddle with it—to the unnatural. It is but the result of writing with the understanding, or with the instinct, that the *tone* in composition, should be that which, at any given point or upon any given topic, would be the tone of the great mass of humanity. The author who, after the manner of the *North Americans,* is merely at *all* times *quiet,* is of course, upon *most* occasions, merely silly or stupid, and has no more right to be thought "easy" or "natural" than has a cockney exquisite, or the sleeping beauty in the wax-works.

The "peculiarity," or sameness, or monotone of Hawthorne, would, in its mere character of "peculiarity," and without reference to what *is* the peculiarity, suffice to deprive him of all chance of popular appreciation. But at his failure to be appreciated, we can, *of course,* no longer wonder, when we find him monotonous at decidedly the worst of all possible points—at that point which, having the least concern with Nature, is the farthest removed from the popular intellect, from the popular sentiment, and from the popular taste. I allude to the strain of allegory which completely overwhelms the greater number of his subjects, and which in some measure interferes with the direct conduct of absolutely all.

In defence of allegory (however, or for whatever object employed), there is scarcely one respectable word to be said. Its best appeals are made to the fancy—that is to say, to our sense of adaptation, not of matters proper, but of matters improper for the purpose, of the real with the unreal; having never more of intelligible connection than has something with nothing, never half so much of effective affinity as has the substance for the shadow. The deepest emotion aroused within us by the happiest allegory, *as* allegory, is a very, very imperfectly satisfied sense of the writer's ingenuity in overcoming a difficulty we should have preferred his not having attempted to overcome. The fallacy of the idea that allegory, in any of its moods, can be made to enforce a truth—that metaphor, for example, may illustrate as well as embellish an argument—could be promptly demonstrated; the converse of the supposed fact might be shown, indeed, with very little trouble—but these are topics foreign to my present purpose. One thing is clear, that if allegory ever establishes a fact, it is by dint of overturning a fiction. Where the suggested meaning runs through the obvious one in a *very* profound undercurrent, so as never to interfere with the upper one without our own volition, so as never to show itself unless *called* to the surface, there only, for the proper uses of fictitious narrative, is it available at all. Under the best circumstances, it must always interfere with that unity of effect which, to the artist, is worth all the allegory in the world. Its vital injury, however, is rendered to the most vitally important point in fiction—that of earnestness or verisimilitude. That "The Pilgrim's Progress" is a ludicrously overrated book, owing its seeming popularity to one or two of those accidents in

critical literature which by the critical are sufficiently well understood, is a matter upon which no two thinking people disagree; but the pleasure derivable from it, in any sense, will be found in the direct ratio of the reader's capacity to smother its true purpose, in the direct ratio of his ability to keep the allegory out of sight, or of his *in*ability to comprehend it. Of allegory properly handled, judiciously subdued, seen only as a shadow or by suggestive glimpses, and making its nearest approach to truth in a not obtrusive and therefore not unpleasant *appositeness*, the "Undine" of De La Motte Fouque is the best, and undoubtedly a very remarkable specimen.

The obvious causes, however, which have prevented Mr. Hawthorne's *popularity*, do not suffice to condemn him in the eyes of the few who belong properly to books, and to whom books, perhaps, do not quite so properly belong. These few estimate an author, not as do the public, altogether by what he does, but in great measure—indeed, even in the greatest measure—by what he evinces a capability of doing. In this view, Hawthorne stands among literary people in America much in the same light as did Coleridge in England. The few also, through a certain warping of the taste, which long pondering upon books as books merely never fails to induce, are not in condition to view the errors of a scholar as errors altogether. At any time these gentlemen are prone to think the public not right rather than an educated author wrong. But the simple truth is, that the writer who aims at impressing the people, is *always* wrong when he fails in forcing that people to receive the impression. How far Mr. Hawthorne has addressed the people at all, is of course not a question for me to decide. His books afford strong internal evidence of having been written to himself and his particular friends alone.


There has long existed in literature a fatal and unfounded prejudice, which it will be the office of this age to overthrow—the idea that the mere bulk of a work must enter largely into our estimate of its merit. I do not suppose even the weakest of the Quarterly reviewers weak enough to maintain that in a book's size or mass, abstractly considered, there is anything which especially calls for our admiration. A mountain, simply through the sensation of physical magnitude which it conveys, does indeed affect us with a sense of the sublime, but we cannot admit any such influence in the contemplation even of "The Columbiad." The Quarterlies themselves will not admit it. And yet, what else are we to understand by their continual prating about "sustained effort?" Granted that this sustained effort has accomplished an epic—let us then admire the effort (if this be a thing admirable), but certainly not the epic on the effort's account. Common sense, in the time to come, may possibly insist upon measuring a work of art rather by the object it fulfils, by the impression it makes, than by the time it took to fulfil the object, or by the extent of "sustained effort" which became necessary to produce the impression. The fact is, that perseverance is one thing and genius quite another; nor can all the transcendentalists in Heathendom confound them.
